## NEW RHYMES AND TUNES FOR LITTLE PIANISTS By Helen L. Cramm

Answers the question, "What shall I do with the children while they are trying to learn the notes on the staff?" Many, many teachers have found this book a valuable accessory during the young pupil's first months of study. Both clefs are used from the start.

Price, 75 cents

## SELECTED CZERNY STUDIES

Compiled and Edited by Emil Liebling  
IN THREE VOLUMES

The Famous Czerny-Liebling Volumes

The piano study material written by Czerny seems to be absolutely indispensable, and teachers who can inspire their pupils to follow Liszt's advice, "practice Czerny diligently," are certain to produce players of marked ability. The eminent piano pedagog, Emil Liebling, selected for these three volumes the best of all Czerny's studies and carefully arranged them in progressive order. The first volume can be introduced with the pupil advanced in the second grade. Volume two runs in grades three to five and Volume three goes along in grades five to seven.

Price, \$1.00 Each

Emil Liebling

## MUSIC PLAY FOR EVERY DAY

THE GATEWAY TO PIANO PLAYING

An irresistible very first piano book for little beginners, 5 to 8 years of age. It appeals to the juvenile imagination from the start with its game-like lessons, story book style explanations, captivating pictures, charts and melodious and rhythmical musical material. Every lesson is a "playtime" to the little tot.

Price, \$1.25

In Four Books (For Convenience in Class Use), 40c Each

## HAPPY DAYS IN MUSIC PLAY

### A SEQUEL TO "MUSIC PLAY FOR EVERY DAY"

A brilliant work, giving the child genuine pleasure in piano study leading right up to the third grade. Keeps up the high plane of interest and the irresistible attraction for piano study created by the delightful and distinctive features in "Music Play for Every Day."

Price, \$1.25

In Four Books (For Convenience in Class Use), 40c Each

## GROWN-UP BEGINNER'S BOOK—For the Piano

By William M. Felton

Today, more than ever, students of mature years are taking up piano study, realizing that with this instrument lies their best opportunity for self-expression in music. "Grown-Up Beginner's Book" leads towards a definite goal, the playing of the many fine compositions and arrangements, about medium grade, that are available for piano players. Everything in the book was placed there with the adult student in mind—the exercises are for mature hands, the pieces appeal to the adult intelligence.

Price, \$1.00

## BOOK FOR OLDER BEGINNERS

By John M. Williams

While this has been called an instruction book for adult beginners in the art of piano playing, it will be found very fitting for those older boys and girls, say 14 years and beyond, who cannot be taught very well with the more juvenile material found in most first instructors. Then again, the older the student, the greater the desire to reach quickly the stage where satisfying numbers can be played. The "Book for Older Beginners" does this almost immediately by introducing easy arrangements of old folk songs.

Price, \$1.00

## BEGINNER'S BOOK

SCHOOL FOR THE PIANO—Vol. I

By Theodore Presser

"Beginner's Book" stands in immense favor with thousands of teachers. Its wonderful first lessons, in the latest revised edition, follow the modern procedure of teaching up and down from Middle C into both clefs. It is a "first reader" in piano study by which teachers achieve speedy results with young beginners.

Price, \$1.00

When pupils are ready to proceed with this pleasing course they can take up Student's Book (Vol. II, School for the Piano) and then Player's Book (Vol. III, School for the Piano).

## TUNEFUL TASKS

Twenty Little Tunes in Etude Form  
for First Year Students

By John Thompson

Cheerful tunes, in a variety of rhythmic patterns, written by a noted pedagogical authority for use as supplementary material to the first instruction book. Favored by teachers and students, everywhere.

Price, 75 cents

## THE FIRST YEAR AT THE PIANO

By John M. Williams

John M. Williams

"First Year at the Piano" provides a progressive and modern beginner's book, ideally suited for the average pupil in the ages between nine and twelve, or perhaps a little older. Both clefs are used from the beginning and by the time the student has finished the

pleasurable first year of study with this book, the very first scale work has been attempted, phrasing is well understood and an excellent foundation secured for future development into a proficient pianist.

Price, \$1.00

In Four Books (For Convenience in Class Use), 35c Each

After the work in this volume is completed, continue with:

SECOND YEAR AT THE PIANO

## THE STANDARD GRADED COURSE OF STUDIES

For the Piano

Originally Compiled by

W. S. B. MATHEWS

In Ten Grades

Price, \$1.00 Each

Constantly Revised, Re-  
Edited and Kept Up-to-Date

Grade One, a Popular First Instruction Book, with the Middle C approach (both clefs at the beginning), is suitable for even the youngest beginner, and is for class or private teaching. With the revised first grade of the "Standard Graded Course," teachers now may care for all piano beginners in the latest and most approved procedures, and, most important of all, be able to follow first grade work with a definite course for successful study in later grades. The Other Grades provide "the back-bone" for a complete course in piano study and they have the desirable feature of being so arranged as to allow the teacher a wide latitude in the selection of pieces and studies to expand and supplement the work in each grade.

## TECHNIC FOR BEGINNERS

ON THE PIANO

By Anna Priscilla Risher

Teachers, with an eye trained to the future of talented pupils, early introduce this work as a preparation for the studies of Hanon, Philipp, etc.

Price, 75 cents

## MASTERING THE SCALES AND ARPEGGIOS

By James Francis Cooke

A comprehensive work which may be introduced as early as grade 2 and used as collateral material up into grade 5. Unique and thoroughly practical methods of presentation place this work supreme in its field.

Price, \$1.50

Select the latest successful teaching pieces from the booklets of specimen pages: GOOD PIECES FOR YOUNG PIANISTS AND EVIDENCE (Grades 3 and 4). They're FREE for the asking.

# MUSIC BEGINNINGS

ARE GUIDED SUCCESSFULLY BY MANY TEACHERS USING THESE WORKS

## In Piano Classes

### MY FIRST EFFORTS IN THE PIANO CLASS

(Piano Class Book No. 1)

A remarkable first book for classes of piano beginners. Its application to practical class procedures is simple. It is distinctive for original material, fascinating melodies, delightful rhythms, logical progression, immediate results and satisfying advancement. The start, of course, is made at "Middle C," and the fun begins at once. When the class has completed satisfactorily the work in this book they can pass on to the study of "Making Progress in the Piano Class" (Piano Class Book, No. 2) (75c) and then to "Proficiency in the Piano Class" (Piano Class Book, No. 3), (75c) the final book in the series.

Price, 75 cents

### THE FIRST PERIOD AT THE PIANO

By Hope Kammerer

This very successful class instructor puts the beginner's hands on the keyboard right away with melodious little pieces, nearly all with helpful text. The author is recognized as an outstanding authority on class piano teaching, having been one of the first to conduct such classes, both in Canada and the United States. This delightful course of class teaching material is continued in "Second Period at the Piano" (75c) recently published. These books can be supplied only in the U. S. A.

Price, 75 cents

### ALL IN ONE

MELODY-RHYTHM-HARMONY

By Robert Nolan Kerr

This distinctive class piano method for beginners about 9 or 10 years old has met with success principally because it does things "just a little differently." The creator of this book has been particularly successful in teaching children and, most fortunately, possesses in addition to this teaching experience an unusual gift for writing attractive little pieces which win favor with juveniles and which also include features that are helpful to the beginner's progress. Many of these are incorporated in this book, thus giving the class an appreciation of music—melody, rhythm and harmony—as well as technical proficiency in piano playing.

Price, \$1.00

### PIANO PATHWAYS

By Blanche Dingley Mathews

Verily, these are pleasant "pathways" for the class of young piano students assigned this book for their first instructor. And yet, the work includes ear-training, theory, technic, rhythm, dictation, memorizing and reading. After the end of these "pathways" has been reached, the students may be taken on the author's "Piano Journeys" (1.00), the follow-up book.

Price, \$1.00

### LET'S PLAY TOGETHER

ENSEMBLE PIECES FOR YOUNG BEGINNERS  
IN CLASS PIANO

By Mathilde Bilbro

This book immediately gets the interest of young beginners for they are given the impression of doing "big things" in playing these piano duets, trios and quartets. Incidentally, they also are learning notation, fingering, time and rhythm.

Price, 75 cents

## In Private Lessons

### • PIANO •

#### MUSIC PLAY for EVERY DAY

##### The Gateway to Piano Playing

An introduction to the piano for pupils of pre-school or kindergarten ages by means of fascinating pictures, tuneful melodies and game-like procedures. "Happy Days in Music Play" (\$1.25), its follow-up book, takes the pupil, in the same delightful manner, well into the second grade. Both books are published also in 4 parts (40c ea.) for convenience in class instruction.

Price, \$1.25

#### BEGINNER'S BOOK

SCHOOL FOR THE PIANO, VOL. I

By Theodore Presser

The familiar "red book" that has started thousands of young pupils between 6 and 9 years of age on the road to piano playing. "Student's Book" (1.00) and "Player's Book" (1.00) continue on with this course so pleasantly begun. The new and revised edition of "Beginner's Book" employs both clefs from the start.

Price, \$1.00

#### FIRST YEAR at the PIANO

By John M. Williams

An immensely popular beginner's book for students between the ages of 9 and 12 years by a leading authority on piano pedagogy. Also published in 4 parts (35c ea.) for convenience in class teaching. "Second Year at the Piano" (1.00) follows this work.

Price, \$1.00

#### STANDARD GRADED COURSE

FOR THE PIANO

Compiled by W. S. B. Mathews

The original and still the most widely used complete course of studies for the piano. 10 volumes—10 grades. The new and revised edition of Grade I uses both clefs from the start.

Price, \$1.00 Each Grade

#### GROWN-UP BEGINNER'S BOOK

FOR THE PIANO

By Wm. M. Felton

Features the chordal approach to the piano for students of more mature years. Includes many pleasing easy arrangements of familiar melodies.

Price, \$1.00

### • VIOLIN •

#### BEL CANTO METHOD

FOR THE VIOLIN

By Mabel Madison Watson

One of the most elementary methods for this instrument combining foundation technic with the art of melody playing in a manner that will surely interest the pupil.

Price, \$1.25

#### Rob Roy Peery's VERY FIRST VIOLIN BOOK

(Fiddling for Fun)

This unique method literally "sings" the young pupil into an acquaintance with the fundamentals of violin playing. Many of the studies are provided with a second violin part for the teacher.

Price, \$1.00

### • VOICE •

#### BEGINNER'S VOICE BOOK

By Frantz Proschowski

Begins with the very rudiments of music and imparts, in a radically new and novel manner, the principles of the Old Italian school of singing, aiding the pupils to attain the highest degree of proficiency.

Cloth Bound—Price, \$3.00

## In Violin Classes

### THE CLASS VIOLIN INSTRUCTOR

By Ann Hathaway and Herbert Butler

IN TWO BOOKS

Violin class teaching becomes a simple, practicable procedure with this work. The use of tunes that young beginners know vocally is a feature. Simple melodies from folk songs, children's singing games and the classics are arranged cleverly to give the most direct and enjoyable approach. The "Teacher's Manual" supplies advice on the use of this work and gives piano accompaniments (with the violin part above in score.)

BOOK ONE

Student's Book, 75c  
Teacher's Manual, \$1.00

BOOK TWO

Student's Book, 75c  
Teacher's Manual, \$1.00

### ENSEMBLE METHOD FOR THE VIOLIN

By Oscar J. Lehrer

This method has won great success in class teaching. The exercises in the book have been arranged for three parts of practically equal difficulty, and the class, being divided into three sections, alternates in playing each part. Viola, Cello, and Bass parts also are obtainable at 75 cents each, thus providing study material for the entire string section of the orchestra. "Polyphonic Studies for Violin Classes," (1.00) follows this book, taking up the third position and double-stops.

Price, \$1.25

### FIRST FOLK SONGS

ARRANGED FOR VIOLIN AND PIANO

By Mabel Madison Watson

Clever arrangements of delightful singing melodies for use either as first studies or as supplementary material for young violinists—class or private lessons.

Violin Part, 50c

Piano Part, \$1.00

### RHYTHMICAL A B C'S FOR THE VIOLIN

By A. Louis Scarmolin

These are pleasingly dressed-up "A B C's" for young violin beginners preparatory to the usual instructor; they may be used either in class or private instruction. The violin parts are written entirely on the open strings.

Violin Part, 35c

Piano Part, 40c

## In Voice Classes

### EDUCATIONAL VOCAL TECHNIQUE

IN SONG AND SPEECH

By W. Warren Shaw

In Collaboration With  
George L. Lindsay

IN TWO VOLUMES

This unique song method presents a practical means for cultivating the voice for singing and speaking, states the underlying theory, and also introduces the pupil to the literature of song. The book is well planned for educational work, comprising 25 units, each of which begins with simple but excellent exercises set to interesting verses. Accompanying the exercises are clear explanations which further aid in acquainting the pupil with the underlying principles of a good vocal technique. Each lesson also includes some bit of a vocal gem from the master composers, the operatic field or from folk song and light opera type sources.

Price, \$1.00 each

W. Warren Shaw

George L. Lindsay

### METHODICAL SIGHT SINGING

By Frederic W. Root, Op. 21

IN 3 BOOKS

The class instruction material in the author's "Technic and the Art of Singing." The books are titled: Bk. 1 "The Beginning"; Bk. 2 "The First Time Through the Keys"; Bk. 3 "Progressive Musicianship."

Price, 60c each

### Include These Excellent Offerings

#### HETZEL'S VISUAL CLASS METHOD for the SAXOPHONE

A Carefully Graded Elementary Work Introducing the Photographic Fingering Chart, with Abundant Ensemble Material, Solos, Duets, Trios and Quartets.

By JACK HETZEL

In schools where participants in either band or orchestra must be trained from the beginning, and quickly brought to a fairly acceptable stage of playing ability, this work should prove ideal. It can be used by the director who is a brass or string man as successfully as by the individual who has specialized in the reeds. The visual idea, using the chart, immediately acquaints the students with the correct fingering and, from the start of learning the very first notes, they have something interesting to play. It is much more comprehensive than the average elementary work and advances the class to a higher point of efficiency.

Price (Complete with Chart), \$1.00

Including . . .

#### HETZEL'S Photographic Fingering Chart for All Saxophones

By JACK HETZEL

This unique feature supplies, with 20 remarkably clear half-tone cuts, photographic illustrations of every detail for the fingering of each note on saxophones of any pitch—B-flat, E-flat or C Melody instruments. It is printed on extra heavy paper stock and folds to the size of the book, 9 x 12 inches. Open, the chart measures 5 3/4 x 12 inches. May be used with any modern method for the saxophone. To the right is an illustration (reduced) of one of the twenty on the chart.

Price of Chart, 50 cents

Hetzel's Visual Class Method for the Oboe and Visual Class Methods for other instruments are in preparation. Due announcement of their publication will be made.

#### HETZEL'S VISUAL CLASS METHOD for the CLARINET

With Photographic Fingering Chart for Clarinet (Boehm System)

By JACK HETZEL

An instantaneous success immediately accepted by the teaching profession, and by many school band and orchestra directors as a most practical method for the first instruction of clarinet pupils. Everything is

clear and to the point and all procedures are based on testings and developments made in much practical work with clarinet beginners.

Price (Complete with Chart), \$1.00

Hetzel's Photographic Fingering Chart for the Clarinet (Boehm System) may be used with any modern method, but is especially adapted for Hetzel's Visual Class Method. Price of Chart, 50 cents.

#### Two Recent Issues for Orchestra

##### MARCHE ANTIPHONAIRE

for  
Symphonic Orchestra

By HAROLD M. JOHNSON

Large, \$3.00 Medium, \$2.00

Full Score, \$1.25

Extra Parts, Each 20 cents  
Piano, Conductor's Part, 40 cents

A modern grand march which derives its name from the extensive employment of antiphonal writing between the principal instrumental choirs. Closely follows the sonata-allegro plan.

##### LES JABAWAUKS

Danse Russe for Orchestra

By ARTHUR WELLESLEY

Orchestrated by A. W. Hughes

(Philharmonic Orch. Series No. 49)

Small, With Piano, 75 cents

Full, With Piano, \$1.00

Full Score, \$1.50

A characteristic dance (Grade 3) recently added to the celebrated Philharmonic Orchestra Series. It makes an excellent feature number for concert or commencement programs of the school orchestra.

Conductor's Book, 75c Other Books, 50c

#### THE MORRISON STRING CLASS SYSTEM

For the Combined Class Teaching of  
VIOLIN, VIOLA, CELLO and BASS

By DON MORRISON

Associate Editors—Karl W. Gehrkens  
and Arthur L. Williams

This system can be used with the four string instruments combined, with any two or three of them simultaneously, or by any instrument alone in a separate class. Every detail in these books has had long continued classroom use. Through a progressive blending of melodies and technical studies the individual is given fundamental training on his instrument, then the co-ordination of the group, or the four instruments, is achieved. A simple piano accompaniment is provided in each book.

Volume I—Violin and Viola, 75c  
Volume II—Cello and Bass, 75c

#### MORRISON ORCHESTRAL UNISONS

A System of Relay Solos for Training  
Young Orchestras

By DON MORRISON

The idea of these relay solos originated from the "relay race" of the track meet. They are intended to awaken in young players a realization of the variety of expression possible in a musical composition and to give confidence in playing solo sections when called upon to do so.

Instrumentation:—1. Violin, 2. Viola, 3. Cello, 4. String Bass, 5. Flute-Piccolo, 6. Oboe-C Tenor (Melody) Saxophone, 7. Trumpet-Clarinet-Sop. or Ten. Saxophones in B-flat-Trombone or Baritone (Treble Clef), 8. French Horn in F, 9. E-flat Alto Saxophone, 10. E-flat Alto Horn or Mellophone, 11. Trombone-Bassoon-Baritone, 12. E-flat and B-flat Tuba, 13. Percussion, 14. Piano Accompaniment.

Instrument parts, 15c ea. Piano Acc., 60c  
Full Score, \$1.00

#### PROJECT LESSONS IN ORCHESTRATION

By ARTHUR E. HEACOX

(Music Students' Library)

This practical textbook presents a series of short, interesting lesson-problems in orchestration, arranged especially for the use of school groups studying this fascinating subject. 180 pages

Cloth Bound—Price, \$1.50

#### MUSIC SUPPLEMENT

to Project Lessons in Orchestration

By ARTHUR E. HEACOX Price, 75c

A book containing the music required in the lesson assignments of the above text—songs and piano pieces. 63 pages.

#### Two Successful Concert Band Numbers

##### SKYROCKETS

Descriptive March for Full Band

By CUYLER HERSHEY LEONARD

For the past two seasons this march has been featured on the programs of many leading high school organizations. Unusual harmonies and striking percussion effects are employed to illustrate skyrockets in action, yet the march has all of the essential rhythmic and melodic features that attract and hold audience and performers alike. There is a xylophone part for concert performance.

Price, 75 cents

##### LISTEN TO THE DRUMMERS

Novelty March for Full Band

By CUYLER HERSHEY LEONARD

With vivid, scintillating effects gained by well handled instrumental colorings, rhythmic liveliness, melodic brilliance and special percussion effects this composition gives its performers a good time and hearers of it a real treat. There are pauses for vibraphone chords, an imitation of modern radio bands.

Price, 75 cents

*Ref*

THE NEW YORK WORLD'S FAIR MUSIC FESTIVAL" by Olin Down

# Aids For Good-Weather Kindergarten Activities

Teachers of young pupils will find it profitable to investigate these books of songs, dances, and pantomimes which possess such admirable qualities for entertainingly developing the thinking and co-ordinated action of little folks who must be kept occupied in summer classes, camps, homes, church schools, or other groups.

## SONGS OF THE CHILD WORLD

Three Volumes  
By  
Alice C. D. Riley  
and  
Jessie L. Gaynor

The most popular collections of children's songs published. For years these have been used in the home, in primary classes, in public and private schools, and in juvenile clubs and societies.

The songs are classified for various seasons and occasions, for various activities in the life of a child. They are educational, recreational, yes, and even devotional, as several sacred songs for Sunday school groups are included.

Cloth Bound. Price, \$1.25 each

## SONGS OF MODERN CHILD LIFE

By Jessie L. Gaynor  
and Dorothy Gaynor Blake

Begun by Mrs. Gaynor, this book was completed by her talented daughter, Dorothy Gaynor Blake. The songs were written at the suggestion of a member of the Council of Public Safety and of the Child Health Organization of America as the simplest way to set down the first principles of child hygiene. Delightfully original texts and especially charming tunes for tiny tots.

Cloth Bound. Price, \$1.00

## LITTLE SONGS FOR LITTLE PEOPLE

By Georgia B. Perry

This book of songs has been given a warm welcome by all interested and sympathetic friends of childhood. The songs are short enough to be learned by the youngest singing child, they embody both commonplace and extraordinary experiences of little children. There are songs for home, school, church and social gatherings.

Cloth Bound. Price, \$1.00

## HEALTH SONGS

By Jessie L. Gaynor  
and Dorothy Gaynor Blake

These eleven songs are those listed under the above captioned classification in "Songs of Modern Child Life," and published in an inexpensive paper-bound book for convenience and economy in distributing copies to children and parents.

Price, 25 cents

The Elephant .....	\$0.50
One-a-Penny .....	.30
The Tin Soldiers .....	.50
Twilight Song .....	.30
What a Very Handy Thing a Monkey's Tail Must Be .....	.40

## SIX LITTLE SONGS FOR THE CHILDREN TO SING

By George Henschel

Based on the text from Scott's "Nature Study and the Child", these songs of a higher type of musical composition, appeal to children because of an unusual, but not too difficult melodic and rhythmic structure.

Price, 60 cents

## SONGS AND SHADOW PICTURES FOR THE CHILD WORLD

Verses by

Rachel Barton Butler

Music by

Jessie L. Gaynor

Shadow Pictures by

Susanne Fennimore Tyndale

Ten fascinating songs for little children, attractively gotten up in a miniature art volume that makes a most suitable gift book. The verses are printed both with the song and on a specially illustrated preliminary page. There is an element of freshness and newness to each verse. Mrs. Gaynor's music is tuneful, of course, and she always keeps her songs safely within a moderate voice range.

Cloth Bound. Price, 75 cents

## THIRTY RHYTHMIC PANTOMIMES

Dorothy Gaynor  
Blake

Song Texts by  
Alice C. D. Riley

Music by  
Jessie L. Gaynor  
Description and  
Illustrations by

Dorothy Gaynor Blake

From the celebrated *Songs of the Child World* volumes Dorothy Gaynor Blake has selected for this book thirty most attractive songs. Accompanying each are clever "match-stick" drawings which show the rhythmic action for young people. Besides the rhythmic consciousness developed, the child thus is given early training in music appreciation and group activity work. Mothers, too, can use these rhythmic pantomimes and songs with pre-school children in the home. Suggestions for use of the rhythms with other songs in the original volumes also are given. Complete texts, of course.

Price, \$1.25

## DANCES AND GAMES FOR CHILDREN

Descriptive Text by  
Susan Hoffman Gilman

Music by

Jessie L. Gaynor

Silhouettes by

Susanne Fennimore Tyndale

A most complete and practical volume of material for the kindergarten or primary grade teacher who appreciates the value of instructive play and group activities. It contains complete directions and music for 27 dances and games that are interesting to youngsters. The illustrations are silhouettes in free-hand paper cutting.

Price, \$2.00

Kirsten Flagstad on "THE ART OF SINGING"

# AMERICA HAS MANY "GROWN-UPS" ENJOYING THE PLAYING OF THE PIANO THROUGH THE AID OF THESE BOOKS

For Years "Grown-Up" Music Beginners Felt That an Instrument Calling for Single Note Reading was Their Only Chance to Enjoy Making Music. To-day, Through These Specially-Prepared Books, They Find the Greater Advantages of the Piano, From Which Melody, Rhythm, and Harmony May be Brought Forth by a Single Performer, Are Opened to Them.

*Piano Teachers Everywhere Are Enlarging Their  
Pupil Lists In Using These Books.*

## GROWN-UP BEGINNER'S BOOK

For the Piano

By WILLIAM M. FELTON

This helpful book for adult beginners at the piano begins with the rudiments, but quickly has the pupil playing interesting melodies while making rapid acquaintance with fundamental technical problems. Keyboard illustrations assist in correlating the notes of the printed page with the keys of the piano.

Here is a book of piano instruction material for grown-ups, high school age pupils and college young men and women, that really leads towards a definite goal—not the digital dexterity of the virtuoso—but the ability to play the many fine compositions of intermediate grade, and the playable arrangements of classic and standard compositions, that are available. While intended for use with a teacher, the explanations are so clear and easily understood that the diligent self-help student may get much assistance from the study of it.

PRICE, ONE DOLLAR

## PROGRESSING PIANO STUDIES

For the Grown-Up Student

By WILLIAM M. FELTON

A "Follow-Up" to Grown-Up Beginner's Book for the Piano

When the adult student has completed the first instruction book a fair amount of playing ability has been acquired. But few are satisfied to rest content with this meagre accomplishment, and then teachers are faced with the problem of supplying the proper study material.

Here in this book are gathered together etudes that have all the characteristics that appeal to adults; the same type of material employed in the author's Grown-Up Beginner's Book. They have been carefully graded in progressive order, the fingering plainly marked and the editing has been most thorough.

Teachers will be delighted with so comprehensive a course of studies under one cover. Adult pupils will welcome the economy effected and will appreciate the opportunity of perfecting their technique to a point where they can play the not-so-difficult pieces of composers such as Schumann, Mozart and Haydn among the classic writers and Nevin, MacDowell, Engelmann, Cadman, Kern and others too numerous to mention among the moderns.

PRICE, ONE DOLLAR

## PLAY WITH PLEASURE

An Album for the Grown-Up Piano Student

Compiled and Arranged

By WILLIAM M. FELTON

Students of more mature years, who have completed the first books of instruction and pieces, can get a lot of fun out of playing these numbers. There are arrangements of folk songs and ballads, gems from the operas and overtures, selections from the classics, and pieces in light rhythmic style.

Adult pianists of limited attainments, or with little time to practice, here have a fine group of selections, including melodies known to them as radio "signatures" and movie "theme music." None of the arrangements requires more technical proficiency than that acquired by the pianist able to play grade three music.

## BOOK OF PIANO PIECES FOR ADULT BEGINNERS

Easy Arrangements of 27 Excellent Compositions

When a grown-up gets started on the undertaking of learning to play the piano, he soon realizes that he is into something worth while and that its challenges to his ability to coordinate eyes, ears, and hands provide delightful, stimulating, and profitable recreation with always enticing fields ahead.

After the first few months of learning the "geography" of the keyboard and in getting the right finger to do the right thing at the right time, there is then the chance to begin enjoying one's own rendition of some attractive music. That is where this book comes in. It provides clever, easy-to-play arrangements of favorite melodies from classic, folk, operatic and standard sources along with a dozen original compositions by favorite contemporary composers. There is a great variety of emotional content in the types of numbers in this collection—some are romantic, some dreamy, some stirring, some characteristic, some lively, and others are dignified and impressive.

PRICE, SEVENTY-FIVE CENTS

## BOOK OF PIANO DUETS FOR ADULT BEGINNERS

Here is an album of 19 numbers that will have a long, useful, and pleasure-giving life around the piano in the average home. When first published it proved an immediate success, but not every copy of the thousands sold has been used by a pair of older beginners. It is ideal for such a pair, but some older beginners have had fun with it, and the benefits of its help to their piano progress, by enlisting the aid of playing mates, younger or older, who have a little more piano-playing experience. Neither part is difficult to play, being perhaps what would be assigned to the average younger student in grade 2, or early grade 3. For hands and minds of more maturity, however, these duets easily may be taken up well along in the first season of study.

PRICE, ONE DOLLAR

## IDEAS FOR YOUNG PIANO TEACHERS

By Harriette Dexter Bosworth

This practical little volume is intended to assist the young piano teacher or the parent who supervises a child's work. It shows how to present the technical and esthetic points of piano playing in the most sympathetic and intimate manner. The author goes beyond mere technical means; she delves into child psychology and the reactions of various types of pupils to the understanding and sympathetic teacher.

Price, 60 Cents

## MUSICAL INSTRUMENTS

By Edgar Stillman Kelley, *Mus. Doc.*

Third Year in "A Study Course in Music Understanding"

In a series of entertaining and informing chapters Dr. Kelley treats of Primitive and Oriental instruments, of their successors in Mediaeval Europe, and then of the instruments in use in the modern orchestra. Chapters are also given to the piano and the organ. A final chapter deals with the orchestra itself as the crowning achievement in musical expression.

Cloth Bound—Price, \$1.50

## CLEARCUT SPEECH IN SONG

By Clara Kathleen Rogers

Mrs. Rogers is acknowledged as a national authority on diction in singing and speaking. A few of the twenty chapter headings: *Classification of Consonants, Exercises to Promote Flexibility, Analysis of Vowels, Positions of Tongue, Breathing, Clear Enunciation on High Notes, Emphasis, Recitatives*. Fully illustrated with musical quotations and pronouncing exercises.

Price, 60 Cents

## THE VIOLIN: ITS FAMOUS MAKERS AND PLAYERS

By Paul Steoving

The author is a member of the faculty of the New York University School of Music Education. This book outlines the development and history of the violin and its playing. It gives in narrative style essential information about more than one hundred and fifty violin masters and composers. Some chapter headings: *Origin and Construction, Makers, Early Fiddlers, Some Early Masters, Viotti, Paganini, General Development of Violin Art, Methods*.

Price, 60 Cents

## MASTERS OF THE SYMPHONY

By Percy Goetschius, *Mus. Doc.*

Fifth Year in "A Study Course in Music Understanding"  
Adopted by The National Federation of Music Clubs

In this notable work, richly illustrated with music quotations, Dr. Goetschius has given students a thoughtful and erudite survey of the Symphony and its development from its genesis to the present day. The Epilogue is devoted to American Symphonic Writers.

Cloth Bound—Price, \$2.00

## THE FUNDAMENTALS OF MUSIC

By Karl Wilson Gehrken

First Year in "A Study Course in Music Understanding"

An authoritative presentation of the fundamentals of music for busy people. Its eight chapters treat of Notation, Rhythm, the Melodic, Harmonic, and Polyphonic elements in music; and of Form and Design, Acoustics, Expression and Interpretation. Fully illustrated and gives ample lists of reference books for collateral reading, together with lists of phonograph records and player-rolls that illustrate the text. 18 illustrations and 136 music cuts, 211 pages.

Cloth Bound—Price, \$1.50

## THE WHY AND HOW OF MUSIC STUDY

By Charles H. Farnsworth

Professor Farnsworth was for many years head of the School Music Department, Teachers College, Columbia University, New York. He is a national authority on music and pedagogy. Contents: *Study and Talent, Discovering Our Talent, Fitting Our Study to Our Talent, Mental Activities in Music Study and Their Application, Relation Between Teacher and Pupil*.

Price, 60 Cents

## TWENTY LESSONS IN CONDUCTING

By Karl Wilson Gehrken

As a first book it is a manual of practice by which baton technic can be secured. Success in conducting depends upon the acquirement of the fundamentals so clearly taught in this book. Music scores are provided that cover each problem, and cuts illustrate the rhythm for baton movements.

Price, 60 Cents

## NOTED NAMES IN MUSIC

By Winton J. Baltzell

As editor of *The Etude*, and afterwards of *The Musician*, the late Mr. Baltzell became himself a noted name in music. This handbook is a Who's Who in Music. It is brought up to date with the biographies of the most noted musicians, past and present, including Americans.

Price, 60 Cents

## EPOCHS IN MUSICAL PROGRESS

By Clarence G. Hamilton

Fourth Year in "A Study Course in Music Understanding"  
Adopted by The National Federation of Music Clubs

To appreciate the music one hears, the listener should have some understanding of the trend of musical development and some knowledge of what has gone before. This volume gives a bird's-eye view of the field of musical endeavor and traces the story of its growth. Its eight chapters are illustrated, pictorially and musically, and give lists of reference books for collateral reading and phonograph records and player-rolls which illustrate the text.

Cloth Bound—Price, \$1.50

## MASTERPIECES OF MUSIC

Compiled by Leo Rich Lewis

Pocket piano scores from Bach, Handel, Haydn, Mozart, Beethoven, Mendelssohn and Brahms. Every measure is numbered to correspond with references in the text of *The Ambitious Listener* by the same author.

Price, 60 Cents

## HOW A DEPENDABLE PIANO TECHNIC WAS WON

By Harriette Brower

The author made a lifelong study of the most practical methods for solving piano students' problems. Her book gives a common-sense way of studying the piano and its music. It is written in an informal style as a series of letters. Some of the subjects covered are: *Scale Playing, Staccato Chords, The Marcato Touch, Arpeggios*. Illustrated with thematic passages and diagrams showing correct finger and wrist movement.

Price, 60 Cents

## FUNDAMENTALS OF VOICE TRAINING

By D. A. Clippinger

Member of American Academy of Teachers of Singing, one of Chicago's leading teachers of the voice, organizer and conductor of the Chicago Madrigal Club and other choruses. Author of *Head Voice and Other Problems; Systematic Voice Training*, etc. Covers such questions as: *Is the Tone True to Pitch? Has It the Right Power? Is It Resonant or Breathless? Is It Steady or Unsteady? Is the Breath Support Right? Is the Vocal Organ Free from Tension? Is the Tone Emotional? Is It Produced without Effort? Tone, Diction, Interpretation, Practice, Technic, Use of Imagination, etc.*

Price, 60 Cents

## OUTLINES OF MUSIC HISTORY

By Clarence G. Hamilton

This revised and augmented edition of a well-known work is a clear cut and up-to-date history book for class use or general reading. In addition to the eighteen pages of illustrative music listed at front of the book, there are reference groups of outside reading material at the end of each chapter. The volume itself is copiously illustrated by pictures, maps and chronological tables.

Cloth Bound—Price, \$2.25

## THE GIST OF SIGHT-SINGING

By Leo Rich Lewis

Written for class use in study-groups, supplying an abundance of practice material, covering all phases of pitch, rhythm, key and mode. In addition are 17 pages of Rudimentary Facts of Music.

Price, 60 Cents

## THE AMBITIOUS LISTENER

By Leo Rich Lewis

Professor Lewis, Director of the Music Department at Tufts College, is well known in both Europe and America for his lecture work. A saving sense of humor makes this book an easy approach to appreciation of master-works in music. The musical examples are given in full in the companion book, *Masterpieces of Music*.

Price, 60 Cents

## PSYCHOLOGY FOR THE MUSIC TEACHER

By Walter Samuel Swisher

More copies of this book have been bought than any other music reference book issued in recent years. A practical working text. A real help to the teacher who wishes to improve his hold on students' interest and attention. Contents: *Music Study and Personality, Psychological Types, How We Learn, The Material with Which We Work, Suggestions and Limitation*. Questions, suggestions, and bibliographies at end of each chapter. Illustrated with musical quotations.

Price, 60 Cents

## FROM SONG TO SYMPHONY

By Daniel Gregory Mason

Second Year in

"A Study Course in Music Understanding"

Adopted by The National Federation of Music Clubs

This Manual of Music Appreciation presents the chief types of musical art in their sequence from the folk song to the fully developed symphony of today. It assists readers to distinguish the masterpieces of music, to understand their significance and respond to their appeal. Fully illustrated, and lists reference books for collateral reading and phonograph records and player-rolls that illustrate the text. An authoritative and stimulating handbook for students and general readers; and its purpose is the cultivation of discriminating listeners.

Cloth Bound—Price, \$1.50

## MUSIC IN WORSHIP

By Walter Samuel Swisher

The author is clergyman, organist, musical enthusiast, and special student of psychology. His book is a text for both organist and minister. Contents: *The Spirit of Worship, Unity of the Service, Function of the Service Prelude, Graded Lists of Church Music, Lists of Anthems for Various Services, Principles on Which Production of Good Music Rests, Bibliography, Function of the Anthem, The Hymn, Choir and Organ, Thematics*.

Price, 60 Cents

## HEALTH HINTS FOR MUSIC STUDENTS

By Dr. Wallace F. Hamilton

Dr. Hamilton is a successful practicing physician. As a student of music he studied the correlation of music and health. The confining nature of musicians' work makes it important to preserve health and vitality. Simple rules for exercise, posture, diet, relaxation, and disease prevention are given. The book contains setting-up exercises; special exercises for singers, pianists, and violinists; diet tables. The exercises are well illustrated.

Price, 60 Cents

## MUSIC CLUB PROGRAMS FROM ALL NATIONS

By Arthur Elson

Besides outlining the various schools of music and giving short, concise biographies of those composers whom we know as the outstanding exponents of each school, this book presents a series of varied programs to be used by clubs and other organizations, together with a series of programs on the great masters of music, on classical music and on modern chamber music. Also included is a questionnaire at the end of each chapter and more than one hundred portraits.

Cloth Bound—Price, \$2.50

## THE VIOLIN STUDENT'S VOCABULARY

By Eugene Gruenberg

The author's lifelong devotion to the violin, both as an artist and as a distinguished pedagogue, finds expression in this valuable handbook which tells every violin player and student concisely and exactly what he needs to know of musical terms, the rudiments of musical knowledge, practicing, the famous violinists, famous violin and bow-makers, with an historical sketch of the violin and bow. Illustrated with music-quotations.

Price, 60 Cents

## MUSIC APPRECIATION

By Clarence G. Hamilton

Based on methods of literary criticism, this unique book is for those who wish to listen to music with quickened hearing and real understanding. There are numerous suggestions for supplementary reading and a bountiful supply of portraits, diagrams and music cuts. The illustrative examples of piano pieces and songs are available in the separate volume *Typical Piano Pieces and Songs*, (Price, \$1.50).

Cloth Bound—Price, \$2.50

## HISTORY OF PUBLIC SCHOOL MUSIC

By Edward Bailey Birge

A pioneer work, in a new revised edition, giving for the first time a story of the evolution of school music in our country from its feeble beginning to its present great development. Richly illustrated with music quotations from early music books and with portraits of the principal educators from Lowell Mason to date. Indispensable for everyone interested in school music and its history.

Cloth Bound—Price, \$2.00

## INTRODUCTION TO MUSIC APPRECIATION AND HISTORY

By Dorothy Tremble Moyer

Adopted for use by the Division of University Extension in Massachusetts

This book gives an understanding of the form, traits and history of music, in a concise series of chapters, free from all technical language, and traverses the story of music from its primitive origins to the present day. Different forms, styles, schools and periods are lucidly explained with the help of many illustrations. Each chapter includes review questions, and a list of phonograph records. At the close of the book is a Chronological Table of both musical and contemporary events. Equally valuable for use by classes in any educational institution or for individual study. 14 illustrations, 75 music cuts, 141 pages.

Cloth Bound—Price, \$1.50

## MUSIC PLAY FOR EVERY DAY

### THE GATEWAY TO PIANO PLAYING

A happy combination of work and play, game-like procedures for inculcating in juvenile minds a love of good music while they are learning the fundamentals of piano playing, make this book a favorite with teachers in the instruction of 5 to 8 year old beginners. Includes the fascinating picture "The Fairyland of Music," a practical keyboard chart, and "cut-outs" to be pasted in the book.

Price, \$1.25  
In Four Books—Each 40 cents

## ADA RICHTER'S KINDERGARTEN CLASS BOOK

### A PIANO APPROACH FOR LITTLE TOTS

A novel presentation of the fundamentals of music, through the medium of the favorite childhood story "Goldilocks and the Three Bears," soon has youngsters of 4 to 6 years playing from notes. Includes a little playlet for pupils' recitals and interesting illustrations which may be colored with paints or crayons.

Price, \$1.00

## BILBRO'S MIDDLE C KINDERGARTEN BOOK

### A VERY FIRST MUSICAL STUDY

By Mathilde Bilbro

Long a standard piano teaching work used for the very first instruction of very young beginners, now presented in the modern Middle C approach. The author, a practical teacher specializing in the instruction of juveniles, has put into this work much of her talent for writing tuneful piano music that appeals to children.

Price, 75 cents

## TUNES FOR TINY TOTS

### A PIANO METHOD FOR PRE-SCHOOL BEGINNERS

By John M. Williams

Thousands of teachers regularly use the piano teaching material of this noted pedagogical authority. Here, in this book, he gives his procedures for tiny tots, beginning with an immediate introduction to the keyboard and the Grand Staff and continuing with delightful little tunes and verses designed to prepare the pupil for the regular instruction book.

Price, 75 cents

## ADVENTURES IN MUSIC LAND

### A MODERN INSTRUCTION BOOK FOR YOUNG PEOPLE

By Ella Ketterer

Miss Ketterer has composed many popular piano teaching pieces in the early grades, and her remarkable success in the teaching profession is readily understandable after examining the material in this helpful piano instruction book. Interspersed throughout are attractive little pieces, quite a few with verses that may be sung. This book goes much further in tonality than the average beginner's book.

Price, \$1.00

## THE FIRST YEAR AT THE PIANO

By John M. Williams

This is the first in a course of instruction books widely used by piano teachers for students between the ages of 9 and 14 years. As explained in the author's Normal Classes, which have been given in all parts of the country, the work is designed for rapid, but thorough progress. Following this book John M. Williams' superb "Year by Year" course supplies excellent, result-producing, and pupil-pleasing study material in *Second Year at the Piano* (\$1.00), *Third Year at the Piano* (\$1.00), *Fourth Year at the Piano* (\$1.00), and *Fifth Year at the Piano* (\$1.00).

Price, \$1.00  
In Four Books—Each 35 cents

## BEGINNER'S BOOK

### SCHOOL FOR THE PIANO—VOLUME ONE

By Theodore Presser

Known to thousands of teachers and students as the "Red Book" this is one of the most frequently used elementary instruction books for the piano. Meeting fully the modern demand for beginning with the Middle C approach, it prepares the student for future advancement with sane, interesting study and recreation material. Taking the pupil as far as the beginning of scale study, this book is followed by *Student's Book, Vol. 2* (\$1.00) and *Player's Book, Vol. 3* (\$1.00).

Price, \$1.00

## TUNEFUL TASKS

### TWENTY LITTLE TUNES IN ETUDE FORM

By John Thompson

Supplementary material is often most helpful in the first year of study at the piano, if the material is carefully selected and judiciously assigned. Dr. Thompson here presents 20 short studies covering points in first grade technic. There is a wide and most pleasing variety in the contents of this book.

Price, 75 cents

## TECHNIC FOR BEGINNERS

### PREPARATORY TO ALL STANDARD WORKS

By Anna Priscilla Risher

This book has been exceptionally successful because it presents, in an attractive manner, modern technical studies which prepare young pupils for future work on the studies of Pischner, Hanon, Philipp, etc. Fine for developing independent finger action.

Price, 75 cents

## BEGINNING WITH THE PEDALS OF THE PIANO

By Helen L. Cramm

Miss Cramm, who has many successful juvenile publications to her credit, here gives young students excellent material for making a first acquaintance with the pedals. The pieces, while tuneful, are sufficiently easy for pupils in grade two to play, almost at sight.

Price, 75 cents

## SHORT STUDY PIECES IN ALL KEYS

By Frederick A. Williams

Frequently students ready for third grade work have not a thorough acquaintance with tonality and later will be found complaining that they can't play in certain keys. Through the medium of tuneful study pieces in each of the major and minor keys this book helps the pupil in such instances.

Price, 60 cents

## TWELVE MELODIOUS STUDIES

### FEATURING SCALE AND CHORD FORMATIONS

By Carl Wilhelm Kern

Third grade pupils cannot be given too much drilling in the scales, particularly if it is done through such pleasing material as is presented in these studies by a writer especially gifted in combining the useful with the attractive.

Price, 60 cents

## CZERNY-LIEBLING

### SELECTED CZERNY STUDIES—IN THREE VOLS.

Selected and Edited by Emil Liebling

The "cream of Czerny" studies carefully and intelligently grouped in three volumes that will supply earnest students with material for technical practice from the second to the seventh grade.

Each Volume—Price, \$1.00

"HOW PEOPLE ARE SWAYED BY SONG" by Mark Sullivan

## STANDARD GRADED COURSE OF STUDIES

For the Piano  
Originally Compiled by  
**W. S. B. MATHEWS**  
In Ten Grades  
Price, \$1.00 Each  
Constantly Revised, Re-  
Edited and Kept Up-to-Date

Grade One, a Popular First Instruction Book, with the Middle C approach (both clefs at the beginning), is suitable for even the youngest beginner, and is for class or private teaching. With the revised first grade of the "Standard Graded Course," teachers now may care for all piano beginners in the latest and most approved procedures, and, most important of all, be able to follow first grade work with a definite course for successful study in later grades. The Other Grades provide "the back-bone" for a complete course in piano study and they have the desirable feature of being so arranged as to allow the teacher a wide latitude in the selection of pieces and studies to expand and supplement the work in each grade.

## TECHNIC FOR BEGINNERS ON THE PIANO

By Anna Priscilla Risher

Teachers, with an eye trained to the future of talented pupils, early introduce this work as a preparation for the studies of Hanon, Philipp, etc.

Price, 75 cents

## MASTERING THE SCALES AND ARPEGGIOS

By James Francis Cooke

A comprehensive work which may be introduced as early as grade 2 and used as collateral material up into grade 5. Unique and thoroughly practical methods of presentation place this work supreme in its field.

Price, \$1.50

## NEW RHYMES AND TUNES

FOR LITTLE PIANISTS

By Helen L. Cramm

Answers the question, "What shall I do with the children while they are trying to learn the notes on the staff?" Many, many teachers have found this book a valuable accessory during the young pupil's first months of study. Both clefs are used from the start.

Price, 75 cents

# PIANO TEACHING "RELIABLES"

These Publications Are Favorites With Many Successful Teachers  
Examination Privileges Cheerfully Granted. Just Ask for Those You Want "On Approval"

## MUSIC PLAY FOR EVERY DAY

THE GATEWAY  
TO PIANO PLAYING

An irresistible very first piano book for little beginners, 5 to 8 years of age. It appeals to the juvenile imagination from the start with its game-like lessons, story book style explanations, captivating pictures, charts and melodious and rhythmical musical material. Every lesson is a "playtime" to the little tot.

Price, \$1.25

In Four Books (For Convenience in Class Use), 40c Each

## HAPPY DAYS IN MUSIC PLAY

A SEQUEL TO "MUSIC  
PLAY FOR EVERY DAY"

A brilliant work, giving the child genuine pleasure in piano study leading right up to the third grade. Keeps up the high plane of interest and the irresistible attraction for piano study created by the delightful and distinctive features in "Music Play for Every Day."

Price, \$1.25

In Four Books (For Convenience in Class Use), 40c Each

## The Very Popular "Year by Year" Course by John M. Williams THE FIRST YEAR AT THE PIANO

John M. Williams

By John M. Williams

"First Year at the Piano" provides a progressive and modern beginner's book, ideally suited for the average pupil in the ages between nine and twelve, or perhaps a little older. Both clefs are used from the beginning and by the time the student has finished the pleasurable first year of study with this book, the very first scale work has been attempted, phrasing is well understood and an excellent foundation secured for future development into a proficient pianist.

Price, \$1.00

In Four Books (For Convenience in Class Use), 35c Each

After the work in this volume is completed, continue with:

### SECOND YEAR AT THE PIANO

By John M. Williams—Price, \$1.00

### THIRD YEAR AT THE PIANO

By John M. Williams—Price, \$1.00

### FOURTH YEAR AT THE PIANO

By John M. Williams—Price, \$1.00

### FIFTH YEAR AT THE PIANO

By John M. Williams—Price, \$1.00

## GROWN-UP BEGINNER'S BOOK—For the Piano

By William M. Felton

Today, more than ever, students of mature years are taking up piano study, realizing that with this instrument lies their best opportunity for self-expression in music. "Grown-Up Beginner's Book" leads towards a definite goal, the playing of the many fine compositions and arrangements, about medium grade, that are available for piano players. Everything in the book was placed there with the adult student in mind—the exercises are for mature hands, the pieces appeal to the adult intelligence.

Price, \$1.00

## PROGRESSING PIANO STUDIES FOR THE GROWN-UP BEGINNER

By William M. Felton

Follows the result-producing "Grown-Up Beginner's Book."

Price, \$1.00

**VIOLIN TEACHERS**—Send us a postal with your name and address and the request "Send to me your teacher's price list on Violin Methods, Studies, and Albums."

## MY FIRST EFFORTS IN THE PIANO CLASS

(Piano Class Book No. 1)

A remarkable first book for classes of piano beginners. Its application to practical class procedures is simple. It is distinctive for original material, fascinating melodies, delightful rhythms, logical progression, immediate results and satisfying advancement. The start, of course, is made at "Middle C," and the fun begins at once. When the class has completed satisfactorily the work in this book they can pass on to the study of "Making Progress in the Piano Class" (Piano Class Book, No. 2) (75c) and then to "Proficiency in the Piano Class" (Piano Class Book, No. 3), (75c) the final book in the series.

Price, 75 cents

**VOICE TEACHERS**—Folders and Catalogs showing portions of sacred and secular songs are yours for the asking. Also ask for "Voice Teacher's Price List—K-15."

## BEGINNER'S BOOK

SCHOOL FOR THE PIANO—  
Volume I

By Theodore Presser

"Beginner's Book" stands in immense favor with thousands of teachers. Its wonderful first lessons, in the latest revised edition, follow the modern procedure of teaching up and down from Middle C into both clefs. It is a "first reader" in piano study by which teachers achieve speedy results with young beginners.

Price, \$1.00

When pupils are ready to proceed with this pleasing course they can take up Student's Book (Vol. II, School for the Piano) and then Player's Book (Vol. III, School for the Piano).

## SELECTED CZERNY STUDIES

Compiled and Edited by

Emil Liebling

IN THREE VOLUMES

The Famous

"Czerny-Liebling" Volumes

The piano study material written by Czerny seems to be absolutely indispensable, and teachers who can inspire their pupils to follow Liszt's advice, "practice Czerny diligently," are certain to produce players of marked ability. The eminent piano pedagog, Emil Liebling, selected for these three volumes the best of all Czerny's studies and carefully arranged them in progressive order. The first volume can be introduced with the pupil advanced in the second grade. Volume two runs in grades three to five and Volume three goes along in grades five to seven.

Price, \$1.00 Each Vol.

## TUNEFUL TASKS

Twenty Little Tunes in Etude Form  
for First Year Students

By John Thompson

Cheerful tunes, in a variety of rhythmic patterns, written by a noted pedagogical authority for use as supplementary material to the first instruction book. Favored by teachers and students, everywhere.

Price, 75 cents

## BILBRO'S "MIDDLE C" KINDERGARTEN BK.

By Mathilde Bilbro

A "both-clefs-from-the-start" Kindergarten instruction book. A fine instruction book for use with the youngest piano beginners in class or private.

## PIANO TEACHING MATERIALS BY MATHILDE BILBRO

### BILBRO'S "MIDDLE C" KINDERGARTEN BOOK

A fine instruction book for use with the youngest beginners at the piano, in class or private lessons, using both clefs from the start.

Price, 75 cents

### BILBRO'S FIRST GRADE BOOK

Piano beginners of the primary school ages progress rapidly with this practical and up-to-date instruction book. Teaches notation in both clefs from the start.

Price, \$1.00

### GENERAL STUDY BOOK

By Mathilde Bilbro (Grade 1)

Price, 75c

Many progressive teachers use this work for supplementary material to the first grade study of young students.

### EASY STUDIES IN EARLY GRADES

By Mathilde Bilbro (Grade 1½-2)

Price, 75c

Young pupils advanced just past the beginner's stage find these studies most interesting in variety.

### TWELVE PIANO STUDIES

By Mathilde Bilbro (Grade 2)

Price, 60c

This book is used by many teachers to provide supplementary practice material for ambitious students.

### TWENTY-FIVE MELODIES FOR EYE, EAR, AND HAND TRAINING

(Grade 2-3)

By Mathilde Bilbro

In this work the author presents valuable educational material in the form of tune-ful pieces to develop musicianship as well as technical facility.

Price, 75 cents

MATHILDE BILBRO, noted teacher, writer and composer, was born in Tuskegee, Ala. Years of experience in teaching, specializing in work with young students, has brought to her compositions, and more particularly her

MATHILDE BILBRO

educational materials, a practicalness that teachers, every where, appreciate. Miss Bilbro formerly taught in Gadsden, Ala., but in recent years has devoted all of her time to composition at her home in Birmingham.

### SHORT MELODY ETUDES WITH TECHNICAL POINTS

(Grade 2½)

By Mathilde Bilbro

A feature of this popular study book that will appeal to teachers is that all of the material is presented briefly, but with complete coverage of the technical point to be gained.

Price, 60 cents

### MELODIES IN DIFFICULT KEYS

By Mathilde Bilbro (Grade 3-4)

Price, 60c

Melodious compositions in major and minor keys with signatures of 4, 5, 6 and 7 sharps and flats. Invaluable study material for many pupils.

### PRISCILLA'S WEEK

Seven Characteristic  
First Grade Piano Pieces

By Mathilde Bilbro

Cute verses and clever illustrations accompany busy little Priscilla as she goes on her weekly round of work and play. A most fascinating book for the dainty miss in her first year of piano study.

Price, 75 cents

*Christmas Secrets*

MERRY CHRISTMAS TO ETUDE FRIENDS EVERYWHERE

# MUSIC . .

# in OUR TIME

Americans Love Music. They quicken to Stravinsky and Debussy (some straight, some "swing") as well as to Gershwin and Kern, Cole Porter, or a Boris Morros film score . . . Music all. A new speech produces within itself a new technique. Czerny, Leschetizky, et al., are aliens to Today's American temperament . . . thus the spectacle of thousands on thousands of American children (and adults!) abandoning piano lessons. Yet these people are musical: DEEPLY musical!

Music is a Mother wounded by the inertia of the average Music Teacher:—the Czerny tyrant; the Leschetizky pedant. Why defy Today's candidate to reach music, to express the music within himself—by the forbidding initiation of years of finger exercises? Why not speed the pupil's progress with the course for

# "MODERN PIANO" by LEE SIMS

## ... A Panoramic Course of Piano Study

Lee Sims, long famed throughout the U. S. and Europe as one of the outstanding composers and pianists of the rising American school, is pre-eminently qualified to teach others to study, at home, the piano and its music.

Wholly self-taught, he is peculiarly familiar and sympathetic with the novice's problems. He solved them for himself. "MODERN PIANO" now solves them for you.

"MODERN PIANO" not only arises directly from basic piano techniques

but also broadens their scope. It brings the student to the music of the piano rather than to mere scale virtuosity.

"MODERN PIANO" is a concentrate of ten richly illuminating lessons comprising 110 illustrated pages, designed to help the veriest tyro at the keyboard. It is not a "learn-to-play-by-ear" outline. Nine years of extreme patience and sincerity have produced this course, which fills Today's crying need for a home-study course of definitive character. Today's American music-lovers can now supplement their passive role of listener with the lively role of active participation in the making of Music.

## ACCLAIMED BY AMERICA'S FOREMOST LIVING AUTHORITIES

I have looked over "Modern Piano—Instructions for the Beginner" rather carefully . . . anyone who is willing to work at this course—and I do mean work—should be able to teach himself to read and play popular music.

DEEMS TAYLOR

I think Lee Sims' book an intensely informative and useful work, for teachers as well as novices. He boils down the essential facts to the least possible wordage and visualization, thereby saving endless time and headaches. . . . He describes and illustrates the fundamentals of piano-playing so clearly that, not to understand them, means to have a closed mind, and to be unable to see and read.

LEONARD LIEBLING

Editor-in-Chief, Musical Courier

Sim's work, I think, is going to create musical amateurs. That is one of the essential businesses in the modern world because if amateurs go out of existence—as is threatened—in the end there won't be any music.

GILBERT SELDES

Director, C.B.S. Television

Lee Sims' "Modern Piano" is an Achievement. I expect it to be the talk of the town, musically, this season—and for many more to come.

PAUL WHITEMAN

Out here in Chicago I've noticed several of the nation's music critics giving your "Modern Piano" Three Typographic Cheers. I'd like to add my cheer to the critical huzzahs and make it Four! I know the years of ardent labor you poured into this effort . . . it will make a more musical nation of our country.

RUDY VALLEE

Lee Sims' course on "Modern Piano" presents with unusual clearness the elementary matters of notation and keyboard harmony. Those who have the resolution can undoubtedly learn much from this course.

JOHN ERSKINE

Former President Juilliard School

"Mr. Sims has been practicing his theories herein set forth for the last nine years. Some of them are striking to a student reared upon the dry fare of Czerny, Tausig, or Plaidy. One is impressed by the obvious, deep sincerity of this—actually the first—attempt to bridge the gap between 'popular' and serious music. Mr. Sims' book could adorn the shelves of Iturbi or Gieseking without insulting their intelligence; Dameron Runyon or Walter Winchell could study it at home. . . . It is far removed from the 'Learn-to-play-at-home' type of thing. Buy it and study it—you'll want to play the piano."

JULIAN SEAMAN

New York Music Critic

### TABLE OF CONTENTS

- FOREWORD . . . . . An open letter to the pupil.
- EDITORIAL . . . . . Essentials of the modern pianist's training.
- Lesson 1: The Piano Keyboard. The Staff. Note Reading. Time Values.
- Lesson 2: The Chromatic, Twelve Major Scales and Progression of Keys.
- Lesson 3: The Twelve Major Chords. 7th Chords in Cycle Progression.
- Lesson 4: Four-Four Rhythm Bass Accompaniment.
- Lesson 5: The Seven Relative Chords of Each Key. Melody in Rhythm. Adding the Harmony Notes to a Melody.
- Lesson 6: Seven Forms of Chords in All Twelve Keys.
- Lesson 7: Arpeggio Scales. Tenth Positions. Sixth Tones in the Afterbeat Chords.
- Lesson 8: The Pedals. Tenth Progression.
- Lesson 9: Embellishments. Breaks. Ninth Chords. Whole Tone Scales. Augmented Chords.
- Lesson 10: Reviewing the Entire Course in an Arrangement of Gypsy Days.

ENCYCLOPEDIA LIST OF ANSWERS  
TO YOUR QUESTIONS

—a miracle of compactness and an adroit departure from the dry pedagogy that long had kept America's musical emotions under blankets.

ARTIE SHAW

I have had a very real admiration for Lee Sims for many years, both as composer and as pianist. Now, I am very happy, indeed, to bear witness to the very interesting manner in which he has handled the hard problems of "getting across" to aspiring pianists those practical and workable solutions for skilful performance of our current American music; "Modern Piano" is very well done.

GLENN MILLER

This is the greatest course I've ever seen. The freshness and understanding of Lee Sims' approach is fascinatingly revealing, making graphic what too long has been befogged in academic small-talk and ambiguous directions.

PERCY FAITH

Canadian Broadcasting Corp. Music Director

"Modern Piano" is a landmark in the Coming of Age of American music. It was inevitable that such a work should appear, necessity being the mother of invention,—and just as inevitable that so qualified a votary of the less-transient phases of American music as Lee Sims should have written it.

BORIS MORROS

Hollywood's Foremost Music Director

The family and I have been excitedly going through your "Modern Piano," and I want to congratulate you for working out with such clarity and simplicity so clear and wide a "window" into the modern pianoforte. You've performed a great service to that great musical section of America who formerly have found the piano a more or less technically-forbidding instrument.

FERDE GROFE

A solid, exhaustive yet lively education in the fundamentals of the piano, 10 lessons bound, boxed, complete, \$5

Lee Sims Publications, Inc., 521 Fifth Ave., New York City

Send No Money. Simply a Post Card Saying:

Please send me "MODERN PIANO" by Lee Sims, for which I agree to pay the postman \$2, and balance \$1 monthly for 3 months . . . OR enclosed find \$5 (check or money-order) in full payment

Incidentally, The Perfect Gift

The need of a comprehensive teaching manual in the field of popular music would seem to be met in a peculiarly effectual manner by the course for "Modern Piano" by Lee Sims that has just come off press.

Thus it is made evident that the effective playing of popular music today is an art that presupposes the possession of a much more substantial musical foundation than the average layman ever associates with it. And it is to the credit of the author of the book that he presents the basic musical essentials, with the special "slant" imposed by its specific purpose, in so comprehensive and easily comprehensible a manner in compressed form . . . a timely and significant contribution.

MUSICAL AMERICA

# ...for YOU!

## CHOICE REWARDS FOR MAKING NEW FRIENDS FOR "THE ETUDE"

• In return for subscriptions to THE ETUDE which you can easily and quickly obtain from your musical friends and acquaintances, we will send your choice of these attractive, useful articles WITHOUT COST! Send each order with full payment of \$2.00 directly to us with your choice of reward. Your personal subscription alone cannot be counted. Complete catalog of rewards sent FREE on request.

### COMBINATION BOOK END—SMOKER'S SET

This unique set has a polished maple finish and includes glass cigarette container, match holders and crystal glass ash tray. An attractive as well as practical addition to the home or studio. Awarded for securing ONE SUBSCRIPTION.

### LADIES' FRENCH PURSE

Here is a compact, combination purse and bill fold. Closed, it measures 4" x 3". Opened, it reveals two pockets for bills or memos. It is made of moire silk and comes in two colors—your choice of brown or navy blue. Your reward for securing ONE SUBSCRIPTION.

### KROME-KRAFT SERVER

Here is a Server for cake or sandwiches that also may be used as a center piece for fruit, etc. It is 10½" in diameter and has a bright chromium finish. Awarded for securing THREE SUBSCRIPTIONS.

### CASSEROLE

This unique award is doubly useful. Besides regular service as a Casserole, the Chromium Tray (diameter 10") may be used for serving cold cuts, salads, cake, etc. The Casserole itself is genuine Pyrex with the new modern line cutting. One quart capacity. Awarded for securing FIVE SUBSCRIPTIONS.

### MATCHED KNIFE SET

This fine set of Knives consists of an 8" Slicing Knife, a 7" Butcher Knife, a Pot Fork and a Parer. All are made of high quality, heavy gauge Carbon Vanadium Steel and have polished rosewood handles. An unusual gift or prize. Awarded for securing FOUR SUBSCRIPTIONS.

## Tuneful Teaching Pieces

(Each with Attractive Title Page)

Recommended by Mr. Wagness for use as Supplementary Material with

## THE BERNARD WAGNESS PIANO COURSE

### AT THE DERBY

By Willis Northrup

Key of A-Minor. 6/8 time. As the title implies, a lively piece with plenty of "pep". Ends with a brilliant glissando, followed by a sforzando chord. Price, 35c-T

### THE HOBGOBLIN

By Bernard Wagness

Key of A-Minor. 4/4 time. A staccato number to be played "misterioso". The middle section calls for some left hand work. Brilliant crossing of hands for the climax. Price, 35c-T

### HYMN TO THE SUN

Price, 30c-T

By Emory Pelham

### SHADOWS IN THE WATER

By Margaret Fleming

Key of C, with middle section in the relative minor. 3/4 time. An easy arpeggio piece, introducing crossing hands and left hand melody playing. Price, 40c-T

### MARCH OF VICTORY

By Bernard Wagness

Key of F. A military march that can be played by a first grader, but is also recommended for more advanced youngsters in need of rhythm drill. Price, 30c-T

### INDIAN RAIN DANCE

By John Stockbridge

Key of A-Minor. 4/4 time. Young boy pupils will get a real kick out of playing this characteristic first grade piece. Two-note chords only. Price, 30c-T

### DAVY JONES AND THE PIRATE

By George C. Franklin

Key of B-flat. 4/4 time. Descriptive march that may be given to boy pupils about ready for the second grade. Price, 30c-T

### THE CELLO

Price, 30c-T

By Bernard Wagness

### PLANTATION SERENADE

By Bernard Wagness

Key of C, with occasional modulation to A-Minor. Ends with clever banjo imitation. Excellent first study in syncopation. Price, 35c-T

### ELFIN FROLIC

By Bernard Wagness

Key of F. 6/8 time. A dainty little number stressing two-note slurs, all of which begin on the up beat. Price, 30c-T

### PING PONG

By Mary Parnell

Key of F. 4/4 time. First grade piece offering good legato practice. Five-finger position. Price, 30c-T

### CASTILIAN DANCE

By Alberto Navarro

Key of F. 2/4 time. An easy-to-play tango with syncopes in both right and left hand. Price, 40c-T

## INVEST YOUR MUSIC MONEY WISELY

WHY IS the Bible the cheapest book in the world? Why can you purchase the complete works of Shakespeare at less than the cost of the latest novels? The answer is simple—mass production, no royalties; constant demand.

By the same token you can buy Beethoven's "Moonlight Sonata"—15 pages of the world's best music—for only 15c in the CENTURY EDITION.

Beautifully printed, carefully edited, the best of paper and workmanship throughout. Think of it: Over 2,000 selections to choose from and none of them cost more than 15c, a copy. Century Sheet Music is truly dollar value for 15c.

TEACHERS who are today supplying their pupils' needs from the Century catalogue are making it possible for many parents to continue their children's musical education, and its low cost is likewise aiding them in their new student enrollment.

That's why we say, "Please Ask for Century Edition."

You will get a new conception of your music's worth.

## CENTURY PIANO SOLOS, 15c ea.

(Capital letter indicates key number the grade.)	
*1860 Andante Finale, Lucia, D-3.....	Leschetzky

## The World of Music

Interesting and Important Items Gleaned in a Constant Watch on  
Happenings and Activities Pertaining to Things Musical Everywhere

ROBERTO  
MORANZONI

THE CHICAGO CITY OPERA COMPANY opened its season on October twenty-ninth, with a gala performance of Verdi's "Otello," with Giovanni Martinelli as *Otello*, Lawrence Tibbett as *Iago*, and Helen Jepson as *Desdemona*. Roberto Moranzoni, the "inspiring conductor, pointed the climaxes with clarion ferocity and distilled a lovely fragrance for the love duet."

A "DOCTOR'S ORCHESTRAL SOCIETY" is the latest infant setting up its cry for recognition in the musical life of Father Knickerbocker's rather overgrown village.

MORIZ ROSENTHAL celebrated on November 13th the fiftieth anniversary of his American debut on November 13, 1888. For this occasion he gave at Carnegie Hall, New York, a piano recital before an enthusiastic audience of the cream of Gotham's cultural and social life.

THE MUNICIPAL THEATER of Rio de Janeiro has closed its season in which Massenet's "Thais," Boito's "Mefistofele" and Puccini's "Madame Butterfly" obtained the greatest success.

MARY TURNER SALTER, former popular oratorio, concert and church singer, and composer of more than two hundred songs, passed away on September 12th, at Orangeburg, New York, at the age of eighty-two. She was the wife of Sumner Salter, widely known organist.

"L'INCORONAZIONE DI POPPEA (The Coronation of Poppea)," a historic opera by Claudio Monteverdi (1567-1643), was presented recently with great success, in the regular season of the Colon Opera, Buenos Aires, with Tullio Serafin conducting.

THE FIRST CENTENNIAL OF MUSIC TEACHING in the Public Schools of America has been completed, with widespread appropriate celebrations in many communities. It was in 1838 that Lowell Mason was officially appointed instructor of music in the public schools of Boston.

JOHN  
CARTER

THE METROPOLITAN OPERA COMPANY announces for this season restorations of Massenet's "Thais" with Marjorie Lawrence and John Charles Thomas as principals; "Fidelio" with Kirsten Flagstad as *Leonore*; "Louise" with Grace Moore in the title rôle; Verdi's "Falstaff" with Lawrence Tibbett in the name part; "Boris Godounoff" with Ezio Pinza as the fated emperor; and "Orpheus and Euridice" with Kerstin Thorborg and Vina Bovy in the name parts. Sixteen new singers are listed, three of them Americans: John Carter, tenor; Risé Stevens, contralto; and Leonard Warren, baritone.

RECOGNITION OF WOMEN in the Musical Profession, including symphony and opera orchestras, on an equal footing with "mere" men, is the purpose of a movement launched by a committee from the eight hundred organized women artists of New York. And so the embattled Amazons advance to rout an entrenched masculinity of the tonal art.

PATRICK BERESFORD LYNDON, of Sanderstead, Surrey, a lad of nine years, received at the recent Croydon Musical Festival two silver medals, a bronze medal, and a silver cup, as the most promising student of music.

ONE THOUSAND LITTLE KNOWN WORKS, or more, by composers of the fourteenth to eighteenth centuries, have been collected by the Federal Music Project of New York City. Among these creative musical folk are two kings, Henry VIII (1509-1547) of England, represented by fifty dances written for the recorder before he came to the throne in 1509; and six songs and dances for flute and violin, by Frederick the Great (1740-1786) of Prussia. There are other such interesting items as *The Joke* by Haydn, for two violins, with one part in reverse of the other.

THE SOCIETY OF MOZARTIAN STUDIES, of Paris, has placed a stone tablet on the front of the Hotel de Beauvais, near Saint Gervais, recording that in his seventh year, between 1763 and 1764, the Salzburgian master lived there.

ARCHIE EMMETT ADAMS, composer of the popular song, *The Bells of St. Mary's*, died October 30, 1938, in London. He was born in 1890, in Australia. The song is dedicated to St. Mary's Church, the Mother Church of Southampton, England, of which the history runs back to Saxon England. It has been several times rebuilt; and the fine peal of bells was first heard on June 27, 1914.

"HOSPITAL BEDS FOR MUSICIANS" has become the slogan of Sir Henry Wood, leader of the Promenade Concerts at Queen's Hall. At the recent opening night of the season he "cast aside his usual modesty and monastic vows of Trappist silence, and made a speech appealing for support for his scheme."

ERICA MORINI, Vienna born violinist; John Brownlee, Australian baritone of the Metropolitan Opera Company; and Beveridge Webster, American pianist, arrived in New York, on October 19th, on the steamship Champlain, to be ready for their season of American engagements.

"SYMPHONIES UNDER THE STARS," in their seventeenth consecutive season in the Hollywood Bowl, opened on July 12th with a performance of Wagner's "Die Walküre" with Maria Jeritz as "Brünnhilde," Grete Stueckgold as *Sieglinde*, Paul Althouse as *Siegmund*, and Richard Hageman as conductor.

ROBERT ELMORE, Philadelphia composer, and widely known organist of Holy Trinity Church of Phillips Brooks fame, has received the Mendelssohn Award for his composition, *Three Fantasies*. The work is scored for four voices, with occasional use of six or eight parts; and it was submitted in a nationwide competition sponsored by the Mendelssohn Club of Philadelphia, to encourage composition for large choruses.

THE LONDON THEATER CONCERTS, conducted by Stanley Chappell, are a new movement in the British capital, to provide central London with orchestral music after Sunday evening dinner.

LINI PAGLINGHI, Brooklyn born and California reared American soprano, is reported to be creating a sensation in South America, where, at her recent debut in Rio de Janeiro she received ovations surpassing those bestowed upon Lily Pons.

THE WORCESTER MUSICAL FESTIVAL (Massachusetts) held its seventieth annual session on October third to eighth, with Albert Stoessel as leader of the choral and orchestral forces. On the opening program the chief choral interest centered in the presentation of the "Ordering of Moses" by R. Nathaniel Dett. The festival closed with a concert performance of Verdi's "Rigoletto" with Josephine Antoine, Robert Weede, Charles Hackett, John Gurney and Lucille Browning as soloists.

THE TIPICA MEXICAN ORCHESTRA, with Angell Mercado leading, has returned to The States for its annual tournée. Its concert in Orchestra Hall, Chicago, on October 30th is said to have won a most enthusiastic success.

JOHN POWELL, American pianist, celebrated on November 1st, the twenty-fifth anniversary of his American debut, with a recital in Carnegie Hall, New York, when his program included a group of Chopin's "Etudes," three of his own transcriptions, and Liszt's *Tarantella*. The proceeds of the occasion were to be used to purchase rare letters of Thomas Jefferson, to be added to the fine collection of the University of Virginia of which he was founder.

IN THE BAYREUTH FESTIVAL of the coming summer, Victor de Sabata, the eminent Italian conductor, will lead the performances of "Tristan and Isolde."

MRS. ELIZABETH SPRAGUE COOLIDGE celebrated on October 30th the twentieth anniversary of her patronage of chamber music festivals, when the usual single medal for distinguished service in this field of refined musical art was multiplied by three. These recognitions were bestowed upon Frank Bridge, English composer and conductor; Jacques Gordon, violinist and quartet director; and Hugo Kortschak, violinist, member of the faculty of Yale University, and distinguished contributor to the development of better chamber music in America.

EUGENIE SCHUMANN, last surviving child of Robert and Clara Schumann, has passed away at Berne, Switzerland, at the age of eighty-six. But four years old at the death of her father, she studied the piano with her famous mother and with Brahms. She also published a book, "A Lifebook of My Father," based on family diaries, documents and her own life in the home circle.

EUGENIE  
SCHUMANN

AN INSTITUTE OF BAYREUTH was decreed during the late celebrations of the one hundred and twenty-fifth anniversary of the birth of Richard Wagner. The Institute will especially promote the study of Wagner's life and works; and one of its first aims will be the compiling of an authoritative biography of the master.

DR. FREDERICK STOCK for the thirty-third time conducted the inaugural concert of the Chicago Symphony Orchestra on October thirteenth, this being the opening program of the organization of which Theodore Thomas became the founder-conductor in 1891, or forty-seven years ago. (Dr. Stock has not been conductor of the organization for forty-four years, as recently stated by one of our worthy contemporaries.) Bach's choral prelude, *A Mighty Fortress Is Our God*, as transcribed for orchestra by Dr. Stock, and Rachmaninoff's Symphony, No. 2 were the numbers of chief interest.

THE MOZART FESTIVAL at Asheville, North Carolina, was held for the second time in the last week of August. It closed with a performance of "Bastien and Bastienne," composed when Mozart was but twelve. The festival is the product of the enthusiasm of the young American conductor, Thor Johnson.

THE SAN FRANCISCO OPERA COMPANY opened its autumn season of nineteen performances with a brilliant presentation of Giordano's "Andrea Chenier" with Beniamino Gigli in the title rôle, this occasion reintroducing him to America after an absence of six years.

ROBERT VIROVAI, young Yugoslavian violinist of but seventeen years, made on November 3rd his American debut, when he was soloist with the New York Philharmonic-Symphony Orchestra at Carnegie Hall, with John Barbirolli conducting. Mr. Virovai won a distinguished success in the virtuosic "Concerto in D minor" of Vieuxtemps, by his "amazing technique," a performance "notable for its warmth and conviction," whilst "his tone was fine grained and pure, giving a seraphic beauty to the *andante religioso* and a bright flash to the *finale*."

VIROVAI

# An American Epic of Attainment

IT IS a fine, fine thing, that Dr. Chevalier Jackson has done in writing his autobiography. This most famous throat surgeon of his time, and the friend and counselor of many great singers, has produced a book as rich in human interest and general information as Dr. Victor Heiser's "An American Doctor's Odyssey" or Dr. Axel Munthe's "The Story of San Michele." Courageous and kind-hearted, he tells a story of almost incredible privations and sufferings in order to secure an education. A precocious youngster, small and frail, he aroused the jealousy of bigger boys who went to school with him near his home, which was on the edge of one of the bituminous coal districts a few miles west of Pittsburgh. They found him so far ahead of them in school work that they tormented, tortured and bullied him almost unbelievably. Dr. Jackson explains this as a case of inferiority complex upon the part of the boys, who entered school so late that some of them were in the primer at seventeen years of age, whereas he had entered school at four. An inferiority complex sets up a defense mechanism; and in this instance it took the form of cruelty to the little student, through physical torture. Everyone knows, however, that a bully is always a coward at heart, and Dr. Jackson's childhood bullies have passed into oblivion while he has advanced to immortal heights.

The story of his voyage in the filth of the steerage of an ocean liner, in order that he might study with the great London throat specialist, Sir Morell Mackenzie, is a little epic of determination. He tells with glee how he was called upon to take care of a man with smallpox and thus was removed from the steerage to the more endurable quarters of the ship's sick-bay.

Thrice, while Dr. Jackson was climbing up in his profession, he was laid low by tuberculosis. Did this faze him? No. He merely looked upon these periods of prolonged confinement to bed as splendid opportunities to arrange his material for the publication of his all important books upon the throat, the trachea, bronchi and the esophagus, and the remarkable technic he developed for removing through the mouth foreign bodies lodged in the lungs. As a result of his bronchoscopic clinics, he has a veritable museum of objects ranging from safety pins and collar buttons to miniature watches and false teeth, which in some mysterious manner unfortunate individuals have managed to inhale into their lungs. With such an object in the lung, death after great suffering, is almost inevitable. Formerly removal was attempted by cutting into the lungs,

but the percentage of recovery was very small. Dr. Jackson, by reason of his development of the bronchoscope, and by his fabulously delicate and sure touch, has thus personally saved thousands of lives. He attributes his surety of touch, and his freedom from tremor at three score and ten, very largely to his lifelong abstinence from alcohol and tobacco.

In treating the throats of a vast number of singers, he has always enjoined them not to smoke or to drink. He looks upon nicotine and alcohol as diluted poisons pec-

uliarly injurious to the mucous membrane of the throat and the nerve control of the delicate muscles of the larynx. He is so convinced of the grave evils of alcohol that he refuses (except where unavoidable) to patronize a hotel or a restaurant selling liquors. He also puts strictures upon the abuse of the voice through yelling, such as one hears at football games. According to his experience this does untold damage to the vocal organs of those who intend to become singers.

An extraordinary man is Dr. Jackson, five feet eight inches tall, very thin, very agile, subsisting upon a most frugal diet, eschewing meat, he nevertheless has the endurance to tire out many younger helpers. At seventy-three he has the eager activity of a youth. An enthusiastic fellow Rotarian, we have seen him at many luncheons, when summoned by a hotel attendant, dart off with the alacrity of a young interne answering his first ambulance call.

Permitting himself almost no social life, Dr. Jackson has given his time to his profession with the devotion of an anchorite. His dominating passions have been his love of truth, of little children,

animals, nature, and his great desire to relieve human suffering. In this work he has struggled to inform the public of the great danger of putting foreign bodies in the mouth. Lobbying in Congress, he fought through a bill, with great personal expense of time and money, to require manufacturers of lye to label all of their products, offered for general sale, with the word "Poison." Lye resembles granulated sugar and countless children have died of taking it by mistake. Our national legislators were very wary of his propaganda and could not understand a man who was spending his own money, with no possible hope of profit, and who, in fact, was trying to injure his own business by preventing the occurrence of diseases in which he specialized. One of Dr. Jackson's proudest treasures is the pen with which President Coolidge signed the bill.

Loaded with medals and honors from many countries,

DR. CHEVALIER JACKSON

including the Legion of Honor of France, the Order of Leopold of Belgium, the Order of the Crown of Italy, member of thirty-six world famed medical societies, staff specialist in five great Philadelphia hospitals at one time, and acclaimed throughout the world as one of the greatest Americans of all time, he is so modest and retiring that many are astonished when they first meet him. Never money-minded, Dr. Jackson is an altruist who has done an immense amount of his work without commensurable remuneration. Not until a protective secretary began to take charge of his fees, did he begin to have the financial relief to which he was entitled by his great genius. A man of great versatility, Dr. Jackson has taken an interest in a wide range of subjects, from cooking and cabinet making

to fishing and painting. His book, published by MacMillan & Company, presents in color, many of his very extraordinary paintings. Dr. Jackson is ambidextrous, and audiences at his clinics and lectures are amazed to see him start to draw an intricate anatomical design, with a crayon in each hand, both working at the same time. He was not born with this gift but developed it.

In August, 1937, THE ETUDE printed a digest of a lecture upon the voice, given by him before the Philadelphia Music Teachers Association. This attracted wide attention.

All in all, his book will become one of the classics of American achievement in surmounting tremendous obstacles. Read it—you will be a better and wiser individual for having done so.

## And the Mothers Sang

ONE of the most resultful movements of the present day, in our country, is the Parent-Teachers' Association. Twenty-five years ago mother took Johnny and Mary to school and more or less consigned them to a kind of alien institution following a fixed pattern of education. If Johnny played "hookey," or if Mary became neglectful or impertinent, mother or father was called to the school to straighten things out or to reinstate the child after a suspension. Other than this, the parent had no more contact with the school system until graduation day. It was as foreign to the average parent's life as the Water Department or the Fire Department of the community.

Of course this was all wrong and had to be changed. Meanwhile great *mutations* had come to the entire educational system in relation to national life. The first intimation that the parents had of this was a radical change in the child's report card. The big change came about in the attitude toward the child. In other words, children were no longer compelled to conform to subject matter, but the subject matter was made to conform to the individual needs of the child. Parents of all types began to take an interest in the systems in the school. They likewise noticed that the foremost factors on the new type of report had to do with those things which make for good citizenship: "Character," "Health," "Personal Responsibility," and "Initiative," instead of the old "readin', ritin' and 'rithmetic." In other words, the educators realized that the first obligation of any school system is to make good citizens, no matter what other education they might have.

The objective was to train the whole child and not merely a few areas of his brain. The intellectual, physical and emotional activities of the child all received attention in proper proportion.

The nature of the great change in the attitude toward the child in the school is indicated by the scope of the daily topics for American Education Week, conducted last November in all the schools of America. Note that there is no reference in this to "readin', ritin', and 'rithmetic."

### Daily Topics

- Sunday, November 6—Achieving the Golden Rule
- Monday, November 7—Developing Strong Bodies and Able Minds
- Tuesday, November 8—Mastering Skills and Knowledge
- Wednesday, November 9—Attaining Values and Standards
- Thursday, November 10—Accepting New Civic Responsibilities
- Friday, November 11—Holding Fast to Our Ideals of Freedom
- Saturday, November 12—Gaining Security for All

Gradually, in different parts of the country, parents began to form themselves into groups to cooperate with the teacher in educating the child. This movement is now

THE CHORUS OF THE COUNCIL OF THE PHILADELPHIA HOME AND SCHOOL ASSOCIATION  
Dr. George L. Lindsay, Director of Music, Philadelphia Public Schools, is seen as Conductor, in the center of the picture. Mrs. John Masterman, President of the Council, is seated at his left; and Mrs. Clyde Baker, Chairman of Music, at his right.

# The Amazing Musical World of To-day

An Interview with the Eminent Pianist  
**WALTER GIESEKING**

Secured Especially for The Etude Music Magazine

By OLIVER DANIEL

This article presents the views of the artist speaking, and not those of THE ETUDE. It will unquestionably create controversy; but we feel that Mr. Giesecking's opinions merit the freest expression in a musical journalism forum such as ours. Whether all our readers agree with him or not, in these days we must support free speech, and therefore his ideals, especially in the matter of "Christian Art," must be read as his personal views and not those of THE ETUDE.

## Biographical Sketch

Walter Giesecking is an example of the true internationalism of artists. He was born in Lyons, France, in 1895, and spent his childhood there and on the Italian Riviera. His parents, who were German, moved to Hanover, where, at the age of sixteen, he began his studies with Karl Leimer. Giesecking now lives in Germany, but his career and fame are as international as his life has been. His American debut was made in 1926. He is as distinguished for his interpretations of Debussy as for his playing of Bach. His concert tours have taken him to nearly all parts of the musical world; and his programs have been drawn from composers of all lands and ages. The interests and abilities of Giesecking are so varied that in one city he may be known as a Mozart specialist; in another, as a peer of Beethoven interpreters; and in another, as a modernist of the contemporary manner.

WALTER GIESECKING

THERE IS MUCH TOO MUCH talk about music. If one is innately musical, he reacts to tones without the need of any explanation; he responds directly to the music itself and merely says that is beautiful' without ever bothering about a reason. To speak of the content of music, and to be specific regarding its meaning and emotional states, are extremely difficult to do, for many times it is next to impossible to put such expression into words. It is often difficult to classify emotional states, because our terminology is so poor beside the subtle expressive possibilities of other artistic mediums. We can hardly speak of music that is devoid of emotion. Even in what we might call bad music, emotional reactions are produced; but naturally they are of a vastly different sort than those evoked by our great masterworks.

"Absolute music has no meaning in the program sense, yet it is no meaningless succession of notes, for if it were how could such great masses of people in all parts of the world be so deeply moved by it.

"I recently saw in Germany a book that suggests that Beethoven used a literary pattern, as it were, for nearly all of his compositions. It is the work of a University professor, but I cannot now recall the name of either the book or of the author. He explains, however, that each work is composed around a definite drama or poem. It is really silly. I could not read all the way through it. About the 'Sonata op. 106 (Hammerklavier),' he says that it is modelled after Schiller's 'Jeanne d'Arc.' The Sonata 'Pathétique, Op. 13,' is supposedly modelled after a poem that was written about two years after the sonata itself. It was 'Hero and Leander,' I believe; but he got around that later by saying that it was another poem on the same subject but by a different poet.

"There is all of this foolishness about moonlight in the 'Moonlight Sonata,' the

silly blind girl story; and the associations about brooks and birds and stories that attach themselves to music. They go down through the centuries, doing a great deal of harm. Yet it seems impossible to suppress them.

"Even in the case of Debussy, whose music suggests painting in sound, the material of his ideas is obtained out of a certain sort of vision, but it ends there. The development is always musical. The names for the 'Preludes,' for instance, were often suggested by the music itself; and they are found written at the end rather than at the beginning of the compositions.

"In some of the great compositions, the expression lies in their movement; it lies in their lines as they flow along. Take the Mozart 'Sonata in A major,' for example. The musical line here, like a visual line, circles and turns in the air; yet it is always expressive. The same, too, can be so clearly seen in that simple and beautiful 'Sonata in C major.' Hum out the melody of the *Andante* from this sonata, and you will see that the melody can be almost traced through the air. Almost choreographically one's body seems to follow the line of the music.

## Spirit, not Technic, Makes Great Music

"MOST STUDENTS AND MUSICIANS who come to play for me, particularly in America, play too difficult music. It is different in Europe. I am not so well acquainted with the attitudes and teaching procedures of conservatories and music schools here; but it seems to me that it is the teaching of technic that is majored. Too often one finds that there is more concern about mechanical means than about the music itself, and many have more technic than their expression demands. At a recent concert in Chicago, a mirror was placed so that my hands could be seen from different

parts of the hall. Now such a thing may be of both interest and value to the student; but one must not forget that musical perception is grasped through auditory and not through visual impressions. Such an arrangement is of no importance musically. In Germany it is necessary to help the young pianist, particularly in technical means, as it is there that the expressive possibilities are majored, perhaps even too much—one cannot say.

## The Birth of a National Art

"MANY PIANISTS FROM ALL PARTS of the world come to play for me when I am in Wiesbaden. My old teacher, Karl Leimer, who also lives there, taught me from the time I was sixteen; and from him I learned to practice with concentration and not merely by finger movement; for practice must be always an intellectual affair and a process of mental training. In collaboration with Leimer, I have written a book on piano playing, that is available also in America. He is now almost blind, and it is pitiful to see him being helped about, yet in spite of this affliction, he is still active and still teaching.

"America is still so new a country; but what are a few hundred years, when one considers the establishment of a culture and a national consciousness. Reactions here are still like those of a foreign country. Although people are born here, their souls and inner feelings turn to other lands and other cultures are drawn upon for inspiration. Naturally, people here are musical, but then if one is asked, 'Where are the great composers?' one can only answer, 'It will take time.'

"Men in America have such a strange outlook on Art. The business man type seems to think that to have any art appreciation is to lack masculinity. It seems to be considered sort of funny here, and something of which one should be ashamed. They always look for the 'he-man' in every-

thing, and it is really amazing to meet so many apparently cultured people who entertain such ideas. While I was riding on a train recently I saw an advertisement that embodied this so clearly. It spoke of how much nicer it is to hear the sound of a *bess*, a *bassa* or whatever you call it—you know, a *fish*—splashing in a stream than the 'Moonlight Sonata.' It is ridiculous to drag great art expression down to help sell another package of tobacco, chewing gum or other commodity.

"As I am not very well acquainted with educational institutions here in America, I do not always know the attitudes they take on musical matters, but I find it amusing that universities, such as Harvard and Columbia, grant degrees in music and yet teach no applied music at all. I once heard a remark by Edward Burlingame Hill that 'Even if the Angel Gabriel came to Boston, Harvard would not have him teaching the trumpet.'

## Personal Participation a Stimulus

"I ALWAYS CONSIDER it more important to play, more important to make music, than simply to talk about it. Of what value is theory, if there is no music? There is at the present time in Europe a craze for the guitar. It does not produce very inspirational music, and I do not care for it myself; but it is used to accompany songs in an amateur way and does some musical good in spite of itself. Although I dislike amateur performances, at least they encourage someone in the making of music. So much more is learned from music itself than from all of the theorizing that is done about it. After one knows and lives with music, then one can bother to analyze its parts, and even then I do not think this is tremendously important except, at times among musicians, when one wants to refer to a certain part as, for example, 'the E major chord, or the B-flat section.' Then people know where you are and can follow

you; but, otherwise, what does it mean? "It is a remarkable thing that Germany has produced such an outstanding and unbroken line of great musicians, from Bach to Strauss. There have been broader fields there for musical activities than in any other countries. For this great development of music in Germany there are several reasons, one very formative one being the existence in the past of so many small cultural centers, so many separate rival courts where art was fostered. Nowhere else are there so many symphonic orchestras, so many opera houses, and so many concerts. There seems to be also a higher percentage of musical people in Germany, and the countries around, such as, Austria, Czechoslovakia, and Switzerland, than in any other part of the world. There is now an apparent lull, however, a waiting for the next great composer. Perhaps he is already here waiting to be 'discovered,' with his music resting unheard on his manuscripts.

### *The Composer's Awakening Incentive*

"THE TYPE OF CHRISTIAN IDEALISM which motivated many of the great artists of the past is no longer a potent force in the art expression of the present. We really have no such thing as Christian Art to-day. Bach was at heart a simple church composer, and there is a strong religious note in the texts he used in his cantatas, the 'Passions,' and in the stupendous 'Mass in B minor'; but in the case of Beethoven, I do not consider him as an expression of Christian Art. His work is a more universal, a more cosmic expression.

"All of those forces which affect the human being leave an imprint on his music. Climate is a determining factor only if it has been the same for many years and blends together with one's inheritance. Europe is almost too small to make many distinctions; and, if you send an Italian to Germany or Scandinavia, he will undoubtedly become accustomed to the colder climate, and will learn to drink schnapps instead of wine; but, if he is of a creative type of mind, he will retain his original ideas, and they will remain for the most part unaffected.

"When many composers begin, they compose because they love to do so and because they desire to express themselves. Many times success unfortunately destroys their naïveté. So many of the young composers feel it is criminal to write a major or a minor chord. Personally, I still like majors, and still appreciate a consonance. I discussed with Koussevitsky a recent modern music festival held in Paris. 'Most of it sounded absolutely degenerate,' he remarked.

"When traveling from one country to

another, I find that the people are remarkably similar. Everywhere one encounters folk of fine developed sensibilities, others of poor appreciation, and some with no response or appreciation at all. Musical pretenders one seems to find everywhere. There are many more unfortunate concerts than there are good ones. This of course profoundly affects peoples' reactions toward music and establishes their preferences. A work of Beethoven, Mozart or Bach can be unendurable if it is played badly; but the waltzes, and etudes of Chopin, the waltzes of Strauss, along with much mediocre music, all are somehow tolerable, even when played poorly; for the latter seem to take fewer gifts and less ability than the former. Compositions, consisting chiefly of sensuous arrangements of tones and brilliant effects, suffer little if they are played slower or faster; and, though it is true the effects will be more or less brilliant and elegant, the rhythm and melody stand fundamentally the same. *The Blue Danube* is an inspired composition, and I can stand hearing it even if it is poorly played; but a Beethoven sonata poorly played—never!

"Personally, I dislike the waltz rhythm. This *ump-pah-pah, ump-pah-pah*, seems to be such a simple, barbaric, foolish thing. I just dislike it.

"Some people feel that Bach, Mozart, and others of their period, should be heard only on a harpsichord; but, after listening to them on the piano, it takes a long time to adjust one's self to the thin tinkle of a harpsichord. It is only a matter of taste. Perhaps Bach should be heard that way, but certainly not Mozart. In intimate surroundings alone is it possible; but in a large hall the thin inadequate tone is out of the question. I do not actually disapprove of it. But I still play the piano. Friends of mine who are excellent musicians like it, so there must be something to it after all.

"Because music as a profession requires so high a degree of specialization that at times many musicians find other factors of their education and cultural interests insufficiently developed, some people adopt the attitude that musicians do not represent as high a level of intelligence as men of other professions. This is of course incorrect. Many musicians, however, do not have the same facility in expressing themselves as adequately through other mediums as in music. Although in the profession of music one may find as many unimportant members as in other professions, it should be remembered that it is only he who is outstanding in his field, who matters. Take Liszt! What an amazing man he was. To be a great musician, one must be a combination of many things."

### *"Going Through" the Book*

By LILLIAN STRAUSS NORTON

HOW VERY OFTEN we of the music teaching profession hear pupils remark, "I am almost through my book," or "I am going to hurry through the rest of this book so I can have a new one." We may be able to repress an audible groan or even a sigh, but inwardly we bemoan the fact that, all our efforts to the contrary, the pupil is still convinced that merely "going through" the book—covering the ground however sketchily—is the height of accomplishment.

Any child can readily see that going through the Fourth Reader at school is not equivalent to completing the Fourth Grade. Knowing how to read properly paves the way for a more thorough understanding of the problems of mathematics, English, and other studies, and enables the person to better solve these. In other words, it is

only the means to a desired end. Just so, music is composite, and unless every component part is recognized, understood and mastered, any composition or any musical grade is most certainly not completed any more than the reader alone constitutes the finishing of the school grade.

Oh, for words to impress that notes and note reading are, or should be, elementary and only the tools which the pupil should employ to bring about the finished result. To so many pupils a new piece means just a new arrangement of notes instead of a new musical pattern—a new and lovely picture that can develop under deft fingers, if and when the mind can relegate plain note reading to its rightful and subservient place so that expression can have full and sufficient sway.

## Radio Flashes

By PAUL GIRARD

THIS TIME OF YEAR almost everything centers around the symphony orchestra in the broadcasting of good music. Toscanini and the NBC Symphony have returned to the air. The Italian maestro's twelve scheduled concerts are about to draw to a close, but the memory of them will live on, for these concerts have been of the highest order. This year the broadcasts of the NBC Symphony have not only been tonally bettered, but the unity of the orchestra has been greatly improved.

This year, in connection with the NBC Symphony broadcasts, Mr. Samuel Chotzinoff, the pianist and critic who, at Mr. David Sarnoff's behest, was directly responsible for Mr. Toscanini's return to America last year, is heard as commentator in the intermission.

Howard Barlow, conductor of the Columbia Broadcasting Symphony Orchestra, who recently concluded his third summer of Sunday afternoon "Everybody's Music" concerts, is continuing this program, by popular demand, in a new evening series. Mr. Barlow has built up a large and devoted following on the air, not only for his exploitation of the classics but also for his playing of works by unknown American composers. In the new series of concerts (heard on Wednesdays 9:00 to 9:30 P.M. EST, Columbia Broadcasting System) the conductor is carrying out the principle established in his Sunday concerts by performing the works of modern and classical composers that everybody enjoys hearing, as well as American works that show exceptional merit.

A cast of familiar personalities has been assembled for this year's Sunday afternoon broadcasts by the celebrated New York Philharmonic-Symphony Orchestra. At the helm is John Barbirolli, the young English conductor, who was born in London in 1899 of an Italian father and a French mother. The guest conductor, during Bar-

birolli's mid-season vacation, will again be the splendid Roumanian violinist, composer and conductor, Georges Enesco. Misha Piastro is again the concert master of the orchestra, and Joseph Shuster is again the leading violoncellist. Ernest Schelling, the American pianist, composer and conductor who has been called the "musical godfather of America's younger generation," after an unfortunate illness which kept him from his musical duties last year, has again assumed control of the orchestra for the Saturday Morning Young People's Concerts.

When on October 17 the Rochester Civic Orchestra gave its first concert of the year, the National Broadcasting Company inaugurated the most extensive series of symphonic broadcasts ever offered to the American radio audience. This program was the first of 90 to be broadcast this season from Rochester, New York, over a coast to coast NBC network. The complete list of concerts includes four Thursday matinees and eight Thursday evening broadcasts by the Rochester Philharmonic Orchestra; twenty-eight Monday, and fifteen Tuesday afternoon programs by the Rochester Civic Orchestra, and sixteen Thursday evening and nineteen Saturday morning broadcasts by the Eastman School of Music Orchestra. There will be two Thursday evening broadcasts of the Rochester Philharmonic during January, on the twelfth and the nineteenth (NBC-Blue Network, 8:30 to 9:30 P.M., EST).

This season is the eleventh consecutive one that Dr. Walter Damrosch, dean of American conductors, and the NBC Music Appreciation Hour have been heard. As Dr. Damrosch's schedule this year is not weekly, we suggest that you consult the newspapers for dates of appearance. Instructor's Manual and Student's Notebooks for these broadcasts can be obtained by writing to the National Broadcasting Company, New York.

## FIFTY YEARS AGO THIS MONTH

EUGENE E. AYERS, a leading piano teacher of his day, contributed to the columns of THE ETUDE the following significant analysis of the successful teacher.

"He is a model teacher. He has a model studio and model disciples. We are interested in all he does from the very first moment. He has a good piano—not a mere piece of furniture—a little worn, perhaps, but first class in action and quality of tone. His studio is plain, but attractive. He has more books than bric-a-brac, and more music than silverware.

"1. He is *patient*. To some listeners the ordinary playing of an inexperienced pupil is hardly endurable. Some teachers are very restless and unhappy while submitting to this ordeal. And this infelicity generally communicates itself to the pupil and results in a general nervousness which is disastrous to the temper of both teacher and pupil. But our model teacher seems to be interested in the poor playing of his pupil.

"2. Genuine patience does not imply stolidity or dullness. Our teacher has *animation*. He never talks sleepily; he is wide awake, and he manages to keep his pupil awake. All ennui is dissipated. His mind is active, and alive to every point of interest. He quickens effort. His pupil is impelled by the liveliness of his method.

"3. His language is choice and forcible. His ideas are clear and attractive. His

method of presenting truths is logical and natural. He is at home with his subject; he knows every phase of it; he has explored its dark places for himself, and he leads his pupil confidently. His study has not been confined to his subject; he also knows his pupil. He frames his argument to suit his listener, and draws his illustrations from subjects with which she is familiar. If she is literary, he knows that he must draw many of his analogies from literature.

"4. He is *hopeful*. He expects to reap a rich harvest. In each pupil he tries to see the budding forth of promise. He is quick to perceive it when his pupil has talent; he is sanguine in his expectations. He finds in each soul some gem worth the polishing, and rejoices in the anticipation of the result. Hopefulness is contagious. His pupil may not be capable of gaining so much from his intelligence, but his hopefulness is like a strong stimulant. Some pupils need more of hope than of instruction.

"5. *Persistence* is another element in our model teacher's character. He is determined to succeed. No difficulty is great enough to weaken his endeavor. No obstacle shall stand in his way, if perseverance can overcome it.

"6. He is an *enthusiast*. Nothing ever really moves in this world until some enthusiastic man begins to move it."

*The sound is, in the execution of the pianist, what color is in painting.—Louis Moreau Gottschalk.*

# The "Moonlight" Sonata

Fact, Fiction and Fancy

By SIDNEY SILBER, Mus. Doc.

DEAN OF THE SHERWOOD MUSIC SCHOOL, CHICAGO, ILLINOIS

WHEN A MUSICAL MASTERPIECE becomes universally beloved; when neither time nor changing fashions in composition diminish its popularity with musicians, artists and music lovers everywhere; we are indeed confronted with an intriguing phenomenon. Such is indisputably the case with Beethoven's so-called "Moonlight" Sonata. What may be the reasons for this widespread acceptance? Indeed, a difficult and complex question! As for myself, I see in this work an intensely human document, bounding in vitality and wrought with consummate skill; an utterance inspired by the master's keen reactions to life, as well as to his individual existence, his yearning and struggling for self-expression and self-fulfillment. Since these are, potentially, the aspirations of the great mass of average, articulate humans, their revelation in this work cannot but evoke sympathetic response. While every great master is an emancipator of some sort, Beethoven remains the most potent of them all. He took music from the salon to the concert hall; from the castle to the cottage. He loosed this already grown up art from the incongruous garb of the idle, but cultured, rich, and gave it a rightful place, for the very first time, on equal terms with its adult brethren. In short, he made the art of music truly democratic!

## So Truth must Stand

THE FOLLOWING FACTS have been established by authoritative biographers:—

1. The designation "Moonlight" was not given by Beethoven.
2. Beethoven left no clue, other than the manuscripts, to either the source of its inspiration, or its interpretation.
3. The dedication to Countess Giulietta Guicciardi was casual, having no reference to an unfortunate love affair. (The countess married Count Gallenberg at the end of 1801—the year the work was composed.)

Let it furthermore be noted that this is not a sonata in the strict sense of the term, since the first movement is not in sonata form. Beethoven called it "Sonata quasi fantasia (Sonata in the manner of a fantasia)" (the term *sonata* probably referring to the literal meaning—an instrumental composition, in contradistinction to *cantata*—a vocal composition).

## Rubinstein's Reactions

GREAT INTERPRETER'S reactions are quoted, revealing the true musician's and artist's attitude toward the interpretation of all art music. In Rubinstein's "A Conversation on Music," we find the following passage, where the great pianist is discussing

designations attached to musical compositions, such as *nocturne*, *romance*, *impromptu*, *caprice*, *barcarolle*, and so on. Among other things, he says, "Having become stereotyped, they facilitate the understanding and rendering of the compositions for the public; otherwise, these works would run the risk of receiving names from the public itself. How droll this is, is sufficiently shown by one example: the 'Moonlight' Sonata."

"Moonlight demands in music the expression of the dreamy, fanciful, peaceful—a soft, mild radiance. Now, the first movement of the C-sharp minor Sonata is TRAGIC from the first to the last note; a beclouded heaven, the gloomy mood of the soul. The last movement is STORMY, PASSIONATE, and the exact opposite of peaceful radiance. The second movement alone would, in any case, allow a momentary moonlight."

## The Designation, "Moonlight"

SAYS KREHBIEL in "The Pianoforte and its Music," "Much mischief has been made by the titles which publishers and others have given to works without the sanction of the composer. The sonata in C-sharp minor has asked many a tear from gentle souls who were taught to hear in its first movement a lament for unrequited love, and reflected that it was dedicated to Countess Guicciardi. Moonlight and the plaint of the unhappy lover! How affecting!"

In a letter, dated January 22nd, 1892, Alexander W. Thayer, the greatest of Beethoven's biographers, says: "As for the epithet 'Moonlight,' it seems to owe its first existence to a comparison made by the critic Rellstab of its first movement, to a rocking on the waves of Lucerne, on a moonlight evening."

"Many years ago, a picture on the title page of an edition led the Viennese to call it 'Laubenssonate (Arbor Sonata),' the picture evidently referring, or giving rise to a story of its composition in an arbor."

## The Dedication

SCHAUFFLER, in his biography of Beethoven, has this to say: "Although, if any girl caused the sadness and despair reflected in his music, her name was not, in all likelihood, Giulietta. For the composition Beethoven originally intended dedicating to the countess, was the not particularly ardent Rondo in C major, Op. 51, No. 2. At the last moment, however, wishing to inscribe this piece to the Countess Lichnowsky, he asked it back and dedicated the C sharp minor to Giulietta instead. There is no good reason to suppose that his devotion to her lasted more than a few months. In her old age, Countess Guicciardi-Gallenberg

spoke of Beethoven without affection, as a person who had composed some 'crazy' music. Then, an afterthought, with sudden animation: 'But his playing . . . it was heavenly!'

## A little known Source of Inspiration

AGAIN REFERRING to Thayer, we find that "the subject of the sonata was suggested by Seume's little poem 'Die Beterin (The Praying Maiden).' The poem describes a maiden kneeling at the high altar in prayer for the recovery of a sick father. Her sighs and petitions ascend with the smoke of incense from the censers, angels come to her aid, and, at the last, the face of the suppliant glows with the transfiguring light of hope. The poem has little to commend it as an example of literary art, and it is not easy to connect it in fancy with the last movement of the sonata, as with the first and second; but the evidence that Beethoven paid it the tribute of his music seems conclusive."

## Fiction that Falters

AGAIN SCHAUFFLER: "Some sentimentalist invented a popular myth about the so-called 'Moonlight' Sonata. There are several versions. One of the more imaginative holds that Beethoven was wandering in the moonlit streets of Vienna, when he saw a blind youth leaning on the arm of his beautiful sister and lamenting the fact that he should never see the greatest of all musicians. Beethoven accosted them, went to their humble home, seated himself at the poor piano, and, inspired by the sightless orbs of the boy, by the 'beaux yeux' of the maiden, and by the moonlight pouring in at the casement, improvised the C sharp minor Sonata. Then, rising to his full five feet-five, he revealed his identity, embraced the lad, and rushed forth to dash down his inspiration."

A variant of this tale makes Beethoven pass the blind boy's window, overhearing him bungling the "Sonata in F major, Op. 10, No. 2," and expressing a wish that he might hear the composer play it. Then it makes the latter push his way in unannounced, play it correctly, and fall to improvising the "Op. 27, No. 2."

## Where "ignorance is bliss"

NOT LONG AGO THE FOLLOWING LINE was encountered in a book (not on music) by a very prominent clergyman: "He (Beethoven) took moonlight and made of it a sublime sonata." This good man can hardly be blamed for such an ambiguous and basically meaningless statement, since numerous writers on music—and some of them of considerable prominence—are quite as guilty of foisting so-called poetic analyses upon their readers."

THE BOURDELLE BEETHOVEN

In the Metropolitan Museum of Art, New York City

Translation of legend: I am the Bacchus who presses delicious nectar for mankind.

One of the most amusing comments, by a certain F. F. Weber, appeared in the eleventh volume of the *Neue Berliner Musikzeitung*. Read, and reread the second sentence. It is a weird and wonderful specimen of the tape-worm type of sentence in vogue, many years ago, in "erudite" Germany. We quote: "Beethoven, in this sonata, represents dream-scenes which take place in visible Nature. Were we to stand in the hush of night, amidst luxuriant vegetation, and did there then approach us, step by step, the natural essences which fill the cells, well-nigh to bursting, and in which the world of growing things surrounds us with its loving embrace, so that our senses should be finally quite absorbed in noiseless, yet unremitting activity of the busy vegetative world around us—that shows in the least leaflet the full intensity of its power—and should the spirits of the processes of Nature continually obtrude themselves upon us, neither withheld nor to be driven away by any means whatsoever, only occasionally betraying their sublime spirituality, by a shy starting-back at some sound—no actual sound, but a dream-sound—imagined in the shell of our own ears; were we to experience this, we should then stand, as Beethoven fancied himself standing when writing the last movement of his sonata in C sharp minor."

## Let Others Speak

IN THE FOURTH VOLUME of the Berlin music journal, *Echo*, No. 43, is an article by Peter Cornelius, in which he compares the first movement of the "Moonlight" Sonata to "a majestic Gothic cathedral, whose inviting chimneys guide seeking believers on their path, through the wilderness, to its sacred enclosures. All pain floats upward through the wilderness and is resolved in the harmony of a blessed spirit-prayer. In the second movement, earthly love holds sway and would fain drown those sacred chimneys with the tones of its harp. To this love is issued a mandate rather to turn toward yon holy refuge, whence it has enticed the devotional throng with irresistible might. In the third movement, the dim forest is again sought out. Evil spirits have closed the doors, the holy chimneys are mute—yet their echo still sounds. Belief is dead in the heart. Disconsolate wandering! But the heart is haughty and bold—ONWARD! It must answer, soar aloft

# The Threshold of Music

A STORMY SEVENTH—AND SOME EVEN MORE COMPLEX CHORDS

## Natural Laws That Guide The Flow Of Chords

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

This article is the tenth in a series on "The Doorstep of Harmony." The first appeared in The Etude for January, and an article will appear each month hereafter.

### Part II

#### THE LAW OF MOTION AND REST: Music is a peace loving art.

One could almost accuse it of being indolent. In music we find constantly a desire to convert motion into rest, conflict into peace, confusion into harmony, unpleasantness into pleasantness, disorder into order, wrong into right, dissonance into consonance, tension into relaxation, discord into concord, roughness into smoothness. The technical names used by most musicians are *dissonance* and *consonance*, but perhaps the words *motion* and *rest* will give you the idea more clearly and simply.

Have you ever studied a snapshot of an athlete in action? Of a tennis champion lunging for a back-hand, or a pole vaulter about to clear the bar? Have you ever thought how painful it would be, or even impossible, for anyone to hold such a pose for more than a fraction of a second? Music gets itself into just such positions—perhaps not as violent ones, but precarious enough to make us uneasy if they are held too long. Each time an action chord strikes our ears, we hold our breathe in suspense until it is followed by a chord of rest.

If we look for the reason why some chords create an impression of being "on the move," while others are peaceful and motionless, we will have to examine the intervals of which these chords are constructed. For in practically every case it is the intervals which give each chord its particular type of personality.

There are certain intervals which we call *dissonant*, or intervals of motion. Those which fall into this group are:

1. All sevenths and seconds.
2. All diminished and augmented intervals.

Ex. 9

The remaining intervals are called *consonant*, or intervals of rest. These are:

1. All the perfect intervals (unisons, octaves, fifths and fourths).
2. Major and minor thirds.
3. Major and minor sixths.

Ex. 10

There are only two chords which contain nothing but restful intervals, the major triad and the minor triad. That is why either one or the other of these two triads is always used as the final chord of any piece of music. All other chords contain one or more intervals of unrest, thereby giving the chords themselves, to a lesser or greater extent, an atmosphere of unrest.

Again the humble harmonica serves as an illustration. For in the world of practical music, the simplest example of the Law of Motion and Rest is contained in the mouth organ. You suck in, and the music is in motion. You blow out, and it finds repose. Why? Partly because of the Melody Law, but mainly because sucking plays the notes of a dominant ninth chord (containing four restless intervals) and blowing plays the tonic triad (all consonant intervals).

Here are several pairs of chords. In each of the four measures the first chord is one of motion and the next is one of rest.

Ex. 11

C: 17 4 C: 57 1 Fmin. 69 1 C: 47 1

In the first chord of the opening measure there is only one element of unrest: the clash between B in the right hand and C in the left hand (a major seventh). In the second measure we find a dominant seventh chord, containing two restless intervals: a minor seventh (G to F) and an augmented fourth (F to B). In the third measure the situation becomes more acute, with no less than four action-intervals: a minor seventh (C to B-flat), a minor ninth—which is the equivalent of a minor second (C to D-flat), a diminished fifth (E to B-flat), and a diminished seventh (E to D-flat). The resulting chord is a tangle of conflicting tones.

The fourth measure is mild by comparison. The D in the right hand is the only dissonant element. If we leave it out the chords become the familiar "Amen" pair—the ultimate in restfulness, the musical embodiment of "Peace on earth, good will toward men".

So, you see, there are all grades of unrest in music.

When intervals of motion want to find peace and quiet they do not go about it in hit or miss fashion. We find as a general rule that seconds expand into thirds, sevenths contract into sixths or fifths, and ninths contract into octaves. We also find that diminished intervals tend to contract, and augmented intervals to expand. And with all these intervals the tendency is for the two notes to move in opposite directions—either to approach each other or to fly apart. That seems to be a more satisfying way of doing it than for both notes to move in the same direction.

Musicians call the practice of contracting or expanding *contrary motion*. Thus, two notes will generally come together  or spread apart  rather than rise together  or fall together 

Ex. 12

rather than

The Melody Law, you can be sure, also exerts an influence in urging each note to its nearest possible haven.

Please do not be misled, at this point, into supposing that music gets nowhere in its endless see-sawing between action and repose. You may have gotten the idea that it is like an airplane which merely bounds along the landing field, sometimes rising a few feet, sometimes touching the ground, but never soaring into the upper atmosphere. That is far from true. Music does soar. But it soars as a hawk does, some-

times flying actively and at other times gliding effortlessly. The presence of consonant chords does not stop music's flow of thought. These chords are just momentary pauses between pulsations. And it often happens that a chord containing an interval of motion melts into another chord which seems at first glance to be passive, but turns out to contain another motion interval which prolongs the flight and keeps the music buoyant. To illustrate, we quote from *I'm Falling in Love With Someone*, from "Naughty Marietta" by Victor Herbert.

Ex. 13

This quotation from *I'm Falling in Love With Someone*, from "Naughty Marietta" by Victor Herbert, is reproduced with the permission of the Music Publishers Holding Corporation, owners of the copyright.

Here are five different dominant sevenths in a row, each one a chord of motion. The chord marked x, for instance, is a dominant seventh belonging to the key of E-flat. You will find its chief interval of motion

Ex. 14

in the right hand (A-flat to D-natural). With the next chord, marked y, this action-interval expands into an interval of rest (G to E-flat). But at the same time the chord "y" introduces a fresh note of dissonance (D-flat, a diminished fifth above G), thus keeping the music continuously in motion.

Once more we are going to turn to that pair of chords which illustrated the mob spirit as applied to the Melody Law: the dominant seventh chord and the tonic triad:

Ex. 15

Now that we view this progression as a product of both the Melody Law and the Law of Motion and Rest it seems doubly effective. How inevitably the two right hand notes move apart, in contrary motion, to their nearest neighbors. On further examination, however, we notice another thing, not explained by either of these laws.

The lowest note in the left hand is not attracted by any of its near neighbors. Instead, it jumps more than half an octave down to C. This downward leap of a fifth we shall soon discover, is a characteristic one, and is governed by the third law of musical sentence structure: the Bass Law.

#### Down a Fifth, or Up a Fourth

ACCORDING TO THE BASS LAW, the lowest note of any chord is impelled by an instinctive desire to move a perfect fifth lower or a perfect fourth higher.

Offhand this seems like a singularly arbitrary and whimsical desire. It is the equivalent of the knight's move in chess instead of progressing to the adjoining square, as kings and pawns do, the knight must have its own peculiar jump. So it is with the bass notes in harmony; they insist on expressing their own personality, and the manner in which they do it is by leaping up a fourth or down a fifth.

This move is not, however, really arbitrary as it sounds. If we turn back to the "Constitution and By-Laws" of music—the harmonic series (illustrated in Chapter I of this series)—we shall find a good reason for it. Of the overtones created by the low C-string of the violoncello, the three which can be written in the bass clef (C, G and C) are separated by wide intervals; while the higher overtones in the treble clef are much closer together, most of them being only a tone or a half-tone apart. So there is plenty of precedent for the Melody Law to favor motion by steps, and for the Bass Law to prefer motion by leaps. If we examine the three base overtones (C, G and C) more carefully, we shall find that, from G's point of view, the fundamental tone C is represented in its higher octaves by notes located exactly a perfect fifth below and a perfect fourth above. So the Bass Law is also a child of nature.

Bass Law motion occurs most frequently with dominant chords. Whenever a next to the last (dominant) chord is followed by the last (tonic) chord, the bass is sure to move down a fifth, or up a fourth to the higher octave—from the dominant note (root of the dominant chord) to the tonic note (root of the tonic chord), or, more simply, from So to Do.

Observe that, in the chords quoted above G of the dominant drops down to fifth of the tonic C. This skip of a fifth down, or a fourth up (the two forms of the move are really identical, since both carry the bass to the self same note, the first taking it to the lower octave and the second to the higher), almost always takes place whenever a So chord is followed by a Do chord. The only exceptions are when the bass is not the root of the chord above it; and until we mention the wrinkle in harmonizing known as Inversions, we must assume that the bass of a chord is always the root.

The characteristic Bass Law skip is not confined exclusively to dominant chords. On other occasions as well, bass notes continue to have a ceaseless desire to make this move. For example, in *Ol' Man Devil* by Max Rich we find

(Continued on Page 62)

# How to Abolish Fear Before Audiences

## The Meaning of Mike-Fright

A Symposium Secured Expressly for  
The Etude Music Magazine

By ROSE HEYLBUT

EVERYONE WHO HAS PERFORMED before an audience has, at some time and in some way, been affected by the thing we call stage fright—which is not stage fright at all, but audience tension. We are quite easy in our minds when we talk with people, work with them, play with them—even quarrel with them. At the act of performing before them things on a very definite psychological reaction.

To some, audience consciousness reveals itself as a warming sense of expectancy, buoying them up to do even better than when they are alone; to others, it takes on the nature of a complete paralysis of self. Some overcome it readily, while others grow more nervous. Many theories have been put forward as to the origin of stage fright—it is a matter of inborn temperament—it has to do with lack of preparation or experience—it results from a state of health—or from a sense of responsibility. Whatever it is, though, stage fright presents a very real problem, to the professional artist as well as to the student preparing for his first pupils' recital. Its solution means much to everyone concerned with musical performance. What can we do about stage fright?

Stage fright can be cured. To clarify the cure, THE ETUDE has asked four distinguished and experienced artists to tell of their own reactions to audience tension, and their personal means of conquering it.

Richard Crooks, beloved American tenor, and renowned for his work in concerts, radio, and at the Metropolitan Opera, makes an interesting distinction between good and bad stage fright. The self-consciousness which springs from inexperience and faulty preparation is dangerous. On the other hand, the pulsing expectancy of looking forward to performance is definitely helpful, buoying the performer exactly as excitement before a party helps you to have a better time. You must make sure of what it is that you are feeling when you stand waiting in the wings.

"I began my public singing as a boy soprano of ten," says Mr. Crooks, "and at that age I was quite unconcerned with the unhappy aspects of nervousness. I had confidence in my teachers and in myself; I was well coached in my songs; I loved to sing—so I simply went out and sang without worry. In the years since then, I have learned more of the difficulties of the task of public singing, and of the responsibility a performer owes to the audience that comes to hear him. And awareness of this kind has, naturally, robbed me of much of the casualness of my boyhood approach. Still the dreadful, laming aspects of stage fright have, mercifully, left me free.

"I began my public singing as a boy

soprano of ten," says Mr. Crooks, "and at that age I was quite unconcerned with the unhappy aspects of nervousness. I had confidence in my teachers and in myself; I was well coached in my songs; I loved to sing—so I simply went out and sang without worry. In the years since then, I have learned more of the difficulties of the task of public singing, and of the responsibility a performer owes to the audience that comes to hear him. And awareness of this kind has, naturally, robbed me of much of the casualness of my boyhood approach. Still the dreadful, laming aspects of stage fright have, mercifully, left me free.

### An Early Beginning Helps

"WHY? I ATTRIBUTE IT to my early beginning. The very casualness of those years helped me to build a fearfree attitude of mind into second nature. I believe, after all, that stage fright is more an attitude of mind than anything else. If one opens the way for it to lay hold of him, it will simply spread its tentacles. My earliest teacher and counselor was my mother. She never led me to feel that singing for people was in any sense an ordeal. On the contrary, it was a pleasure. Part of the pleasure came from the joy of singing, and part from the idea (or the hope) of pleasing my hearers. She taught me, too, that it is no more disconcerting to sing for ten people than for one—for a hundred than for ten. Indeed, the numerical count of the audience should make no difference at all.

"Thus, my first counsel is: Let the student make as early a start at public performance as he can. Let him, as a child, take part in little studio recitals or church concerts, convincing himself in his most plastic years, that the act of performing carries in itself nothing terrifying. Let him learn to regard these appearances as pleasurable experiences. Do not pave the way for fright by assuring him that he will not be nervous. Take it for granted that he will not, and stress the pleasure that he and his hearers are going to have from

the event. Let him look upon his audience as his personal guests, whom he is about to entertain with the same free, frank, unafraid cordiality he would use in making guests comfortable in his home. The early implanting of thought habits of a pleasant and fearless nature will go far towards removing the hazards of stage fright.

"But that is not the whole story. The free, fearless thoughts must be bolstered up by a solid foundation of good work. The painful aspects of stage fright can be usually traced to insecurity or lack of experience. The performer who is sure of himself in every breath, every note, every word, every shade of interpretation, has little to fear. Only unreasonable panic can harm him, and a carefully built background of safe habits of thinking and working can protect him against that.

"As to the good kind of stage fright—well, it is not fright at all. Every performer, no matter how experienced, feels a wave of excitement before he steps out to the stage. And that, I hold, is a necessary part of his equipment. It is this upswinging force which makes him an artist. It lifts him out of the everyday level of things and enables him to project himself across the footlights in a better than everyday manner. The absolutely unmoved performer is likely to be dull, just as the guest, who remains absolutely unmoved when he enters a ballroom, is likely to provide a dull time for his partners.

"So get used to performing, through a timely start; be sure of what you are about, and take pleasure in your work. Then stage fright cannot hurt you!"

### Self-Eliminating Stage Fright

MOST PERFORMERS have to unlearn stage fright. Gladys Swarthout, star of the Metropolitan Opera, of concerts, radio, and motion pictures, offers one of the rare examples of learning to be afraid. But we will allow Miss Swarthout to tell you about it.

"When I first began singing—and at that time I had no ambitions for a career—I

GLADYS SWARTHOUT

LUCILLE MANNERS

was not afraid of anything. Such was the sublime ignorance of youth that I learned the difficult *Ave Maria* from Max Bruch's "Cross of Fire" in four days, sang it with orchestra on the fifth, and took the entire matter quite for granted. I knew, of course, that other people get scared; but I attributed such reactions to a lack of preparation and felt sure that, if I worked faithfully, they could never touch me. And then I was engaged for the Chicago Opera. I was cast as Siebel in "Faust," opposite Chaliapin's *Mephisto*; and, waiting in the wings to go on for the *Garden Scene*, I saw Chaliapin pacing the floor, ashen green under his make up, and moaning to himself. I thought, of course, that the great basso was ill, and hurried to summon the stage manager. He laughed at me.

"Ill? he said, 'He's not ill; he's nervous. He gets like that every time, just before he goes on. Half dead of stage fright.'"

"I couldn't believe it. And then, through my disbelief, a completely new sensation overtook me. If a superb artist like Chaliapin suffered so horribly from stage fright, surely there must be something very wrong with an inexperienced little beginner like me, to be so nonchalant about it. And, then and there, I got scared, too—and from that time I never have been completely free from stage fright.

"I believe that, essentially, stage fright is a very personal matter between yourself and you. Audiences have little to do with it. To me, the kernel of this fear is a dread of not doing my best, regardless of what the audience may be kind enough to like in my work. Stage fright, then, is a question of responsibility.

"Having learned it, I have since spent much time—not always successfully—in trying to unlearn it again. The first step towards acquiring security (in contrast to having it naturally, as in the beginning), is to be perfectly prepared, and quite certain of that fact. My greatest aid, in those moments before going on, is to tell myself over and over again that I have honestly done all I can to assure my hearers an adequate performance. I impose calm and quiet on myself. I allow myself to think of nothing but the work ahead and the best way of doing it. I do not find it at all helpful to distract my thoughts with alien topics. I want to be as close as possible to the coming performance, and to avoid that fatal 'inspiration of the moment.' I never read telegrams in my dressing room, or receive visitors, or look to see who has sent the flowers, until the performance is over. Things like that have an unexpected way of cropping up at the wrong moment—during a song, for instance, one may become hopelessly distracted by suddenly remembering the chance remark of some caller, or the flowers of a friend one has not seen in months. Then there is a gap in the continuity of one's thoughts and a less than easy feeling creeps in.

### Make Conditions Familiar

"I FIND, TOO, THAT purely physical and material considerations have a share in calming one's mind. I always rehearse once at least in the same hall in which I shall sing, and with the same accompaniment. Nothing strange should be left to performance time. The same is true of clothes. I never appear publicly in a gown or slippers or gloves that I have not first worn at home, making myself entirely comfortable in them, getting to know their feel, their fit, their adjustment. I rehearse the feel of clothes and atmosphere as carefully as I do my songs.

"The best thing, of course, is to prevent the petrifying sort of stage fright from getting a grip upon one at all; and this can be done, I know, by concentrating on a perfect preparation and by not allowing distracting thoughts or influences to be upsetting. But, once it has shown itself, it can be overcome by confidence and self-imposed calm."

Mischa Elman, world renowned violinist, believes that stage fright is simply the consciousness of one's own limitations, at a moment when limitations of any sort place a barrier between what one wants to do and what he can do. Everyone has his limitations, of course; and, even if the audience does not even notice one's shortcomings, the performer himself is always conscious of the discrepancy between his ideal and his work. One grows nervous, then, through a self-conscious dread of doing less than one's best.

"To overcome stage fright," says Mr. Elman, "try to get rid of self-consciousness. Your duty on the stage is to project the message of the composer into the hearts and minds of your hearers. You are only a means towards this end. Therefore, stop thinking about yourself and concentrate on the music. Then do your honest best and do not worry about the effect you are making.

"A certain amount of stage fright is quite normal, especially to inexperienced performers. The more one plays in public, the better able he should become to master the fear that comes from sheer inexperience. So do all the playing you can. Do not hold back from it. Plunge in, and earn for yourself the experience that drives away fear. Make up your mind at the start that your first dozen performances will be less than your best, simply as the result of this apprentice nervousness. Give as many bad performances as possible, as soon as possible, and do not worry about them. Play naturally and let the music come first in your thoughts. Then, as you progress in public performance, you will find the fear wearing off.

"After a dozen attempts at public per-

formance, then, you will find that one of two things will result: either you are mastering the dread of stage fright—or you are suffering from it worse than before. In the first case, you are approaching that state of freedom and experience that makes for success in public performance. In the second instance, you should face the fact that public performance is not for you. It is well known that some natures never master their dread of playing for people. Some extremely gifted and sensitive musicians simply cannot face an audience. This is a sad fact, but a fact none the less. The person who cannot control his nerves or his fears is better off away from the public platform. Neither he nor his hearers will benefit from a performance conducted under conditions of horrible tension. But these cases, very happily, are the exception rather than the rule. We may safely concentrate our discussion upon the stage fright which can be cured by confidence, musical surety, and self-control.

### He Cultivates Stage Fright

"THERE IS ONE TYPE OF PERFORMER who always gets stage fright! He is the one who practices after his concert instead of in advance. We have all known people who give a performance and then tell you, afterwards, what they should have done differently. Settle your problems in the practice room; and come to your performance with a clear, faithful conception what you mean to say and how you mean to say it. Leave nothing to chance. What went badly at practice will certainly not get better in performance. Consider every note, every tone, every phrase. Then play naturally, keeping in mind only that ideal conception of the music for which you are

striving. Do not think of yourself as playing for people; remember only that you are playing fine music, in the finest way you can. Thus, you will, of your own will, close the doors to the fear that you are not doing your best. And just that fear, I believe, is the root of all stage fright."

Thus far, we have considered only the tension which comes from facing a visible audience. Lucille Manners, popular radio star whose career has thus far been made in radio alone, assures you that there is a very real stage fright problem in working before a microphone, without a single visible listener in the studio. Mike fright!

"Naturally, one is not afraid of the microphone at all," says Miss Manners; "but there is the remembering that, on the other end of that harmless little 'mike,' there are more listeners, probably, than could be gotten into the largest auditorium. I used to suffer badly from mike fright; but I have cured myself, and others can do the same."

"Stage fright of any kind is pure self-consciousness. What really takes place is that the performer forgets the fact of performance, for the time being, and distracts herself with thoughts about 'my' looks, 'my' voice, 'my' interpretations, 'my' personality. If that were not the case, there would be nothing to fear—certainly, one would not be frightened about Beethoven. So the first thing is to try to cut loose from oneself entirely. Do not let 'I,' 'me,' and 'mine' enter the picture at all. Think of the music you are going to project, the theme of your songs, the emotions you wish to arouse. And discipline yourself into thinking that, no matter how you feel, you have to go on and do well.

"I got my first cure in stage fright from my grandmother. She was a great club woman and often had to make public addresses. Just before she spoke, she would sit quietly and look rather unhappy. When I asked her what was the matter, she would say, 'I don't particularly like to make a speech, but I have to make it—and I'm going to make it, and make it well.'"

"You can discipline yourself into doing anything you want.

"One thing about radio work, which might entitle one to be a little bit scared, is the fact that there is no immediate means of gauging the reactions of one's audience. One simply does not know whether pleasant impressions are being aroused or not. That can be troublesome—until the mind has decided not to think of the effect at all. One must live alone with his music at such moments, and must perform it in the best possible way. The effect part will take care of itself. Once one gives of his best, there is nothing more to be done about it; so do not worry about anything more."

"The way one stands can help in the control of his nerves. The firm, erect posture, which is necessary for the emission of a good tone, is the best to calm one generally. Feel conscious of strong support from the spine. Breathe deeply, as though covering a tone. Stand firmly, and stand down on the knees. Even before beginning to sing, this singing posture will help. It is a good posture for instrumentalists, too.

"Get as much practice as possible in singing for people. Try your wings in the teacher's studio. If you can sing there, with a few people close upon you, there should be no trouble in a concert hall. Indeed, the greater distance between the singer and her hearers makes her to feel more comfortable. At first I was scared of my studio audience of over fifteen hundred people; but by applying these methods, I have now so completely mastered this fear that I should miss the audience if it were not there. But no matter what helps may be derived from outside matters, like stage distances and good posture, the chief thing in ridding one's self of stage fright is to forget oneself!"

If we ask "What about stage fright?" the answer is, "It can be cured, and it depends only upon one's self to cure it."

WHAT A MOUTH ORGAN!

These Indian boys, from Lake Titicaca, must be remarkable blowers, to play these giant instruments.

# The Men of the Orchestra

A Visit with the Individuals Who Produce the Music

By MISHEL PIASTRO

CONCERTMASTER OF THE NEW YORK PHILHARMONIC-SYMPHONY ORCHESTRA

A Conference Secured Expressly for The Etude Music Magazine

By STEPHEN WEST

AN ORCHESTRA CONSISTS of two vital and integral parts—the conductor and the men. The conductor, who leads the performance, is responsible for its interpretative worth. He uses the men as his instrument and plays upon them. The men, playing instruments of their own, follow the conductor and submerge their musical ego in his. Both parts are mutually interdependent, one upon the other. Publicly, one hears the orchestra speaking through the conductor. But the men have a great deal to say for themselves!

First of all, let me stress the point that a position in a good orchestra is a completely worthy, dignified, and important form of musical expression. Unfortunately, most people do not realize this. The common notion is that a young musician must study for the sole purpose of becoming a great solo virtuoso. If he achieves this, he is a success. If not, then he takes a post in an orchestra and lives out the rest of his life as a failure. I have heard this attitude expressed hundreds of times—by parents, teachers, and by the players themselves—and it always makes me sorry, because it is so entirely untrue.

No one can pretend, of course, that the orchestral player receives the same attention by way of glamour, curtain calls, and publicity, that the soloist does. But the student who measures a career in terms of these things alone is better out of the musical profession than in it. It does not follow that the man who falls short of spectacular virtuoso heights is an inferior artist. Conditions, which have nothing to do with musical ability, may hamper his progress—health, financial circumstances, luck, sheer nervousness in facing an audience. Some of the finest players I know are at their best only in their own homes. Further, public success requires a certain undefinable animal magnetism as much as musical ability. The power to project one's self across footlights and to move people's hearts is a gift in its own right. Not every one possesses it, regardless of the musical endowments he may have. It is quite possible to be a magnificent artist, and still not make one's mark as a big soloist. Thus, it is neither true nor just to rate an orchestral player as a musical failure. Young people could save themselves much heartache by realizing this fact.

## An Honorable Service

THE ORCHESTRAL MUSICIAN is performing one of the finest pieces of work in the musical world. And there is the chance for splendid achievement awaiting him. It is he who gives the great masterpieces their final splendor, their sensuous appeal. It is he, in the last analysis, who makes them sound. To bring forth the full value of the "Ninth Symphony" is hardly synonymous with musical failure. Let us be honest enough to measure musical success by musical standards.

In the eighteen years I have been in this country I have been increasingly impressed with the immense improvement to be found in the quality and preparation of the younger orchestral players. Both technically and musically, they are almost incredibly superior to the young men of years ago. Graduates of the leading conservatories are coming into the ranks, realizing that a fine musical life (and a by no means unprofit-

able business life) awaits them there.

The best thing I can advise for the development of good orchestral material—and for general musical development, regardless of future professional possibilities—is the early habit of reading chamber music in groups. As soon as young students are technically able to manage the notes of the standard trios, quartets, and so on, let them band together into groups of threes and fours, to acquire practice in the playing and reading of these works, together.

The word to emphasize is "together." No matter how fluently one may read notes alone (or with one's regular accompanist), an entirely new vista is opened in group work. Here the secret lies not merely in producing the requisite number of correct tones but in mastering the give and take of playing in numbers. The earlier the student begins to acquire this practice in ensemble reading and playing, the better his chances for success in group work. Chamber music offers the most direct means of getting this drill, if only for the reason that the student has fewer active partners with whom to "break in." Even the larger student orchestras do not afford the same opportunities as this early start in chamber music playing.

## All May Be Readers

THE SECRET OF SIGHT READING is speed. Anyone can read accurately, if he goes slowly enough and takes enough time for it. To read accurately at the proper tempo is another matter. And this, of course, is the object of practice in reading. Some people have a natural gift for reading, but facility can undoubtedly be acquired, through constant practice. Begin to read the simplest music you can; simpler than the grade of music you normally play. But set yourself the task of going through the piece accurately and at its proper tempo. As your ability to do this progresses, advance to more difficult things. But do not take the difficulty of the composition as your goal. Speed, with accuracy, is the thing for which to strive.

If the young players who form such an ensemble group are too inexperienced to

give the music its proper tempo, shading, phrasing, and emphasis, there is an excellent conductor waiting to help them. This is the phonograph. Almost every studio possesses one of them, nowadays; and if not, local music dealers will permit one to listen in their shops. All the standard chamber works are available now in reliable recordings. Get hold of these discs, listen to them, watch your notes while you listen and mark in the tempi, the shadings, and so on. If possible, play along with the records, repeat them, go over the troublesome passages with them. Then stop the phonograph, and listen to the improvement in your own group playing. This is an excellent training for conductors, too.

It is also possible to secure mechanical piano rolls which will provide you with the piano part of the great sonatas (or the orchestral part of the concertos, played on the piano). These are invaluable, in communities where it is difficult to find adequate accompanists.

## Larger Ensemble Study

AFTER THE STUDENT has had a good taste of playing chamber music, let him and his fellows form a small orchestra—possibly for strings alone at the start, progressing later to the inclusion of woodwinds and brasses. I should think that this would be a most welcome addition to any community life. It would also provide ideal opportunities for practice in group routine playing, for it may be supposed that students would have even more time at their disposal for drill than the professional musician can get.

The National Orchestra Association, in New York, offers perhaps the best example, of which I can think on the moment, of what can be accomplished with a student orchestra. Under the able direction of Leon Barzin, and officially sponsored by members of the Philharmonic-Symphony Society, this is a body of non-professional music students, ranging in age from sixteen to twenty-two; and they perform music which would need careful drill by a seasoned orchestra. Some of our professionals play along with them, as a matter of helping them achieve proper balance, but the or-

ganization as a whole stands as a student group. Only the best students are taken into this orchestra, and the boys achieve truly wonderful results, not only in the mechanics of playing but also in learning the other values necessary for orchestral performance. A student orchestra of this kind is an excellent asset to a community. Besides its advantages in training the boys, it becomes a fine clearing house when young men are needed in professional orchestras.

The other values demanded in routine playing are discipline, orderly thinking, consideration, respect for one's neighbor, and the cooperative ability to pull along with others. These have nothing to do with music, but they are vitally necessary. To acquire them one must have drill in playing with others, and just this becomes the great problem for the average amateur orchestra. Its members must be given opportunity, for playing the standard repertoire in company with others. Drill in reading (and playing) many varied kinds of music, plus drill in playing it together, are necessary. To play a limited repertoire in a group is as useless as to play quantities of music alone. A good, solid student orchestra can provide chances for both these needs, supplying, for its members the best chances for future orchestral success.

## The Desire for Permanent Members

THE GREAT DANGER CONFRONTING ANY ORCHESTRA, whether amateur or professional, is that of a too frequent change of personnel. No matter how fine the individual players may be, the orchestra as a whole is at its best only when those players are perfectly accustomed to each other. This familiarity must go further than mere playing together. The men must know what to expect from each other, temperamentally and psychologically. An orchestra's success depends upon its unity, and perfect unity comes only with perfect familiarity. It is exactly the same as in a family group, and oddly different from the workings of any other profession. In a family the welfare of the unit as a whole comes before that of any one of its members. To achieve and maintain it, each one must make concessions, must learn to give and take, to sacrifice. Just so in an orchestra. One must learn the musical idiosyncrasies of the man playing next to him, ahead of him, behind him. One must adjust his own playing to theirs and they must do the same. If your deskmate has a rough tone, you must refine yours to balance it. A mere performing of notes never gives an orchestra finish and polish, no matter how well those notes may be played. The more the men work together, studying each other's individualities, and adjusting themselves to them, the better the orchestra sounds. I can think of more than one famous orchestra which falls short of being a great orchestra simply because the men are not familiar enough with each other to work properly together. Certainly I am not advocating that younger men be kept out of the organization, but I believe that all the players, both old and new, should be assured of a definite period of three or four years of playing together.

## Necessity of Discipline

ORCHESTRAL PLAYING CULTIVATES DISCIPLINE

MISHEL PIASTRO AND JOHN BARBIROLI

# Lessons With Ossip Gabrilowitsch

Piano Virtuoso and Conductor—An Apostle of Beauty in Piano Playing

By CECILE DE HORVATH

PART II

## Theories on Tone Production

FOR OUR MELODY TONE he advocated fairly flat fingers with the last joint slightly curved. But there must never be any flabbiness. All singing tones must have the weight from the shoulder, and the wrist must be low. Also all heavy chords must have behind them the weight from back of the shoulders. The arm must hang relaxed; the hand must be kept very quiet. In Gabrilowitsch's playing the softest notes penetrated to the farthest corner of the hall, because he knew the secrets of acoustics and long vibrations. He explained that if the singing tone was played with finger weight alone, there would be no vibration. If with the forearm weight alone, the vibration would be too short; but with the weight of the arm from the shoulder, the vibration is so long, even in *pianissimo*, that every tone carries. For a perfect *cantilena* there must be a *legatissimo* almost oily in quality. It is important that the hand be completely relaxed for a singing tone. This applies also to singing chords, where all the voices sing.

He would say:

*"That would not carry beyond the first six rows."*

Then he would never let us forget the audience. Gabrilowitsch made us realize that the tones we thought we had been producing were actually no tones at all. We had to listen for vibrations all the time, and at no time would he allow us to play as though we were playing in a small room. One of his favorite remarks was:

*"The people in the galleries have just as much right to hear the concert as any one else."*

He not only advocated the most beautiful tones possible, but also insisted that we should not overdo any one particular quality of tone. Variety was always what he sought; as he maintained that no matter how beautiful the tone might be, there must be innumerable shadings and color variations of it, to prevent the playing from becoming monotonous. As many colors and different kinds of touches as we could command were what he sought; but, of course, they must all be beautiful. He would never allow us to repeat a passage in the same way. In order to enable us to have the widest range of colors, he wanted us to develop as large a tone as possible; but, of course, without the slightest trace of hardness or pounding. He would repeat and repeat:

*"Strive for beauty of tone, beauty of line, beauty of color."*

A thousand color nuances can be given by a variation in the depth of pressure, and by skillful pedal combinations; but for these effects he claimed that no teacher could give any but the merest hints. Therefore he urged us to listen carefully when practicing and to train our ears to distinguish and to discriminate the slightest nuance by color, touch or phrasing. He would so often say:

*"It is in the grasping of these elusive points that the pupil shows whether he is to remain only a pianist who does nothing more than record the music with irrespressible automatism, or is capable of going on and up until he stands with the artists."*

As he once remarked:

*"No teacher alone can really make any*

*one play. He can only indicate, and the pupil has to collaborate in order to attain the best results."*

When *legato* octaves are employed in playing a melody, make the pressure toward the outer fingers in order to accentuate the melodic line; but in heavy *bravura* octaves the weight is thrown upon the thumb, to secure a greater effect of brilliancy.

### Don't Hit the Piano

NEVER STRIKE A CHORD. In *fortissimo* chords the hand should be on a chord and the weight is from the muscles back of the shoulders, the arm hanging heavily relaxed. Remove the hand from the chord after it is played, so as to release the complete vibration while holding your foot on the pedal. Just as in the singing tone, if the chords are played merely with the forearm weight they are either too small in sound or, if an effort is made, they are harsh and noisy with no carrying quality.

This forearm playing is far too prevalent among pianists of the present day. Many pianists are delightful as long as they play softly; but, to anyone schooled in the Gabrilowitsch ideals of piano playing, they become unbearable when they play *forte* and *fortissimo*. To Gabrilowitsch, all pounding and forcing of the tone was intolerable. He would insist:

*"The piano treats you just as you treat it. If you hit the piano it will hit you back!"*

He explained to us that a *fortissimo* tone, that is free from all hardness, is actually ten times as big in volume as the forced, tight tone; as it has that much more carrying power, owing to the release of all the vibrations.

Sometimes, in *fortissimo* chords, he would advocate our arpeggiating the left hand very swiftly, almost imperceptibly. This treatment gives an added richness of quality, and it serves to eliminate the dry, unresonant quality which sometimes results from the chords being struck with simultaneous precision. For example, this is very effective in the dramatic chord at the beginning of the *Scherzo in B minor* by Chopin.

This, however, is a dangerous rule to give to any but a highly intelligent and musical pupil, as an undue employment of this effect would result only in slovenly work.

Whether playing *fortissimo* or *pianissimo*, the tone must be rich and deep, and with body and quality. Never play on top of the keys, as the work then loses all impressiveness, just as if a public speaker should talk through closed teeth and not reinforce the tones of his voice by the deep breathing which comes from the lungs. This kind of playing is very unjust to the piano manufacturers, who have provided an action which calls into play the complete resonance of the strings.

In light passage work, the finger tips alone are employed, without the aid of

arm weight; but in *forte* passages a little weight is added for contrast. One should have such absolute control of all muscles that they can be called into use at will; and the more control to which they are subjected, the greater the variety of colors in the tone produced. Mr. Gabrilowitsch would say:

*"Do not play on the keys of the piano. Play on the strings of the piano. Try to make your listeners forget that the piano is an instrument of percussion."*

### The Ideal Teacher

IT SEEMS STRANGE that we had to come to the poet of the piano, the singer of the keyboard, to find the ideal teacher, for whom we had all been looking. He was, as was to be expected, a master of interpretation; his ideas on phrasing were consummate; but it was a surprise to find him so meticulous, practical and methodical a teacher; a man who was willing and able to go into such details as none of us had experienced heretofore.

In contrast to the relaxed hand in melody playing, the hand is set for *staccato*. The keys are never struck in *staccato*, but the quick action comes after the key is pressed. This makes a *staccato* of better quality, with none of the harsh, percussive effect of the struck *staccato*.

But whenever a running passage is repeated, an excellent effect in contrast can be obtained by playing the first run with such an overlapping *legato* that it sounds like a *glissando*, and the second one with thrown fingers, producing a *staccato* like effect. Gabrilowitsch would say:

*"Contrast is as essential in music as it is in painting. Therefore use your colors judiciously, and never do the same thing twice. For instance, here a phrase is repeated three times. What is it you intend to do with these repetitions? Something has to be done in order to secure a contrast."*

In the classics a very crisp, *semistaccato* touch is often in place, while in Chopin, a *legato* style is more appropriate.

Gabrilowitsch was keenly aware of the effectiveness of the thumb, and used it often to end brilliant *arpeggio* runs or *glissandos*. Sometimes he would have us throw the entire weight of the hand on the thumb for especially big effects. For deep songful effects, roll the weight of the arm on to the thumb, and be sure not to bend the last joint. For this quality of tone, he especially recommended our practicing *On Wings of Song* by Mendelssohn-Liszt.

In passage work and chords, the little finger must be scarcely curved at all, as we need all of it. But in organ effects in left hand bass chords, weight is thrown into the little finger, so that it has a deep, rich organ quality even in the softest chord.

He was extremely particular about the use of the pedal. He always wanted clarity in the standard works, but he decried too little pedal as he would then complain of dryness. In the modern works he showed us marvellous veiled effects, opening up to us great new possibilities, through expert use of the pedal.

For bell-like tones, such as in the *Prélude, No. 17* by Chopin, he had us strike the A-flat in the bass quickly with the

finger tips so that, with the aid of the pedal, we produced a metallic, gonglike effect.

Ex. 2

He was very fond of bell effects. In the slow movement of the "Sonata in B minor" by Chopin, for instance, an effect of distant bells is secured by using the pedal so that the overtones of the inner voices in the right hand will melt into each other.

Ex. 3

A good way to find out whether your fingers have control of color is to see how many colors can be produced with the fingers alone, without the aid of the pedal at all. Although the pedal is an invaluable aid to color, it is a great mistake to depend entirely upon it. That is the fault that Chopin found with Thalberg. He said:

*"He is not the pianist for me, as he gets his effects with the pedal instead of with his fingers."*

Gabrilowitsch once said that a pianist who has great technical facility and no beautiful colorful moods is like a gorgeous chandelier without the lights lit.

### Good Taste In Interpretation

GABRILOWITSCH was opposed to very fast playing, and he never allowed us to play a technical passage like an exercise. As he said, it should always be expressively colored with *crescendo*, *diminuendo* and varying tints. Brilliance should be beautiful and big, never coarse and noisy. "That sound too technical," he would say. In any *bravura* composition he always wanted the passages to sound musical and interesting. He would say:

*"Do not commence your crescendo with a forte as it will degenerate into noise."*

*"With every change of key there should be a change of color."*

*"Always give the melody a different tone color from the accompaniment, whether the latter is in the same or in a different hand."*

Gabrilowitsch's ears had become so sensitive, that all tones that lacked quality were agonizing to him.

To express the ebb of a phrase, he used the picture of circles in the water which gradually grow fainter and disappear. He would direct:

*"Play as you breathe. Phrase it as a singer would."*

He constantly preached to us the importance of balance and proportion, and all excesses, exaggerations, and distortions of line were abhorrent to him. As Oliver Downes has said:

*"Gabrilowitsch is a born aristocrat and a*

(Continued on Page 64)

# The Spelling of Musical Notation

Musical Orthography Made Clear

By PRESTON WARE OREM

THERE HAVE BEEN from time to time sporadic outbursts of "spelling reform" in language, "phonetic spelling" as it is called. The late Theodore Roosevelt was interested in the last reform wave of this nature, just as his boundless nervous energy pushed him into so many other matters of greater or less importance. Now we know, of course, the old saying that "a rose by any other name would smell as sweet"; but would it, really? *R-o-s-e* or *r-o-s* would seem to strike us unethetically, to say the least. Then if we happened to incur an ache somewhere in our anatomy and a fellow should come along and spell it "ake," very likely a new "aque" would develop elsewhere. We have it on authority that no less than thirty-two dialects are spoken in Germany; and, judging by what comes to us over the "raddeo," there are many more varieties of English spoken in this country, politicians, apparently, being the worst offenders. And what has all this to do with music? It strikes a parallel. Personally, both by ancestry and inheritance, we are jealous of our English. The romantic and colorful history of our English speech is reflected in its very spelling, and a large majority of us seem to resent any tampering therewith. To us the very appearance of many a word, its spelling, calls up an eventful racial history.

Now, this art of music of ours, largely empirical, adventitious as it is, has developed a whole system of symbols for its notation, as it has progressed; and this so accurate and systematic as to provide us with a written universal language. To this we must learn to adhere, in all sincerity. This applies alike to the student, the theorist and executant; and we shall realize this as we go along. In our tuning of instruments, we have seen fit to adopt during the last two hundred years, and to propagate a device called equal temperament. We will not bother the reader with it at this time; but, since it is with us, we must abide by it. Our present system of musical notation is in accordance therewith; and so is our "spelling."

Musical spelling begins just as soon as, by sounding two tones, we create that which we call an interval. Even the unison (two tones of the same pitch) is included; and musical notation decrees that, in "short score" (as in hymns) or even in piano or organ music, wherein we indicate merely the part writing we shall use appropriate symbols—the linked notes or the double stems.

At once our troubles begin. Let us dismiss for the time being the melodic intervals, formed by the members appearing in melodic line, and tarry a while with the harmonic intervals, or those used in forming chords; here is where our real spelling comes in. It will not hurt any of us to review certain pertinent facts. We reckon all intervals by degrees (successive letters), A, B, C, and so on, in the first instance. This process gives us the name; hence A to B, a second (two letters); A to C, a third (three letters); and so on. A chromatic modification of each kind gives us the final identification. For instance, what is this? Old stuff! Yes, indeed! But we have seen in our time too many musical misspellings not to realize the importance of the enforcement of the principle. Based upon tonality and the tempered scale, our

system for the formation and identification of intervals and chords admits of no deviations. Those would be composers, who improvise at the piano and then put down, hit or miss, on paper the results of their keyboard experiments, invariably give themselves away. But the real spelling, once we attain it, fits in logically and beautifully—a help to our analysis, our sight reading, our technical grasp and to our understanding.

To return to our "measurements,"

we have here a second (A, B—two letters). But here is also a second

likewise two letters. But, measuring chromatically (by half steps), we find two half steps from A to B, but one half step from A to B-flat. Both are seconds; but one is less than the other; hence those fixed terms; major (greater) minor (lesser), a major second, a minor second. But why not

It sounds the same. Lacking two letters, this is not a second at all. It is a phonetic outrage like spelling *cat* as *kat*. Besides, on no stringed instrument would A to B-flat and A to A-sharp be fingered alike; neither would they be on certain other instruments. But we could also write a second as

one half step greater than a major second; since we have expanded it still farther we call it an augmented second. But why not write it as

This sounds the same, does it not? Oh, yes! When a horse is tied to a post, he is "fast"; but, when going at a gallop, he is "fast" also. Not until the spelling of intervals is firmly established may the structure of chord formations be satisfactorily handled. We are not attempting to teach harmony in this article, however, merely to illumine certain important principles of writing. What we have said about seconds will apply to thirds, sixths and sevenths, except that since there are certain modifications that we do not need, we do not worry about them; purely theoretical intervals may be discarded. But let us look for an instant at sixths and sevenths. Here is a minor sixth;

and Ex. 8 is a major sixth.

All perfectly simple; but later we have important use for the augmented sixth,

No we do not alter chromatically the lower

member of any interval. All in musical theory is built up from a fixed foundation. The seventh is another story. Ex. 10A is a minor seventh,

while Ex. 10B is a major seventh. But there is no use to augment it. Rather let us diminish it:

Always enumerate the half steps included, for the verification of any desired interval. Fourths and fifths, as derived from the major scale we know, are called perfect; but these may be either diminished or augmented.

There are just two letters of the musical alphabet, B and F, which, without the employment of sharps or flats, will form, respectively, an augmented fourth or a diminished fifth:

a continual trap for the unwary. As to scales, we are not much concerned with them at present.

The preceding is but a preparation for a consideration of the chords. These must engage our chief attention. Whatever we do in music is dictated by the ripe experience of some centuries, and a consensus of enlightened opinion. The spelling of music has grown just as has the spelling of language. So far we have seen fit to build up our chords in thirds from foundational basses; this custom will cover anything that we do, legitimately. We are talking music now, not acoustics. Please bear in mind, we are talking not only harmony but counterpoint as well. Since, even in the most elaborate counterpoint, we have an eye always (and an ear too) for the implied harmonies. We are convinced thoroughly that future originality in musical creation will arise from purely contrapuntal (horizontal) habits of thoughts, but nevertheless our work must be duly systematized.

The spelling of the common chords, those triads so dearly beloved of the elementary teachers of to-day, calls for no special comment, since it is based entirely upon the scales. What we need to remember is that all chords in their original positions are built up in thirds, and that, no matter how their members may be scattered in their various positions, the spelling remains unaltered. Of course, where modulations are being consummated, requiring accidentals for the consequent changes in key, the spelling must be watched closely. We have seen some very queer spellings as the result of comparatively innocent modulations. The triads seem to take care of themselves pretty well, except when inverted. For instance, we have seen in print the first inversion of the C minor triad spelled thus:

Occasionally when accomplishing modulations we get into trouble of an enharmonic

nature; a change of spelling without a change of sound. The point is, of course, that we may not make only a partial change of spelling. The innocent E-flat major triad looks quite different if spelled in sharps.

We just cannot get along without that F-double-sharp; and that chord in the twenty-ninth measure of the *March Funebre sulla Morte d'un Eroic* in Beethoven's "Sonata, Op. 26" has a rather outlandish appearance in some old German editions, the F-double-flat being an enharmonic notation for E-flat, the real root of the chord as heard by the ear.

Beethoven's meticulously exact spelling went astray in this particular chord, though his careful habits are nowhere better exemplified than in this number, which will repay careful analysis.

But when we leave the triads our real troubles begin. We will be better off, of course, should we quit theorizing and ascribe all dissonant combinations of tones to one root, the dominant. Then only, in the analysis of any chord, can we reconstruct the chord mentally, in thirds, and arrive at its real significance. In the tonality of C, such a dominant from root to thirteenth will read:

From this aggregation the group most commonly met with is the dominant seventh, which, be it remembered, is the same whether the key is major or minor:

Ordinarily this group is misspelled, but seldom, except enharmonically, as we shall soon see. To spell any dominant seventh chord correctly, we have only to remember the correct sequence of the component intervals, major third, perfect fifth, minor seventh. From the point of sound, there are but twelve dominant seventh chords that we can write. Furthermore, we must remember that when we speak of tonality, we mean that group of related keys that surrounds every given principal key; and again this should be a help to our spelling. With C as the principal key, we find six dominants in use.

A neat assortment! Bear in mind that the third of each of these dominants is respectively the leading note to one of this group of related keys, and we have the whole principle in a nutshell. Next, transpose these dominants into all possible keys; and their spelling should become fixed.

It is difficult, in an article like this, to express all that one seeks to tell, without undue technicality; but in these days every music student knows at least something about harmony, and fortunately many know

a lot. Just recently we have seen in print an atrocity in notation perpetrated by a composer who certainly should have known better. Here it is:

Ex. 20

But why did not the musical editor see this? Ah, he should have done so! It is, after all, a complete dominant whose root is D.

Ex. 21

How much simpler to have spelled Ex. 20 correctly. Just the alteration of the F-flat above to E-natural, and of G-flat to F-sharp, would have straightened out the whole thing.

Possibly one of the most frequently misspelled chords is that familiarly known as the diminished seventh: that chord which has been called a part of the "stock in trade" of the old fashioned Italian opera. So far as its derivation is concerned, it may be ascribed to the dominant as a root, said root being omitted. It is made up of the third, the fifth, the seventh and the minor ninth, of the dominant harmony. Its popular name comes from the fact that from its lowest member to its topmost one is measured the interval of a diminished seventh. As it stands, it has the peculiarity of being built up all in minor thirds. And in point of sound, there are but three actual diminished seventh chords. Here they are:

Ex. 22

It is by their spelling alone that we are able to distinguish the key to which each belongs. But the joke of it is that each of these three may be spelled in six different ways. Here are the complete enharmonic spellings of each, with the keys and dominant roots given.

Ex. 23  
Keys: C E-flat G-flat A F-sharp D-sharp (Minor)  
Roots: G B-flat D-flat E C-sharp A-sharp

Keys: G B-flat D-flat E C-sharp A-sharp (Minor)  
Roots: D F A-flat B G-sharp E-sharp

Keys: D F A-flat B G-sharp (Minor) E-sharp  
Roots: A C E-flat F-sharp D-sharp B-sharp

Several of these spellings need never be used; we have put them in merely for completeness and to help to show what should be avoided. Should the roots of these groups be considered as roots of major supertonic, the spelling will be unchanged; the difference will be one of resolution and progression only.

The most often misspelled chord is, of course, the augmented sixth. To make sure of this chord, there is just one way to work it out. Let us, first of all, construct a major chord on the supertonic of the scale; then add to it the seventh and the minor ninth. In the Key of C (major or minor) this will give us

Ex. 24

and then let us treat the fifth of the chord as a diminished fifth.

Ex. 25

We have then, all of the members from which all three forms of the augmented

sixth chord are constructed. Its simplest form, the Italian Sixth, is an inversion of the above group, which comprised the diminished fifth, the seventh (doubled), the minor ninth, and the major third.

Ex. 26

The French Sixth (so much employed by Wagner) is just as easy; merely add the root to the preceding group.

Ex. 27

We agree with Wagner, we like it much. And the German Sixth merely omits the root, but adds the minor ninth.

Ex. 28

This latter form is found all through the classics. Yes, you say, but it sounds exactly like a dominant seventh:

Ex. 29

Of course it does, but it is not "how it sounds" but "where it goes" that regulates its spelling. Anent this very chord, there is a glaring misspelling in the beautiful *Prelude in E minor* of Chopin; which, in view of Chopin's overpowering genius, no editor has had the temerity to correct. The chord is spelled

Ex. 30

and comes just before the cadence. It cannot be a dominant seventh, since it occurs in no key related to E minor and its seventh does not descend. It is the augmented sixth (German) of the principle key.

Ex. 31

The augmented sixth chord is so called because it is the only chord containing the intervals of an augmented sixth. Then what about that passage at the very beginning of Wagner's "Tristan and Isolde" over which there used to be some discussion? No mystery at all! Wagner knew his spelling and was meticulous about it.

Ex. 32

Disregarding the G-sharp (auxiliary tone) in the first chord, it is but the augmented sixth (French) of A minor:

Ex. 33

and, disregarding the A-sharp (another auxiliary tone), the following chord is the dominant seventh of A minor; just as it should be.

The auxiliary tone, mentioned above, when written properly never clouds the issue; written upon an accent, a degree above or below a member of a chord which it temporarily displaces, its function is to round out the squareness of certain passages and to give a certain tenseness to the emotional content.

Passing tones, not falling upon the accents, follow usually the scales from which they are derived. If chord tones are indicated correctly, there will be little trouble as to passing tones.

We cannot refrain from one more quotation. Old Dr. S. S. Wesley is said to have

(Continued on Page 51)

## RECENT RECORD RELEASES

By PETER HUGH REED

FAR MORE EXTENSIVE than that ordinarily heard in the concert hall is the recorded repertoire of Mozart. With many music lovers this most humanly lovable composer is the beginning of all music. Several musical friends have remarked to us recently that their love of really great music began with Mozart, advanced to Beethoven and later composers, and then went back to Bach and Mozart's forerunners.

No less than five of Mozart's piano concertos, those improvisatory musical journeys in which are to be found some of the composer's most charming and characteristic inventions, were recently issued by Victor. This latter observation is borne out in the wholly delightful "Concerto in G major (K. 453)" (Victor Set M-481), which Edwin Fischer plays, and also in the "Concerto in C major (K. 467)" (Victor Set M-486) and the "Concerto in C minor (K. 491)" (Victor Set M-482), which Artur Schnabel and Edwin Fischer respectively perform; and the two latter of symphonic proportions. A deeply felt work of rare unity is the "C minor," undoubtedly the greatest of all the concertos. Attractively bright and effectively worked out in the coordination of its two keyboards, is the "Concerto in E-flat (K. 365)" (Victor Set M-484) which Artur and Karl Schnabel play in the recording. Lastly, there is the scintillating and polished "Cononation" Concerto (K. 537)" (Victor Set M-483) which is brilliantly played by Wanda Landowska. On a single disc (Victor 15185) Fischer plays a particularly cherishable *Rondo* for piano and orchestra (K. 382) which Mozart valued so highly that he wrote his father, "I want no one to play it after me but my dear sister."

Toscanini, conducting the B. B. C. Orchestra, touches off the brilliant music of the overture to Mozart's "Magic Flute" with his usual magic (Victor disc 15190); and Adolf Busch and his Chamber Players give notable utterance to the composer's *Adagio and Fugue* (K. 546) for strings (Victor disc 12324). Two "must haves" for the true Mozartian!

In his sonatas for violin and piano Mozart gave considerable prominence to the keyboard instrument; that is why these works require two ideally matched musicians for successful performance. Adolf Busch and Rudolf Serkin are such a team, as their fervently played performance of the composer's "Sonata in F major (K. 377)" proves (Victor discs 15175-6).

An attractive early Mass, written by Mozart in his nineteenth year, possessing in its music the aura of a youthful elation which brightens its solemn text, has been recorded by Musicraft (set 23). As sung by the Motet Singers of New York, with string orchestra, directed by Paul Boepple, this work has an appealing artlessness and is a simple expression of faith. A worthy addition to any record library.

Among recent recorded symphonies two "number fives" stand out for their unsailable musical ranking and the unapproachable eloquence of their latest performances in recording, and a third finds its ideal representation on records at the hands of the composer's compatriots. Wilhelm Furtwängler, directing the Berlin Philharmonic Orchestra with splendid ease and fine precision, gives one of the best performances of a Beethoven symphony on records in his interpretation of the composer's mighty "Fifth Symphony" (Victor set M-426); and Koussevitzky, directing the Boston Symphony Orchestra, gives a superb and intensely personalized reading of Sibelius' "Fifth Symphony" (Victor set M-47) along with a brilliant reading of the composer's

tone poem, *Pohjola's Daughter*. Georg Szell, conducting the Czech Philharmonic Orchestra, sets forth the gay and nostalgic qualities of Dvořák's "Fifth (New World) Symphony" without pretense or exaggeration.

The Jacques String Orchestra of London, playing the late Gustav Holst's "St. Paul's Suite" (Columbia discs 17113-4-D), sets forth this refreshing folk-modal music with healthy exuberance and appropriate precision; and Hamilton Harty and the Hallé Orchestra play the Incidental Music to "Rosamunde" by Schubert in a wholly satisfactory manner. The recording in the latter, which dates back several years, has an appropriate mellowness. (Columbia set 343).

Among recent chamber music releases, that of the "Quartet in D major" by Rousset (Columbia set 339) is important, not only because it is the first chamber work by this noted French composer to be inscribed on wax, but because it is a composition of marked distinction. Played by the Roth Quartet, which gave the work its first public performance, the elegance and refinement of the music is tellingly voiced; particularly is this true in the emotional and sensitive *Adagio*, which is similar in mood to the slow movement of the Debussy quartet. The Busch Quartet, which Toscanini, among others, regards as one of the foremost ensembles of its kind before the public, renders unto Beethoven and Schubert all that could be asked in its unified and rarely eloquent performances of Beethoven's "Quartets in E-flat, Op. 127" (Victor set M-489), and in A minor Op. 132" (Victor set M-490), and of Schubert's famous posthumous quartet, "Death and the Maiden."

New piano recordings include: Johana Harris' conscientious rendition of Busoni's transcription of Bach's *Chaconne* (Victor set M-506); a work which being more Busoni than Bach should have a bigger frame than it is given here; Anatole Kitain's smooth, unsentimentalized performances of the "Waltzes" of Brahms and of the "Edward" Ballade, Op. 10, No. 1 (Columbia set 342); and Louis Kentner's electrifying pianism in Liszt's musically empty but technically impressive *Venezia e Napoli* (Columbia set X-105).

Other piano releases include Edwin Fischer's cherishable rendition of Schubert's two sets of "Impromptus, Op. 90 and Op. 142" (Victor set M-494); Cortot's fine playing of Mendelssohn's "Variations Sérieuses," a skillfully contrived composition regarded by many as the composer's best piano work.

Among vocal discs recently issued are: Charles Kullman's fervent renditions of the *Prize Song* from "Die Meistersinger" and the *Narrative* from "Lohengrin" (Columbia disc 9146-M); Marian Anderson's vocally oquent performances of Bach's *Komm, süßer Tod* and Handel's *Siciliana* (Victor disc 1939); Gerhard Hüsch's fine singing of the Beethoven song cycle, "An die ferne Geliebte" and the same composer's song, *Andenken* (Victor discs 12246-7); and Charles Panzera's rarely quanced performances of a well chosen group of Gabriel Fauré's songs (Victor set M-478).

One of the choicest albums of old music ever released is the Monteverdi set (Victor M-496), containing some of the composer's most expressive and moving works—madrigals, arias and others. The set was made at the instigation and under the direction of Nadia Boulanger, the eminent French conductor, composer and teacher. It is music that needs only to be experienced to realize its splendid worth. We recommend that our readers be sure to hear it.

# Earning a Living Through Singing

"Sing a song o' six pence  
A pocket full of rye"

By the Well Known Concert Soprano and Teacher  
CRYSTAL WATERS

## EDITOR'S NOTE

Crystal Waters, author of this article, is characteristically American. She was brought up in California, where her father organized an orchestra and then a band. Crystal played the piano in the first, and alto horn and cornet in the second. At seventeen she became a church soloist. After being graduated from the Los Angeles State Normal School (now the University of Southern California), she taught school and gave private lessons in singing and piano playing. She then borrowed money and went to Italy to study for two years, merely with the desire to learn to sing artistically. She says that she is one of the few singers who did not go to Italy as a trained nurse for an operatic bee. The following five years were given to studying, to singing in church and recitals, and to teaching in Boston. Two years more were spent as a teacher at Mt. Ida School for Girls, when she proudly paid back, with seven per cent interest, the considerable sum she had borrowed to go abroad. The next year she went to France and sang for the soldiers at the front. Since the War she has located in New York, as a teacher, and a soloist in leading churches. Her radio programs have been very comprehensive, and distinguished by sheer originality and modernity. She appeared also as a soloist with the great Hungarian composer, Béla Bartók.

CRYSTAL WATERS

"SHALL I BE ABLE TO EARN my living with my voice?" is the first question asked by a new comer to a vocal studio. Young people who love music, and whose voices are good enough to attract attention and comment, are eager to go into the vocal profession as a life work. A few of them consider this field of endeavor with the same common sense and serious minded point of view that they would weigh the possibilities of becoming a trained nurse, a dietitian, a doctor, lawyer, pedagogue, or social worker. Each is ready to prepare himself for his own unique niche, on the level that suits his particular talents. But the majority of these young people, unfortunately, demand being told at the outset that they are sure to reach the top. Without that assurance they seem unwilling to enter the vocal field. Singing, to them, means the intoxication of fame, glory, dressing rooms filled with flowers, ermine wraps, and a stream of gold flowing in from some mysterious source.

Too frequently the teacher's answer to that first question is influenced by his wish to gain a pupil. He exaggerates his praise and promises large rewards, disregarding the many factors, other than a good voice, necessary to make an artistic career possible. Usually, he holds out grand opera as a goal; and that is just what that majority want to hear. The student starts lessons. Leaping blindly toward a pinnacle, proper foundations for a practical musical life are neglected. Other capabilities the individual may possess, and we all possess some of them to a degree, are left sleeping. In the end the money runs out, the goal is not reached, and the teacher cannot be held responsible.

The world is full of disappointed singers who have put all their faith in such promises. One girl, to our knowledge, was so determined to be a grand opera star that, when fame did not arrive in her home town, she spent all of her small inheritance studying with famous coaches in Italy. After five years she returned to America penniless. She did not qualify at the Metropolitan. She was not prepared for any other phase of vocal work. Circumstances forced her to take a job as a filing clerk. A young man, after a similar experience, was glad

to get a job as a sales clerk. Both could have been artistically useful to our country; both could have had happy, prosperous lives; if they had rounded out their musical education, developed all their natural capacities that pertain to this work, and had had the right attitude about the phase of singing they were equal to doing.

## Great Vocal Talent Not Indispensable

TO EARN ENOUGH SIXPENCES to have a decent living, it is not enough to have a fine voice. It is essential to develop a broad love for all humanity, objectified in a pleasing personality. Equally important, one must know all about music, including time, rhythm, harmony, theory, and sight reading. One must love poetry and be able to interpret it so that the emotional values behind the words can be communicated to other people, arousing them to think and feel. To go farther and win the highest goal, one also must have such qualities as a flair for languages, dramatic instinct, artistic sensitivity, musical intelligence, a feeling for the theater, and that divine inner fire called temperament. The greatest gift of all is a talent which persists in discovering every capacity within the individual, and in developing each of them to the fullest extent. Some of the biggest ones do not appear until the smaller ones are matured. It is the utilization of these abilities which enables the young singer to reach the heights; and the heights are so glamorous that obviously no effort should be spared in scaling them.

## Be One of the Chosen

OF COURSE EVERYONE CANNOT ARRIVE at the top, or no top would exist. As in any field of work, few become so outstanding as to be known internationally. But many are rewarded with substantial incomes, tripled, in effect, by the sheer joy of being in the work they love. Here one does not vainly yearn for the time and leisure to acquire growth of character and the art of living, because such development becomes a necessity—an integral part of the whole.

If you have a predominating urge to be a singer, do not let it discourage you to

learn that only about one per cent of the students of singing become famous. And do not fall in the dumps if someone "in the know" tells you that the size and quality of your voice will never set the world on fire. Remember that some of the greatest successes have had inferior voices. Mary Garden is an outstanding example of international renown in spite of an inadequate voice. Even critics, who worshipped at her feet, called it defective. She became a famous *diva* because her singing held her audiences spellbound. Her musical intelligence and her personal magnetism compensated for her lack of voice. She had the distinction of creating many operatic rôles, including Debussy's *Mélisande*. Another example is Povla Frjisch who, again in spite of a limited voice, is proclaimed in Europe and America as one of the greatest among interpreters of songs. The lovers of art from stage, studio, radio, dance and screen fill her concert halls to capacity.

Your own voice may be strong and beautiful, but no one can predict an outstanding career for you just by hearing you sing. I know many cases where grand and glorious voices, yes, and too much talent, are a handicap. The students who possess such gifts too frequently become so enamored with the sensuous sound of their own voices that they are both lazy and careless. Under the intoxication of their friends' extravagant compliments, they refuse to work toward the high standards set for professional singers. Others with ravishing voices have not enough interest in music to become specialized. After all, it is the mind that sings, and the vocal bands, whatever their size, are willing followers of that mind. How can any one tell that you have the common sense to build a firm foundation in vocal production, musical knowledge and artistic expression? How can any one discern that you have many of the necessary factors other than a good voice plus the sticktoitiveness to follow through and develop them?

So, regardless of the volume or size of the voice, you can succeed if you will do the work. Large or small, when it flows fluently with rich, vibrant, mellow tones and appears easy, the sounds always give people a bit of a thrill. Such singing brings a reward so ample in itself that outside praise becomes unnecessary to your enjoyment. The full, expansive breath, playing upon a freely responsive vocal mechanism, and the swirling sound waves in the open spaces of the throat and head, constitute a sensation of boundless delight, as if the tones were out in space, independent of the throat.

Small voices, clearly, freely and smoothly produced, with clean cut enunciation, have been known to win higher places than some large, strong ones. The microphone is friendly to such production; and, if the person with the small voice has more ability to "put a song across," and to let his or her personality shine through it, the mechanics will amplify the sound until it comes over the radio as a full toned voice.

## Choosing the Right Teacher

WHEN READY TO TAKE VOCAL LESSONS, choose a teacher who has won recognition as a singer and who has the ability to impart knowledge. Only one who has actually experienced the sensations of producing expressive musical phrases can give instruction.

Good teaching is not a matter of sex. Either a man or a woman may be analytical, patient, explanative and inspiring. But do not be beguiled and misled by a magnetic personality, a glamorous studio, flattering attentions, or divine accompaniments.

Vocal methods have become modernized and streamlined. Scientific research, conducted by the Bell Laboratories in New York City and by G. Oscar Russel of Ohio State University, reveal that the acoustical laws of universal sound apply to the tones of the living, human instrument. Find a

teacher who understands and can explain these findings. Conform to these natural laws and you will save much time and trouble. Another important trend is to combine vocal technic with education in musicianship, from the start. Instead of dry, tedious vocalises, students are given their problem to develop from examples and exercises in the songs themselves. Nothing but the finest song literature is used. Thus an excellent repertoire is established from the beginning.

### The Broad Education

THE SUREST WAY of developing something within yourself, to be expressed when you sing, is to have a college or university education. If you will make music your major, you will have the courses which automatically lay the bricks for your firm foundation. You will be taking musical theory, sight reading, music appreciation and history, violin or piano, conducting, literature, languages, poetry, phonetics, philosophy, psychology, æsthetics and so on and on.

A university degree is an asset in every region of the vocal field. Suppose, for one reason or another, that you do not realize a living wage from just singing. A degree will help you to secure a position in a private or public school. Vocal music is expanding every year in the school systems. It includes teaching singing in the elementary grades, vocal instruction in high schools, junior colleges, universities, conducting glee clubs and choruses, and the work of music supervisor. Many people have taken up a serious study of the voice after they finished college. They intended to teach anyway, and they would rather teach the subject they love than literature, mathematics, or sciences. So they have usually succeeded in finding a desirable position.

In case you do not have the opportunity to go to college, then have the enterprise to educate yourself up to that standard. Set yourself the task of covering specific readings which will broaden your point of view and deepen your understanding of human nature. Take private or class lessons in sight reading and musical theory, or get a text book and teach yourself. The modern vocal teacher will be glad to assign projects on musical knowledge; and, if you can work as hard for yourself as you would find it necessary to work for someone else, you will carry them out to the finish.

When ready for that first job, look the field over in your own locality. First, consider the church positions. The average pay is five dollars a Sunday; and, while that is not much in itself, it will probably pay for a vocal lesson, or fill out your budget. For preparation, be able to sing from thirty to forty sacred solos and to read any hymn or anthem at sight. Write a neat business note to the organist or the music committee of every accessible church and ask for the privilege of an audition. Explain that although there may be no immediate vacancy you would like to have your work known to them. Take to the audition at least two solos, and have them of different types, one quietly sustained to show the smoothness of your *legato* singing, and the other more dramatic, to show the expressiveness of your voice. But, regardless of your vocal quality, be warned that every organist says that if an applicant cannot read music this individual is promptly disqualified.

Next, make up some interesting recital programs to sell. Remember that an interesting program compensates for lack of experience. Choose songs that are within the frame of your present vocal expression. Naturally, you will not be satisfied with your singing at this time; nor, for that matter, will you ever be so. A serious artist never catches up with his ideals. Then choose songs that the majority of people enjoy, not the high brow ones that demand a musical education for their appreciation. Keep your ear close to the ground, so to

speak, and try to listen for the musical needs of your audiences.

Interest in your program may be heightened by bringing the songs into their proper settings. For instance, some story about the song, about the musician who composed it, or the poet who wrote the words, may be told informally. A program of national folk songs, of national love songs, or of national nature songs, may be outlined; or one with words all by one great poet, such as Shakespeare, Bobby Burns, or Longfellow, or Tennyson. Another suggestion is to have a group of sea songs, a group of land songs, a group of mountain songs, a group of love songs, and the like. The history of any nation can be vivified through its song literature. Just think what you could do with American history, if you sang a group of songs of the Revolutionary Period, then one of folk songs from the different states, then some Civil War songs, then those of the elegant eighties and finally a group of modern songs, both art songs and popular ones.

Make a business of being at least partially your own manager. There will be more interest in selling yourself than will be taken by anyone else, and at much less cost. A man with a very commonplace voice became one of the outstanding tenors at the Metropolitan Opera House, simply because he made up his mind that if he used the same trouble and ingenuity in selling himself as he had been using to sell pianos, he would be a success. He began in a very small way, and he reached the very top.

Sell these programs to the clubs and schools in your district. You can obtain the names of all the club presidents from your local newspaper or from the Federation of Women's Clubs. The State Board of Education will give you the names of school principals. Keep a card catalog of all these names and write them letters and explain in an attractive way what you have to offer and that you are willing to give an audition. Make your price attractive at first—not more than five to fifteen dollars and expenses. If you have something people want to hear, you are sure to get a response.

The largest return will come from gaining experience. Every time you sing, whether it is for an audition or a recital, a large audience or a small one, take infinite pains to have your personal appearance, your gracious attitude, your magnetic charm, your courteous manners and your speaking voice, the finest you have to offer. Remember that one person is a potential unit which may lead on to further success or cut you off.

Two hearts full of enthusiasm are better than one. If you can find an accompanist who is also a pianist it might be very much worth your while to go fifty-fifty with her on deals, including the profits. If dressing in costume, piano solos that fit in with the program being given would occupy the time you are taking to change. Also, a group of piano pieces, artistically played, would add variety to the whole. Then the help this will bring towards writing letters and contacting people, will be a welcome relief.

At the same time begin to think about a series of interesting broadcasts. They should have an educational value, or be highly entertaining. Here again, it is more than just a voice that counts. Learn how to send all your personality out on your voice alone. Do not be fooled into thinking it takes a special technic to sing or speak into the mike. The main thing is to have something to say and to say or sing it naturally. Do not be discouraged if the first audition brings no results. Just continue learning how to sing with more ease, with an increasingly smooth and fluent tone, and with more genuine feeling. The next time ask for an appointment with the manager

(Continued on Page 72)

### An Astonishing Invention of Musical Interest

WHEN new inventions of revolutionary type related to the musical field have appeared, THE ETUDE has departed from its customary non-proprietary policy and announced them in these pages. The new "Mystery Control" radio presented to the public by Philco a few weeks ago, is now attracting wide attention.

It was first exhibited to scientific groups; but, in order to get the impression of the mass public, it was shown at county fairs, where it had a startling reception. As uncanny as the radio itself, this new invention drew crowds away from the Midway, the races, the prize preserves and the prize "critters." The demonstrator, with what resembled a box slightly larger than a cigar box (weight less than three pounds), could, by turning a dial similar to a telephone dial, cause the receiving set to change from one broadcasting station to another, or cause the set to play louder or softer at will. The "Mystery Control" is not connected with the radio by any wires, it is not "plugged in." It is an entirely separate and independent unit. The receiving set may be in any part of the house and at the same time may be controlled by the "Mystery Control" box, from one room to another, from the lawn, from the kitchen,

from the porch, in fact from anywhere within an enjoyable listening distance.

In a music school the set may be played from any part of the building, merely by turning the dial on the separate box. Thus, if a teacher wants to make the tone louder or softer, she does not need to disturb the class by leaving her desk. When desirable, the set may be turned off entirely, from the "Mystery Control" box.

The invention suggests so many other possible uses that it becomes astounding, because it controls from a distance light and power through wireless means. Is this the beginning of a new era, an era which may mean an enormous economy in the communication of industrial power?

The wonderful thing about the new "Mystery Control" is that each control box may be synchronized with its particular receiving set, so that a score or more of such sets and boxes may be in the same building without interfering with each other. The "Mystery Control" can be used only with the new receiving set designed by the manufacturers and therefore does not affect radios of other makes in the neighborhood. The receiving set may, of course, be tuned independently of the "Mystery Control," if so desired.

### A New European Sound Reproducing Invention

The *Illustrirte Zeitung* has announced a method of recording sounds upon a continuous ribbon of cellophanelike material, so that a whole concert or opera may be taken upon one film. This, however, is not like the light film so widely used in moving picture theaters in America; but sounds are graven on the film by a saphire needle, after the manner of the phonograph. The new instrument is called the Tefiphon, and the inventor is a Dr. Daniel of Cologne.

\* \* \* \* \*

The *Etude Music Magazine* strives to keep its readers informed upon all the latest musical devices which represent a departure in this new and rapidly progressing age. We realize that, as with the automobile, there are sure to be continual changes, as the inventive genius of man devises them.

A New Film Phonograph

## The Technic of Teaching Rhythm

### How "Foot Beats" Have Been Found Valuable in Training Bands

THE SUBJECT OF RHYTHM has been an engrossing one to all band and orchestra conductors, and not without reason. Not one of them would deny that rhythm has a serious effect on the general performance of his organization, and that its standard of excellence is commensurate with the exactness of its rhythm. At various clinics which the writer has conducted during the past few years, the subject of rhythm has occupied a considerable portion of session time. It must be admitted that even the most reputable teachers seem to differ greatly in their philosophy and methods of developing this phase of student training. But this is as it should be; for it is hardly practical or necessary that all teachers employ the same technic in developing desirable rhythmic responses within their students.

The various devices and methods have their individual advantages and values, and the competent instructor will analyze their comparative worth and employ those which accomplish the end most efficiently and reliably.

Rhythm must be felt, and as is true with other factors of a good performance, if properly felt it becomes a part of the performer as well as of the performance.

After an analysis of the various modes of approaching the problem of rhythm, we would confine our attention to two methods of handling the matter of teaching rhythm. On the one hand we have the instructor who teaches his students to read the various figures through use of the ability to "feel the rhythm," while on the other hand we have the teacher who insists that the student count and divide the units of each measure or phase accurately by means of precise mathematical division.

Both of these methods are essential, yet each has its separate weaknesses. Rhythm, we are told, is the regular recurrence of a certain stress, as in poetry, oratory, or good prose, while time is the basis of correct rhythm. Frequently we find a conductor referring to *rhythm* when he actually intends to refer to *time*. We must not fail to recognize that "the symbols of rhythm on the printed page are not rhythm unless these symbols bring definite rhythmic impulses into our bodies." It is this response which our first-mentioned teachers are trying to bring about. The major weakness of his method is that the student usually "feels" the rhythmic pulse, yet does not have the ability to read the various figures in precise time. For instance a student might well feel the beats in a measure of our four rhythm without being able to count accurately the division of the notes between the beats.

The other group of instructors insist on "arithmetical interpretations" of rhythmic figures, and the weakness therein is a resultant stifling of the student's musical interpretation and expressive qualities. In order that rhythm be properly developed and felt, it is necessary to adhere to the basic principle that there must be physical motion *plus* a mental concept of the ac-

curate distribution of the time value of the rhythmic figures.

Jacques-Dalcroze was perhaps the first to recognize and develop the basic principle of rhythmic training in his work; and this has caused many instructors to turn from a mathematical basis of rhythmic experience to one built upon bodily motion. Through the contribution of the Dalcroze theory, we find to-day thousands of students in the physical education classes training their muscles and bodies to respond appropriately to varying rhythmic patterns. Such bodily response to rhythm should be started while students are in the grammar school, and continue until a true rhythmical expression and feeling have been attained.

Many students begin the study of instrumental music before they have developed these natural capacities for rhythmic response, and quite naturally they have considerable difficulty with feeling rhythm or counting time. In music, "rhythmic feeling" and "time understanding" are indispensable. When students have sufficient rhythmic experience to understand and feel the rhythmic patterns, then the study of instrumental music may be introduced, but it is hardly advisable to do so before such rhythmic training has been experienced.

#### Methods of Keeping Time

IN KEEPING with the controversial nature of our subject, we must ask the question, "How should we teach our students to react physically to rhythmic impulses?"

Assuming that our students have acquired a normal competency in rhythmic reaction, we must next decide between several methods of "keeping time." The first method is one of "counting" mentally, with no physical reaction. There may also be the actual voiced count, which is physical only insofar as it involves the use of the vocal cords. Another approach is through clapping of hands to fit the rhythm, and this is definitely a muscular method.

While the "vocal" and "clapping" methods are acceptable as an initial approach, and especially for young instrumentalists, they fail as soon as the student gets to playing his instrument. It is obvious that his hands and throat are busy with other functions and cannot be used for purposes of rhythm.

Another approach is that of "beating or tapping the foot." This method involves putting the foot down on the beat and raising it exactly on the half-beat. This method of teaching the counting of time is in my opinion the most efficient and effective means for attainment of definite results in rhythm. One advantage of this method over mental counting is that it is visual, and thus the matter of concentration and thinking is "double-checked" by vision. In the second place, it provides a definite and physically timed division of the beat into halves, which of course is of assistance in further subdivision. Lastly, this system of counting time provides for a sense of pulsation, and at the same time affords a sense of control and organization.

Naturally, the pianist or organist could

hardly be expected to use this latter method, but for those instruments where the foot tapping would be impractical, there are other means of teaching rhythmic fundamentals.

A glimpse of the mechanical means used in the "foot-tap" method as well as something by way of explanation might here be appropriate.

The symbols  $\downarrow$  or  $\searrow$  are frequently used to indicate the down beat of the foot, and the symbols  $\uparrow$  or  $/$  indicate an up beat of the foot. It is absolutely imperative that the up beat of the foot comes *exactly* midway in the unit of measure. This may be illustrated as in Ex. 1a or 1b.

Further subdivisions would be indicated by feeling or mentally conceiving of extra syllables "and," "e," and "a," as in Ex. 1c. Any other figure would be an enlargement of this example.

While strongly favored by many musicians and teachers, this method of teaching the counting of time is by no means universally accepted. Those opposed to this practice maintain that the method should not be recommended because it is detrimental in effect to the performer's general musical interpretation. They also hold that if the student "feels" the rhythm, patting the foot is unnecessary.

The just criterion by which these practices should be judged, it would seem, lies in the ultimate result achieved. The ideal in teaching rhythmic figures and developing the associated abilities would be to train the instrumental student so that he could sing his music at sight, with correct pitch, intervals, and rhythms, using his foot as a sort of pendulum. The foot serves in several useful capacities, for it aids in execution of correct rhythm, helps the counting of time or beats, measures the exact value of each note and its divisions, and finally provides a visual means of checking upon the student's concentrative powers.

If we were to examine carefully those students who play the beats in regular rhythm but fail to divide the notes with mathematical precision, we probably would be amazed to find the number of these students who are merely tapping the foot on the beat or mentally counting the beats, with little or no regard given to the exact evenness or mathematical measurement of the time value of each and every note. It has been our experience that the student who "counts mentally to himself" almost invariably does not count at all. At least it is these students who usually fail when called upon for sight reading. The curtailment of note values, the tendency to rush rapid figures, the failure to observe rests, and many other incorrect rhythmic prac-

tices can be traced to two fundamental errors: First, the lack of definite and precise "beat feeling," and secondly, the lack of coordination between physical and mental response.

One must first "feel" the rhythm, but it is of just as great importance for one to be able to read these rhythmic patterns. This capability can be developed only through the process of thinking and not solely by means of feeling.

#### Simplified Rhythms First

RHYTHM in music applies, of course, to phrasing as well as to the beat. In teaching the handling and feeling of rhythmic figures, it is essential and important to proceed from the easy to the difficult. Ability to read simple figures should be well developed before proceeding to the more complicated ones. The student should be constantly reminded that evenness and accuracy of rhythm are dependent largely upon the proper division and distribution of the notes within the rhythmic pattern.

A common fault with those who have been started on the foot tapping method is to raise the foot too soon. The foot should serve as a guide for the equal distribution of the notes within the count, as well as a means for marking the beat unit. For example the foot beat should be

or it may be

The tendency to hurry the foot on the up beat will naturally cause a hastening of the notes of the up beat.

Most young students, when first learning to apply the "foot tap" will experience some difficulty in maintaining evenness in the down and up motions of the foot. Therefore it should be recommended that they "glue" the foot to the floor before attempting to raise it. This is of course an imaginative device, but the suggestion will prove a valuable aid in maintaining precision and evenness of rhythm.

The winning sight reading bands and orchestras of the country have very definitely proven the value of the "foot tap" method. The Joliet High School Band is perhaps one of the nation's outstanding sight reading bands, and I believe that much of its ability to read at sight is partially due to the excellent training the students receive in the "foot tap" during their early stages of learning. Many other excellent bands and orchestras employing this method have shown that this means of teaching students to count is effective and useful.

The "foot tap" should be used only in the early stages, and should not be necessary after the division of the various

(Continued on Page 61)

# MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music  
appearing in  
the Music Section  
of this Issue

## A WORD OF GREETING

As 1938 bows out of the picture your Commentator begs leave to extend to his readers, all good wishes for 1939. No one can truthfully say that 1938 proved a dull fellow, and we can even voice reasonably a hope that 1939 may prove as interesting without serving up quite so many "alarums and excursions" with the breakfast coffee! At least the muddled state of the world at large during the year past has served to emphasize the privileges we enjoy as American citizens and should focus interest anew on American music and composers. The eclipse of foreign music centers should release new energy in the American field and help teachers to visualize a great future for the art in this country.

And so, a happy and prosperous New Year to everyone!

## INSTANTS JOYEUX

By FRANCISZEK ZACHARA

*Instants Joyeux—Happy Moments* serves as an instant clue to the interpretation of this piece. At least it leaves no doubt as to the mood!

In form this music is more rhythmic than lyrical and care should be exercised to give proper treatment to the two-note slurs which form so important a part of the rhythmic line.

The middle section contains several short passages almost Chopinesque in style which should be played with freedom and a certain sparkling clarity.

The entire piece is playful (*scherzando*) and is to be played rather fast, *Allegro*.

The interlocking passages in the second section (measures 11 and 15) are really easy to execute and lend added brilliance when played in good style.

Pedal only as marked.

## BREAD AND BUTTER

Arr. by GUY MAIER

Here is a novelty arrangement of an old tune (handed down from no one knows where) by that able concert pianist and teacher, Guy Maier. Naturally, all readers of THE ETUDE know Mr. Maier through his "Teacher's Round Table" page, one of the most popular departments in this magazine. He is known to the world of music at large as a master pianist and teacher of distinction who is responsible for the development of some of the most promising concert artists of this generation.

An interesting phase of Guy Maier's work is that of Children's Concerts, an enterprise to which he has devoted much time, thought, and energy in recent years. He has probably done more to raise the standard of music appreciation among American children than any other one person engaged in this admittedly difficult task. He never "plays down" to a young audience. On the contrary he manages in a magic way to lift his listeners to his own higher level. He is quite without professional fear or snobbery and is not at all afraid to give children occasionally the sort of thing that *they* like.

With unfailing instinct he has selected this old tune for rejuvenation, and youngsters will instantly like it. Incidentally he has arranged it in such manner that it has pianistic value. For example the slurred groups in the left hand give excellent opportunity to develop the drop-roll touch. Later in the piece there is ample practice in playing grace notes. There are, too, of

course the *glissandi*—of doubtful value but lots of fun nevertheless—which to fertile young imaginations will probably suggest the motions back and forth of the knife as it spreads butter on bread.

## MAMMY TELLS A STORY

By MATHILDE BILBRO

Miss Bilbro, well known to readers of THE ETUDE, has spent many years in the South and is, of course, well acquainted with the musical idioms of that section.

This piece, as suggested by the title, is in descriptive form and opens rather quietly.

The *tempo* is *andantino*, in expressive mood. Be sure to give proper significance to the two little diagonal lines placed, in parallel position, indicating a slight pause or break in the *tempo*. Observe also the *portamento* marks in measures 3, 10, and so on.

Much change of pace is indicated in the first section which serves as an introduction to the songlike character of the second.

Throughout the second section (measures 13 to 30) be sure to phrase the left hand accompaniment exactly as marked; that is, the first quarter is slurred into and thrown off on the second and the last two quarters are sustained with the pedal. Treat the right hand part as a song played rather quietly in a humming manner.

The piece closes on a short *coda* which makes use of the same *motifs* found in the introduction.

## FROM OLD TUILERIES DAYS

By EVANGELINE LEHMAN

This short piece is written in dance form and, as indicated in the text, is to be played in gavotte *tempo*.

In character, it is an imitation of eighteenth century music, even to the *musette* section with its drone bass.

The *musette* was originally an old instrument of the bagpipe family. It was used to accompany certain dances which also came to be called *musettes*.

A popular device of the day was to write the usual Trio section of a dance in *musette* style, with the drone bass playing an important part in the general effect.

## MARCH OF THE CLOWNS

By CEDRIC W. LEMONT

If at first glance it seems a bit unusual to see a march bearing the time signature of six-eight, remember that it is intended to be counted two to the measure (one count to each group of three eighth notes or a dotted quarter. This gives the "feel" of two-four rhythm on triplets.

Naturally, it will be important to observe all slur signs and accents which play a definite part in establishing and preserving the proper rhythmical swing.

The first theme is in the key of E minor and the second theme in the relative major, G major. Note the marks of dynamics which range from *piano* to *fortissimo*.

Try to inject a bit of humor into the performance and make the piece more descriptive.

## THE LOTUS POND

By ALEXANDER BENNETT

This composition is in lyric form and should be played in thoughtful, reflective manner.

The opening *motif* is to be played very *legato* and is answered by short groups, all carefully slurred. Meanwhile the left hand supplies a rolling accompaniment

which should be pedaled exactly as marked.

Give proper attention to the tonal treatment, indicated by the marks of dynamics. The second section is more animated (played *piu mosso*) and opens with the melody in the left hand. One measure later the melody is resumed in the soprano voice and is carried from this point on by the right hand. Note the *allargando* which goes into effect in measure 29.

The first theme again is heard—D.C.—and the piece ends at the double bar at measure 16.

## SEA ANEMONE

By G. A. GRANT-SCHAEFER

Rhythm is of utmost importance in the performance of this piece; a slow, swaying effect being necessary to impart the atmosphere suggested by the title.

After a short one-line Introduction, the theme proper begins with measure 9.

Be sure to preserve the melody line, particularly in such places, for instance, as measures 10 and 11, where the accompanying chord played by the right hand on the second beat must be handled so as not to detract from the melodic progression in the alto voice. The entire first section calls for the best possible singing tone.

The second section—played *poco piu mosso*—is more rhythmic than lyric in character and care must be exercised in playing the triplet figures which begin on the second beat and are phrased into and thrown off on the third beat.

The pedal, as always, should be used with care.

## NIGHT THOUGHT

By EDOUARD SCHUETT

Much freedom of style and good tonal treatment, together with a bending of the *tempo* (*tempo rubato*) is necessary to the proper interpretation of this number. However, it would be a wise precaution to learn it first in somewhat "strict manner" so that the liberties taken later on will be under control. Otherwise there is always the danger of applying "ritards of convenience" rather than of intention.

It is perhaps unnecessary to point out that the melody line is of utmost importance, as are the secondary voices indicated by *sostenuto* marks, found mostly in the left hand part.

The many changes in pace, tone, phrasing, and so on, are so freely marked that it is almost impossible to go astray in the matter of interpretation. In other words, the composer has clearly indicated just what he wishes to have expressed and it is merely a matter of following faithfully the indications as shown in the text.

The piano pieces of Edouard Schuett always meet with a favorable response on the part of the pupil and this one should find a welcome place on pupils' recital programs.

## ETUDE IN C-SHARP MINOR

By FREDERIC CHOPIN

While Chopin wrote almost exclusively for piano, he was very fond of the violoncello and this fact is clearly revealed in several of his piano solos which are quite violoncello-like in effect.

In fact, this etude makes a most satisfactory solo for violoncello and is often heard as such in recital programs.

See the Master Lesson on this etude by Alberto Jonás which is to be found on another page of this issue of THE ETUDE.

## SARABANDE

By BACH-BURMEISTER

The *Sarabande* is a stately dance, the real origin of which is lost in obscurity.

Some claim that its source is Oriental while others credit its invention, sometime about the middle of the XVI Century, to a Spanish dancer named Zarabande. In any event, it enjoyed great popularity in the Spanish Court in early days. Its movement is broad and stately and it is written usually in three-two meter; however, it is also occasionally found in three-four as in this example from Bach.

Richard Burmeister has given much attention to transcribing the older classics written originally for the harpsichord or clavichord, and has given them rather free treatment in order to make use of the resources of the modern piano.

A comparison with the original will show this arrangement has been greatly augmented. Of course the real trick is to be able to give to this number the benefits of the modern piano without destroying the characteristics of the original.

A study of both is therefore essential.

## THE OLD CLOCK ON THE STAIRS

By CECIL GRANT

This little First Grade number is quite descriptive of its title.

The *staccato* notes at the beginning of each phrase clearly indicate the ticking of the old clock while the feeling of movement expressed in the passages in eighth notes warns that "Time Marches On" eternally.

Both *staccato* and finger *legato* come in for equal share of development in this short number.

## JACK FROST WALTZ

By CECIL GRANT

Besides developing waltz rhythm, this little number supplies practice in phrasing and finger *legato* in five finger groups. An ideal First Grade tune.

More important than all this—from the student's standpoint—is the fact that it is really tuneful and interesting.

## RAIN DROPS

By CECIL GRANT

Another short number with real pianistic value. The *staccati* obviously suggest the rain drops, and for contrast *legato* phrases intervene.

## FUNNY LITTLE CHINAMAN

By GEORGE JOHNSON

This little composition should be played in capricious manner with due attention given to *staccati* and the many slurred groups.

When playing *staccato*, it is suggested that wrist *staccato* be used for the single notes and forearm *staccato* for all double notes.

While pupils in this grade cannot be expected to be over-subtle in the matter of nuance, they can at least be taught the importance of contrast.

Insist therefore, that wide tonal contrasts be made as indicated by the marks of dynamics.

## HOP, SKIP, AND JUMP

By RENEE MILES

The text indication "Lightly but well marked" means that the rhythm is to be (Continued on Page 72)

# THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

## Wrist Levels

Will you please tell me the correct hand position for piano playing. I was taught and also now teach the principle of holding the wrist lower than the hand in general playing, but I notice that most people hold their wrist level with hand. I understand this was the older method, but was told my hand position is incorrect.—I. S., Pennsylvania.

There is no one "correct" hand position. The height of the wrist depends on the player's type of hand and on what the music requires of it. So much hokum has been stated upon us patient music teachers that's high time for a hand position debunking crusade.

The first thought not to start in your pupil's minds is the "orange" or "ball" hand. Just try for yourself curving your fingers sharply, and holding your hand at piano as though you carried a base ball or an orange inside it. How is it? As grandma would say, "It don't feel so good"; in fact, it feels hard, tight and uncomfortable. (It makes no difference whether your wrist is high or low).

All right, then it is clear that this is not the way to hold your hand.

Now, put your hand naturally on the piano, that is, without excessively curved fingers, or forced arch, and with a level or slightly lowered wrist. What happens? Immediately it feels easy and relaxed.

All right, then use it!

The position of the wrist changes constantly; for melody playing it is sometimes high, often level, frequently low; for scales, chords and smooth; for arpeggios, moderately high, with no "dipping" between octaves; for brilliant, fast octaves, very high for small hands, slightly less high for larger hands.

A harmful direction given by some teachers is that in playing octaves, the reversed (inside) fingers are to be held curved. Again, I say, try it for yourself. If you have an abnormally large span and long fingers you may find it necessary to curve the inside ones, but in nine cases out of ten the result is appalling—rigidity, hard work, endurance and speed impeded; and after a few weeks "wens" or hard lumps appear on the hand.

All right, then don't do it!

Just be sensible about that hand position, don't you? Always remember that the more you and your pupils concentrate on a light, relaxing, easily moving elbow tip, the freer you will play. To paraphrase an old expression—"It ain't the wrist, but the elbow." Unless you think about the former, the latter.

## Nervous At Lessons

I am a woman thirty-five years old and I started studying piano music a year ago. I have gone through the first two books of the Theodore Presser Series, a Loeschorn study book and am now half way through the third volume of the Theodore Presser Series.

I can play my lessons through fairly well at home, but when playing for my teacher, I am no good at all. My fingers get stiff and I'm too self-conscious. I am not exactly nervous but still cannot think clearly. If I played at home as for my teacher, I would give up music. But I know I can play my lessons, even if my teacher doesn't. She seems to understand my problem, and I feel she is doing all she can to help me.

Could you offer any suggestion that would be of help?—I. G., Indiana.

Does it give you any comfort to know that almost all students, beginners and ad-

vanced, young and old, suffer from the same ailment? Your case is especially severe because you waited so long before starting piano lessons. Most adults are painfully self-conscious when they are examined in a new, unfamiliar and highly complicated skill like piano playing. So, at a lesson, which is of course an examination, everything seems to go haywire.

The only remedy I can suggest is to play your assignment several times to friends or members of the family before you go to your lesson. Play frequently for anybody you can "rope in," even if it does not go well at first. Try your best to make the simplest exercises and pieces sound so cleanly articulated, so musical that your friends will understand, appreciate and love them. This is interpretation in the best sense of the word—sharing with others what you yourself have found beautiful. Which is, after all, what artists struggle all their lives to achieve. And how they struggle!

Also, if your teacher will show you how to practice in very short, intensely concentrated periods, you will soon succeed in gluing your mind to the pieces when you play for your teacher or others, forgetting everything else but the music. Most persons, however, practice in such a diffuse, lackadaisical, yes, imbecilic manner, that it is no wonder they cannot keep their minds focused when the test comes.

Then, too, teachers are sometimes at fault. They often treat their pupils with such a cold, deadly serious "bedside" manner that nervousness is bound to run rampant. At the lesson they should be humorously human, trying every moment to put the pupil at ease, treating lightly—even "joshing"—all tendency toward self-consciousness.

Ensemble pieces, played with the teacher or other students, should be a regular part of every adult's piano course, even during the first year; and each pupil should be required to perform in a students' playing class once every two or three weeks—if only a short composition, exercise or etude. Adults ought to have plenty of chord pieces, which they find easier than "runny

numbers, and which they enjoy playing on account of the masses, and handfuls of notes, the swinging rhythm, the free, full-arm approach.

Try this: ask your teacher for a short, lovely, massive chord piece; learn it carefully and play it with fine, big sweep for as many different persons as you can corral. I will wager that most of your timidity will disappear after the tenth performance, and that your friends will enjoy it too.

## Repeating Pieces

I read that repetition of pieces is senseless to a certain extent. Now, I would like to keep my pupils interested as well as getting them ahead in the least possible time. In the June, 1938, issue of THE ETUDE, you advise to drop a piece after two or three weeks' study and go back to it later. Here is my question: Where does the piece stay during that time? With the pupil or teacher? And why? I'm afraid if I would ask a pupil to bring back a dropped piece, it would cause very hard feelings on the part of both the pupil and the parents. The pupil would feel he was at a standstill, or going backwards, and the parents probably would think I was working in circles.—M. R., Wisconsin.

All of us, I am sure, will get a good chuckle at your healthy doubt as to the disposition of "dropped" pieces. If your pupils and their parents do not have faith enough to believe that pianistic progress is actually served by interrupting the practice of a piece for a week or two, then I'm afraid you have not been able to instill much confidence in them. Or perhaps you are the exceptional teacher whose students never "get sick" of pieces, but learn to play them perfectly in a short time. If so, I would like to know your system, for I find this question of unfinished compositions one of my major problems. All the pianists I know—including the great artists—find it necessary several times to lay aside any new piece they learn, letting it mature before they feel competent to play it in public. This process sometimes takes two or three years for a single composition.

Now, as to your question—where does the piece stay? It can be kept in your studio during the interval, while it is really "sinking into" the student's subconscious mind; then when the piece is given back

for restudy, it will not seem like taking up some stale old number from the pupil's music shelf. At any rate, try this and see how it works.

## A Hard Tone

When I recently played a piano selection by Liszt, I was told that my tone was rather wooden. Will you please tell me how to overcome this. Are there any good books on the cultivation of touch and tone? If so, please name them.—B. DeR., Wisconsin.

Wow! That's a tough assignment! Since it would probably take a fine teacher a long time to diagnose your case, and still longer to change your whole conception of piano playing, it is really asking the impossible of me to give you remedial absent treatment. I know of no books that show anyone clearly and adequately how to play beautifully. Many have attempted it—Matthay (himself a great teacher); Mason, whose "Touch and Technic" has its good points; Adolph Kullak, whose "Aesthetics of Piano Playing" I still consider the best all 'round volume on the subject—despite its advanced age. Yet, these and others remain somewhat unsatisfactory, for they are not simple, direct, and all-inclusive enough. The question is, will anyone ever be able to write a clear book on the subject—one which students will be able to apply without expert guidance? I doubt it.

The best I can do here is to tell you that your "wooden" quality probably comes from too percussive an approach to the keyboard, playing your tones with hammer finger stroke, hitting them with stiff forearms, or dropping on them with full arms. In other words, you are guilty of attacking, instead of playing the keys. (If only teachers would throw overboard that vicious word "attach," how relieved we all would be!)

Or, if your forced tone is not caused by striking "from the air," then it comes from excessive muscular contraction, making hard, square phrases, poked tones, disjointed rhythms. Here are some suggestions for you to try:

1. Practice only soft, singing pieces for at least three months.

2. Produce no tone without first feeling the finger in contact with the key; release the key instantly the tone is played, even though the note value says "hold longer (let the pedal hold the tone for its full value)."

3. Practice the soft, up chord touch recently described on this page.

4. Begin each day's practice with a short, quiet, singing piece, played twice; (a) as softly and slowly as possible (using pedal, of course) with eyes closed; (b) with "remote" control; that is, eyes open, lean back in your chair (throw away that piano bench, or use it for firewood!) play expressively, but coolly, from *pp* to *mp*, trying every moment not to push or press on a single tone; feeling as though your fingers belong to someone else, and that you are merely the distant, impersonal, directing force.

Above all, try to find a good teacher; there are many excellent ones in your state. From long association with the musicians and audiences of Wisconsin, I know how fortunate you are to be living in one of the most musically enlightened states of the Union.

## A Personal Note from Mr. Maier

The time has come to make clear my position as your consultant, if only to reply apologetically to those correspondents whose questions have not been answered.

First consideration must be given to the queries which will interest and help the most readers. I cannot answer those too elementary or personal, such as, "What can I do to help a young pupil read (or play) accurately?"—"How can I acquire independence of the hands?"—"What is the best fingering (or phrasing) for this passage?"—"Will you outline a course of study for me?"

Also, I will not answer questions similar to those recently given attention on this page. In this category come, "How to keep students from playing the right hand after the left?"—"How to gain (or teach) speed in scale or passage playing?"—"What to do about double-jointed thumbs or left-hand weakness?"—"Sight reading hints?"—"Practice time budgets?"—"Two-piano playing?"—"Stumbling students?"—"Finger exercises?"—"Octave playing?"—"Glissandos?"—and other similar questions. So, before writing, please refer to your files of THE ETUDE.

Then too, there are many questions which "stump" me; some are too hard, others not of my field. Alas, I am not an oracle, and therefore crave indulgence on the part of my insatiable Etude quizzers.

All of which makes it look as if there were nothing left to ask about! On the contrary, stimulating, challenging and unusual problems are coming to light every month. When there are not enough of these to answer I shall ask the editor to let me quit the "Teachers' Round Table." This page will never become routine so long as I have it.

Please keep your questions within one hundred twenty-five words.

G. M.

# The "Etude in C-sharp Minor, Op. 25, No. 7" of Frederic Chopin

A MASTER LESSON

By the Renowned Spanish Piano Virtuoso  
and Teacher of many Famous Pianists

ALBERTO JONÁS

"YOU OF THE PUNY SOUL, of the dry little heart; you the weak-fibered; do not play the finale of Nocturne in B major, Op. 32! Do not attempt the tragic grandeur of his C minor Nocturne, of his Etude in A Minor, Op. 25, No. 11, and both in C minor, in which he hurls forth his passionate, throbbing protest against Poland's downfall! For here the greater, the real Chopin looms up; and you would fail, you would not understand!"

"None can exceed the heroic and martial valor of his great soul. In his *Polonaises* in F sharp minor, A flat major, A major, C minor, reverberate the tramp of armies, the boom of cannons, the sinister howl of grim war. Chopin, the morbid dreamer of nocturnes, the elegant composer of aristocratic waltzes, we all know; but not all have as yet fathomed the might and sweep of his greater works; the Fantasy in F minor, the four Ballades, the four Scherzos, the great *Polonaises*, the Sonata in B-flat minor and in B minor, the Etudes and some of the Preludes and Mazurkas."\*

These reflections apply with equal force to the *Etude in C-sharp minor, Op. 25, No. 7*, by Frederic Chopin. Idealism, depth of feeling, fervor, all these and more, are needed to understand and to portray vividly one of the most remarkable, most exalted love duets ever written. The means employed here are different from those used by Chopin in his larger, more dramatic works. Yet the effect of this masterful story of human love, yearning and passion is strongly gripping and forceful, deeply touching and poignant.

When did Chopin compose it? We do not know. On October 20, 1829, he wrote, "I have composed a study in my own manner." In November of the same year he recorded, "I have written some studies." All biographers agree that when Chopin left Poland and settled in Paris he took with him the manuscripts of his two concertos, of all the etudes and of other noteworthy compositions. The "Twelve Etudes, Op. 10," dedicated to Franz Liszt, were published when Chopin was twenty-three years old; the "Twelve Etudes, Op. 25," dedicated to the Countess d'Agoult, Liszt's intimate friend, came out four years later.

## A New Voice in Art

THESE TWENTY-FOUR ETUDES created a sensation throughout the musical world. Such newness and boldness of design! Such untrammelled flights of imagination! And what stupendous, at that time seemingly unconquerable, technical demands! Small wonder that the "Philistines" of Schumann's *Carneval*, the old fogies of the

\*Chapter on "Style," Book VII of Master School of Piano Playing and Virtuosity by Alberto Jonás. By permission of Carl Fischer Inc., New York

time, led by the dry as dust music critic, Rellstab, decried everything Chopin composed. Rellstab, anent the etudes, wrote, "Those who have distorted fingers may put them right by practicing these studies; but those who have not, should not play them, at least not without having a surgeon at hand."

But Liszt, Hiller, Mendelssohn, Franck, and kindred great minds, understood and admired. They enthusiastically endorsed what Robert Schumann had already proclaimed in his *Neue Zeitschrift für Musik*: "Hats off, gentlemen, a genius."

Interesting is a letter addressed to Hiller, the noted composer, and signed by Liszt, Chopin and Franck, the first and last named being among the closest friends of Chopin. One of them would write a few words, and Liszt, snatching the pen from his hand, would continue writing, only to be laughingly pushed aside by Chopin himself, who, in turn, had to yield it again to Liszt. Here is that letter. The portion written by Liszt is in italicized type, and that written by Chopin is in the usual type. "Do you know Chopin's wonderful studies, They are admirable! And yet they will last only till the moment yours appear. A little bit of authorial modesty!!! A little bit of rudeness on the part of the tutor, for to explain the matter better to you, he corrects my orthographical mistakes, after the fashion of M. Marlet.

The responsible editors,

F. Liszt, F. Chopin,  
Aug. Franck

The notes which usher in the *Etude in C-sharp minor, Op. 25, No. 7* (Measure 1), are printed in usual type in some editions; they appear in small type in the Kullak, in the Friedman and in the Klindworth editions. That is a happy thought, for these introductory notes should not be "sung." Wafted over, like a gentle murmur they should be given a soft, improvised character, whereby their melodic outline appears to come from afar. That interpretation is conveyed in the Kullak edition, in my opinion the standard, finest edition of the Chopin Etudes. Both Klindworth and Friedman divide those small type notes into measures. That is too arbitrary a proceeding, for this whole "preamble" is like unto an improvisation, and should be rendered as such.

## A Memorable Melody

BUT NOW BEGINS a song that you will remember all your life, if in your soul flares what the Frenchmen so graphically call *le feu sacré* (the sacred fire) that every true artist harbors within his own, inviolate self.

The first three notes in the bass (Measure 2)—think of a violoncello, rather than,

ALBERTO JONÁS

literally, of a man's voice—are at once answered on high—a violin, rather than, literally, a woman's voice (Measure 3). Yet the love duet is there, intensely vibrant, but glorified through such a wide range as no voice can encompass.

If both "voices" are made to sing all the way through, that is to say, if equal tonal strength is given both all the time, none will "sing." The result will be thirds, sixths, and so on (Measures 23, 24, 25). The desired effect of an impassioned dialogue will be obtained by constantly shifting the singing effect from one voice to the other, being mindful to give to the violoncello-like notes in the bass the depth of tone, the mellowness and the slightly "trailing" connection between any two notes that characterize that instrument.

Whereas the *cantilena* in the treble, impersonating, ideally, a woman's voice, but rendered by the violin, should possess a less robust, more ethereal tone, sweetly penetrating, but never shrill or harsh.

All double notes or chords that constitute the accompaniment of these two voices should be played *pp*, unless a sudden vehemence of declamation requires a stronger dynamic support.

The second part of this tonal poem begins now (Measure 9). No longer the sweet, yearning strain. An uncontrollable agitation, a rising sea of tumultuous tonal waves foreshadow a great dramatic conflict. Those upward-rushing runs, what are they (Measures 23-25)?

They usually give trouble, both as regards technic and memory. This trouble disappears if one knows how to look at them. They very nearly follow the pattern of the Hungarian minor scale, to my belief a much more beautiful minor scale than our usual harmonic minor, and one which has been used with telling effect by Liszt in his "Hungarian Rhapsodies," and by Brahms in his *Variations on a Theme by Paganini*.

Ex. 1

But in these runs the sixth note of Hungarian minor scale is missing, therefore we are no longer dealing with scale.

The true structure of these runs is first, the simple minor triad, then the major triad, each note of the triad being prefaced by the adjoining, lower *appoggiatura*.

Ex. 2

enharmonically equal to

Viewed in this light, these runs become easy to survey and to execute. Chopin used them also in his great *Polonaise in F-sharp minor*.

But now, in the turmoil of an ever growing agitation we are nearing the dynamic and dramatic culmination of the whole composition. The turbulent bass recedes, rises, recedes again, falls lower and lower while the treble rises higher and higher, and, suddenly, a ringing, triumphant chord bursts forth in measure 28. A rising wave of passion, of not to be denied desire, conquering strength, blends the two voices and the accompaniment into a single, surging, overpowering flood, annihilating everything except the glorified consummation of two ardent souls.

This story does not end in quiet happiness (Measures 26, 27, 28, 29). Chopin loves did not end so. Constantia Gluckowska—fugitive vision of his early youth (Continued on Page 51)

# FASCINATING PIECES FOR THE MUSICAL HOME

## INSTANTS JOYEUX

An spirited and original work by a new Polish-American composer. The composition is just what the name implies, "Happy Moments," and must be played in a gay and piquant style. Grade 5.

**Allegro scherzando M.M.  $\text{♩} = 126$**

**FRANCISZEK ZACHARA**

The musical score for "INSTANTS JOYEUX" is presented in a standard piano format. It begins with a treble and bass staff in 3/4 time. The tempo is marked "Allegro scherzando" with a metronome marking of 126 beats per minute. The key signature is one flat. The score includes various musical notations such as notes, rests, and dynamic markings like "p" (piano) and "f" (forte). The piece is divided into measures, with measure numbers 10, 15, 20, 25, 30, and 35 clearly marked. The score concludes with a "Fine" marking and a "D.C." (Da Capo) instruction.

# BREAD AND BUTTER

COMPOSER UNKNOWN

With the label "Das Butterbrot, by W. A. Mozart," this curious little waltz-glissando piece has long enjoyed great popularity in Europe. Anyone familiar with Mozart's style knows that he could not have written it. Indeed, Mozart experts disdain to mention it even among the "doubtful" or "spurious" compositions attributed to that master. Yet its simple charm and effectiveness make it an attractive piece for students of all ages. And children adore it! But it would be unwise for them to ask after the meaning of the Bread-and-Butter title, for, like all the lovely, fanciful things of childhood, this must forever remain a mystery. Grade 3.

# ETUDE'S COURSES IN CULTURE

Behaviorism—Books and Travel—Current Musical Knowledge—Entertainment—Appearance—Health

## THE NEW YORK WORLD'S FAIR

May 1939 Forecast—FAIR and Warmer!

Amid the chill blasts of winter, you will feel, like an incorrigible dreamer, like beginning to think already about your trip to the New York World's Fair, scheduled to open April 30th. But you can have loads of preliminary fun, poring over the wealth of literature that is being prepared to inform you of every aspect of a visit to the Fair, and planning the trip well in advance. And—more important—you can pack double the thrills that a haphazard tour would give you into a carefully thought out vacation.

With the complete reports of worth while musical events to be published here and elsewhere in THE ETUDE, the Fair itself may prove easy to cover with no great forethought on your part. Most of the many musical activities will be centered in several buildings, and efficient guides will help you find just what you want in other types of exhibits.

Your efforts to see New York City, on the other hand, will be sadly dissipated, unless you are wise enough to spend a pleasant hour or two from time to time learning what there is to be done, and what you would like to do. Music, for instance, looms large among the phases upon which you will concentrate in "doing the town."

### Musical Manhattan

POPULAR CLASSICS UNDER THE STARS at popular prices—that is always the keynote of the New York summer music season. There is every reason to expect that the best features of past years will be continued, to draw the greater Fair year audiences. Gorgeous productions of light opera at Randall's Island Stadium. The ample operatic repertory of the San Carlo Opera Company of Fortune Gallo, at Jones Beach. America's finest band concerts, long under the direction of Edwin Franko Goldman, on the Central Park Mall. It is reported that Mr. Goldman will be at the San Francisco Fair this year, but it is very likely that the concerts will be continued under another bandmaster of comparable stature.

The New York Philharmonic-Symphony (the same orchestra that performs for the winter season at Carnegie Hall under the exacting baton of John Barbirolli) will present the best loved symphonic works at the Lewisohn Stadium, with a brilliant series of guest conductors and soloists.

Though far from the least exciting of your vacation activities, such attractions will be a welcome chance to rest weary legs, after hectic days of exploring the Fair Grounds. On your more energetic evenings, notice may be taken of other facets of Manhattan's musical life. For the dinner hour and late evening suppers, New Yorkers throng the city's hotel dance rooms, dancing to tunes ranging from the smooth ballads of the Guy Lombardo type to the primitive Cab Calloway rhythms.

And, coming back to more orthodox musical interests again, you might plan your itinerary and time your visit to include Connecticut's Silver Mine Festival, or the Berkshire Festival in the Massachusetts foothills of the Berkshires—two of the nation's outstanding open air musical events.

### Putting Your Plan on Wheels

WHATEVER YOUR INTERESTS, the Fair and the city will fill every day you can give them with exciting satisfaction. As to how you get there, the variety of choice is narrower. A successful vacation, nevertheless, demands just as thorough consideration of the transportation problem.

If you are looking forward to making the Fair a sightseeing spree for the whole family, you will be inclined toward the good old family "buggy." Your car does have some disadvantages, however, that ought to be considered. Once in New York, driving under the normally crowded conditions augmented by the Fair traffic will be no pleasure. The city's subway, street car and bus systems offer advantages in speed, safety, economy and comfort, which your car cannot rival. And, whether or not you use your car in the city, garage fees will be a substantial added expense.

The railroads, buses, and airlines will concentrate all of their finest innovations in passenger facilities and services on bringing you to the Fair. The marvels of the Fair's World of To-morrow will certainly be paralleled by the transportation companies bidding for the business created by the Fair. Moreover, if the number in your party is under four, the saving of motor car travel over bus or train fare will be less certain, or at least less of an item. With more than six, you will find the ordinary private motor car uncomfortably crowded.

Do not overlook the possible fun of going to New York in a large group. In one distant town, a dozen young piano students—doing their Fair shopping early—are planning to go all together, dividing their teacher's expenses among them in order to have her along as "cruise director." Another group, we hear, is considering increasing their number enough to charter a bus for their exclusive use.

However you expect to go—alone, with the family, or in a group—make arrangements for your living quarters in advance. Early reservations are essential if you want rooms central to the attractions of (Continued on Page 53)

## RING IN THE NEW YEAR WITH MUSIC

Have a "Start the New Year Right" Party!

Culture, good-fellowship and harmony are the keynotes for 1939. As we inaugurate this new department for entertainment, it is fitting that it should "Start the New Year Right," in the way amateur musicians love best—with a musical entertainment.

As the last Christmas carol fades for the year, and *Auld Lang Syne* ushers in a new year, there is something particularly worth while and American in the finer sense of the word, in the parties that are given at home amid friends with the same loves and tastes.

In some families, certain members and their guests may not be musically minded. Why not intersperse the musical program with such games as a "Balloon Race," men against women, in which each member of each team first blows up a balloon, then races across the room with it and back again, then sits on it to break it. The team finishing first, wins a small prize. Or if

you want a game more musical in character, "Musical Charades" is great fun. Play a bar or two of a well known, old fashioned melody, then act out the name. You will find that even those melodies most familiar will not be so easily identifiable when only two or three bars are played. Another contest, possible in every home, is "Filling the Milk Bottle." Ten clothes pins are given the contestants, with instructions to stand over the milk bottle and drop

them in from a height of four feet above the bottle. The two who score best in three tries must play off for a prize.

After the group has sung and played its way into the New Year, the hostess can proudly lead them to an appropriately decorated table as pictured here. Choose any color scheme you like, for the decorations, cloths, napkins, cups, and plates are made of *paper*. (What a boon this is, to the ones who normally would have to wash the dishes!) You can buy the cups, plates, snappers, napkins and paper at your local five and ten store or stationer. Dennison Manufacturing Company has consented to mail *free*, directions for making the other matching decorations, yourself, if you will send us your request on a post card.

But of course, not only must the bells look down on a festively decorated, candle-lit table, but on an appetizing array of edibles, from which the guests can serve themselves, buffet style. Our menu for a party of eight should cost about two dollars.

### A Good Plain Buffet Supper

Spam and Deviled Egg Salad Sandwiches  
Hot Potato Salad  
Cookies or Cake "Frutea" Punch  
Candy Salted Nuts

### RECIPES:

*Spam and Deviled Egg Salad Sandwiches:* 1 can Hormel's Spam cut into sixteen slices. Deviled Egg Salad—chop ten hard boiled eggs with one two ounce bottle of pimento stuffed olives. Add salt, pepper, celery salt, paprika, three teaspoonfuls of Gulden's prepared mustard and four tablespoonfuls of Hellman's salad dressing or any other good mustard or mayonnaise, with a few drops of tarragon vinegar. Butter thirty-two slices of white bread, not too thick. Put one slice of Spam topped with salad into each sandwich. Cut in quarters.

*"Frutea" Punch:* To eight cups of very strong tea, add the juice of a can of pineapple, peaches or raspberries. Add the juice of three oranges and one lemon. Add a bottle of dry ginger ale. Sweeten as desired. Chill thoroughly, and serve. To make this more festive, serve in large punch-bowl, with bits of fruit and maraschino cherries floating in it.

With an evening of such planned entertainment, decoration and food, your reputation as a good hostess will be greatly enhanced and your friends will all be eagerly awaiting another invitation to your musical parties.

If you have any entertainment problems, write this department, Elizabeth Fairchild, Room 613, 350 Madison Avenue, New York City, and we will help you solve them, or will help you plan your next party, tea, or reception. After you have had your party, write and tell me how successful it was.

# The QUEST for HARMONY in DECORATION

"Harmony in Decoration Is Invaluable in the Achievement of Harmony in Music Study," says Annabel Comfort in this stimulating article

**H**ARMONY in the decoration of a home or studio is the counterpart of mental harmony. The artist or music teacher who employs harmonious thinking in harmonious surroundings should inevitably produce a career filled with harmonious music.

Occasionally a great musician has come through from the slums, a great pianist has been found in an attic, or a poet has emerged from a tumbledown shack. The tradition, though, that genius must starve to produce a great work, is a fallacy. More often than not it has proven a tragedy. It is a known fact that one must work to be successful, but is it equally realized that one can work more effectively in harmonious surroundings? It is the modern theory that even genius can produce more brilliant work in this atmosphere.

We can all remember visits at the homes of talented musicians or perhaps calls at the studios of various teachers. Some were so uninspiring that we can recall our thoughts on the way home. Thinking out loud, we praised the pupils of these teachers. We thought how they must love music to try to express themselves under such bare, untidy and cluttered conditions. On the other hand we can recall visits to studios and homes of good taste and distinction in which we felt that producing good music was doubly possible.

Speaking of unattractive decoration, I have in mind one studio in particular that I had occasion to visit one day. It looked as though a dust cloth had not been employed in several years! Some dingy worn linoleum covered the floor. Music was piled everywhere, helter skelter. Hanging askew on a nail over an old style ornamented piano was a picture of the immortal Beethoven. The glass covering his face was cracked, but this did not seem to matter. In the corner was an old couch with a few broken springs plainly visible under the faded cover.

As I sat there, this piano teacher told me all about her "hard luck." Her pupils had left her, one after another. I sympathized with her, but to myself I said, "No wonder." I could picture the mental discomfort of those pupils and could see why they had sought mental and musical stimulus elsewhere.

Imagine a potential music student coming from a beautifully decorated home into this unkempt atmosphere! The average pupil would seek an environment comparable at least to that from which he had come! Those from lesser homes would naturally look for an aura of contentment and good taste, or an environment somewhat better than their own. We discussed this question of harmonious mental, as well as physical, environment. She heeded my advice and it was not many months before this teacher had regained her confidence, her poise and her pupils. Two salient points helped her. (1) She realized that students are constantly in the quest of mental and musical harmony. (2) That, although a teacher must teach music, the saving grace in music teaching is the studio atmosphere and how it is reflected in the teacher's personality when a studio is decorated in fine taste.

Let us consider the country home of Lily Pons, coloratura soprano of the Metropolitan Opera. Here is decoration *de luxe*!

Hers is a French Provincial house, set in twenty-seven acres of ground. It is built of French stone, with a slate roof. This is the type of house you will find in France, comfortably resting in the rear of a large chateau. She calls this home her "Gentle-Folks House"; and its outside as well as inside arrangement is one of artistry. On each side of the steps leading to the veranda Miss Pons has planted little flower clusters. She planted so many that they covered up the steps; so, rather than ruin the flowers, these steps are not used any more. The grass must suffice for walking purposes. Flowers have been planted around the house and in every nook and corner. French casement windows open into the dining room and studio living room. This living room is thirty-five feet long and twenty-two feet wide. The bookcases behind Miss Pons in the photograph contain autographed books by French authors and poets and were recently presented to her at a dinner honoring her in Paris. A heavy beamed ceiling tops the room, while the furniture is in the French manner. At one end of this large room is a homey fireplace which extends from the ceiling to the floor.

Above and around the living room there is an inside balcony. Miss Pons' bedroom opens on this balcony. Outside her bedroom door stand four white stone musketeers. She

Lily Pons and her Music Room

Exterior of Lily Pons' Silver Mine Home, Connecticut

Music room in California home, decorated by Barker Brothers

Teaching Studio in large New York City Music School

says, "They guard me well while I sleep; and when I awake they greet me with a cheery 'good morning.'" The studio contains several lovely birds in decorative cages. When Miss Pons sings, the house is filled with their music, for they are fast learning to imitate her.

In the rear of the studio is a large swimming pool and even where small bird houses dot the grounds as well as large old pine trees. Small wonder then that Miss Pons always seems so joyful and free in her singing.

The music room in Barker Brothers "California House," designed in Los Angeles, will appeal as the expression of a very modern personality. It is decorated to serve as a flattering and individualized background for the hostess who entertains her guests with little intimate dinners and desires to arrange a pleasant evening of music or conversation with a visiting celebrity.

A fine instrument like the Steinway Sheraton grand piano does serve this worthy setting; and the window drapes that frame the piano are the visual expression of a fine musical mood. These rays of light through glass curtains of Celanese "Chifonese," draped at the period window, form a gracious background for the grand piano, the most important thing in the room to the hostess who entertains musicians. This room is not one of clutter for each item is designed to fit in its particular niche.

Eighteenth century styles, both French and English, emphasize the importance of good reproduction furniture from the simplest and most modestly priced to the elaborately veneered, which belongs in the company of fine antiques. This is the present trend.

The colors used are subtly pale, and deep piled broadloom carpeting reflects the exact shade of the walls. Original eighteenth century portraits and old French porcelain add distinction to this beautiful living room.

Lastly, let us consider the studio for the music teacher. The picture of the studio on this page is that of the late Dr. Herman Spielter, a former contributor to "THE ETUDE." One finds in this room a Steinway Piano purchased fifty years ago but still practical for teaching purposes. This is certainly an eloquent testimony. The large window gives plenty of light and air, which are essential to a busy teaching schedule. A simplicity motif is carried out with comfortable chairs, lounges, writing tables and magazine racks, a few pictures on the wall and seasonal plants for decoration. The effect is one of simple charm and inspiration.

One must stop and think about the location of the studio. The most spacious room in the house or apartment is the room in which the teacher should carry on her business. Her teaching business will be just as large as she cares to make it.

To-day, business has become a work of art. Take, for example, the time and thought that is given to decorating an artistic wearing apparel shop, an exclusive florist shop, or an interior decorator's salon. No amount of effort is spared. First the location is selected—one that is in a good part of town and so placed that it will entice the desired clientele. The owner realizes that the shop must be the last word in decoration or he will not be successful in attracting this following. He spends energy in making the shop one of distinction, one in which people will want to come. This also will be found to be true of the large music schools, where music teaching is organized on a large scale.

The smaller studio deserves the same attention. One should be selected that has a "view." How often a teacher will say to a pupil, "See the robin flying away from that beautiful tree. Doesn't this inspire you to play with the same freedom?" This is one of the reasons for selecting a studio with a "real view." Looking out, the pupil will really have something to observe, and it will give the inspiration upon which the teacher is so interested. Instead, we have been in many a dark studio with no view—only an old building or a court shaft to arouse the imagination. Is it not conceivable that those who reach a degree of musical understanding in adverse surroundings might become superb musicians in attractive

environments?

With comparatively little effort and expense you can make your studio an inspiring one to your pupils by investing it with simple quiet charm and attractiveness. Of equal importance is the setting of the music room in the home where these pupils must spend hours of time in daily practice. You will be surprised and delighted with the results.

# Shopping for Charm

with Theodora Van Doorn

## Behaviourism

### RACE AND GRACIOUSNESS

Many times, the musician is so occupied with the job of perfecting the technical and musically expressive parts of the program, that little or no thought is given to the very important details of her behaviour on the platform.

In watching most famous musicians, it is seen that their personal charm lies in their great simplicity. A person who is genuinely earnest, gracious and relaxed, reflects these qualities both on and off the platform.

Do you handle yourself gracefully and composedly in your public appearances? In the matter of applause for instance, is your expression of appreciation a stiff, awkward "title girl" gesture, or a truly gracious acknowledgment of the plaudits of your admirers?

So many fine musicians who have dignity when they first appear and even during the recital itself lose all grace and charm the moment they hear a burst of applause. Others accompany their bows with a toothy, strained grimace, which gives the impression that perhaps they themselves are surprised at how well they performed. The ability to act graciously is even more necessary in case the applause happens to be moderate.

To correct this awkwardness, Margery Wilson, the famous teacher of "Charm," suggests that you study yourself before a full length mirror. Stand erect, with one foot slightly in advance of the other, hands relaxed at your side, smile and then bow slightly from the waist, with a gracious inclination of the head.

If you will hold on to the thought that these people on the other side of the lights are friends, and that you do appreciate their interest, and that you are genuinely grateful, you will find that these thoughts are reflected in your face and attitude. Practice this attitude and the accompanying gestures in front of your mirror as many times a day as possible, until they have become part and parcel of your thinking; until you are that genuinely humble, grateful person. Your bows on the concert stage will then add to the pleasure of your audience by having them carry away the picture of a fine musician who is refreshingly natural.

For as Miss Wilson says, "Charm lies in complete naturalness. But no woman (or musician) CAN be natural when she is surrounded in self-consciousness and other inferior notions or confusions."

Many and varied are the problems in behaviourism which confront the musician; problems of poise, problems of posture, problems of personality and of etiquette. The new educational efforts toward culture to which these columns now commit you, you will doubtless have many questions that you will want to ask me. I will answer them as fully and as promptly as I can.

Etude readers desiring information or advice upon any of the subjects discussed on this page, or in any of the Departments of the ETUDE'S COURSES IN CULTURE, may write to Theodora Van Doorn, Room 613, 350 Madison Avenue, New York City, and prompt attention will be given to their requests.

## Stage Make-up

### LET'S ALL MAKE UP AGAIN!

When grease paint is mentioned, most people have horrific visions of a slimy sort of substance, uncomfortable to apply, injurious to the skin and generally messy. But this is only one of the forms of grease paint. For untold years the necessary pigments have been produced in stick form and it is with these harmless colors, that I now show you how to make up for any Italian, Spanish, Gypsy or other swarthy character.

Those of you who sing or play in costume for opera, operetta or musicale, or for that matter, in stage performances, (I had a request for nine sets of make-up from a high school dramatic teacher in Canada last month), will welcome this equally effective form of stage make-up and will probably want to try it right away.

To give the glowing suntanned olive tones of the Italian complexion, you must follow closely the procedure described herewith. These colors were carefully tested and blended in a consultation with Dr. Anstin Alexander, famous chemist and music lover.

On the thin basic film of cold cream, smooth evenly a film of "Juvenile Flesh" grease paint (*M. Stein & Company's* number 4) all over the face with the exception of the upper eyelids. Over this apply an even coating of their "Sallow Old Man" grease paint (number 11), (what a name for a grease paint which helps to portray exuberant vitality). This will give you a rather dark olive complexion with brownish tones. Dark red rouge in stick form should be applied high on the cheek bones. Blend this very carefully so that no decided color is visible. Practice will show just how much rouge is advisable. Next

cover the upper lids, blending well to the eyebrows with either dark brown or grey lining, bringing the shadow as far as the outer end of the eyebrow. Pat in rachel powder and over this dust tan powder. Brush away all surplus. With a black eyebrow pencil, accentuate heavily the eyebrows. Draw a line under the lower lids, ending it parallel with the eyebrow, also one through the center of the upper lid, parallel with the eyebrow. Your neck and arms can be treated with the same grease and powder to give an even tone to all exposed parts. Use a dark lipstick (the same stick as used for the cheeks). Sleek the hair down (if dark) or wear a wig (if blond). Cover the eyelashes with black mascara.

To facilitate your using this make-up, *M. Stein* has assembled at my request a compact tin box containing all the grease paint colors for the Italian and kindred make-ups, at \$1.00. If you want this kit, write me enclosing money order or check.

## Platform Make-up

### GETTING IT DOWN IN BLACK AND WHITE

When from time to time I have advocated the wearing of black for your concert appearances, there have undoubtedly been many of you who thought you could not wear it. Black, which is in reality the composite of all colors, does have an odd effect on the skin tones, drawing away much of your color. Dark people seem to grow darker, while those with medium coloring merely become colorless. Fair people with natural peach-like tones in their complexions look very well, but others appear washed out.

With this in mind, *Primrose House* is advocating special makeup for Black, which is based on your skin tone. If you have a fair, medium or dark skin, their new cosmetic shades heighten the effect of your costume and make your complexion glow with a translucent radiance.

These make-ups are particularly right for concert or platform use, as they do not offend good taste, when you come down from the platform and mingle with your well-wishers. They are right, whenever and wherever you wear black, and should be applied in the following most effective manner, before a brilliantly lighted mirror. (See November "Shopping for Charm" for instructions).

Here is the *Primrose House* Make-up Technique. Cream your face thoroughly and wipe clean to remove every vestige of dirt. Pat briskly, when applying the skin tonic, to remove last trace of cleansing cream and to tone the skin. When this is completely absorbed, rub a small amount of Foundation Cream all over your face, giving particular attention to the sides of the nose, under the eyes and the chin crevice. Now rub in the cream rouge with an upward stroke. *Primrose House* advises the use of the lipstick before powdering, to make it more permanent. Let it settle for a moment or two. Then spread a thin film of liquid powder over the entire face and allow it to dry. Powder freely with a downward motion, including the upper eyelids. Brush away all surplus powder. Shadow the upper lids lightly. Mascara the eyelashes lightly. Brush the eyebrows with mascara, first against the hairs and then with them to smooth them into a line that will stay. If needed, pencil them lightly. In order to keep this make-up fresh and glowing for the entire recital and the time after it, go over the whole face with another light film of liquid powder "to set" the make-up.

The colors *Primrose House* designed especially for your type when you wear black, are:

**Fair Skin**—Pompadour lipstick and light Pompadour rouge, blue-grey shadow, natural liquid powder, natural powder.

**Medium Skin**—Primrose Red lipstick and rouge, blue-green shadow, beige liquid powder, beige powder.

**Dark Skin**—Carnival lipstick and rouge, fuchsia shadow, beige liquid powder, Rose-Petal powder.

Though these combinations were designed to complement black, I found them equally effective with white (which is merely the absence of all color) and felt I should comment on this dual usability.

I shall be pleased to know of your trials and triumphs with this specialized platform make-up.

## Care of the Skin

### ROUGH WEATHER AHEAD, AHAND, AFOOT!

#### Sports Cream

All the world is sports conscious! In our non-musical moments, skiing, sleighing, skating, golf, tennis, swimming, even bad-

minton, expose our complexions to their natural enemies, sun, snow glare, cold and wind. And no musician can allow herself the dubious luxury of a rough, coarse skin, be it face or hands. *Lentheric* has packaged a cream that can be used as a powder base before exposure or after. It is fittingly named *Sports Cream* and comes in a tube at 50¢ or a jar at \$1.00. These containers are cleverly decorated with tiny figures busily at play. If you can't get this cream—I'll be glad to help you get it direct from the manufacturer.

#### Blustery Weather Lotion

Silk stockings have an annoying way of starting to run when they come in contact with rough legs and hands. And we do wear silk hose for all dress occasions. What a catastrophe a run can be at the start of a recital when a whole pair is home and we are elsewhere! So as a precaution, a rub-in with *Dorothy Gray's Blustery Weather Lotion*, (a bland, fast disappearing emollient) will save the stockings and your savoir-faire, as well as all other chappable areas. A special double size bottle can be had during January only for only \$1.00. If your local cosmetician cannot get this for you, let me know and I will see that you are supplied for \$1.00 and other considerations. The other considerations will be your continued loyalty and active support of this column.

#### Les Lotions Pour Les Mains

At this season of the year, well-known cosmetics manufacturers have always become logically superconscious of the need for constant care of the face and hands, and provide us with liquids and creams, par excellence, to prevent roughness, redness and chapping. *Coty* has a new clear, amber colored liquid, with a clean menthol odor, in a snooty blue capped bottle, which can be used on the skin daily, as a softening, beautifying aid. This is priced at \$1.10 and is economical at this price, as a little goes a long way. They also have a creamy white liquid that is designed to be used several times a day in conjunction with or independently of the other, *Lotion pour les mains*. This is beautifully bottled in a pink capped white glass, modern flask and retails at 75¢. The manufacturer of these articles will be happy to tell you through this column, where they can be purchased if they are not yet available in your locality.

(Continued on Page 61)

# THE FORWARD MARCH of MUSIC KEEPING FIT PHYSICALLY

A Department Providing the Study-Basis for a Broader Musical Background

## THE BEST INVESTMENT

JUST about a year ago a young woman went to the office of a well known physician, complaining of increasing nervousness. She was employed in the office of an insurance company doing work in making reports that were incredibly monotonous.

"I go over lists and lists of tabulations," she complained, "until I feel like screaming when I even see an adding machine."

"Well, what have you done for it?" asked the doctor.

"I walk, I play golf on Sundays, I read, I go to the movies"; she replied, "but the columns of figures haunt me. They seem like mathematical snakes running after me."

"Well," said the doctor, "medicine won't do you any good. I could give you something to let you down temporarily, but it would be only a palliative. In a few days you would be right back again. There is only one thing for you to do, and that is to call upon your imagination through some kind of interpretative or creative work. Do you play the piano?"

"Yes, but I gave it up and sold my old piano, as I thought it would make me more nervous."

### A Case of Ennui

"QUITE THE CONTRARY," smiled the physician, "what you have is a case of ennui. You are bored with your daily existence. You have been trying to supply the lack of color and imagination in your life by having some one else create it for you in a book or in a movie. In other words, you have been making no mental effort, save that of sitting passively back and having someone else supply the imagination. Now music calls for a kind of concentration that compels the player to take his mind off everything else. Get another piano, somehow, and start playing again. That is the cheapest medicine you can procure."

This was the advice of one of the foremost mental experts in the country. He is also a famous brain surgeon. His fees are very large. The young lady took this advice and inside of three months noted a marked improvement, and in a year was literally cured.

### Escape from a Troubled World

THE WRITER, in his many years of practical experience as a teacher of piano, knew of many cases of pupils engaged during the day who found piano playing an invaluable means for what the psychologist calls "escape." One business man, who later became a multimillionaire in England, once put his hand upon his piano and said, "Considering the returns it has brought to me in mental relaxation and enjoyment, that piano is the best and the cheapest investment I have ever made." Then he continued, "I have received so much from that piano that when I go into a home where there is no such instrument, I feel that there is something important missing, just as though the architect had forgot to put in the windows."

In the enormous revival of musical interest, the number of bands in America has mounted to one hundred and fifty-six thousand. Strangely enough, the use of the piano has been benefited by this and its sales increased, because it is the background of normal musical development in all fields.

## MONTHLY MUSICAL CULTURE QUIZ

After each question in parentheses will be found the number of the page in this issue upon which may be found the answer to the question. Let each question count for ten points. After you have set down your answers, correct them by referring to the pages mentioned. Then credit yourself with ten for each correct answer. Total this amount and you will have a revealing estimate of your general musical knowledge.

1. What was Sir Morell Mackenzie? (Page 5)

2. What is contrary motion in music? (Page 40)

3. Who wrote the "Hammerklavier Sonata?" (Page 7)

4. What is the best thing to develop good orchestral material (players)? (Page 13)

5. What fault did Chopin find with Thalberg? (Page 14)

6. What continental composer did the English composer Sterndale Bennett emulate? (Page 54)

7. What is a sarabande? (Page 20)

8. What two letters of the alphabet may be used to form a diminished fifth, without the use of a sharp or flat? (Page 15)

9. Who is the Conductor of the Columbia Broadcasting Symphony Orchestra? (Page 8)

10. Who was the greatest of Beethoven's biographers? (Page 9)

## EXPANDING YOUR CULTURAL AND MUSICAL LIFE

By Joel Anderson

THE Editor of THE ETUDE has asked me to jot down certain influences in the general field of art, science and literature which should be of stimulating value to musicians. Great books, great art, great dramas, great movies; these seen at the right time have made differences in many lives.

The Oxford University Press has just issued a very comprehensive work, "The Oxford Companion to Music," by Percy A. Scholes. The book is almost all-inclusive (1091 pages) and is written in popular style. This is not the ordinary encyclopedia of music, but is interspersed with essays upon various musical subjects. The book is voluminously and excellently illustrated. The selection of material for any book of this kind is always a debatable question; and such a thing as pleasing all contemporaries is probably unattainable. The author, however, has fallen into one ridiculous historical trap by stating, in his biography of John Philip Sousa, that "His father was Antonio So, and to this surname the son added U. S. A." This has been refuted over and over again in THE ETUDE, upon documentary evidence. If the author should call at the office of THE ETUDE, he could see the discharge papers of Antonio Sousa (born in Spain), from the United States Navy. These date from before the birth of the great bandmaster. The book is reasonably priced at \$6.50.

The most discussed English novel of the hour, "Rebecca" by Daphne Du Maurier, gives an extraordinary picture of country life in a fine old English manor house with an intimate insight to the manners of English society of to-day. The work is one which, at the age of the writer, who is still in her third decade, can only be looked upon as sheer literary virtuosity. Gruesome and horrible as is the denouement, it contains a surprise which is so shocking that few readers put the book down until the last word is reached. Doubleday, Doran & Co., Inc. are the publishers.

"Cast Out Your Devils" is the startling title of a new work by Dr. Alfred M. Uhler, long associated with the famous psychologist, Dr. David Seabury. As the name implies, the work is Freudian in its main concepts, in that it endeavors to explain, in as simple words as possible, how the psychoanalyst digs down in the human consciousness and, after having discovered the mental toxins of fear, repression, hate, and so on, removes them by means of rationalizing. This book endeavors to show the reader how he may in some instances do this for himself, suggesting a kind of auto-psychoanalysis. We believe that musicians, who often have difficulty in making their emotions behave, will find the two dollar book, published by Stackpole Sons, a mighty good investment.

The Metropolitan Opera Guild has just put out a sixty-eight page book (sheet music size) called "Opera Cavalcade," by Ruth Adams Knight. It is a very graphic story of the great opera house and its famous companies of stars which have ranked at the top of operatic history for a half century. It contains over a hundred

(Continued on Page 64)

## Chin Up!

FEW health problems are more vital to the student of music than the question of proper posture. Effortless technical control of voice or instrument, attractive platform appearance, and ability to endure long hours at the keyboard or music stand, without undue fatigue, are but a few of the factors directly dependent on correct bodily carriage.

From the mass of writings on posture—both for the music student and the general reader—one may gather a few simple principles which underly most of the rules, and which are readily understood and applied.

1. Hold the chin up, the head in a straight line with the chest, hips, and feet.

2. The chest should be thrust forward and held high, the shoulders back.

3. Hold the abdomen flat. A bulging abdomen is usually due to lazy, untrained abdominal muscles.

4. Stand and sit erect, with both feet on the floor, the weight evenly distributed.

There is only one way to use these rules—give them constant attention until they become ingrained habits. Try to catch yourself slumping in a chair, drooping your shoulders, or standing with your weight resting on one foot. Whenever you notice such faults, correct them at once.

Naturally, detailed posture pointers, particularly in voice, should be worked out in conference with the teacher to meet the requirements of the individual student. But this alone is not enough. You must achieve a healthful and graceful carriage as second nature in your daily life. Otherwise, attempts to remedy your posture as a part of your musical performance will merely result in a strained stiffness, and weaken your concentration on the music itself. A forced position, however correct, can be just as harmful as a thoughtless slouch.

So—chin up! shoulders back! chest out!

## One, Two, Three, Four

THIS DEPARTMENT will have much to say in future columns about exercise for the healthy musician—both competitive sport and controlled gymnastics—for relaxation, general health, and specific muscular training. At the moment, a word is in order in defense of the gymnastic routine of the "daily dozen" variety. Although this type of exercise is liable to become a monotonous task, and is low in relaxation value, it is particularly useful for careful posture development.

In her stimulating little book, *Health, Speech and Song*, Jutta Bell-Ranske reverses the logic of posture development for musical skill. She advises singing lessons for children as a pleasant and effective method of training in healthful breathing habits and fine carriage.

This is the answer of Jutta Bell-Ranske to critics who maintain that musical instruction overtaxes the energies of the very young. Health for better music—music for better health!

## Orpheus and Morpheus

READERS OF THE ETUDE are well aware that music sometimes may be an almost fanatical interest which saps the energy of the serious student. Rest, recreation, and above all sufficient sleep are advised by teachers everywhere for the musician who devotes long and arduous hours daily to the perfection of his art.

Hamilton, in *Health Hints for Music Students*, offers an ingenious method for

ETHELBERT NEVIN, Op. 25, No. 2

Arr. by William Hodson

Con moto, non troppo presto

The first system of the musical score consists of four staves. The top two staves are for the first violin and second violin, both in treble clef with a key signature of three sharps (F#, C#, G#). The bottom two staves are for the first and second violas, both in alto clef with a key signature of three sharps. The music is in 4/4 time. The first staff begins with a measure rest followed by a half note G5, then a quarter note A5, and a half note B5. The second staff begins with a measure rest followed by a half note F#4, then a quarter note G4, and a half note A4. The music continues with various melodic lines and chords, including triplets and sixteenth notes. Dynamics include *mf* (mezzo-forte) and *f* (forte). The system concludes with a double bar line.

## The "Etude in C-sharp minor, Op. 25, No. 7"

(Continued from Page 22)

aria Wodzińska—he became engaged to her, but the engagement was broken off; Countess Potocka, and George Sand. They have had, even at the age of twenty-seven, a dread premonition of the terrible disease—consumption—that was to blight his life and bring him to an early grave. His youngest sister, Emilie, died of tuberculosis in early life; his father died of heart and heart complaint. He resigned himself, even then. As with Beethoven and Schubert, music became friend, mistress and wife to him and remained so until his eyes closed forever.

To render adequately this touchingly beautiful composition use "lingering accents" and "accents of delay" (described and illustrated in the Chapter on Accents, Book V of my "Master School of Modern Piano Playing and Virtuosity"). The sweeping, rising and descending scale in the culminating passage in E-flat major (Measures 28), already mentioned, usually offers great trouble to the inexperienced, though able, pianist. The dynamic and agogic marks I have given will help to tide over any technical trouble. The sudden appearance of the transfiguring chord in E-flat major should be forceful, *fortissimo* in the right hand, with a strong, lingering accent on the first note on the scale in the bass. Let the left hand then play swiftly but softly, while the right hand proclaims with force every single chord. Towards the end of that down-rushing scale *ritard*, in both hands, and let the six last notes in the bass be played rather slowly but forcefully, with firm touch. On the last note linger.

What follows now is a "solo" of the violin, plaintive, yearning and ending with softest pleading on an unresolved chord of the dominant seventh; while the violoncello rises up, softly too, a *basso ostinato* (unchanging bass), as in Measures 29 to 36. A moment of suspense, and the violoncello again pours forth its appealing melody (Measure 37). Again is heard the opening theme, the unforgettable dialogue (Measures 46 to 53). There is this time a new feature. From a deep, soft F-double-sharp in the bass rises a chromatic scale; it rushes faster and faster (Measures 53-54),

culminating on the fateful E with which the whole poem started.

Is there any need to bespeak the end? The impassioned, bemoaning passage of the violoncello, its last appeal, in vibrant, imperishable accents, ending so sadly, in utter gloom. In his remarkable edition of the "Etudes" of Chopin, Kullak writes: "The composer paints with psychological truthfulness a fragment out of the life of a deeply clouded soul. He lets a broken heart, filled with grief, proclaim its sorrow in a language of pain which is incapable of being misunderstood. The heart has lost—not something but everything. The tones, however, do not always bear the impress of a quiet, melancholy resignation. More passionate impulses awaken. The still plaint becomes a complaint against cruel fate. It seeks the conflict, and tries through force of will to burst the fetters of pain, or, at least, to alleviate it through absorption in a happy past. But in vain! The heart has not lost something, it has lost everything."

Not always do Chopin's melodies end so forlornly. Even his *Etude in E-flat minor, Op. 10, No. 6*—the song of bereavement, of stark desperation—ends with a note of radiant hope. And witness the loving, uplifting melodies in his great "Sonata in B minor"; in the *Fantaisie-Impromptu*; in the *Impromptu in F-sharp major*; in the nocturnes in F-sharp major, D-flat major, B major, E major, and E-flat major; the lovely, ardent melodies in his two concertos; the *Berceuse*; and a score of other compositions. We may well, as Schumann urged, stand uncovered in the presence of such a creator, and acquiesce to what Schumann said later, when he beheld the resplendent galaxy of Chopin's works: "He is and remains the proudest and most audacious poetic genius of his time."

Eighty-nine times has this little planet of ours circled around the sun since Chopin's death. Yet his message is as new and vibrant, as moving and compelling, as when first given to the world.

It will remain so always, until the last loving couple, their hands entwined, lies prone and silent on the dead, barren and frost encrusted earth.

## Aids to Sight Reading

By NELL V. MELLICHAMP

IN ADDITION to the reversible flash cards which are invaluable in teaching quick recognition of notes, a simple plan which we find helpful and which may be used for any age, is to select a composition well within the child's grade and let him point to the music, following it as the teacher plays. The teacher may test his accuracy by pausing at intervals to be

sure he is pointing at the exact place where the player has stopped.

In like manner several children may sit near the piano and each, having the same composition before him, may follow and tell where the player is at each pause. This trains the eye without involving the use of hands and effort for rhythm all at once, thus developing ease and confidence.

## The Spelling of Musical Notation

(Continued from Page 16)

asked Mendelssohn how he derived those opening chords in the famous "Wedding March," those chords which, as Schumann declared, dignify an otherwise commonplace number. Mendelssohn is supposed to have replied that he "didn't know and didn't care." We do not believe the story. Mendelssohn knew always just what he was doing. The passage is really all one chord; from root to eleventh, the dominant harmony of E minor, a closely related key to major:

Ex. 34

And finally, we have "listened in" recently on several old-fashioned "spelling bees," to our great edification. So how about some "musical spelling bees" in connection with classes in "Musical Dictation"?

Now!  
The Piano Course You  
Have Waited For!

by

T. ROBIN MacLACHLAN  
and MICHAEL AARON

These two music educators need no introduction to teachers of piano. Their years of actual experience in teaching small, medium and large children, together with their natural ability to write *tuneful* technical material assures the teacher and student of interest and progress with each lesson.

As specialists in the publication of piano teaching material SCHROEDER & GUNTHER, INC., recognize the MacLachlan-Aaron Piano Course as the greatest forward step in a century.

MANY SINGERS sacrifice clarity of diction, or the "word," for what they believe to be a great tone, which, as a matter of fact, is entirely false in timbre and produced by forceful efforts. Such singers actually think that their words are given intelligibly, when, truly, they are merely outlined "behind the tone," so to speak.

Clarity of diction depends upon no peculiar endowment, natural or phenomenal, other than common sense and intelligence; and it therefore can be attained. To this end one has only to establish first of all an automatic control over the necessary adjustments of the vocal mechanism. Secondly, deep, spontaneous breathing must have been developed so as to be employed automatically. Then, last but not least, the tongue must have been trained to entire freedom from stiffness and "bunching up," especially at the back.

For an automatic control over the adjustments of the vocal organs, one must acquire a clear conception of those sensations (physical) which always accompany a pure, free tone. The assistance of a competent teacher of voice is necessary to this acquisition, in that he can lead the student to recognize these important sensations, which may never before have been noticed, even though always having existed, unrecognized, within his tone.

By such a course the student will develop

a system of tone production in which are eliminated other harmful sensations which are only results of incorrectly adjusted organs and wrongly produced tones. That is to say that the student will develop a correct mental conception by which he can prevent using conscious physical control (effort), which is always composed of strain and force and is, of course, destructive of the best vocal quality and of elegant diction. After this correct conception or pattern has been attained, the vocal mechanism can and will respond automatically to the impulses of the singer's will.

For the development of correct deep breathing, one has only to allow the lungs to expand most freely in the lower regions of the chest, while the diaphragm becomes very much contracted. The expenditure of air is managed by natural functions of the abdominal and intercostal muscles, and through this system the breath is properly given to the vocal cords within the larynx for its conversion into sound.

For pure diction, the tongue must be absolutely free from stiffness and "humps." It is to the flexibility of the tongue that vocalists should direct much attention and practice. With the tongue under gentle, but entire control, and this based on a breath that is as spontaneous as in a sleeping child, the singer has opened the way to a beautifully finished and intelligible diction.

## Shall We Understand Our Singers?

By D. C. PARKER

IN AN ARTICLE, "Our Bad Singing," contributed by the able English critic, D. C. Parker, to *The Musical Standard* of London, he makes these rather pungent comments on the subject of intelligibility of text in vocal music.

"As a result of a pretty wide experience gathered at constant concert and recital attendances, I feel the efforts of the majority of our singers to be so futile and inartistic that I must voice my complaint. I feel their futility and lack of art in all phases. The shortcomings make themselves felt in oratorio, in opera, in the operatic excerpt sung at concerts, in the art-song and the ballad, even in the musical comedy. I used to think that some of our concert singers might profitably visit the musical comedies, for there, at least, one heard excellent diction. But, in the theatrical domain, both diction and singing have fallen to a low ebb in recent years. Will anyone seriously argue that Gilbert and Sullivan would have been content with such singing as that which we often hear to-day in musical comedies and revues? I have sat in the second row of the stalls and been unable to make out a single word sung by the chorus. From the same position I have missed many lines

sung by principals, and my hearing is acute.

"The diction of our native singers requires far more attention than it gets. The very fact that the words of songs are printed on programmes and that they have to be followed so closely by many in the audience appears to me a confession of failure on the part of the singer. The song is music and words. If the words cannot clearly be heard, the task has been only half accomplished. Moreover, the personality of the singer ought to hold the hearer so firmly that he has no desire to read while trying to listen. The diction should be so good as to make printed words superfluous. In the case of foreign languages and translations, there is an argument in favour of their retention; in the case of English songs sung by English singers there is no such argument, provided the singer can articulate properly.

"Not long ago a critic, writing of a recital given by John McCormack, remarked that the words in the programme were quite unnecessary. What a comment on the general state of singing! But the diction of many modern singers is so wretched that one might almost mistake them for actors and actresses of the numbling school."

# MUSICIANS!

Winter perspiration odors  
are avoidable!

MUSICIANS, music teachers and music lovers have a hard time keeping their bodies free from unsavory perspiration odors in the winter. The constant going in and out of doors necessitates the wearing of heavier clothing, and heavy clothing causes perspiration. Where one pupil or teacher likes a room cold and another likes it hot, where the hall in which you practice or perform is either frigid or overheated, it is virtually impossible to control the flow of perspiration with normal methods.

ARRID DEODORANT might therefore almost be said to have been created especially for musicians. It

1. Does not harm dresses. This is particularly important in this weather, when wool and silk are the fabrics worn. Wool holds perspirations so tenaciously that it is best to prevent perspiration rather than to get rid of its odors later. 2. No waiting to dry. Can be used right after shaving. 3. Instantly checks perspiration for 1 to 3 days. Removes odor from perspiration. 4. A pure white, greaseless, stainless vanishing cream. 5. Arrid has been awarded the Approval Seal of the American Institute of Laundering, for being harmless to fabrics. TRIAL JAR: Send 10c (stamps or coin) for generous size jar of Arrid.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## "Let Us Study The New Anthem"

By WILLIAM H. BUCKLEY

WHEN BEGINNING REHEARSAL of a new anthem, take it through at sight with its accompaniment. The attempt to meet the difficulties encountered will usually cause some amusement. Then take it in sections, each part by itself. Play the parts themselves on the organ as you begin to combine them: first, two parts, then three parts, and at last four parts. During this study, conquer all difficult intervals and chord combinations. Then rehearse the four parts without the organ, until perfect accuracy and confidence are assured. Follow this with your interpretation, and lastly, add the accompaniment. When the organ part is added, there will be found a tendency among your singers to be careless about many fine points, which they have learned in their unaccompanied practice. Insist upon each detail being noticed, and point out that the organ is used to intensify their efforts and not to carry the responsibility of the interpretation.

When these stages have been completed, the anthem should be held over and finally brushed up at the next weekly rehearsal. Then it is ready for public performance. Never present a number which has not been thoroughly mastered. An old anthem well done is infinitely preferable to a new one indifferently sung.

Do not allow overanxiety on the part of some choristers to cause an anticipation of the beat. This is as offensive as a tardy attack. Lack of firmness on an initial attack is often caused by choristers not opening the mouths *before* the beat. In this case ask them, facetiously, to open the mouth one measure before they are due to sing.

### "God Is a Spirit"

A VERY ATTRACTIVE COMPOSITION for study by a small choir is the *God is a Spirit*, which is a quartet from the beautiful cantata, "The Woman of Samaria," by the English composer, Sterndale Bennett, who was such a friend and follower of the style of Felix Mendelssohn-Bartholdy.

Begin very quietly, but make the first consonant of the initial word, "God," rather solid. Swell out gradually from the very beginning until the first beat of the second measure is reached, and then die away to the end of the phrase. Get the final *t* of *spirit* exactly on the third beat of the second measure. The second phrase, with the same words, is taken in the same manner, but slightly louder, since it is higher in pitch. The contraltos should emphasize *they* and fall away to *worship Him*, with a slight stress on the first syllable of *worship*.

In Measure 5 the bass and tenor entries must not disturb the flow of the contralto melody. In the next phrase, the accompanying parts follow the expression of the part carrying the melody. In Measure 8, the contraltos again have the melody, with *they* as the strongest word and with a slight stress on the first syllable of *worship*. The sopranos have a secondary part which becomes primary at the second beat of Measure 10. This part begins softly at Measure 9 and progresses steadily up the scale, gathering strength until it reaches

its climax at the first beat of Measure 12. From here let it die away gradually to the end of the phrase. Measure 14 is shaded like the opening phrase but to a lesser degree. It forms a tonal foundation or "bed" for the soprano arpeggio, which should soar above it with the greatest purity of tone. Measure 16 repeats the

where the rest begins, since a bar-line has no time value. This brings the final *t* of *Spirit* on the first beat of the second measure. Unless this is done the first measure will be robbed of a part of its value.

In cases in which another word follows, it is impossible to give full value to the first word and still to articulate the second

ures will illustrate this point. It is too of sung as

#### Ex. 3

when the correct and much more effective way is

#### Ex. 4

At Measure 21 we begin a new section. *For the Father seeketh such* will be sung with natural expression. That is, the degree of loudness is governed by the pitch of the note to be sung. Use the contralto melody as your guide in this phrase. In the phrase beginning at Measure 23, use *seek* as your peak word and diminish therefrom to the end of Measure 28. Measures 25, 26 and 27 have stressed second beats within the diminishing effect. The cadential second inversion on the first beat of Measure 28 intensifies the normal accent.

### Repeat Problems

AT MEASURE 29 WE BEGIN THE REPEAT of the first section. Sing this phrase very gently with the soft floating tone already described. While the expression is similar to that of the original opening phrase, the treatment is much more delicate because it is a *pianissimo* passage. Do not swell out beyond *piano*. From Measure 31 lead up to a climax at the first beat of Measure 33 and fall away to *Him* in the next measure. At Measure 35 the last phrase is repeated in a lower part of the scale and therefore uses the same expression in a more subdued fashion.

Let the contralto note on the second beat of Measure 36 be firm. Begin the soprano part quietly and gradually work up to the chief climax of the composition at the first beat of Measure 39. Within this general *crescendo* we get secondary effects in Measures 37 and 38 where the initial beat take reinforced accents. The falling away from the main climax continues until the first beat of Measure 45 is reached. A secondary line of expression begins on the last beat of Measure 42 where there is swelling out to the first syllable of *spirit* in Measure 44, from where there is a dying away to *truth*.

The coda begins at Measure 45. The soprano and contralto parts are inverted in Measures 45 and 46. Although the coda is marked *sempre calando*, swell out gently from Measure 45 to *seek* in Measure 46 and then let the volume of tone die away to the end. A slight recovery in tone at Measure 51 makes the *pianissimo* ending all the more effective. Begin the last phrase very softly and slowly. Make a definite separation after *spirit*. Be careful to avoid singing *an din truth*. Hold the last word till the tone has almost vanished.

By such a course of study there will be achieved a sympathetic interpretation of this beautiful composition, which may well serve as a model for many others.

The Organ, with Choir Loft and Screen, of St. Patrick's Catholic Church in San Francisco

effect of Measure 14. At Measure 18 begins a *crescendo* which culminates at the first beat of Measure 20. Within this *crescendo* there should be added stresses on the first beats of Measures 18 and 19.

Final consonants will be troublesome at times. If not taken exactly together, you get a sort of reversed stutter from your chorus, as *Spirit-t-t*, for instance. Fix the exact point where the final consonant is to be heard, and you will overcome this fault.

If a word is followed by a rest, the final consonant will be sung at the beginning of

word properly. In the following, for instance, there must be care not to sing,

#### Ex. 2

*Spir-i-tov the*. To avoid this, the second syllable of *Spirit* must be shortened. In rapid tempo the *t* could be sung on the fourth beat of the first measure, giving time to do it before beginning the next vowel.

Every phrase has its climax towards which there will be a swelling out, and from which there will be a dying away. Mark the climactic syllable of leading phrases, and then train your choir to learn the feeling of these passages. This marked syllable will be the peak of the phrase to which it belongs. The following two meas-

#### Ex. 1

the rest, since the note lasts until the rest begins. The second half-note ends exactly

# World of Music

(Continued from Page 4)

TO ENCOURAGE NEW MUSIC the Ministry of Popular Culture at Rome has ordered that in all Italian theaters a half of all the music played must be works premiered since 1900, and of these at least fifty per cent must have been first heard during the last twenty years.

ALEXANDER MICHALOWSKI, one of the greatest of Polish teachers of the piano, passed away on October eighteenth. He was perhaps the last representative of the Chopin tradition handed down to him by his teacher, Mikuli, a pupil of Chopin. His entire life was devoted to the interpretation of the Polish master's works and the initiation of hosts of young pianists into the inner secrets of his art.

THIRTY-THREE CONTEMPORARY COMPOSERS were among the programs of the Sixth International Festival of Contemporary Music, held from September 5th to 13th, at Venice, Italy.

PERSIS HEATON TRIMBLE, one of the widely known women musicians of the Middle West, died on June 30, 1938, at her home in Lenox, Iowa, at the age of fifty-three. Mrs. Trimble won national recognition with her "Lay of the Fairies" for women's voices; she was formerly for four years the national president of the Mu Phi Epsilon honorary musical sorority, and at her death was Music Chairman of the National League of American Pen Women.

FOUR WOMEN CONDUCTORS are among the prides of Chicago: Gladys Welge, of the Woman's Symphony Orchestra; Ebba Sundstrom, leader of her Symphonietta; Lillian Poenisch, conductor of the Chicago Woman's Band; and Fanny Arnstrom-Hassler, leader of the Women's Concert Ensemble.

THE ITALIAN SEASON at Covent Garden, London, left the public clamoring for more. In "Rigoletto" Gigli so thrilled the audience with the "magic charm" of his singing and acting as to inspire a leading critic to write that "No tenor since Caruso has reached such perfect vocal quality, or such dramatic fervor." The demonstrative audience demanded encores in "Rigoletto," which interrupted the play and renewed the press controversy as to the right or wrong of encores.

## COMPETITIONS

TWO PADEREWSKI PRIZES of one thousand dollars each are available to American composers. One is for an orchestral composition of fifteen to twenty minutes length, another for a concerto for solo instrument with orchestra and not less than fifteen minutes in length. Manuscripts must be received not later than March 1, 1939; and complete information may be had from Mrs. Elizabeth C. Allen, Secretary of Paderewski Fund, 200 Huntington Avenue, Boston, Massachusetts.

THE CALIFORNIA COMPOSERS AND WRITERS SOCIETY will be especially recognized on August 22nd to 25th, 1939, as the sponsors of leading activities of the Golden Gate International Exposition of San Francisco. California born musicians are asked to communicate with Galen M. Harvey, Secretary, 616 Aileen Street, Oakland, California.

AMERICAN COMPOSERS are asked to submit works to Howard Barlow, Columbia Broadcasting Company, 485 Madison Avenue, New York City, to be considered for performance on the Everybody's Music orchestral series over CBS. Having begun with July 24th, each program now includes one American composition—a fine recognition and opportunity for our creative musicians.

THE YSAÏE COMPETITION FOR CONDUCTORS will be held for 1939 at Brussels, Belgium. Full particulars may be had from the Administrator-Director, Foundation Queen Elizabeth, Palais d'Egmont, Brussels, Belgium.

## The Organist's Extra Sense

By ADA CLARK DAVISON

THE CHURCH ORGANIST needs an extra sense, which, for want of a more strictly technical term, may be called a Sense of Awareness. By awareness is meant the sense of being in possession of information of what is happening and, further, what is going to happen. By the organist's intensive training of the other senses, he becomes alert, vigilant, mindful, aware; thus acquiring this extra sense, awareness.

Through the acuteness of sight, he sees that the pastor is closing his hymn book at the third verse of the hymn, having preached several minutes overtime, and that the congregation is following his example.

The organist plays the Amen after the concluding line. An inexperienced musician would start another verse—and embarrassment would follow.

The sense of awareness is also detected through the ear. Familiarity of the pastor's voice is a great help in interpreting the pastor's mood. Is he coming into his pulpit in a state of exaltation; or is he deeply emotional and prayerful? By listening acutely, the organist has trained his ears to hear the pastor's feelings, as they are expressed in his voice.

### The Quickened Senses

THE ORGANIST IS MADE CONSCIOUS of the feelings of the singers in the choir, the soloist, and the congregation, through sight, hearing, and feeling. He knows if the choir anthem will be sung with the proper spirit, or merely sung; and how much help must be supplied to bring the anthem up to its rightful mark.

He knows when a soloist is nervous, or overconfident, or in fine mettle. In the first case, build-up in the accompaniment is necessary; in the second, a toning down; and in the third, the organist may go ahead and do his best work—but always, always, he must be alert for what might happen unexpectedly. The best of singers make mistakes, drop music, turn a wrong page, or do things unthought of at rehearsal.

Soloists sometimes have grown so nervous that the written accompaniment had to be abandoned—for that rendition, at least—and a solid background given them.

The movements, the silences, or the rustlings of the congregation tell the organist volumes—when his music is being played. The tenseness of the attention of the people tells him, as plainly as words, or even more accurately than words, what selections to play. Organists who have developed the sense of awareness, see the congregation's response; they hear it; and they feel it. This response is an excellent teacher.

"But," argues a young organist, "my organ technic is well-nigh perfect, I have been trained to accompany the choir, the soloist, and the congregation; I know how to read a church service; why do I need to develop a sense of awareness? It will give me a feeling of impending danger, and render me self-conscious. And what is the objective of this awareness?"

This argument is quickly answered. The most perfect technic at the console will not help when certain occasions arise, as they very often will, when the organist must breach a gap.

### In Sympathetic Action

AS FOR READING THE CHURCH SERVICE, it is the privilege of most pastors to take liberties in the order of the service. The experienced organist thinks with the pastor, perhaps this way, "That anthem was longer than I had anticipated; I will omit the second hymn." The sense of awareness makes the organist the pastor's "other mind." The hymn is omitted; and the organist makes the necessary changes in the order of service.

Then, there is no sense of impending danger in this alertness, this being on one's guard. Rather, it calls all the bodily forces together for assistance in time of need. One need not feel self-conscious. Instead, a feeling of preparation makes one feel secure. "Whatever may happen, I know what to do!" actually produces poise and efficiency.

The great objective of the sense of awareness is the coordinated, sympathetic movement of the church service.

After a few years of experience, the young organist will be proud of his increasing facility at the console, but he will be prouder still of the development of his extra sense of awareness.

## Church Organists in Australia

By REV. H. P. FINNIS, M.A., MUS. DOC.

"IN AUSTRALIA we have musical deficiencies in every direction, and it is partly our own fault. There are organists so glued to their organ stool that they never hear their choir sing undistracted by organ control and questions of registration. To hear a choir from the last seat in the nave is a very different matter from hearing the same choir while accompanying them from the organ loft.

"It is true that one can read a book, accompany the choir, and listen to their singing all at the one time, but the finer and more delicate questions that govern choral

art require concentration of attention on the part of the listener if he is to detect faults, and see to their correction in future rehearsing. Again, there are potential organists or choir-trainers who would welcome opportunities of assisting in church services by playing some part of the organ accompaniment, or by helping in the conduct of a choir practice, but do not find much incentive or opportunity."—*The Church Standard, Sydney, Australia.*

We are of the opinion that these conditions are not confined to our musical cousins of the antipodes.—*Editorial Note.*

\*\*\*\*\*

### Genius in Simplicity

"Genius seems to be supreme in all those activities, interests and powers that all of us possess in a lesser degree. . . . Genius is more alive, more susceptible to the work about it than other human beings. . . . We may therefore say, in general, that genius is an enhanced, superior capacity for living." Max Schoen, in "Art and Beauty."

## And The Mothers Sang

(Continued from Page 6)

nation-wide and has a very direct bearing upon many national activities. It is composed of all classes of people who have the greatest stakes in American life and progress—their own children. The institution is now one of the most valuable assets of our country, in standing for the highest American ideals. The fact that it brings fathers and mothers of all types together in a common interest makes one of the most patent democratizing factors in modern American life.

Teachers everywhere have welcomed this coöperation, because the teacher at last has an opportunity to put before the parent the ideals of better education and to display the technic used in accomplishing these ideals. The whole responsibility for the student's schooling is no longer placed upon the teacher's shoulders. The parent is claiming his or her share.

We recently attended an annual gathering of choruses made up from various individual "Home and School Associations" in Philadelphia. We cannot imagine any force that could possibly wipe out class distinctions better than the cultural impetus of such a gathering. There was great rivalry between the different groups in part singing. Then, at the end, the huge chorus of mothers came together upon the stage and sang as a body. Here was a rich and powerful expression of ideals. They were singing to the America of the past and the America of the future, the homeland of those whom they loved more than anything in the world; with gleaming eyes and rapt expressions they were carried away with the high purpose and the inspiration of the moment. With the to-morrow of America in their hands, we need have no fear of destructive "isms." More than all this, they were realizing their own relation to education and taking part in it as their privilege and right. Music, as an invaluable unifying and elevating force, is indisputably recognized in the front rank of all such educational advances.

## Why Rhythm

By G. ALDO RANDEGGER

RHYTHM is the equalized division of time. Rhythm, through sound, has greater force upon man's consciousness than rhythm through visualization. The tick-tock of the pendulum of a clock makes a greater impression on the mind than the two extreme points, right and left, which determine the motion of the pendulum.

The origin, or cause, of rhythm, as related to man's physical receptivity, lies in man's need, and therefore sense, of equilibrium; this, in turn, is based on the balance of the perpendicular halves of his body.

The motion involved in this adjustment provides a cadence (from the Italian *cadere*, to fall) which is and defines the first rhythmical unit.

It is well established that uniform rhythmical motion in a mechanism is a required factor of its efficiency, as indicating a perfectly regulated control. Rhythm can be defined only upon the establishment (balance) of at least two sounds or movements.

A single sound or a single motion gives nothing rhythmical. Instinctively we need and seek a repetition of the first unit in order to grasp fully and appreciate its rhythm.

Rhythm, as something reacting upon our senses, is a physical fact in itself; while speed is purely imaginary until measured or subdivided by the yardstick of rhythm. We may think of speed while viewing a race or considering anything which, by

comparison, is faster or slower than something else. Whether fast or slow in our imagination, speed is nothing tangible until conventionally calculated in relation to time.

The acme of speed in an ant's busy little complex might be to run a yard in ten seconds. Horse speed was once a wonder. Other standards have superseded with mechanical progress, and even astronomical axioms of speed begin to come within the range of understanding. That is why speed is only an imaginary thing, according to who does the thinking.

The first rhythmical unit of time, in our habits, is the sixtieth part of a minute or a subdivision thereof. While fractions of a second can be calculated indefinitely; human perception hardly goes to less than an eighth of a second. Well trained musicians, however, might be able to value a time space as little as a sixteenth of a second, if keen enough to perceive it, and finger dexterous enough to play sixteen even notes to a second—which is rare.

Symmetry is a form of visual rhythm. It is the foundation of architecture, just as rhythmic division of time combined with sound is the foundation of music. The two elements of music are motion and sound.

Finally, in these days of time adjustments of working hours and leisure hours, it may be asserted that the potential factor of all leisure considerations is the rhythm, or balance, of one's daily occupations, as consistent with reason, necessity, inclination and diversion.

\* \* \* \* \*

A lasting reputation is seldom acquired quickly. It is by a slower process, by the prevailing commendation of a few real judges, that true worth is finally discovered and rewarded.—William Crotch.

## ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I am organist of a small church and would like to have a book containing organ numbers that can be used for preludes and postludes. I cannot afford a very expensive one. Would it be possible for you to name one of the best teachers of Piano and of Pipe organ in my vicinity?—K. S.

A. For your use for preludes and postludes, we suggest: "Two Staff Organ Book" by Presser (with pedal indications); and "Church Music for the Smallest Organ," by Nevins (includes separate staff for pedals); at One Dollar each. To be had from Publishers of THE ETUDE. Information as to piano and organ teachers is being sent by mail.

Q. Enclosed is the specification of an organ, on which I would like your opinion. The instrument was constructed in 1928, at a cost of about \$30,000. I would like a candid criticism and suggestions as to any additions. Could a French Horn be accomplished by a use of the following stops: Gemshorn 8' and 4' and a Clarinet? Does the Quintadena stop consist of two ranks of pipes? If not, how is the 12th accomplished?—J. C. M.

A. The specification seems to be quite good, considering the size of the instrument. We should prefer a Solo Organ to the Echo Organ, but that is a matter of opinion. We do not quite understand the Echo organ containing both a Lieblich 16' and a Bourdon 16', unless one of them is a Pedal stop for use with the Echo organ. We suggest the following as possible additions: Great Organ—Twelfth—Mixture stop or stops. Choir Organ—Flute 4'—Piccolo 2'—English Horn 8'—Orchestral Oboe 8'—Dulciana 16'—Dulciana 4'—Dulciana Nazard 2 2/3'—Dulciana Fifteenth 2'—Gamba 8'—Gamba Celeste 8'. These additions will equip your Choir Organ as a Solo Organ. Of course the distinctly solo stops could be used on a Solo Organ, playable from the Echo Organ keyboard. The combination you name might be used as a substitute for the French Horn, but we should doubt its effectiveness as an imitation of the French Horn. The Quintadena includes one pipe of each note, constructed in such manner that the twelfth is present in a prominent degree along with the fundamental 8' tone. On small unified organs the 8' Stopped Diapason and its unit at 2 2/3' are sometimes used to produce a synthetic Quintadena.

Q. We are interested in enlarging our thirty year old organ, which is rather small for our church, seating five or six hundred people. The stops we have are: Swell Organ—Stopped Diapason 8'—Salicional 8'—Bourdon 16'—Flute 4'—Oboe and Bassoon 8'. Great Organ—Open Diapason 8'—Flute 4'—Melodia 8'—Dulciana 8'—Octave 4'. Pedal Organ—Bourdon 16'. Tremolo—Great to Pedal—Swell to Pedal—Swell to Great—and Swell to Great Octaves. I have thought of adding to the Swell organ Aeoline, Gedackt and Vox Celeste; to the Great—a soft Flute 8', Gamba and Gedackt—and to the Pedal—a soft 16' and 8'. I would appreciate your comment on my suggestions. How much would it cost to make these additions? Will you please send me the requirements for membership in The American Guild of Organists?—C. B. A.

A. We should think that some other stops would be more valuable as additions to so small an organ, for a church seating five or six hundred people. The stops you suggest will not add much to the power of the instrument, and will be too similar to some you already have. The Swell Aeoline would be useful for very soft effects. The Gedackt would not be practical, inasmuch as you already have a Stopped Diapason in the Swell and a Melodia in the Great organ. The Vox Celeste is useful, but not for additional power—in fact it should not be used in full ensemble effects, as it is an undulating stop. A Gamba, if added, should not be of a strident character. The Pedal additions you suggest are all right, if the present Bourdon is sufficient to support the "Full Organ." We suggest the following in addition to the Aeoline and Vox Celeste, if they are to be included: Swell Organ—Geigen Diapason—Cornopean (bright) Great Organ—Gamba (mild) Twelfth 2 2/3' and Fifteenth 2'. It would be advisable to secure prices from organ builders who can examine the instrument and quote cost accordingly. The requirements for membership in The American Guild of Organists can be secured by addressing the Guild headquarters, R. K. O. Building, Rockefeller Center, 1270 Sixth Avenue, New York City.

Q. We have a good reed organ which I consider is capable of beautiful expression. The following is the arrangement of the stops: (1) Principal—(2) Diapason—(3) Dulcet—(4) Bass coupler—(5) Diapason—(6) Vox Humana—(7) Flute Forte—(8) Treble Coupler—(9) Echo Horn—(10) Melodia—(11) Celeste. The organ has been played by some very talented musicians, but I cannot agree with their handling of the stops; for instance, they insist on pulling out all the stops at once and pedaling very rapidly. For Sunday school hymns I find plenty of volume in 2, 4, 5, 7 and 10. For very soft passages I often use only 3 and 9 or 1, 3 and 10. Is it not better to pump evenly, feeding only as much air as is needed? What arrangement of stops do you think best for congregational singing, also for solo accompaniment? Organ solo work registration, I should think, would depend on the number being played.—F. T. H.

A. If the combinations you use sound well and support the singing, they are all that is necessary. We see no objection, however, to use of the full organ for hearty congregational singing, provided the effect is good and accompaniment is not too loud. Soft effects may be secured by closing the full organ key swell, thus reducing the registration to whatever soft stops may be drawn. The stops to be used for accompaniment of solos depend on the amount of support necessary, the character of the passage and so forth. The organ should not be overblown; that is, the stroke of the wind supply should not be apparent in the tone.

Q. I play an organ with two manuals and stops named on enclosed list. What stops should I use in place of Oboe? Salicional? Vox Humana? Celeste? Unda Maris? Where can I secure a two manual reed organ (with pedals)?—C. T.

A. From the list you send we suggest the following substitutions—not necessarily in that order: Oboe—Cornopean or Viole d'Orchestre; Salicional—Aeoline or Viole d'Orchestre; Vox Humana—Viole d'Orchestre and Tremolo; Celeste—Usually a harp-like stop; Unda Maris—Aeoline and Tremolo. We are sending you information about reed organs by mail.

Q. Will you kindly advise me how to execute the quoted passages from Choral Boellmann? Is it necessary to join as much possible the chords of the first page, as well as those from the end of the 21st measure to the 35th? At the end of the 152nd, and of the 153rd measures? The following chords are without pedal.

Ex. 1 Measure 22 Measure 24

I execute this way the following passage

Ex. 2 Measure 204

Often at the beginning of a phrase there the word non-legato, while further on in the same phrase certain notes are surmounted the pointed staccato. What difference is there between these two terms?—S. S. J. G.

A. The Choral by Boellmann does not seem to be very fully edited, and it is difficult to decide just what proceeding to adopt to opening part. If the building is very resonant, playing the chords close together (with ties) might prove satisfactory; but we feel the best effect in the average building is secured by playing the opening Choral the smoothly—with tied notes. For the passage on Page 39—measure 152—we suggest playing the chords in a detached manner over a *legato* pedal passage. The quarter notes in the second measure of the last line on Page 39 we suggest be played smoothly. In order that you be able to play the notes as written in measures 22 and 24, you might retire all pedal stops, except Swell to Pedal, during the rest in Measure 21, and play the lower notes on pedals. Restore the pedal stops again during the rest in Measure 25, to whatever is required for the passage beginning in Measure 35. Your treatment of the second passage you quote is justified by the marking given in the manuscript following the *con fuoco* passage on Page 40. Ordinarily we should interpret a *non-legato* passage with later *staccato* marks as indicating the general effect to be *non-legato* with *staccato* marked notes played in a more detached manner. *Non-legato* indicates a spilling touch rather than *legato*, and is not a real *staccato*.

Q. I am interested in the second question of your department in the April, 1937 ETUDE. Can you tell me why, how and where the sand was used? If not, can you send me the address of the inquirer so that I may write him directly? I have never heard of this suggestion. Will you kindly send me the address of the manufacturers of the new electric organ? I know of the Hammond, but are there others? Also names of manufacturers of the Manual reed organs. Do you know of any organ handles only two manual reed organs used and new, or anyone who has a clearing house for such instruments?—D. S.

A. The only information we have is "putting in sand in the one set of reeds I have been able to tune them alike." We are sending you the address of the inquirer by mail, that you can, if you wish, make direct inquiry. The one other electric instrument on the market, to our knowledge, is the Everet Organon, manufactured by The Everett Pipe Company, South Haven, Michigan. We know of no clearing house of the type you mention. We presume the various organ builders have instruments of this type, from time to time.

# THE ACCORDION DEPARTMENT

## Accordion Concerts

By PIETRO DEIRO

As told to Elvera Collins

ACCORDION CONCERTS have been growing in popularity during the past few years. Many accordion schools intend to inaugurate the policy of annual concerts this season and have asked for a few suggestions on how such concerts may be successfully conducted.

Directors of accordion schools have found that their students are divided into two principal groups—those who study because they enjoy it and want to learn music and those who study because their parents have bought them an instrument and subscribed to a course of lessons. Accordion concerts are beneficial to both of these groups. The ambitious students are given an opportunity to appear in public and such appearances are usually a credit to them, so they feel encouraged to study harder than ever. The less ambitious students find that a concert provides an incentive to practice as they are studying for goal rather than just learning their lessons from week to week. Such students often experience an awakening when they hear their fellow students play well, and thus they are inspired to more serious study.

I believe that it is the duty of every teacher to present his students in concert at least once a year and, if possible, twice a year. These public appearances represent a valuable part of the training of students. Naturally it is the students who derive the major benefits from such concerts but we must also concede that the teacher receives the benefit of indirect advertising from them.

If semiannual concerts are to be given, the early part of December is considered a good time for the first concert while the latter part of May or first of June is a good time for the second concert. Arrangements for the concert hall should be made several months in advance to permit sufficient time for announcements, advertising, printing of tickets, programs and other details.

Accordion concerts may be conducted to present students individually or as an ensemble with some duets, trios and quartets interspersed among the ensemble numbers.

### Rehearse with Regularity

IN A RECENT ARTICLE we discussed the formation of accordion bands and stated that when such bands were formed it should be understood that rehearsals were in preparation for concerts. Teachers who have already formed such accordion bands will find that the weekly rehearsals, if properly conducted, take care of most of the preparations for concerts. The secret of successful accordion ensemble playing lies in systematic rehearsals. Even though each individual member may know his particular part well, the performance will not be successful unless sufficient time has been devoted to rehearsals of the entire ensemble so that they play as one instrument, with expression and shading of tone.

The manner of presentation will have much to do with the success of an accordion concert. Borrowing a few ideas from the theater, we find that the opening will be most effective if the entire ensemble (including the tiny tots as well as the older students), is seated on the stage. If the concert hall has a regular stage with a drop curtain or drapes which can be drawn together, it is well to have them closed so the seating of the ensemble can

be arranged without the audience seeing any possible confusion. As the players are all amateurs it is advisable to try to have at least one rehearsal in the hall with the seating arrangement as it will be used for the concert.

The past few years have brought in the vogue for masters of ceremonies and affairs of this sort hardly seem complete without them. If the services of a master of ceremonies have been engaged, he would make his entrance before the closed curtain and after a few words of greeting would announce the opening group of numbers by the ensemble. The stage curtain would then be lifted to reveal the entire group, ready to play and awaiting the entrance of the director.

The program should be arranged to provide a variety. When discussing accordion band rehearsals it was suggested that the opening number be a spirited march followed by a waltz, then a novel characteristic number. Directors no longer need to take time to make special arrangements for their ensembles because band arrangements of most standard numbers are now available.

After the first group of three numbers by the entire ensemble, the curtain could be drawn and while the ensemble is leaving the stage the master of ceremonies could announce the next group of numbers. Accordion duets, trios and quartets would follow nicely after the ensemble playing. We suggest that after this it would be well to introduce something as a change from the accordions. A vocalist, string ensemble or violin soloist could be used, after which there would be an intermission.

### The Second Part

THE SECOND HALF of the program could consist of ensemble playing by the tiny tots alone, followed by the advanced students. An Argentine tango would make a nice number for them and it could be followed by an overture. The mere mention of an overture brings to mind the word of warning that it should not be attempted unless the advanced players are capable of playing it well. Much time should be devoted to rehearsing an overture if the playing of it is to be a credit to the school. Following the overture, the guest accordionist of the evening could appear. It is usually customary to have some outstanding player at such concerts but if no guest artist is to appear, then the teacher who is giving the concert will play his part of the program as a finale.

And now a word about costumes. An ensemble attractively costumed certainly presents a colorful appearance. The finances of the students would naturally govern this and if they cannot afford costumes then it is well to have the girls and ladies wear white while the boys and men can wear either dark suits or dark coats and white trousers.

The question now arises as to whether all music should be memorized or if the music sheets should be used. If the seemingly impossible could be accomplished and each and every member memorize his parts perfectly, then it would be all right to dispense with the music. However, it is really best to use music when a mixed group of this kind is playing. We suggest that the teacher provide the new orchestra type of music stand, and the initials or insignia

of the school could appear on the back of the stand, facing the audience.

Many schools close their programs with a contest. The winning students are presented with trophy cups. Such contests provide excellent experience for the participants because they realize they are before an audience on a competitive basis and must produce their best. The competing students devote many hours to practice and rehearsals which they might not do otherwise. True enough, the best players do not always win the prizes as lack of experience in playing before the public, as well as nervousness, handicaps them. This proves that public appearances are necessary.

Should the director of the school not care to have an accordion contest, he should then arrange the program so that students are given an opportunity to play solos.

Accordion concerts represent a lot of hard work on the part of the director of the school but they are an important part of the training of students for professional careers and should be included in the curriculum of every well established accordion school.

The ideas given here are only suggestions and are more or less general because much depends upon the city or town where the concerts are to be held, as well as the size of the accordion school. School directors, however, can no doubt work out their individual ideas from these outlined suggestions.

# THE VIOLINIST'S ETUDE

Edited by  
ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## The Art of the Vibrato

By SAKS SIMONSON

THE SAME EMOTIONAL URGE that causes the human voice to be raised and body muscles to move by reaction to excitement prompts, to a great extent, the violin vibrato. But because its coloring is as varied in appeal as its model, the voice, only the mechanical procedure can be standardized. As a result, any system for vibrato production must concern itself only with the technic for gaining a controlled vibrating movement. Fortunately, unlike the variation of its emotional effect, investigation reveals that the physiological movements governing good vibrato are so definite that its technical intricacies can be overcome by systematic practice. If perfected, its artistic application will contribute more individuality to tone than any other means.

Mechanically, the vibrato's most conspicuous technic is the to and fro movement of the left wrist and finger joints, which produces a rapid oscillation of the finger stopping the string. Such an action causes a slight deviation from the true intonation, as the finger alternately swings above and below the fixed tone, but the speed of the hand fluctuation fuses the combination into a single pitch. It is the swing of the to and fro movement, however, that contains the problem, and to arrive at a solution we must look for the hidden factors that go to make up the vibrato.

Much of the failure to produce properly a normal vibrato can be traced to the inability of adjusting the holding of the instrument from a non-vibrato position to a new position conforming to a change which necessitates the elimination of all left hand tension. Therefore, in the first step toward securing free movement, the left arm must be relieved of the task of supporting the instrument. To counteract this lessening of support, pressure must be

increased between the shoulder and the jaw until the ratio of chin rest pressure will be proportionate to the intensity of the vibrating action. The reasons for such an increase in shoulder pressure are apparent: the shake of the instrument, which results from a relaxed hold during vibrato, sets up waves of incoordinated motion, instead of permitting an equally distributed leverage; the unsteadiness causes the bow to bounce and to prohibit sustained tone by the irregular change of bow pressure. Also, the use of the hand and arm for support necessitates gripping the instrument tightly between the thumb and the base of the forefinger, which locks the hand and, consequently, the fingers. The forefinger joint must be free of the neck, and the hand tensionless, so that an uninterrupted hand swing will be possible. Except where the neck of the violin rests against the thumb and where the finger producing the vibrating tone is pressed, no other part of the hand may touch the violin. In fact, during preliminary training where there is a distinct influence of muscular tension, even the thumb may be kept free.

### The Vibrato Speed

BUT IT IS THE RATE of hand speed that is responsible for so much of the confusion surrounding the effect vibrato has upon tone. The major cause is the supposition that there are slow and fast types of speed, which vary in treatment according to individual style and need. This claim, that increase or decrease is regulated by the depth of feeling desired, is disproved by the fact that the rate of a normal vibrato, under any emotional condition, varies so slightly among experienced performers that it can be treated as a fixed speed. Its rate of six pulsations per second is the result of being the regular and even motion best adapted to constant muscular expenditure; conse-

quently, it is a physical fact—not a point of artistry—that speed is not interchangeable from slow to fast. While it is possible that a smoothly executed hand swing can reach its mechanical maximum rate of seven movements per second, trying to exceed this rate is likely to become a forced action restricting free movement. Moreover, the deviation between six and seven movements is so slight that vibrato quality is not affected by the difference, for the scope of tonal intensity is not paralleled by speed but by the width of motion, or arc, traveled by the finger and hand. This swing will vary in width, and therefore force, according to the intensity of the motion, but the number of to and fro movements will remain the same, since even the minimum rate of typical speed is reached at the start of the vibrato and does not accelerate to any marked degree to reach a maximum speed. Specifically, maximum volume creates a maximum of vibrating motion: when the tone is soft, movement is small; when the volume is increased, the arc becomes larger in ratio—but speed remains constant. And, for small volume the vibrating movement is usually confined to the fingers; as volume becomes greater the hand vibrates; finally, for maximum volume the whole arm moves.

Because general technic is under control and there is less danger of stiffness, and because vibrato execution is more difficult in the first position, it is an advantage to make the start in the third position. To simplify practice, the bow is not to be used in this preliminary step, which is to acquire a method for regular movement. Start the hand swing with the thumb free from the neck, with the second finger placed on the E of the A string; this finger is used

because it is the natural point of balance of the hand and is the easier to manipulate. Then, to develop a pulsation that is regular and evenly distributed, use a slow speed about two full movements per second. Undue fatigue and jerkiness will be avoided if the width of the vibrating movement is restricted to a small rotation and the pressure of the vibrating finger is not too great. For the same reason, the practice period should be no longer than a few seconds at a time. After the second finger rotates freely with the swinging of the hand, the other fingers may individually be developed in this order: the third, the first, and the fourth.

Ex. 2

The thumb may now rest against the neck in the ordinary manner, with the base of the forefinger remaining free. At this stage the bow may be used; but pressure should be light, since the width of the vibrato is in ratio to tonal intensity. When there is coordination between smoothness of pulsation and bowing the width of movement may be made wider, and speed gradually increased until the near normal rate of six to and fro movements has been reached. During this process, whole notes should be played to secure evenness and to adjust bowing to the change that vibrato makes upon bow and violin fluctuation; for no matter how steady the bow and instrument are held, and still permit free use, the vibrating movements affect the sum of vibrato quality. Many of these detrimental effects can be carefully watched and reduced to a minimum with the aid of sustained whole notes. After facility has been acquired in the third position the other positions will offer little difficulty. But the first position is the next suggested attempt.

## Paganini's Secret — A Historical Mystery Solved

By DOROTHY BRANDT DALLAS

### PART II

One thus may discover a pitch of superior resonance for each of the twelve semitones. Each receives a reinforcement from certain open tones or harmonics which are sympathetic to it. Some of the resonant tones are not so strong as the a's discussed above; but all are readily distinguished by the violinist. The young pupil, once he has gained a small measure of finger control, easily picks out the twelve resonant tones, which thereafter constitute to him perfect violin intonation.

The fact that the resonant tones are unequal in volume explains the occurrence of key color on the violin, and on other instruments where sympathetic vibration may occur, and on which the temperament is unequal. On the violin the tones G, D, A, and E are decidedly the strongest. It follows that the keys containing all four of these tones in their diatonic progression are

the loudest and brightest keys—C, G, and D. The dullest violin tones are probably F-sharp (G-flat), C-sharp (D-flat), G-sharp (A-flat), and D-sharp (E-flat)—thus rendering A-flat, D-flat and G-flat the most somber keys.

### Paganini's Secret?

JUST AS PAGANINI was indubitably aware of key color, and so tuned his fiddle so as to profit from the fact; so was he unquestionably aware of resonant intonation. It would be the greatest presumption not to suppose that he and other famous violinists, sooner or later in their careers, discovered it for themselves, either unconsciously or otherwise. They simply could not be so intimate with the instrument and miss so marked an idiosyncrasy. Thus we may feel quite certain that this versatile violinistic phenomenon figured, to a more or less de-

gree, in the playing of every outstanding artist and virtuoso of the bowed instruments.

By examining the fingerboard of his instrument, it probably could be ascertained whether or not Paganini employed this violinistic temperament; for his violin has been reverently preserved under glass since his death, and it is unlikely that the ebony has been changed. The fingerboard will show spaced depressions, if a temperament was used, which would be fewer and more marked than if just intonation had been employed; and his intonation could be further checked by playing the tones fixed by these supposed depressions.

It is interesting to note that Paganini's intonation, according to Spohr and other critics, was "constantly pure" and "always accurate"; and his tone, when he was not emitting sounds likened to the "mewlings

of an expiring cat," is recorded to have been "clear and delicate."

As for his failure to reveal his secret before he died—death has a way of slipping in unannounced. And, indeed, who could blame him for being discrete, when the revelation that he possessed a violinist's secret, which should have been eagerly pounced upon by the profession, met with such cold rebuffs from fellow artists and academicians alike.

\* \* \* \* \*

"After the bow is under control, so that the motion of the full stroke is acquired with the simplest motion possible, the light small bowings will be found easy and of pure tone quality."—*The Violin World*.

## The Care of the Violin

By HENRY MORTON McGOHAN

THE GREATEST ASSET toward the production of a good tone, in violin playing, aside from having a fine instrument, is the extreme care that should be given it. The finest instrument is often greatly impaired or ruined through careless neglect or absolute ignorance of its peculiar requisites.

A sure mark of the mediocre fiddler is to see his violin covered with rosin dust. A violin at all times should be kept free of dirt and dust, so the top will vibrate freely and the varnish remain unimpaired. A high grade cedar-oil polish should be used in cleaning the instrument; or a special preparation, which can be obtained at any reputable music store. Clean the violin thoroughly once a week, rubbing to a high polish with a chamois skin or piece of felt. A small piece of cloth from an old billiard table is excellent for this purpose.

A violin should be kept always in perfect tune, at the one degree of pitch. In no case, except in rare emergencies, should this rule be broken. The wood fibers adjust themselves to certain vibrations for each one and when the tension is changed, they must change also. Constant changing of pitch finally will break their fibers apart into very minute particles. These are quite invisible, yet they assuredly are there, and play an important part in the vibratory function of a spruce top.

### Some "Do's" and "Do Not's"

HERE ARE A FEW CONCISE RULES that the professional player, as well as the student, will find well worth remembering.

1. Never allow a violin to be exposed for any length of time in a room of variable temperature.
2. Put it away in a case, after playing, if no case is available, in a silk or flannel bag.
3. Never let anyone play it but yourself. It has become accustomed to your individual touch.
4. See that the sound post and bridge

are adjusted by an expert; and keep them always in the same place. This is most important.

5. Do not let the bridge lean forward. A fall and crash are likely to occur, which may knock down the sound post. This will result in considerable damage to the tone, if not repaired and adjusted by one of long experience.

6. Keep the bridge slightly reclining backward. If it is cut and fitted properly the feet will set solidly on the top in this position.

7. Do not use any more rosin than just enough to cause the bow hair to grip the strings. If too much accumulates on the bow, wipe it off with a clean cloth.

8. Keep the violin flat on a shelf out from the wall; never on the floor. A table is a good place for a violin.

9. Practice scales in every key, and in every position.

10. Always use the same gauge of strings. A difference in string thickness requires a different adjustment of the fingering; and this difference, however slight, contributes, in exact ratio to disturbance of the sensitive wood from its former line of adjustment.

11. Always loosen the screw in the bow when through playing. Many good bows are rendered worthless by leaving the hair taut while lying in the case.

12. Have the bow filled twice a year with a good grade of hair. This is necessary for the production of a good tone. Do not touch the hair with the fingers or allow any one else to do so. Watch out for old time fiddlers! Some of them know next to nothing about holding the bow and they seem to care less.

13. Handle your violin as carefully as you would your most valued treasure. It will repay you well for the extra care you bestow upon it.

Follow the above rules for a year and you will be surprised at the improvement of your instrument. Also, in your playing,

## Expanding the Violinist's Repertoire

By SAMUEL APPLEBAUM

THE REPERTOIRE of the violinist is somewhat limited, with regard to concertos. Bach gave us but two; Beethoven, only one; Brahms, Mendelssohn, Tchaikowsky, Glazounoff, Lalo and Conus, only one each. Bruch gave us two and Saint-Saëns three. How unfortunate—only one each from Beethoven and Brahms! But they are colossal masterpieces. Mozart wrote seven, but Handel, Schubert, Schumann, Wagner and Chopin did not write any. The concertos of Kreutzer, Viotti and of Spohr are but occasionally used; and the brilliant but shallow concertos of Paganini, Wieniawski and of Vieuxtemps are becoming more and

more unsatisfactory to the discriminating listener.

A great many of the artists are referring to the sonatas to build up their programs; and we may quite frequently see programs which contain two sonatas and no concerto. The literature is a bit more rich in sonatas for violin and piano, yet it falls far below the amount of material to which pianists have recourse.

We look hopefully to contemporary and future composers for concerto enrichment of the violin literature. Let us note here that the contemporaries Prokofieff, Elgar, Stravinsky and Sibelius each has already produced a splendid concerto.

\* \* \*

*"There is no such thing as luck in a professional career. Nobody is against you. Nothing can stop you but yourselves. Don't worry about opportunity not finding you when you are ready. Whether you go home in the subway or the Rolls-Royce is completely unimportant."*—Kathleen Norris (Novelist).

## THOROUGH PROFESSIONAL TRAINING

Most of the young people studying the interpretive arts at Sherwood Music School are planning careers as teachers or performers. They have selected Sherwood because this 40-year-old school is known far and wide for its thorough, professional instruction by teachers who are also outstanding artists . . . a fact worth remembering when you choose your music training!

Courses lead to degrees, diplomas and certificates in Piano, Violin, Cello, Voice, Organ, Theory, Composition, Public School Music, Conducting, and Dramatic Art. Accredited instruction.

Scholarship assistance for deserving students. Dormitory. Write for catalog. 410 S. Michigan Ave., Chicago, Ill.

## Andres Segovia

**I**N RESPONSE TO INQUIRIES from several of our readers we are giving a short sketch of the career of this great Spanish artist. Born forty-three years ago in Granada, historic city in the Province of Andalusia, Andres Segovia received a thorough musical training in his boyhood. Coming accidentally upon a guitar in the home of one of his friends, he was at once fascinated by its beautiful tone quality; and then and there he decided to master it. Unable to locate a capable teacher, he found it necessary to rely on his own ingenuity in trying to unravel the secrets of its technical intricacies. One day he was fortunate enough to meet a blind guitarist, who suggested to him the study of the works of Sor, Aquado and especially Tarrega; and from then on all his waking hours were devoted to his beloved instrument. When eighteen years of age he made his first public appearance in a recital in his native city, which proved an unqualified success; and within a comparatively short time his fame spread throughout Spain. A contract with the well known Spanish concert manager, Daniel, secured for him engagements in South America, Mexico, France, Germany and Austria; and since then his concert tours have taken him throughout the civilized world. His remarkable successes in this country during the past nine years are too well known to require reiteration. Segovia's rendition of works by Bach, Haydn, Schumann, Mendelssohn, Granados, Albeniz, Turina, and other composers, has endeared him to all music lovers, and many compositions have been dedicated to him by some of the outstanding modern writers. Conditions now existing in his native land are such that he decided to make his temporary home in Montevideo, South America. Let us hope he will soon be with us again.

### The Hawaiian Guitar

THE UNPRECEDENTED POPULARITY of the Hawaiian guitar has been responsible for many letters received from all sections of the country, containing questions relating to different phases of guitar technic and we are glad to offer some suggestions that might help ambitious students, especially those unable to obtain tuition from a capable teacher.

To acquire a satisfactory technic one should strive right from the beginning for perfect intonation, brilliant tone, smooth and even oscillation of the steel; alternation of thumb, first, and second fingers of the right hand in playing scale passages; and later on speed. First of all the strings of the guitar must be tuned correctly and this should be learned as early as possible. A tuning pipe may be used, if the student finds this matter troublesome; but eventually one should learn to tune by the open string intervals.

Alternating the first and second finger of right hand and again the thumb and first finger should first be practiced on the open strings; and not until they function easily should this alternation be used in playing scales. Strike the string with a quick energetic movement of the finger, using only the tip of the thimble; and guard against the thimble coming too close to the string after the stroke, as this will cause a buzzing noise. The playing end of the thumb pick must not be too long in order to avoid scraping across the bass strings, and it should be kept smooth at all times to insure a clean cut tone. In playing scales on bass strings it is advisable to glide the

pick towards the next string, instead of raising it after every stroke. Use thumb, and first and second fingers for chords of three notes—for chords of four or more notes, when on adjoining strings, the thumb is generally used with a sweeping motion across all strings. Sometimes it is well to emphasize the top note of a chord on the first string and in such cases the first finger picks this note at the same moment the thumb sweeps over the remaining part of the chord.

One of the most characteristic and beautiful effects on the Hawaiian guitar is obtained by the proper oscillation of the steel, and this steel technic requires careful and persistent practice until it is perfected. Most professional players are now using the cylindrical steel rounded at one end. It should be made of rustless steel and be kept in perfect condition at all times.

### Some Technical Tricks

HOLD THE STEEL between the extended thumb and the first finger, the second finger giving support on the left side and extending far enough to touch the string. The tip of the second finger acts as a guard against any noises resulting from the contact of the steel with the strings. For single notes tip the steel high enough so it will not touch the next lower string. Now place the tip of the steel on the fret desired, the end of the second finger guarding the string and the steel in exact line with fret; strike the string and oscillate the steel about one-quarter to one-half inch back and forth. Begin by doing it slowly at first, and gradually increase the speed, keeping the fingers, hand and wrist entirely relaxed, and using just a slight pressure. Practice of oscillation on single notes on every string on all frets should be continued until satisfactory results are obtained and only then should the steel be used for double notes and chords. When playing chords the third and fourth fingers act as guards by resting lightly on all the strings, the steel now being placed across the strings in line with the fret. When it is necessary to slide the steel from one chord to another, raise it and glide over the first string only, and then lower it on to the next chord. When oscillating all the notes of a chord, the movement of the steel should be held down to a minimum; but increased pressure with the steel is necessary to get the desired result.

To execute fast scale passages, play the notes desired then raise the steel slightly from the string, keeping the tip of the second finger on this string to stop vibration, which again requires careful and persistent practice. This method is also recommended when notes are marked *staccato*. To muffle or cut short the tones of a chord drop the right hand quickly across all strings after striking them.

Another important phase of guitar technic is the study of intervals on the first and second or the first and third strings. This must be practiced daily, slowly at first while listening carefully to both tones of the interval. Some intervals require a slanting position of the steel which may prove troublesome at first, but persistence will win out in the end.

Most instruction books contain exercises on intervals and we cannot emphasize too strongly the importance of practicing them daily, especially those requiring a change from a straight to a slanting position of

(Continued on Page 72)

## VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

### Value of Guarnerius

T. R.—1. There is no set price for a Joseph Guarnerius violin. It depends on the tone, its beauty, and the skill with which it is made. Instruments of this character have also an historical value. A Guarnerius violin which has been the favorite of some famous violinist, and used by him in his concerts, would have an added value because of this historical background. For instance, the great violinist, Paganini, had a wonderful Guarnerius, which he called his "Cannon," and which was his favorite concert violin. This instrument is priceless. Present day prices for Guarnerius violins are from \$15,000 to \$30,000, or even more in some cases. However a violin is worth what it will bring, and there is a wide range in the prices even of Cremona violins. 2. I presume the word you refer to is "*fecit*." This is a Latin word, meaning "made." It often occurs on the labels of good violins, thus, "*Amati fecit 1731*," means "Amati made this violin in 1731."

### To Acquire the Vibrato

E. B.—I have known many violin students who learned to do the vibrato quite well by watching other violinists play. The best way, of course, is to get a good teacher to show you how, but as there probably is no teacher in your vicinity, you will have to rely on books, and watching others do it. Get the book, "Violin Teaching and Violin Study," by Eugene Gruenberg, which can be purchased through the publishers of THE ETUDE. This book has many pages devoted to the vibrato. It contains instructions on the subject, with illustrations, by famous violinists who give their views on the best way to acquire it. The movies also have occasional pictures of violinists and orchestras, in action which will help you, if you watch the violinists perform the vibrato. If there are any concerts in your town or vicinity, by all means attend them, and watch the violinists perform the vibrato. If you go backstage, perhaps one of the violinists will show you how the vibrato is done, and explain and demonstrate it for you. Perform it with a to and fro motion of the hand from the wrist, with a quiet forearm.

### Accent and Pizzicato

M. N. G.—1. In the example you send the accent should fall on the first note of each group of six or seven notes. 2. The cross above the three-note chord signifies that it should be played *pizzicato*. This could be done with either the right or left hand, preferably with the forefinger of the right hand.

### Violin Literature Books

F. S. S.—1. These books will give you much information in violin playing and violin teaching: "Lexicon of Violin Playing," by George Lehman; "Art of Violin Playing," by Frank Thistleton; "Violin Teaching, and Violin Study," by Eugene Gruenberg; "How to Produce a Beautiful Tone on the Violin," by H. Timmerman; "The Child Violinist," by Edith Winn. There are many others, of course. Start with the Gruenberg book first, and master it from cover to cover, and then take up the others. Read the articles on the violin and violin playing, in "Grove's Dictionary of Music and Musicians," (which you will find in your public library. This contains a vast fund of information which every violinist should have. If possible take lessons from a good, experienced violin teacher and, if he will permit such an arrangement, ask him to allow you to watch him give some of his lessons, which will do more to advance your knowledge of teaching than anything else. Join a students' orchestra if you can. 2. For first instruction books you might use, "Easiest Elementary Method for Violin, Op. 38," by F. Wohlfahrt; this contains tuneful accompaniment parts for the teacher. "Elementary Studies for the Violin, Op. 20, Book 1," by H. E. Kayser, also are very good. Of course there are many others. Go to your music store and look over them. Go to all the pupils' recitals you can. You will learn much from checking up on other teachers' work. Remember that almost all teachers learned to teach by actual experience in teaching their pupils.

### An Obscure Maker

E. D.—The Lowendall violins, made in Germany, are of no especial note, or value. They are mostly copies of Amati, and other famous Cremona makers. I do not think the slight difference in the dimensions of your violin will seriously affect the tone. None of the books on violin makers gives much information on the life and career of Lowendall. Show your violin to a good expert, or to an experienced dealer in old violins. The inscription on the peg-box, "Celebrated Conservatory Violin," is put there as a trade mark, and signifies nothing.

### On Violin Making

W. E. H.—Two good works on violin making, which are not expensive, are: "The Violin and How to Make It," by a Master of the Instrument; and "Violin Making," by Walter H.

Mayson. These can be purchased through the publishers of THE ETUDE. The wood for making the violin can be purchased from any large music dealer, or violin maker.

### Baby Violinists

M. J. H.—1. I do not approve of trying to teach violin playing to children of the tender age of three. Better wait until the child is five or six, or a year or two later. I am sure it will give better results in the long run. There are a number of "Baby Orchestras" in various parts of the country, but they are somewhat unusual, and it is a question whether the results would not have been better if the children had commenced their violin playing five or six, instead of three. I do not know of any baby orchestras or three year olds in the South, or in the vicinity of New York. 2. For a child violin pupil, get a first rate experienced private teacher. Very young children cannot be taught successfully in class.

### How to Divide the Bow

W. McC. 1. For the pain in your left hand, arm and shoulder, I would advise you to see an experienced physician. The trouble may come from arthritis, neuritis, or some other similar cause, which your doctor no doubt could locate, and remedy. 2. As to the division of the bow in playing single notes or passages, it would depend on the length of the note passage to be played. This you could learn by a thorough study of violin technic, exercises and compositions. A whole note would require longer bow in one passage than another. Experience, and lessons from a good teacher would solve your difficulties in this case. Long notes require long bows, medium notes, medium bows, and short notes, short bows. Many violin instructors indicate the bow length for each note in the exercises in their books. Hermann's "Violin School, Vol. 1," deals largely with the subject of bow division, and indicates the length of bow required for various notes and passages.

### A Violin by Stauffer

W. E. M.—Johann Georg Stauffer was an obscure violin maker of the Austrian school of violin makers of the XIX century. The work on violin making give him only two or three lines in their lists of noted makers. His label read: "Johannes Georgius Stauffer, fecit, Vienne, anno 18"—Translated, this means, "Johann Georg Stauffer made this violin in Vienna, the year 18—" If you wish to ascertain the quality and value of the violin, you will have to submit it to an expert. I do not know of a work which contains much information on the maker, but there may be one published in Europe.

### About Honore Derazey

G. L. M.—Honore Derazey was one of the esteemed violin makers of the Mirecourt region in France. He was not a famous maker, but made some excellent violins. You will have to submit your violin, if you own one, to an expert, to an expert, if you wish to ascertain its quality and value. A well known authority says of Derazey, "He was a careful workman but did not use good varnish; also they put too much wood in his instruments."

### Paolo Giovanni Maggini

T. L. M.—Paolo Giovanni Maggini was one of the immortals in the history of violin making. He was one of the Brescian School of the Italian makers from 1590 to 1640. He was the best pupil of Gasparo da Salo. His violins are large and massive, and many of them have double purfling. They are very scarce and valuable, and it is estimated that there are only fifty in existence, and only four in the United States. These violins, at present valued at from \$1,500 to \$3,000. The tone is broad, dark and melancholic, and for this reason they are seldom used for concert purposes since the virtuosity of the present day prefers the bright and brilliant tone which characterizes the violins of Cremona, especially those of Stradivarius and Guarnerius.

There is an immense number of imitations of Maggini's scattered all over the world, so am afraid your violin, which is labeled "Maggini," is only a copy. It would put you to a considerable expense to find out if your violin is genuine. You would have to send it to an expert, paying express charges both ways, and insurance. Experts charge from five dollars up for an opinion as to whether an old violin is genuine or an imitation.

### A First Concerto

L. M. H.—For a start in concerto playing I would advise you to use the Seitz' Pupils' Concertos. Some of these are in the first position, and the others have passages in higher positions. Nos. 2 and 5 lie entirely in the first position, and Nos. 1, 3 and 4 lie mostly for the higher positions. A pupil who mastered the three books of the Kayser "Studies, Op. 20," would be able to play these concertos. They are brilliant and melodious, and make excellent concert numbers. They are used by violin teachers all over the world.

## ONLY TEN MINUTES FROM MAIN STREET

You are literally only ten minutes away from Main Street everywhere—Fifth Avenue, Chestnut Street, Michigan Avenue, E Street, Boylston Street, or any of the great marts of America. That is, it will take you less than ten minutes to write a letter ordering by mail anything you see advertised in *THE ETUDE*. Your letter may be in transit an amazingly small number of hours, and before you know it your purchase will be at your door through the magic of mail order buying. Millions buy through the mails daily. *THE ETUDE* brings you purchasing opportunities monthly. Learn to shop by mail through *THE ETUDE*, but please never forget when you are writing to an advertiser to say,

**"I saw it in *THE ETUDE*."**  
It will command the dealer's respect for you.

## Shopping for Charm

(Continued from Page 37)

**Quelques Fleurs Lotion**  
"Pale hands I loved beside the Shalimar!" This song has always evoked visions of lovely languorous ladies with gently moving white hands, weaving garlands of exotic flowers, warm sunshine and spicy odors. Even in this winter climate, musically busy hands should be beautiful hands, even though at times they plunge into dish water, or get wind roughened. *Houbigant's Skin and Hand Lotion* with its haunting fragrance of their justly famous perfume *Quelques Fleurs* will add a touch of glamour to the prosaic job of routing that winter bugbear, chapped skin. It is priced at \$1.10 per bottle. Call on me by post card for shopping information.

## Bands and Orchestras

(Continued from Page 19)

rhythmical patterns can be analyzed without it. Frequently even professional musicians come across complicated figures which require the "foot beat" for a reading or two, after which it is dispensed with. At no time does the player tap his foot when performing in the band or orchestra in a concert, or at rehearsal. When one is playing in a full ensemble under a conductor there is no necessity for a "foot tap" since this physical action is replaced by the visual one of observing the conductor's baton.

Frequently I have been questioned as to how to eliminate the foot beat at rehearsals when the students have become so accustomed to using it in their individual practice. I have found that simply by calling it to their attention and requesting that they do not use the foot beat in rehearsal, the serious minded students will refrain from its use. Occasionally it has been necessary to caution individual students on this point, but altogether very little difficulty with this problem has been encountered.

There is considerable difference in being able merely to feel rhythm and being capable of reading music. The student who cannot sing, or play upon his instrument, the simple rhythmic figures, discovers that with every new selection he has to learn rhythmic patterns all over again.

It is at those times when the average student of our bands and orchestras is called upon to perform individually that weaknesses of rhythm and reading are noticeable. It is then that we realize that the ensemble has been a staff for him to lean on, and that his ability to count time suffers from the lack of a systematic procedure in analysis of the various rhythmic patterns. Most of such students will tell you that they are counting to themselves. This may be true, but their performance would indicate that such is not the case. At least their playing of the figures would hardly show accuracy in this mental counting.

While I am convinced that the "foot beat" is an effective method for the teaching of counting time, I do not intend to convey the impression that it is the sole means to the teaching and handling of this problem. There are undoubtedly many other devices which are used successfully. It is not so much a matter of method as it is the result obtained. Of one fact I am certain—many students cannot read even the simplest of rhythmic patterns because they use no method for the learning of counting time or the analyzing of these figures.

Teaching the reading of musical figures must not be confined to oral presentation. It is best to use also a blackboard, so that the student may actually visualize the pat-

tern he is being taught. A few minutes spent at each rehearsal on the study of musical figures will prove of great interest and help to the young band or orchestra. Begin with the most simple pattern such as the usual figures met with in four-four meter. These patterns should be sung in unison, with the entire ensemble using the foot tap throughout the pattern. Careful attention should be given the foot beat, and consideration should be given to the problem of division; that is, accuracy in the subdivision of the notes should be insisted upon. For instance if the figure should be

Ex. 4

4 2 . .

the instructor should check upon all downward and upward motions of the foot, seeing that they coincide with the ensemble beat, and observing whether or not the foot is dividing the beats accurately.

First attempts in this method will probably necessitate considerable individual help. As the attainment of proficiency warrants, additional and more complicated patterns should be presented, with the foot tap still being employed as the guide for dividing such patterns into their proper divisions. In addition to the combinations of patterns, rests of various values should be interspersed. We are all familiar with the usual student difficulty with rests, and this study should be just as thorough as that of any other pattern.

An effective means for improving accuracy in reading rests is as follows: Write a rhythmic study upon the board. Have the entire class sing and tap the study, then call upon different individuals to perform these figures in the same way. Substitute rests here and there for notes, and then review the exercise using the foot tap and observing rests as carefully as note values. The more individual attention given, the more effectively this problem can be met, for it is inevitably true that the organization is no stronger than its weakest player.

In conclusion I wish to point out that rhythm is but one of a number of elements that a student must master before satisfactory performance can be achieved. Yet it is one of the most essential, and without it the student can never hope to be a good "sight-reader." Some students seem to be naturally endowed with a sense of rhythm, and they are fortunate; the larger majority who are not so gifted have to work out the rhythmic patterns the "hard" way, and it is this greater number that we are daily trying to help. The "foot tap" method might be "old-fashioned" or antiquated, but its efficacy cannot be denied. Until a more worth while method is put forth, I shall be inclined to defend and make use of the method.

## Keeping Fit Physically

(Continued from Page 38)

discovering the ideal number of sleeping hours. No two individuals, he explains, need the same amount of sleep, although the average is usually nine to eleven hours. If you find it difficult to get up in the morning, you simply are not sleeping enough. Try going to bed a half an hour earlier each night, until you find that you wake refreshed and eager for the day's practice.

### Read and Sleep

A NUMBER OF BOOKS have been published to aid restless tossers in wooing sleep and in getting the most out of their actual sleeping hours. Since obstacles to restful slum-

ber are in large part mental, almost any sleep book (unlike any novel) is good, if it puts you to sleep. Here are a few suggested titles:

Edmund Jacobson, *You Can Sleep Well*; Whittlesey House, New York, 1938; Ray Giles, *Sleep! The Secret of Greater Power and Achievement*; Bobbs Merrill, Indianapolis, 1938; John A. P. Millet, *Insomnia, Its Causes and Treatment*; Greenberg, New York, 1938; Donald Anderson Laird, *How to Sleep and Rest Better*; Funk and Wagnalls, New York, 1937; Donald Anderson Laird and Charles G. Muller, *Sleep! Why We Need It and How to Get It*, John Day, New York, 1930.

Even in his most intricate compositions, and particularly in those which express his most mysterious feelings, the artist should employ simple form in order to render his ideas clear and intelligible.—Stephen Heller.

## The Threshold of Music

(Continued from Page 10)

Ex. 16

This quotation from *Ol' Man Devil* by  
Max Rich is reproduced with the permis-  
sion of Stasny Music Corporation,  
owners of the copyright.

Here the Bass Law guides the left hand  
part from D to G, to C, to F, to B-flat;  
and then, after a surprise chord which in-  
terrupts the chain by taking the bass to  
D-flat instead of E-flat, the Bass Law starts  
its inexorable work again and carries the  
left hand part from C through F and B-  
flat back to the home note, E-flat.

Not all the chords involved are dominant,  
however. The ones marked with x's are,  
and the two marked with y's are distorted  
versions of the dominant chord (about  
which we shall learn later). But the two  
chords marked with z's are not dominant  
at all; and yet they are just as successful  
as the others in keeping the bass moving  
according to the Bass Law.

For even better examples, turn back to  
the three illustrations of seventh chords in  
Chapter VII, and examine the bass notes.  
You will see that most of the time they,  
too, follow the Bass Law, moving either  
down a fifth or up a fourth.

As these excerpts are played on the  
piano be sure to stress the bass notes. And,  
by the way, be strongly advised to play  
over each and every illustration that is  
mentioned, even when it means turning  
back to another page. In no other way can  
the language of music become really clear  
and intelligible to you.

### The Line of Least Resistance

WE MIGHT MENTION AT THIS POINT another  
natural tendency in music—a law of har-  
monic inertia. Notes, like human beings,  
have a certain lazy streak in them. When-  
ever they find themselves situated in a posi-  
tion of rest, they show a tendency to follow  
the line of least resistance. Their first choice  
is to stay just where they are; their second  
choice is to move a step at a time; and only  
when they are prodded or fired with sudden  
bursts of enthusiasm will they move in  
larger intervals.

Chords follow the line of least resistance,  
too—which is only natural, since a chord is  
simply a collection of several notes each of  
which has its own instinctive laziness.

The way for a piece of music to move  
with the least possible effort from one  
chord to another is for the first chord to  
change only one of its notes, leaving the  
others just as they were. This is the laziest  
of harmonic progressions. The 1-3-5 chord  
(tonic, or Do) can turn into 1-3-6 (an up-  
side-down version of the La triad) with  
the greatest of ease. One note (5) moves a  
step (to 6), while the others stand still.  
Just as easy is the transformation of 1-3-5  
(Do triad) into 7-3-5 (Mi triad), and of  
2-4-6-8 (Re seventh) into 2-4-6-7 (Ti  
seventh):

Ex. 17

Notice the smoothness of the progress  
from one chord to the next in this exam-  
ple the *Grail Motive* from "Parsifal" by Ri-  
chard Wagner

Ex. 18

The first five chords follow the line of  
least resistance absolutely. The first chord  
is the tonic of A-flat. In the second,  
note E-flat moves up a step to F (5 to 6).  
In the third, C moves up a step to D-flat.  
The fourth chord is simply a repetition of  
the third. In the fifth, A-flat moves up  
a step to B-flat.

Next in the order of laziness is the pro-  
gression that requires two of the notes to  
change, leaving one unmoved, or, in the case  
of a seventh chord, two notes unmoved.

Ex. 19

When we come to progressions which  
require three notes to change, we are back  
to the line of least resistance still more  
heavily. In the case of triads, such pro-  
gressions leave no notes in common—not even  
one foot on common ground.

Ex. 20

Under certain circumstances, however,  
a chord may move to another chord with  
has no notes in common, without bucking  
the line of least resistance to any great  
degree. These circumstances are when the  
entire chord slides in a body to a new po-  
sition, placing a step higher or lower. Un-  
der such conditions the effort seems fairly  
negligible. Here are some slides compl-

Ex. 21

### Composers—and the Natural Law of Music

WHEN COMPOSERS LINK TOGETHER notes and  
chords into musical compositions, they  
usually work unconsciously, realizing in-  
stinctively what is natural and effective  
and what to avoid as incorrect or unsu-  
fying. But if we analyze what they have  
written we usually find that their music  
conforms to

1. Melody Law.
2. The Motion and Rest Law.
3. The Bass Law.
4. The Line of Least Resistance.

Within these general bounds, of course,  
composers are free to do as they wish; just  
as authors are free to transfer their  
thoughts into words in as bold a way  
they please, provided they show some re-  
spect for the common sense laws of gram-  
mar and rhetoric.

## Another Use for Reward Cards

By EDWARD J. PLANK

EVERY MUSIC TEACHER has been at some time or other discouraged by the poor attendance at recitals on the part of the fathers of the pupils. It is disappointing to realize that the only concern the average father has about his child's music study is to pay the bill. The writer has observed that fathers of new pupils came to the first recital on which their child appeared, and finding themselves in a decided minority, did not attend further programs.

Visitors at recitals serve as an excellent advertising medium for the teacher. Pupils bring their relatives and friends and they should be encouraged to do so. To stimulate this extending of invitations the writer offered a Reward Card to any pupil who brought three guests. The required num-

ber may be three, four, or five guests. Naturally, the first guests a child considers are his parents. This is an opportunity to win a Reward Card very quickly; as the usual way is by practicing a maximum amount of time for a few weeks. The children appreciate such a "bargain" and will see to it that their fathers are present. This offer brought out the fathers, the masse (and even some grandfathers), the writer's studio.

Having won another card in the series, the student is more anxious to complete the set. Besides solving the father attendance problem and creating a larger student audience, this offer thereby incites the student to earn more Reward Cards in the usual practice manner.

## The Men of the Orchestra

(Continued from Page 13)

of two kinds: general and musical. Both are excellent character builders, and cannot but be of assistance to the persons who benefit by them.

The general discipline of an orchestra is a very army-like affair. The men soon learn to arrive punctually; to get themselves and their instruments in good order promptly on the stage; to think in terms of the group as a whole and not of themselves; to obey instructions quickly, accurately, and without questioning; and to check impulsive exuberances of their own. When one rehearses with one hundred and five men on the stage, for instance, and the conductor stops a moment to explain something, he can have no little buzzing of talk among the players, discussing points of their own. Even if the conductor is not sufficiently interesting or vital to maintain discipline in his own right, the men must nonetheless go through the motions and present him with the sort of disciplined attention he has not earned. This sometimes happens, and the men must know how to behave.

Musical discipline is different. This involves knowing exactly and at all times what to do and what not to do. The goal of a well disciplined orchestra is to acquire such exact familiarity with the scores—with their emphasis, their ensemble give and take, as well as with their notes—that the conductor's signals to bring this or that group into the forefront of attention will be not even needed. Great playing is approximated when the conductor is free to concentrate upon his interpretations, while the men take care of how to realize them without having to be told.

It requires the greatest flexibility, of course, to perform familiar works with various conductors, each of whom brings his own individual interpretative conceptions of work upon them. Even when the orchestral players do not agree with the indications of the all important baton, they have to follow them. An orchestra is a mirror; it

does not play either well or badly (in the interpretative sense, of course) but reflects the musical personality directing it—neither more nor less.

The men of the orchestra have problems to face which the public hardly realizes. Take, for instance, the matter of intonation. One sometimes reads reviews in which the orchestra is criticised for imperfect intonation. In nine cases out of ten (when dealing with a group of experienced or seasoned men) this is not the players' fault at all but depends on atmospheric conditions. Strings usually hold their tone best. The woodwinds and the brasses suffer most from sudden changes in heat or cold. The woodwinds are especially sensitive, and thus it results that they set the intonation for the entire orchestra. The colder it is, the higher they sound; the warmer, the lower. Thus, as the program progresses and the hall becomes warmer (merely from having so many human beings breathing it), the musicians are in constant danger of playing out of tune, without being able to do anything about it. On bitter cold days the woodwind players frequently come down to the hall two full hours before they are due (and often at great sacrifice simply to acclimate their instruments to the difference in temperature between outdoors and the hall in which they will play. The danger is greatest when the outdoor of the hall is close to the stage, when the auditorium is too suddenly chilled during intermission times. Give a seasoned orchestra a scientifically air conditioned hall to play in, and defects of intonation will disappear as if by magic.

But no matter how fine the hall, how adequate the training, how splendid the technique, or how disciplined the musician, background, the orchestral musician is at a disadvantage if he approaches his work with the nature of disgraceful second choice. Routine playing is entirely worthy and capable of leading to dignified musical heights. Let us learn to regard it in that light.

## Expanding Your Cultural and Musical Life

(Continued from Page 38)

fine rotogravure photographs, most of which we have never heretofore seen. With its gay scarlet modern cover design by Gerscovici, it is the kind of book that people will like to expose in the music room, for decorative purposes. One interesting chart in the book reveals that the vocal student studying in New York for three years, should not expect to spend less than eight thousand dollars for the period. In fact it may run nearer nine, with living expenses at \$30 a week totaling \$4500 and vocal lessons at \$5.00 a lesson, costing \$4,000.

Certainly one of the most significant figures in the art history of all time is Leonardo da Vinci; and any new work,

such as that of Antonina Valentin (The Viking Press, \$3.75), deserves the serious consideration of all who are endeavoring to seek a wider culture. This is one of the strongest biographies of this world figure; and fortunate is he who through it extends his knowledge of the great era in which the versatile Leonardo lived.

The writer has found the remarkable motion picture, "A Man You Will Remember" one of the most worth while of its type. With a cast of actors little known to the public, and with a setting entirely adequate but without pretensions, it is one of the most forceful and compelling dramas that has ever been presented on the screen.

## Lessons With Ossip Gabrilowitsch

(Continued from Page 14)

an interpreter. He could not commit a grossness or sensationalism if he would, and would not if he could."

For instance, Gabrilowitsch would say:

"Do not play loud for the sake of playing loud, or fast for the sake of playing fast. If such conditions do not grow logically out of the music, they are cheap and unworthy effects."

He insisted on perfect repose.

"For without repose a pianist has no control over an audience. You must have absolute mental control of the situation. He would often say:

"Guard against restless playing. You may use rubato when the character of the work permits it, but maintain a certain steadiness throughout."

He always stressed the "breathing places."

(Continued in THE ETUDE for February)

Write, "I saw it in THE ETUDE."

## VOICE QUESTIONS

Answered

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

### Head Voice and Falsetto.

Q.—I am a young man twenty years old, with a high, lyric tenor voice and I have been singing since May, 1937. My teacher makes me use the so-called falsetto voice, which I do not, developing it so that there is no break between it and the chest voice. What then is that I can get no power, and my high tones are rather breathy. I am sure that I am breathing correctly. Am I using the head tones correctly? If not what is my trouble?—C. R. B.

A.—I wish the expressions "Head Voice" and "falsetto voice" could be clearly defined, almost every attempt to do so meets with my objection. Here is an attempt to clarify my misconception. It is my opinion only, and just be accepted as such. The expression "head voice" is used to classify those high notes that seem to have the greater part of their resonance in the head, and the bones of the face. The French words "Dans la Masque" mean the same thing. It is a sensation of vibration only, as Lilli Lehman pointed out, all the notes throughout the entire range of the voice are formed by the action of the breath upon the approximated vocal cords.

Theoretically at least, the falsetto voice, is produced with much less firmly approximated vocal cords, which accounts for both the breathiness and the lack of carrying power of the falsetto voice. Under the advice of the teacher it may be used, in an attempt to obtain a sense of vibration without stiffening the throat muscles or the tongue. The resulting notes are too weak and emaciated for opera concert. I think your teacher will agree that eventually you will have to use a firmer and stronger tone, if you expect to be successful. Please remember that this is only my opinion. Consult your teacher.

### Chopin's "Maiden's Wish."

Q.—In the song, The Maiden's Wish, by Chopin, please give me the execution of, the 4, second line, "But in the little window."

so a good, fairly easy way to play the many notes in the introduction—piano part. Could this do?

A.—In the song, Maiden's Wish, Chopin, at the words "But in the little window," clearly indicates that the small notes should be sung *tempo rubato*; or, if you prefer the expression, *a piacere*. To change the value of the notes in the first measure, and the accent in the second, as you suggest, would be, in my opinion, to improve upon Chopin; and I am sure either you nor I would have the temerity to do that.

2. Perhaps Chopin intended that a skillful pianist should play the trills in the introduction something like this:

A is too rapid for your technic, then be satisfied with B.

### The Tenor's High Tones Once More

Q.—I am a tenor twenty-two years of age, who has been studying voice two years. Although I use facial and bodily exercises daily, my freedom, relaxed tongue and floating jaw position, my upper tones seem strained and forced, and I tire easily. There seems to be either substance nor mellowness in the upper voice. Are the terms head voice and falsetto synonymous; and, if I cultivate my voice from top downward, starting upon a falsetto note, will it in time unite with the lower chest, making an evenly balanced head? A falsetto voice is easy to sing but weak and lacks a break between the B and D immediately above the bass staff.—E. M.

A.—Are you sure that your voice is really a tenor and not a high baritone? You should be sure about this before you commence serious vocal study. Please read my answer to R. B. in this issue. In an attempt to clarify the situation such as yours, I venture here a statement of both falsetto and head voice, which may help you to understand the difference.

2. To blend these two registers so that there is no break between them requires a great deal of skill and practice. If you are successful, there is some reason why the scale from the top to the bottom should not be sung without any break and in consequence be quite smooth. Lis-

ten to Richard Crooks, who is a past master in this sort of thing. Remember that in the so-called head voice the vocal cords are more firmly approximated than they are in the so-called falsetto, and that the resulting tone is stronger and less breathy. The falsetto is very effective over the radio, but too small and thin for use in concert or opera with a large orchestra. Consult your teacher for a more definite description of falsetto and head voice.

### The Abominable Tremolo

Q.—I am a soprano fifteen years of age; and I am also a violinist. I can sing my high notes nicely and use my tremolo, but I cannot do my low notes very well.

2. Can you give me any exercises or scales to help this. What classical or popular music do you recommend for soprano?—V. M.

A.—It is not at all unusual for a girl of fifteen to sing very high notes. Later in life, as the girl develops into a woman, usually a few tones are added by time to the lower voice, while one or two may disappear from the upper voice. The tremolo is a very dangerous habit to form. It is easy to acquire, very difficult to overcome, and most audiences dislike it. It is quite objectionable over the radio. Sing with a clear, pure, steady tone, without any shake in it at all.

2. There are so many excellent books of exercises for the soprano voice that I hesitate to recommend any. Abt's "Singing Tutor"; Connell's "Master Exercises"; and Marchesi's "Method" Vol. 1, are outstanding. If you need a small book about the theory of voice production, you might look at my "What The Vocal Student Should Know."

Until you have a good command of your voice, it would be well to refrain from singing too many and too difficult songs. However, any song that is within the range of your voice, and not too hard for your musicianship, may be attempted. It sounds as if you need instruction in the art of singing, from a competent teacher.

### Singing After Tonsillectomy.

Q.—I am sixteen years of age. Four years ago my voice changed from soprano to alto, as the result of a tonsil operation. My range is

SLUG 1—

just two octaves. On the low notes I sing with volume and without strain; but my voice strains and gets hoarse on the high tones. How can I increase my range up? I have had no voice lessons. What instruction books upon the voice could I buy? Please answer in THE ETUDE.—R. J. G.

A.—1. The range you indicate is a good one, provided the tones are all of the same color and the scale is smooth. Did your voice change as the result of the tonsillectomy, or was it the result of your growing from a child of twelve to a young woman of sixteen? This should be satisfactorily answered before you decide whether your voice is soprano or contralto. It is not at all unusual for the character and the range of a voice to change after the tonsils are removed, because the whole shape of the throat has changed. After the wound has healed and the scar tissue been absorbed, the true quality of the voice usually shows itself again. Four years seem plenty of time for these things to have occurred, and at this distance it looks as if you would remain a contralto. No certain answer to this question could be given without a hearing.

2. Perhaps you are forcing your voice to go too high, thus causing hoarseness. Or it may be that you are relying too much upon the so-called chest quality, as many contraltos do, thus limiting the upper range of the voice. Try practicing ascending and descending scales, being careful not to sing too loudly, and avoiding any tremolo, which is apt to appear after a tonsillectomy. Also see that you do not carry the "chest voice" too high, and that there is little or no break between the low and the high voices; but that the scale is smooth. The late Herbert Witherspoon has devoted a portion of his book upon the vocal art to exercises designed to help singers after tonsillectomy. Read it, and try them. You might use Sieber's "Thirty-six Eight Measure Vocalises."

### She Wants Some New Songs.

Q.—I am a senior in High School and have taken singing lessons two years. I sing all types of songs, with a range from middle C to high G or A. Sing On by Denza suits me and my style. Please suggest some songs that would be good for me to sing this year.—D. B.

A.—After all, every man must choose for himself the music that he likes. Here are a few suggestions: Sheila, by Kellogg; When I have sung my songs, by Charles; Curmudgeon, by Wilson; Wake Up, by Phillips; and Going Home, by Dvořák. All are pretty, and one of them might suit your needs.

### Should a Soprano Sing Alto?

Q.—Please tell me the effect upon the soprano voice of singing alto.—V. L. W.

A.—First you must be sure that you really are a soprano. There are some voices on the border line between soprano and alto. They are called either mezzo-soprano or mezzo-contralto. Are you sure that you are not one of these? Have a thorough examination by a good singing teacher, who will classify your voice for you and tell you what exercises and songs you should study. When a real soprano sings alto for any length of time, it usually takes away some of her high notes.

JUILLIARD SCHOOL OF MUSIC

ERNEST HUTCHESON, President

## JUILLIARD SUMMER SCHOOL

GEORGE A. WEDGE, Director

July 5 to August 11, 1939

Accredited music courses leading to diplomas, teacher's certificate, and Bachelor of Science and Master of Science degrees. Instrumental and vocal instruction for beginning and advanced students, repertoire classes, methods and materials, public school music, theory, composition, and musicology.

Special program of study for high school students including private instrumental or vocal instruction, rudiments of music, and daily rehearsals in orchestra, band, and chorus.

Two one-week FORUM courses conducted by leading music educators July 17 to 21 and July 24-28

For catalogue please address

120 Claremont Avenue Room 125 New York, N. Y.

## The Clebeld Institute of Music

Confers Bachelor of Music Degree. Master of Music Degree, Artist Diploma  
Faculty of Nationally Known Musicians

BERYL RUBINSTEIN, Director, 2605 Euclid Avenue, Cleveland, Ohio

72nd YEAR

A complete school of music, dramatic art and dancing. Courses lead to degrees. Special students may enter at any time.

SECOND SEMESTER  
Opens January 27

Write for catalog

2650 Highland Ave. Cincinnati, Ohio.

## BALDWIN-WALLACE CONSERVATORY OF MUSIC

BEREA, OHIO (suburb of Cleveland)

Affiliated with a first class Liberal Arts College. Four and five year courses leading to degrees. Faculty of Artist Teachers. Seventh Annual Bach Festival, June 9 and 10, 1939. Send for catalogue or information to:

ALBERT RIEMENSCHNEIDER, Dean, Berea, Ohio

## SCHOOL OF MUSIC OF THE UNIVERSITY OF MICHIGAN

Complete curricula leading to degrees in all branches of Music. Faculty of distinguished artist teachers. Concerts and May Festival by world's greatest artists and organizations in Hill Auditorium seating 5,000. Chorus of 350; student symphony orchestras, glee clubs, bands, etc. Recitals each week on \$75,000 organ.

Second Semester  
Begins  
February 13.

CHARLES A. SINK, President  
Box 1004, Ann Arbor, Michigan

## DETROIT INSTITUTE OF MUSICAL ART

DR. FRANCIS L. YORK, Chairman  
DR. EDWARD B. MANVILLE, President

Member of the National Association of Music Schools. Founded 1887. All branches of Music and Dramatic Art. School of Sacred Music. Faculty of 70 artists. Accredited Teachers' Certificates, Diplomas and Degrees.

H. B. MANVILLE, Business Manager  
32 Putnam, Detroit, Mich.

## LAWRENCE COLLEGE CONSERVATORY OF MUSIC

APPLETON, WISCONSIN

Carl J. Waterman, Dean

Courses in piano, voice, violin, cello, organ, theory, public school music and choir directing leading to Bachelor and Master degrees

## OBERLIN CONSERVATORY OF MUSIC

Advanced study in all branches for Mus. B., Sch. Mus. B. degrees, combination with Oberlin College for A. B. Distinguished faculty of specialists. Excellent equipment. For entrance, high school or equivalent. Dormitories. Catalog. Frank H. Shaw, Dir., Box 519, Oberlin, Ohio

Shop by mail through THE ETUDE.

Phone District—4079

## "Well Done"

By IZANE PECK

Do you SING, or play some musical instrument? If so, it might be well to apply a simple gauge to the performance. Ask yourself these three questions.

1. Can I play or sing several pieces from memory?
2. Do I play or sing these well enough to interest my hearers?

3. Are these pieces well chosen?

If these questions cannot be answered in the affirmative, strive until they can be done so. Thereby it will be found that both interest and efficiency will be doubled and even trebled. There will be also an inner conviction that you can express yourself well musically.

## The "Moonlight" Sonata

(Continued from Page 9)

to the sacred pile that shines yonder before the tearless eye, etc. etc. . . ."

Adolph Albert Schmitz, in a publication appearing in 1898, places the scene of action of this sonata "in a cemetery." He sees "a poor widow, falteringly approaching the grave of her deceased husband." Standing there, she thinks, "I must resign myself to Fate." In the second movement Beethoven calls to the forsaken widow in three-voiced chords, "Have faith in the TRINITY (!) suffer with fortitude, pray and work, put your trust in God, he will not forsake you and your children." In the final movement, the widow becomes involved in a struggle for existence; she reproaches herself, suffers pangs of conscience, sees the hand of Providence in her suffering, is overcome with remorse! From time to time, major chords are heard, representing consolation; but her wavering hope vanishes before her great grief. The second section ends with the ultimate death struggle."

Ulibischeff finds in the *Adagio* "the moving plaint of a love that knows no realization and feeds upon itself like a flame lacking fuel. As the melody sounds more brokenly, the moon shines forth, like a pale, corpse-like face, and then veils itself in a moment behind the gloom-cloud, hastening past. We seem to view an immense grave on a wild barren plain. Melodies rise, like the responses of a complaining spirit, bemoaning its impotence. In the Presto, Beethoven gives vent to his fury and despair, cursing Destiny which crushes the human race under the load of its curse—and then weeps again like a child begging its mother's forgiveness."

Elterlein regards "unspeakable pain, cutting agony of soul" as the keynote of the entire work. "In the *Adagio*, the inner suffering appears restrained, repressed. Measured sighs escape to the Inevitable. The *colorit* of the whole is magical—a twilight, a night-zephyr. In the *Allegretto* we fall as from heaven into an easy, carelessness, light mood of the other movement (?). In the last movement, the pain-racked soul surges up in agonized passion. The repressed feelings find vent, a whirlwind of emotion rages. As out of the rumbling con-tortions from the crater of the heart, the soul struggles fiercely with the power of Darkness. It does not, however, succumb; disenthraling humor glances out in a few passages. The composer's spirit has given free rein to its tears and thus won off the spell."

To Louis Koehler "the mood of the *Adagio sostenuto* reveals a churchyard, beneath weeping willows, with the moon shining on funeral urns. The *Allegretto* in D flat leads into a mood mingling with tears, transforming the earlier agony of grief into tender consolation. In the Presto agitato, accents of fear and terror alternate with moments of delirious rapture in the play of unfettered feeling and with moments of sublime resignation, teeming with lofty, soul-felt dignity. After flaring up in a violent career of passion, it falls in mortal lassitude, in a last intense effort."

Marx calls the first movement "the soft song of renouncing love." It is the farewell to all hope of the thirsting soul, when speech fails, when the fearful sigh from the faithful breast can hardly breathe its lay, when the pulse of rhythm, scarce awakened, falters and delays, like the last, lingering gaze of a sad parting. Life, too, glides downward with ghostly calm into depths,

wherein no balm is found for these pains. And, in such chaste tranquillity, untroubled by all disturbing storms of passion, this mournful song flows on. Renunciation is followed by the parting in the second movement. Oh, think of me, I think of thee. Farewell! Farewell forever! And no Life must nevertheless be lived. The love storms abroad and storms aloft and fumes and complains. All the assaults and thunderbolts of Fate shall not bow the noble head of the devoted one."

Czerny speaks only of the first movement, calling it "a night scene in which a wailing spirit-voice is heard."

Liszt called the *Allegretto* "a flower between two abysses."—a comparison, by the way, which Ulibischeff did not approve.

The above analyses and stories are but a few taken at random from a vast number which have appeared in print. Other writers who have discoursed in more or less similar fashion include: Mme. A. Audley, W. von Lenz, Carl Zastrow, Willibald Nagel, etc.

## The Nub of the Matter

No ONE WILL GAIN SAY that most of the above stories are pretty. Nor will any one gainsay that numerous individuals, apparently, do not, or cannot, enjoy music without some verbal prop. It is, of course, very difficult to fathom or justify the reactions of others to music; but it would seem that, in such cases, it is the story rather than the music which is apprehended. Be that as it may, music which requires a story, music which cannot, so to speak, "stand on its own legs," is a pretty flimsy product, which certainly does not merit the immortality of Beethoven's "Op. 27, No. 2." The real reason, finally, why it is so hard to talk or write about music is that the art's actual emotional content—certainly the most important thing about it—transcends ordinary language and cannot be expressed or described in words.

In conclusion, Dr. Adolph Kullak, in his "Esthetics of Piano Playing," sounds a rational note. "In view of the boundless affinities between tone and life, he (the pianoforte player) should only begin with the idea, that every noble composition of lyric expression is of such wonderful, infinitely profound depth, that the soul cannot translate the most rapturous emotion of its life through it alone. Beethoven's "Sonata in C-sharp minor" is neither the picture of a churchyard, nor of a temple, nor of a mourning love. It is more than this. It is the picture of the primal source of the emotions, which are experienced in these several situations. . . . Although piano playing belongs to the domain of reproductive art, its elements cannot be projected without the highest cultural development of the interpreter. . . . Feeling will be the lovelier, the more it is spiritualized by thought. . . . Let the player not be content to leave everything to his blind emotional instinct; in all there dwells a law of beauty which would be discovered by meditation. . . . In many works the sensuous power of a fine technique may exhaust the meaning—the beauty of the mechanical art is then the intention of the work; but the player must discern with tact and precision. The lofty creations of a Beethoven, Bach, Schubert, Schumann, Chopin, Mendelssohn, Brahms take beauty of this nature for granted—THEIR REAL ESSENCE LIES DEEPER."

\* \* \* \* \*

Some of our modern young composers ought to be made to sing the music they write for the voice."—Sir Henry Wood.

## The Cover for This Month

Little Nance Borbridge and Jane Bloxom of Flower-town, Pa., help Mr. Si LaTour, already known to ETUDE readers through several interesting photographic covers, to obtain the "turning over a new leaf" photograph with which THE ETUDE

MUSIC MAGAZINE greets its readers on its first issue of the year 1939.

More than one wise mind has expressed the conviction that the four necessities in man's life, apart from his faith, are food, shelter, aimment, and music. The value of music to a life is enhanced many-fold when it is self-created. The young lady at the piano is fortunate that her parents already have made it possible for her to have music in her life. The little child reaching for the music is a reminder to all parents of children of this age that now is the time to make plans, so that within a few years hence their little boys and little girls may have a real New Year in their lives as they way is provided for them to begin to learn how to bring music forth from the piano.

THE ETUDE MUSIC MAGAZINE secured the magazine cover privileges on the photograph reproduced on this issue from Si LaTour and sons, 475 Attica Street, Altadena, California.

## Play and Sing

Favorite Songs in Easy Arrangements for Piano

By Ada Richter

Judging by the popular favor shown to *My First Song Book*, by Ada Richter, we are certain of making no mistake in publishing a collection by the same author of other song arrangements slightly more advanced in difficulty but not to exceed grade two.

This collection will shortly appear under the title *Play and Sing*, and will be found to meet fully the grade requirement. For general convenience, as well as to fit in with school needs, the contents have been subdivided into the following five heads: School Songs, Songs of Other Lands, Songs of My

## The Sunrise of New Musical Opportunities

1938 with its strifes, uncertainty, sorrows and bitternesses is gone and "good riddance." For many, it was, confessedly, a hateful year.

1939 is here with glad promise and assurance of new, more stable, more rational, more constructive foundations for all, particularly for you and your music.

We pray that tolerance, patience and forbearance may forever lead to the settlement of "wars" in advance, in the Spirit of Christ, instead of in the Spirit of Mars, after millions have been annihilated. Time adjusts all things.

The prospect of more settled conditions in Europe has given new hope, new courage, new energy, new incentive, and new ambition to everyone in America. This already has produced thrilling results. The sales of pianos and musical instruments have shown a startling increase. This issue of THE ETUDE is 50,000 greater than a year ago.

At last the music teachers' long-

awaited opportunity for expansion is here and those who "dig in" and give their best energies at this time should be properly rewarded.

The Theodore Presser Co., with its vast publishing and publicity resources, is continually promoting music and music study in the interests of teachers, schools and conservatories, as well as in the interests of other publishers and music dealers everywhere. In return, we have been honored with the enthusiastic cooperation, confidence and patronage of all interested in music.

The Theodore Presser Co. is glad at all times to help its patrons in securing "just the piece I want" whether it is one single piece or a whole library selected from the catalogs of all the publishers of Christendom. Never hesitate to write for catalogs, materials, advertising helps, or advice. Our fifty-four years' experience has made our service world-known. We always look after your interests in the matter of terms, discounts and price.

## A GLORIOUSLY HAPPY, PROGRESSIVE NEW YEAR TO ETUDE FRIENDS EVERYWHERE.

Country, Songs from Operas, and Songs My Grandparents Sang Long Ago, making over forty selections.

Not only will the children like these enduring melodies; they are sure, also, to appeal to many older persons who knew and loved them in their younger days. Many of these themes are frequently heard over the radio, but in book form they have a closer and more permanent appeal.

As originally printed, the music of these numbers is too hard for the young performer, but as arranged in *Play and Sing* they should

be easy enough for any second grader to master in a short time. Pupils in company are often asked to play something for others; with a copy of this book handy they should have no trouble in pleasing their auditors.

Our special advance of publication cash price of 25 cents for a single copy, postpaid, should appeal to customers who like to keep abreast of the latest in musical publications.

These copies will be delivered as soon as published. The sale of this book is confined to the U. S. A. and Its Possessions.

## It's Time to Prepare for Lenten and Easter Music

While this copy of THE ETUDE may be delivered to you as the bells are ringing out the Old Year and ringing in the New; while the January date on THE ETUDE reminds us of new hopes and aspirations and inspires thoughts of new plans, the sagacious choir director will be reminded that "Ash Wednesday cannot be far away." Nor is it. This year the Lenten season begins on Washington's birthday, February 22. Easter falls on April 9.

There is such a wealth of music today for this period of church devotion, Lenten cantatas and anthems, special solos and chorus numbers for Palm Sunday, music for all of the services during Holy Week and, of course, the magnificent music many composers have written for the great church feast day, Easter.

Choirmasters who realize the importance of their group's contribution to the church services begin to plan these Lenten and Easter season programs well in advance. If a cantata is to be presented, an early start on rehearsals is absolutely necessary, even short anthems should be adequately prepared. Now is the time to decide on materials, rehearsals should begin in the next week or two.

In another note on these pages attention is called to a brand-new cantata for the choir's Easter program, *Hail! King of Glory* by Lawrence Keating. Other notes announce new arrangements for the treble voice section of the choir, or for choirs composed entirely of women's voices. The J. H. Maunder Lenten cantata *Penitence, Pardon and Peace*, arranged by J. C. Warhurst, should prove quite effective, and we know many choirmasters who will welcome Dr. J. Christopher Marks' celebrated Easter cantata *Victory Divine* in Mr. Warhurst's arrangement for treble voice choirs.

The Theodore Presser Co. catalog is rich in appropriate music for Lent, Palm Sunday, Holy Week and Easter. There are cantatas that even the inexperienced choir can present with a little rehearsing; cantatas, almost of oratorio proportions for the proficient choir with trained soloists. Short anthems and carol-anthems, brilliant anthems that may be used instead of a cantata. Vocal solos and duets, organ and piano pieces and services of verses and songs for the Sunday school.

All of these are listed in Folder P-1, a copy of which will be sent FREE upon request. Single copies of any Easter music publication may be had for examination.

## Hail! King of Glory

An Easter Cantata for Volunteer Choirs By Lawrence Keating

Choir leaders seeking an Easter cantata which will meet the needs of the choir without trained voices will do well to examine this new work by a composer, who not only is able to write with melodic and harmonic interest, but who also knows the limitations of the average small choir.

The text has been written and selected by Mattie B. Shannon, who has adapted Scriptural quotations and drawn freely from appropriate hymns in her telling of the Resurrection story. Besides the choruses in the usual four-part harmony for mixed voices, there are short and easy solos for soprano, alto, tenor, and bass, which, if desired, may be sung by those sections in unison. Of particular interest is a three-part trio or chorus for women's voices, and duets for soprano and alto, and soprano and tenor. These are not difficult and all parts are written within

(Continued on Page 68)

## Hail! King of Glory

(Continued from Page 67)

a very limited vocal range. The composer in this way creates variety in the performance and reduces the amount of group rehearsal necessary.

A single reference copy of this cantata may be ordered now at our low advance of publication cash price of 30 cents, postpaid, with the assurance that delivery will be made in plenty of time for early rehearsals.

### Victory Divine

An Easter Cantata by J. Christopher Marks  
Arranged for Women's Voices

By James C. Warhurst

DR. MARKS

There is something about this cantata that carries an especial appeal to hearers and participants. The chorus numbers *God So Loved the World*, *Death Is Swallowed Up*, and *It Is the Hour of Morning* are especially noteworthy. Several of the solo numbers have accompanying choruses. In this arrangement all of the chorus numbers will be arranged for three-part singing (SSA) with only occasional division of the voices for emphasis or to provide an optional note where the range is wide.

This cantata is considered by many one of the outstanding contributions of this noted composer to the literature of American church music. In this arrangement for women's voices it should be just as attractive as in the popular arrangement for mixed voices because the original harmonies have been retained with the fine supporting organ accompaniment. There will be solos for Soprano, Mezzo and Alto, and a duet for Soprano and Alto.

This cantata will be ready in time for rehearsing for Easter presentation. Single copies may be ordered now at the special advance of publication cash price, 35 cents, postpaid.

### Penitence, Pardon and Peace

A Lenten Cantata by J. H. Maunder  
Arranged for Women's Voices

By James C. Warhurst

This positively will be the last month during which orders may be placed for copies of this work at the special advance of publication cash price, 30 cents, postpaid. Next month, February, the Lenten season begins, and we hope to have copies of this cantata in the hands of advance subscribers before the end of this month.

*Penitence, Pardon and Peace* is known to many choirmasters in its original (SATB) arrangement. In this new form it loses none of its effectiveness and its availability for many choirs will be augmented. It should be especially valuable to those choirs where the male voices are weak, or not dependable. Of course, choirs composed entirely of women's voices will be delighted to add this noteworthy cantata to the repertoire.

The choruses have been arranged for three-part singing and there are soprano, mezzo and alto solos for variety. The cantata may be given in its entirety, about 35 minutes, or it may be rendered in three separate parts in connection with the church services.

This is your last chance to order single copies at the special advance of publication price. Orders can be accepted only from patrons in the U. S. A. and Its Possessions.

### One-String Solos

For Violin Beginners

By Kate LaRue Harper

The violin always has been a favorite instrument, both with players who are what might be called "solo minded," and with those musical-loving folk who enjoy playing in groups. The demand for violinists in the school orchestra makes advisable the early instruction of children who will take up the study of this instrument.

One of the drawbacks to teaching violin in the primary grades has been the lack of material that carries an appeal to the modern youngster. Dancel, Wohlfahrt, DeBeriot, Sitt and other authorities built well, and their primary studies hardly will be surpassed for value in technical development. Köhler, Czerny, Heller, etc. also contributed indispensable study material for young piano

students, but no teacher would think of prescribing an entire course consisting of the works of these masters.

Supplementary literature of a lighter character, preferably pieces that introduce various technical figures, liberally intersperse any modern piano course. Young violinists, treated with the same consideration, should advance rapidly, too. The author of this work achieves some really remarkable results with little tunes in which the playing is confined to one string, and then using only the first, second and third fingers. Of course, a well harmonized piano part helps considerably.

As an added attraction for the youngsters their violin part will be most interestingly presented. Each piece will be accompanied by a fascinating story and clever illustrations. This book may be used from the very beginning of study and in conjunction with any violin course.

*One String Solos* will be issued in two separate books, oblong in shape. One will be for the students, the other for the teacher or accompanying pianist. The violin parts may be ordered in advance of publication at 15 cents a copy, the piano part at 20 cents, postpaid.

### 16 Modern Etudes

For the Advanced Trumpet Player

By John Huber

As preparation for the demands made upon his technical proficiency by modern composers and arrangers of band, orchestra and ensemble music, the advanced trumpet player will find these studies most helpful. They also should help in developing interpretative ability, proper breathing, correct tone production and facility in triple-tonguing. In advance of publication orders may be placed for copies of this book at the special cash price, 40 cents, postpaid.

### Reward Cards for Music Pupils

(Second Series)

Bizet	Gluck	Rimsky-Korsakov
Chaminade	Grieg	Rossini
Debussy	MacDowell	Rubinstein
Dvořák	Massenet	Saint-Saëns
Elgar	Moszkowski	Sibelius
	Moussorgsky	

For many years teachers of piano, and others having in charge the instruction of young music pupils, have used with much success the set preceding this series of *Reward Cards*. The original set of 16 cards included the following: Bach, Beethoven, Brahms, Chopin, Gounod, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Tchaikowsky, Verdi, Wagner and Weber. These, with a *Prize Card*, are obtainable at 50 cents a set.

The usual method of using *Reward Cards* is to give the pupil a card for each completed, or well practiced lesson, and, when all 16 cards have been earned to give the *Prize Card* (a beautiful souvenir printed from a steel engraving, and containing portraits of 8 great composers grouped in an artistic border design); writing thereon the pupil's name, the date of award and adding the teacher's signature.

Many teachers have requested that we add various composers to the *Reward Cards* so, rather than enlarge the first series, we decided to publish an entire new group, to be designated *Reward Cards for Music Pupils* (Second Series). These cards will be exactly like the first 16, a handsome lithographic reproduction of the composer's portrait and his birthplace, or some other scene of interest, and having on the reverse a condensed biography, a facsimile of his manuscript and a reproduction of his signature. The *Prize Card* will accompany each set.

Considerable research has been necessary in order to obtain all this data and there are many details to be taken care of by our Mechanical Department in preparing these

cards for publication. However, we hope to have them ready in the near future, and just as soon as they are available sets will be mailed to those who order them in advance of publication.

There still is time this month to place your order for sets of *Reward Cards* (Second Series) at the special prepublication price, 35 cents, postpaid.

### Manual of Fugue

By Preston Ware Orem, Mus. Doc.

In writing this book Dr. Orem followed the same "breezy" style of presentation that made his previously published theoretical works so popular with teachers and students. The study of this subject presumes a thorough knowledge of harmony and the fundamentals

of counterpoint. It is a course seldom attempted by any but the most ambitious students. Yet, modern developments in music composition make absolutely essential a knowledge of fugal writing. Study the chorus material found listed on current programs, even those of high school groups. The student who has completed Dr. Orem's prior works, *Harmony Book for Beginners*, *Theory and Composition of Music* and *The Art of Interweaving Melodies* should have no difficulty in taking up this book; in fact, he should find it a real pleasure and a ready means to advance in musical knowledge.

There is still time this month to order a single copy of *Manual of Fugue* at the special advance of publication cash price, 40 cents, postpaid.

### The Youthful Baritone

An Album of Songs for Studio and Recital

When a composer sets out to write a song for baritones or basses, the first thing that comes to his mind, as a rule, is a robust, rollicking, or dramatic musical composition—with text to match. Leading vocal artists of the concert platform, the screen and the radio have done much to popularize this type of song from the *Largo al factotum* to the bandit and horror numbers that are the vogue today.

However, such songs require considerable experience and no little voice study and training. To give such songs to the youthful baritone, young men of high school or college age, would be exceedingly dangerous. The attempt to sing them might result in permanent injury to the young man's voice.

Far better that young singers in their first years of study be given songs safely within their vocal range. They can be songs of spirit, songs with lots of "pep and go," songs of melodic charm, even dramatic songs (and all with virile, manly texts) and yet not be too difficult for somewhat inexperienced singers. It is such songs that are being collected for this album.

It has been the publishers' experience that collections of this kind, designed especially for student singers, are considerably in demand with established vocalists who use them frequently as encore selections, or as a, b, and c numbers on their programs. Probably this volume will have a similar appeal.

In advance of publication single copies of this book may be ordered at the special advance of publication cash price, 35 cents, postpaid.

### The Youthful Tenor

An Album of Songs for Studio or Recital

The title of this new book should catch the eyes of youthful tenors in search of worthwhile songs for parlor or concert use.

This is more than a mere collection of songs for a tenor voice. It is now well-known that developed high tones at the expense of a weak middle register do not make a true vocal artist. In selecting the contents for *The Youthful Tenor* we have kept in mind melodiousness, interesting variety, opportunity for effective interpretation, quality of music and words, and ample chance to use the rich middle tones as well as an occasional effective high one.

This collection will appeal, not only to the youthful tenor, but also to more mature and advanced singers, many of whom do not

always know where to look for material that will stand the test of frequent use.

At a time when interest in vocal culture is increasing almost daily, it is gratifying to find a collection of songs that meets all the demands in modern voice training.

This carefully edited and well prepared group of about a dozen tenor songs will be found to be a paying investment. It is not possible to order single copies at the special price of 35 cents, postpaid, by taking advantage of our special advance of publication cash offer, copies to be sent as soon as received from the printer.

### Fragments from Famous Symphonies

Compiled and Arranged for Piano

By William Baines

On occasions when music loving individuals visit the establishment of the Theodore Presser Co., or when some such individuals learn that its representatives are present with a exhibit of music publications at some large music conference or convention in their home city, it is not unusual for some of these individuals to pick up some of the present day piano methods and piano collections for young pupils and exclaim "I wish such things had been available when I was learning to play the piano."

In every way the piano student of to-day has many advantages over the piano beginners of days gone by. They not only have the advantage of hearing so much good music through the radio, through music activities in the public schools, and through community band orchestras, and choruses, but they also have made available to them, through gifted and skillful arrangers, melodious and characteristic bits from the writings of the master composers.

The latest offering of this character is the volume *Fragments from Famous Symphonies*. Teachers will find this album gives an excellent variety of study pieces, and over and above such practical usages is the joy in music which it gives to the pupil along in the second grade of study by making it possible for him to play, on his own piano, arrangements of themes from some of the glorious symphonies written by such composers as Beethoven, Brahms, Dvořák, Haydn, Schubert, Schumann, and Tchaikowsky.

Although designed for the young piano student we can see where many grown-up pianists, beginners, or pianists of very limited attainments, will find enjoyment through the well-made yet not difficult to play arrangements in this album. We regret that copyright restrictions prevent this album from crossing into other lands beyond the border of United States and Its Possessions, but most certainly those within the United States of America and Its Possessions, who order a copy of this book at the advance of publication cash price of 30 cents, postpaid will obtain splendid value for so nominal an outlay.

### The Organist's Resource

A New Collection of Organ Music Selected from the Compositions and Arrangements of I. V. Flagler

In organ literature, probably more than in any other classification of music, volumes of selected compositions are favored. This is, no doubt, due to the fact that ready access to the library is a prime consideration of the church musician, and a substantially bound volume is usually a convenience for the concert and home organist, too.

The organ works of I. V. Flagler are well known. As composer, and as editor and arranger of other composers' works, he was an important contributor to the literature for this "King of Instruments." His editing for the modern organ of the works of Dubois, Bizet, Lemaigre, Widor, Guilmant, Massenet, Rubinstein, Meyer-Helmund, etc. are especially noteworthy.

A five-volume collection of Flagler's organ compositions, editings and arrangements for years has been highly favored by organists. From this collection the present volume has been selected. Copies of *The Organist's Resource* may be ordered now in advance of publication at the special cash price of 30 cents, postpaid. The sale of this book will be restricted to the U. S. A. and Its Possessions.

## en Studies in Black and White

By Mana-Zucca

Allured by the universal popularity of the technical studies by such writers as Loeschhorn, Heller, Clementi, Cramer, von Bülow, and others, hundreds of experienced teacher-composers have tried to achieve equal success with their own efforts in the same direction. Rarely have they succeeded. Successful writers, such as those mentioned, had the rare gift of achieving just the right blending of melody and technical worth that has made their works enduring and assures them of long future or. Therefore, we feel proud to be able to announce the coming publication of ten original studies by a modern writer; studies which we feel sure have the essence which makes for long usefulness and popularity. These are by Mme. Mana-Zucca, a highly-able teacher, concert pianist, and composer widely known to modern musicians. The studies are of fourth grade and higher and have the following titles and characteristics: *A Misty Scene* (melody and accompaniment in legato style); *A Sky-Line* (develop the stretch of the hand); *The Dancing Spray* (rhythmical wrist attack); *Twelve Leaves* (octave study in crisp legato); *A Sea-Scape* (left hand arpeggio study with right hand melody); *A Spanish Tune* (study in rhythm); *Still Life* (legato study); *Clouds Over the Ocean* (double treble); *The Fountain* (study in velocity); *Flowers in Bloom* (study for quick attacks). This new book will be a worthy addition to the *Music Mastery Series*. Those wishing to obtain single copies at our special advance of publication cash price of 20 cents, prepaid, may send in their orders now and receive the book as soon as it is published.

## Spring Programs

At about this season of the year various departments in the Theodore Presser Co. are serving the foresighted individuals who are planning well ahead on Spring Programs. One department the orders and requests for selections show that school music educators, junior choir directors, choral club conductors, and others working with vocal ensembles large and small are getting their materials together. Mature groups, of course, want good things worthy of the standard they have established and these things we can supply. Just as careful attention, however, is given to the choral requests for younger singers where it means much to have melodious singable things which they will enjoy doing, and which their perhaps not too discriminating music audiences will like. Many suitable choruses with stirring Spring messages in their text are among the things available to such groups. Over in the Sheet Music Selection Department during the month of January and continuing on through the Spring months will be found many requests for selections of materials which progressive teachers want for purposes of building up an interesting Spring Festival Program for their piano pupils. Some teachers work out very attractive Programs often carrying the Program along in some special continuity of their own arrangement, sometimes setting the platform and costuming the pupils in keeping with the whole mood of the Program.

It is an easy matter to select pieces with titles which make it possible to have a "With the Birds Recital", "A Flower Recital", "A Nature Recital", "A Birds and Blossoms of Spring Recital", or some other similar designated type of recital. There is a musical sketch for young musicians, *Birds of All Feathers* by Mildred Adair which provides vocal solos, as well as piano solos, a violin number, some piano ensemble numbers, and a toy symphony number. This sketch as well as various types of recitals mentioned may be enhanced if desired by costumes which can be made very readily of crepe paper.

Other publications which provide useful material are *Around the Maypole*, A May Day Festival, with eight piano numbers, two vocal selections, and dance directions, by William Baines; *Music of the Flowers*, piano solo album; *Spring*, (Around the Year with Music Series), piano solo album; *Among the Birds*, piano solo album; and *The Melting Pot*, piano solo album.

Let our expert selectionists help you find suitable material for whatever type Spring Program you are planning. You may name specific publications which you would like to have sent to you for examination with return privileges, and you may submit such specific requests, or, entirely apart from any specific requests, you may describe your needs and ask that suitable suggestions be sent to you "on approval."

## All-Classic Band Book

Arranged by Erik W. G. Leidzén

First announcement in last month's *ETUDE* of this forthcoming publication for band brought quick response from band leaders interested in modern materials. Already familiar with the brilliant and skilful transcriptions by Erik W. G. Leidzén, through his many important published works, readers know in advance what may be expected in this volume prepared to meet the needs of the elementary band.

As the title suggests, the contents have been drawn entirely from the classic composers and represent a careful selection from unacknowledged compositions not available in other collections for band. Haydn, Schumann, Schubert, Handel, and Bach are each represented with two typical selections; an *Andante* from Beethoven and *Reverie* from Mendelssohn are characteristic of these composers; and a little-known song of Mozart supplies the gem, *Blushing Roses*. Other composers included are Gluck, Verdi, and Martini.

As would be expected, the instrumentation is complete for the modern school band. The conductor's score provides a playable piano part for pre-rehearsal study and a fully-adequate short score on two staves for conducting. All entries are marked and cues indicated. Complete instrumentation follows:

C Flute and Piccolo  
D-flat Piccolo  
E-flat Clarinet  
Solo and 1st B-flat Clarinet  
2nd B-flat Clarinet  
3rd B-flat Clarinet  
E-flat Alto Clarinet  
B-flat Bass Clarinet  
Oboe  
Bassoon  
1st E-flat Alto Saxophone  
2nd E-flat Alto Saxophone  
B-flat Tenor Saxophone  
E-flat Baritone Saxophone  
Solo and 1st B-flat Cornet  
(B-flat Soprano Saxophones)  
2nd B-flat Cornet  
3rd B-flat Cornet  
1st Horn in F  
2nd Horn in F  
1st E-flat Horn (Alto)  
2nd E-flat Horn (Alto)  
1st Trombone  
2nd Trombone  
3rd Trombone  
1st and 2nd Trombone (Treble Clef)  
3rd Trombone (Treble Clef) (B-flat Bass Saxophone, or B-flat Bass)  
Baritone (Bass Clef) (Euphonium)  
Baritone (Treble Clef)  
Basses  
Timpani, Drums  
Conductor's Score (Piano)

In advance of publication copies of this work may be ordered at 15c each for the Parts; 25c, or more, Parts at 10c each; 25c for the Conductor's Score (Piano).

## "Wind Falls"

The buyer who purchases to resell can not afford to be fooled. If he runs a high class food market he wants the choice hand-picked fruit that does not have the blemishes or bruises of the fruit classed as "Wind Fall."

Such a buyer also must cater to various tastes and even though he seeks the choicest fruit in buying apples, for instance, he will not limit his display of fruit to one type of apple. Some people enjoy practically every type of apple, others want nothing but a sweet apple of soft texture, while others delight only in having a hard firm apple with a tartness in its flavor.

Tastes vary in music, and in the great stock of music publications carried by the Theodore Presser Co. all varieties are represented, and in the Publisher's Printing Order of every month all types of numbers will be found. Numbers appearing on the Publisher's Printing Order, however, are there for needs of stock replenishing so the active music worker

is kept acquainted with such materials as represented by numbers on the Monthly Printing Order, and comes to know the "hand-picked" music selections, which others have used with success.

The following list represents some numbers selected from last month's Printing Order. The Theodore Presser Co. will be happy to send single copies of any of these numbers for examination with return privileges.

SHEET MUSIC—PIANO SOLOS			
Cat. No.	Title and Composer	Grade	Price
25361	In My Garden—Scott	1	\$0.30
26605	Swinging in the Treetops— Forrest	1	.25
24010	Waltz with Me—Kerr	1	.25

## The Etude Historical Musical Portrait Series

To an ever-increasing number of our readers, this unique feature of THE ETUDE has assumed the proportions of a monthly "prize package." Filled with pictures and interesting information concerning 44 of the world's best known musicians and musical personalities,

each new instalment becomes a valued addition to this unprecedented collection. And this month's instalment is no exception, as you readily can see by turning to page two. Here you will find included outstanding composers, instrumentalists, conductors, directors, teachers, editors, writers and critics whose names fall into that part of the alphabetical sequence reached by the series this month.

Although the collection is now nearing completion so that those who have followed "all the way" soon will have the most all-inclusive pictorial-biographical reference work available in any form, you'll find it worth your while to look for remaining instalments in the series. And if you would like separate copies of past instalments so that you may have a complete set, or for scrap book purposes, we will be glad to supply you with them at the rate of 5 cents each.

ADVERTISEMENT

## New and Frequently-Requested Awards for ETUDE Subscriptions

THE ETUDE offers fine merchandise in exchange for sending us subscriptions. Many of our musical friends, teachers, students and music lovers generally obtain articles of merchandise of which they are proud, both for their beauty and utility. Make up a list of your musical acquaintances. Call on them. Show them a copy of THE ETUDE and you will have no difficulty in securing their subscription. For each subscription sent to us at the full price of \$2.00 (not your own) we will give you a credit of one point toward any premium selected.

The following is a selected list of rewards: **SILVERCRAFT SERVER:** This new, chromium-finish, pointed-edge-design Server is 13 1/2" in diameter and has a removable, etched-glass compute 5" in diameter and 2 1/2" high. This center dish can be used for cheese, jelly, butter, etc., making the Server adaptable to many uses. Awarded for securing seven subscriptions.

**ICE TUB AND TONGS:** Here is a useful as well as decorative combination. Both Tub and Tongs are completely finished in chromium and the Tub has the new, modern line decoration, with new design handles. Height of Tub, 5 1/2"; opening 5 1/2". Your reward for securing four subscriptions.

**MATCHED KNIFE SET:** This fine set of Knives consists of an 8" Slicing Knife, a 7" Butcher Knife, a Pot Fork and a Parer. All are made of high quality, heavy gauge Carbon Vanadium Steel and have polished rosewood handles. An unusual gift or prize. Awarded for securing four subscriptions.

**PYREX PIE SERVER:** Lined with genuine heat-resisting pyrex, has cast handles and feet and a pierced bulged embossed design frame. Diameter 9". Its chromium finish will remain bright and new looking. Awarded for securing four subscriptions.

**KROME-KRAFT SERVER:** Here is a Server for cake or sandwiches that also may be used as a center piece for fruit, etc. It is 10 1/2" in diameter and has a bright chromium finish. Awarded for securing three subscriptions.

**BREAD TRAY:** A Bread Tray that is a little different in shape and for that reason may be a little more appealing than some others offered. It is 11" x 6 3/4" and has a gracefully irregular rim with decorated ends. Its chromium finish is easily kept bright and new looking. Your reward for securing one subscription, not your own.

## A Binder for Your Copies of THE ETUDE (1938)

Regular subscribers, who have all twelve volumes of THE ETUDE, 1938, no doubt will wish to keep these together in accessible form. For this purpose they can obtain a fine silk-cloth binder stamped in gold "THE ETUDE" for a very small sum.

The price of your renewal for 1939 is \$2.00 in the United States and Its Possessions. If you send your renewal subscription now, adding \$1.25, we will send to you this fine binder which regularly sells for \$2.25; in other words, remit \$3.25 and your subscription to THE ETUDE will be renewed for one year and the binder will be forwarded to you, all charges prepaid. Canadian subscribers, please add 25 cents. On foreign subscriptions, add \$1.00.

## Fraud Agents

We again warn our musical friends against paying money to strangers, unless convinced that the canvasser is reliable. Do not accept a common stationery store receipt. Duly accredited agents carry the official receipt of Theodore Presser Co., publishers of THE ETUDE, or the receipt of the agency for which they work. Read any contract offered to you before paying money. Help us to protect you from loss.

## Delays in Delivery of THE ETUDE

Each year during the holiday season, owing to congested mails, we have more or less complaint on delay in delivery of THE ETUDE. Please bear with us. If your current issue does not reach you within a reasonable time after the first of the month, drop us a post card and we will gladly investigate.

# THE JUNIOR ETUDE

Edited by  
ELIZABETH A. GEST

## The Keyboard Traffic Line

By Gladys M. Stein

"I DO WISH my teacher would not fuss so about my hand position," Frederick grumbled to his mother, when he had returned from his piano lesson. "She said that if I would play in farther on the keys my fingers would not flatten out so much, and that my thumbs would rest on the keys instead of slipping down over the edges."

"Why don't you draw a traffic line on the white keys of the piano, and then try to hold your hands so that the finger tips will fall on the inside of this line when you play?" suggested his mother.

"That might help," admitted Frederick, as he reached into his desk for a ruler and pencil to use in marking the line on the keyboard.

Traffic line

Frederick drew the traffic line exactly one inch in from the outer edge of the piano keys, and then, by keeping the tips of his second, third, fourth, and fifth fingers inside this line while practicing, he soon overcame his flat finger troubles and developed a really good hand position.

## A Musical Flight

By Janet Nichols

WHEN YOU START to practice anything new (or old for that matter) pretend that you are on a "Musical Flight," for you really are, and realize that it is your job to make a safe landing.

Of course before the flight is attempted the plane must be in perfect mechanical condition; that is, your attention must be concentrated on the task, and you must know the exact course that you are to follow, which means you must understand every detail of the musical passage so that it can be executed flawlessly.

Trial flights are made many, many times by inexperienced pilots before they are permitted to do a long distance flight. Likewise the musician, in his "Musical Flight," should attempt not more than a phrase at a time. If there is any hesitancy within the phrase we will consider that the pilot has flown into an "air pocket." Of course it would be better if the "air pocket" could be avoided but they are to be preferred by far to a complete crack-up, which would indicate that the musical pilot had broken down in the middle of his journey. If everything were in perfect order and thoroughly examined in advance this would never, never happen, and if the pilot kept his wits about him it could not happen. Such pilots are never able to make successful long distance flights.

If you want to learn how to keep your mind on your musical task you should play this game of "Musical Flight." It will teach you to concentrate; and a half hour of concentrated effort is worth twice the time spent at the keyboard with the mind wandering and becoming distracted by outside subjects.

Be a good Musical Pilot and you will surely have a "Happy Landing."

## The Shepherd Sings Folk Songs In New Mexico

By Marjorie Knox

ACROSS the blazing crackling campfire, around which they sat that dark lonely night, Chido, the small Mexican boy, spoke to his new friend, the shepherd.

"It is very kind of you, Señor, to let me rest here in your camp tonight. It is a long way to the city where I am taking my burro, packed with my mother's newest woven blankets, and my father's fresh garden vegetables. He is very tired, too." Chido glanced toward the animal strolling contentedly in the dry red pathway in the partial shadows beyond the circle of fire light.

"It is good to have a visitor," cried the Shepherd. "My wife is the loneliest in New Mexico, for I am out in the bleak wilderness away from my people for so many months at a time. You see, I have with me only that large flock of sheep, two dogs, and my Mexican peon cook. These do not fulfill my desire for company so I resort to thinking up new folk-songs or remembering old ones. I sing and play them to pass the lonely hours away."

Chido clapped his hands. "Tell me about them—and sing some—too." The Shepherd smiled and began immediately.

"Folk-songs are those which have originated among the native people of any country. The Mexicans and Indians of New Mexico sing many of these, but the shepherd, having more time, produces most of these songs. From behind a rock, the Shepherd drew forth a crude looking object that appeared to be a giant jews-harp.

"This is the instrument that is confined to the sheep camp. It is called a 'bijuela' and is formed in the same manner as a small jews-harp, only, as you can see, the bow frame is three feet long. This string is made from a guitar gut. But before I got this instrument, I made one of my own from a stiff weed stalk and a linen thread."

"Indeed," said Chido.

"Like all Mexicans," continued the Shepherd, "I have a natural talent for playing other instruments—the simpler ones such as the harmonica, guitar, and the accordion."

"Sing a folk song," demanded Chido, anxiously.

"I will sing *The Charcoal-Man*, a quaint little song which is supposed to have come from El Pino, a tiny hamlet on the edge

of the Navajo Reservation, where coal is mined in New Mexico. But probably, it actually originated in Central Mexico where charcoal burners are a part of the landscape." The Shepherd, accompanying himself on the bijuela, sang the following.

The Charcoal Man

Chido clapped his small brown hands. "I like that song—mucho!"

"Most of the New Mexico folk-songs are love songs. Most of them are sad and in a minor key. The comical song is rare. Sometimes the words of a song express a philosophy of life." The Shepherd strummed his bijuela a minute, then spoke again.

"The New Mexican is not a good singer. Perhaps it is because the very dry atmosphere of this State affects his throat and gives him a husky, unmusical voice. The Mexican is a master of rhythm, but he persists in slurring over his notes. *Con espressione* (with expression) means, in his conception, to clamber for the highest possible pitch his voice can reach. In doing this his tones become nasal and distasteful to the ear of a good musician. But there are a few good singers and, consequently, their songs are very sweet."

"Tonight, upon the mesas across the river from here, there is a Pueblo Indian tending his sheep. Often we meet as we did to-day as we roam this open country. Contrary to the Mexican, the Pueblo knows how to sing. One time while we rested together, he sang for me a corn grinder's song that the Pueblo Indian sings while he grinds corn into meal between lava slabs. 'Shall I sing it for you?' And he sang several other charming folk-songs, also."

Chido listened quietly. Then as the Shepherd finished, the boy yawned and the two lay down and went to sleep as the campfire crackled on into the starlit night.

WAYSIDE SCENE IN MEXICO

## Modern Music

By Carmen Malone

Just listen to the sound  
Of all things everywhere;  
There's rhythm on a breeze,  
There's music in the air.

There's rhythm in the way the raindrops patter down; and in the way the wind swish limbs of trees around. There's music in the phone-wires near a country lane in crossing signals of a swiftly moving train. How different is the pitch the morning whistles blow; or honking horns of cars, as down the road they go. A steel gate loudly clangs; is its pitch A or B? A balky hydrant turns; is its pitch F or G?

Just listen to the sound  
Of all things everywhere;  
There's rhythm on a breeze,  
There's music in the air.

## Harold's Machines

By Leonora Sill Ashton

"I LIKE to play with automobiles. I like machines that have different parts in them to make them go." So said Harold to his music teacher.

"Come over here by the window, Harold," said Miss Davis, "And I will show you a fine machine."

Harold jumped up on the window seat and peered out of the window, but the road in front of the house was empty.

"Where is it?" he asked. "I don't see any machine."

Miss Davis pointed to his own small brown hands. "There are some of the best machines that were ever made," said she. "They have very excellent parts connected with each other by links."

"Now, let us see how many different ones we can count."

Miss Davis pointed to the brown hand again. "Here are the fingers. Each one is composed of three parts connected by fine strong links. The last of these three links connect the fingers with the hands. They have a name—the knuckles."

"Then we come to the larger parts of the machine. The hand is able to move to and fro by means of a wonderful link called the wrist. The wrist also connects the hand with the forearm; and the forearm in turn has a large link—the elbow which connects it with the arm. The arm has a yet larger link, the shoulder, which connects it with the body."

Harold looked at his two brown hands and he felt of his arm and shoulder and wrist.

"It's got parts all connected just like an automobile or any other machine, hasn't it?" he exclaimed.

"Yes," answered Miss Davis. "There is one thing, however, that makes this body different, and the best kind of a machine I think, that ever could be made. The brain which tells you how to guide the different parts is inside of it, instead of outside."

"I guess you're all right about it," said Harold. Then he jumped down from the window seat and started for the piano.

"Come on. I want to practice," he shouted. "I want to make the machines go."

# JUNIOR ETUDE—(Continued)

## Minnie's Musical Arithmetic

(For Very Little Juniors)

By ALETHA M. BONNER

It is Minnie speaking; I love music very early but how I do detest arithmetic! No, I should put the detesting in the past tense, you know what I mean—but let me explain.

I had not been studying music very long when one day my teacher said that in order to play or sing well one must learn to keep time. I asked her how this was done, and when she introduced me to the Note Family Whole, Half, Quarter, Eighth, Sixteenth and Thirty-second. Then it was I found that music is marked by a time signature, such as two-four, six-eight, four-four, or some other fraction placed at the beginning of the Staff House.

The bottom number gives the names of the one particular Note Family living in the house, while the top number tells how many of these Note folk may crowd into the different rooms, or measures.

If, for example, the Time Signature is four-four, it means that the Quarter-Note family lives within, and that four of them may stay in a Measure-room.

I asked my teacher how they managed if they had a party, and invited in the neighbor notes, such as the Eighths and Sixteenths. She thought that was a good question and explained that since the Eighths are only half as large as the Quarters, and

the Sixteenths are so small that four of them can occupy the space of one Quarter, many members of these families could be invited.

It was quite different though when the Whole and Half Notes called, for the Wholes are very stout—four times the size of the Quarters, so only one could squeeze in the measure holding four of the home folks, and the Halves are almost as fat, or twice as big as a Quarter Note, and only two of them could get in the room.

My teacher then asked me how many neighbors might find standing-room in a four-four measure, and I said that if a Half came into the measure, there would be space left for only one Quarter and two Eighths; or that the Quarter might stay out and let the two Eighths and the four Sixteenths in with the Half. Then Miss Frances, my teacher remarked that I must be "good in arithmetic," as that was a correct answer.

I could hardly wait to get home to tell mother about it, as she had always said I was "hopeless in fractions"! And believe it or not, but from that day I began really to study and to be interested in arithmetic, as I wanted to "live up" to my music teacher's compliment, so as to be worthy of her confidence.

## Letter Box

DEAR JUNIOR ETUDE:

As I am greatly interested in the activities and interests of other young people and often receive inspiration from them, I am writing to tell a little about myself and hope to hear from other young folk.

I began to study piano before I was two years old and early began composing little pieces. My other studies were begun before I was three and by the age of seven I twice passed College entrance examinations. I have always worked long hours until a year ago when I was forced to relax. From the age of ten to fourteen I practiced eight hours a day and kept up my studies. Now I practice only six or seven hours and am studying hard and writing music. People often laugh at me now because I am writing a symphony; however, they may soon be surprised.

I have very little time for making friends, but would love to receive some letters.

From your friend,

M. Katrin Van Jount (Age 15),  
California

DEAR JUNIOR ETUDE:

We have organized a music club which meets the last Monday afternoon of each month. We have twenty members ranging in age up to fourteen years. Each member plays a piano selection; and also we read the lives of composers. We have club pins and at the end of the meetings refreshments are served.

We feel that the club is valuable experience for us.

From your friend,  
NORMAN LEE DAVIS (Age 8), Ohio.

## Who Knows ???

1. What is a polonaise?
2. Who wrote the oratorio, "Creation"?
3. When did Debussy die?
4. If the supertonic of a major scale is C-sharp, what is the signature of that scale?
5. How many measures are in the *Star Spangled Banner*?
6. Which composer was born in 1797 and died in 1828?
7. What is meant by *con grazia*?
8. Is Iturbi a composer, conductor, pianist or violinist?
9. What nationality was Edward Elgar?
10. What instruments comprise the brass choir in a symphony orchestra?

(Answers on this page)

## Prize Winners for Broken Letter Puzzle:

Class A, Nancy Zanolli (Age 15), Connecticut.

Class B, Glory Rathe (Age 12), Illinois.

Class C, Frances Sutton (Age 9), Virginia.

## Answers to Who Knows

1. A stately court dance, originating in Poland.
2. Haydn.
3. 1918.
4. Five sharps.
5. Thirty-two.
6. Schubert.
7. With grace, or gracefully.
8. Pianist and conductor.
9. English.
10. Trumpets, French Horns, Trombones and Tubas.

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "My favorite composer." Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by January 18th. Names of prize winners and their contributions will appear in the April issue. The thirty next best contributors will receive honorable mention.

## RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not

have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

## The Inside of My Piano

(Prize Winner)

PEOPLE DO NOT REALIZE what a piano is. It is something like magic. The clear tones that come from it are really grand, if you like music. Sometimes I think a fairy is in my piano, making beautiful music for me. If a piano could talk it would tell you many wonderful things about how its lovely tones are produced. Often I wish I could get inside of my piano to see what happens. I would have been inside long ago, but I am too big!

GENEVIEVE BEVESS (Age 9), Class C,  
Iowa

## The Inside of My Piano

(Prize Winner)

UNTIL NOT so very long ago the inside of my piano was a mystery to me. Then suddenly I awoke to the fact that not all of the music was determined by the action of my fingers, and my curiosity was aroused. Upon inspection I found that behind the beautiful exterior of my piano there is an intricate set of wires and hammers, all of them servants that cooperate with me to make lovely chords and melodies.

To me, the whole system is rather like an army. My brain is the Commander-in-chief; my fingers are the commanding officers; and as I depress each key the hammer behind springs into action without hesitation. The hammers might be called the subordinate officers in this imaginary battalion, and they in turn, give directions to the strings who are the privates. In my army there are no revolutions but always willing obedience and perfect accord and harmony.

PATRICIA HANSON (Age 15), Class A,  
Washington

## The Inside of My Piano

(Prize Winner)

THE CASE OF MY PIANO consists of two sides made up of many thin strips of wood, bent to shape and glued together. They are supported and held in place by posts of heavy timber. Over the sounding board is placed a metal plate to hold the strings, which are drawn from the tuning pins to the hitch pins at the other end. The action is adjusted in such a manner that a felt hammer strikes a string, or a group of strings in unison. The strings pass over a bridge which is glued to the sounding board. Press down a key and you will see how its rear end rises and lifts the "jack" which throws the hammer against the strings, at the same time raising the damper from them.

The left (soft) pedal, in upright pianos shifts the hammers nearer the strings so their strokes are shorter and lighter. In grand pianos it shifts them to the side. The middle, or sustaining pedal, when the keys are pressed, holds the dampers away from those particular strings, where as the damper pedal holds the dampers away from all the strings.

The tone of a piano depends largely on the length and size of the strings and on the resonance space.

CAROLYN CUNNINGHAM (Age 13), Class B,  
New York

## Anagram Tunes Game

By Gertrude Greenhalgh Walker

THIS GAME necessitates some preparation. Cut pieces of manuscript paper into one half inch or one inch squares. Upon each square write a note, flat, rest, sharp, accidental, dot, or in fact, any character used in music notation. Make many duplicates of each character.

After players are seated around a table put all characters in a pile in center of table. Each player silently thinks of a tune (four measure phrase may be long enough if very young people are playing) after which he pulls one character out of the pile. If he can use it he keeps it; if not, he returns it to the pile.

The one first completing his tune or phrase is declared winner.

Suggested tunes are *America*, *Star Spangled Banner*, *Dixie*, and so on.

Rita Sue Sheahan, Missouri  
Age three and a half years

## Honorable Mention for Broken Letter Puzzle:

June Steidinger, Sara Cable, Lily Mae Lanzmar, Grace Larsen, Marjorie Clipper, Cecil Seigler, Thomas Petrik, Marcia Paulch, Irene Clinton, Mary Brideson, Rita Elaine Scogna, Sheila Falconer, Dorothy Gaudin, Virginia Hummel, Bertha Sagel, Anne Marie Friedly, Darleane Christian, Murrel Brite, Elizabeth Jones, Lola Sabo, Gloria Roth, Rita Kalinowski, John E. Price, Edith Doring, Patricia Fay, Betty Madigan, Lena Stecker, Elizabeth Johnson, Julia Johnson, Lola Wallace Johnson, Mary Katherine Bayless, Theodore Wolfe.

## LETTERS FROM ETUDE FRIENDS

### How Flowers Taught Sybil to Count

TO THE ETUDE:

Sybil, an eight year old, sweet, but stubborn child, refused to count. I explained the reasons for counting, illustrating them by marching, dancing, doing calisthenics, and rocking a doll, to show how the body moves rhythmically. I told about accents, allowing marchers and waltzers to get in step, should they miss. I played tunes in different time to show they couldn't be recognized. Her Irish, blue eyes would look up saying, "Why bother, you or I?"

One afternoon when walking in my garden to pick her a bouquet, I noticed that Cosmos has eight petals. I enthusiastically drew her attention to this, and we counted dozens of cosmos. Then we counted toes and fingers. Why even our Creator counted! If God counted, perhaps a wee little miss should count her music.

Trotting home, she carried not only flowers, but also a thought. She must have done a heap o' thinking, for never again did I need to mention counting. She loved to count, gaining such a thorough knowledge of time that she now has a ladies' orchestra. Her mother says she loves her music more than anything else in her life.

HAZEL DITZ BROWN

### An "Etude Room"

TO THE ETUDE:

"I have turned an entrance hall into an ETUDE room, placing shelves all the way down and they are filled with Etudes, have five music cabinets full of sheet music, and am I proud of my Etude room. Pupils who are unable to buy THE ETUDE (some just can't afford to) I donate copies to—assign lessons out of them in hopes of making them Etude conscious."

MAYBELLE URADNICKER, Washington

### Music Extension Study Course

(Continued from Page 20)

sharply defined while the tonal values of the piece as a whole are on the light side.

A well marked rhythm is the result of proper accents and proper phrasing. Do not forget that the phrasing has a decided influence on the rhythm.

And, of course, the degree of tone is controlled by the amount of force expended whether it be finger, wrist or arm touch.

For the rest, simply follow the marks as given and proper interpretation is bound to result.

### EVENING BELLS

By OPAL LOUISE HAYES

This piece is of about grade one-and-a-half and should be played in slow tempo and descriptive manner. The ringing of the bells is heard at intervals throughout the piece—always indicated by the words of the text. Strive to produce a bell-like tone by striking the keys rather sharply with fingers and hands held somewhat tense. The tenseness of the hands will inject a metallic effect to the tones, thus following the intention of the title.

### HAPPY HANS

By OLIVE P. ENDRES

This little Dutch Dance is so full of cheer and good humor that it is practically impossible to play it in any other than a happy manner.

Do not stint the accents and give plenty of significance to the notes bearing the *marcato* marks. They all indicate the tapping of the wooden clogs in the dance. Note that the middle section is played somewhat slower and be sure to sustain the right hand chords throughout the measure.

The *staccato* notes of the accompaniment preserve the rhythm of the dance and should be clipped off sharply against the *sostenuto* of the upper voice.

\* \* \* \* \*

No man has too much talent to be a musician; most men have too little.—George Sand.

## Earning a Living Through Singing

(Continued from Page 18)

of the station, and talk your ideas over with him. Be willing to sing for nothing until you lose the feeling of strangeness and embarrassment before the mike.

An enterprising young singer thought up a good idea for a radio program which included songs and then went around the small town in which she lived until she found her own sponsors. She went to the advertising managers of several firms who were not on the air and asked if they would be interested in paying a reasonable sum for a little such advertising. She explained that with several in the combination no one would pay very much. The idea struck fire and she won sufficient cooperation to cover

thoughts, feelings and moods is their speaking voice. The same vocal principles and methods apply to the speaking voice as to the singing voice. Add to this that every human breast hides a secret desire to sing. Now that it is a known fact that a naturally and easily produced voice always gives pleasure, inhibitions begin to break down and these people develop their own self expression. Even if it is only to sing in a chorus or to sing around the house, they want to do it acceptably well so as to enjoy it.

Public speaking classes are greatly in demand. Singing classes that end up with a community "sing" and a social evening

Second in the twelve month chain of Supernumbers of THE ETUDE

### SMART ATTIRE FOR CONCERTS AND RECITALS

ELIZABETH HAWES

In an interview illustrated with original, exclusive, and hitherto unpublished designs, Elizabeth Hawes, outstanding fashion specialist of the hour, tells what should be worn at recitals and concerts. Readers of the gentler sex will consume this with delight. Miss Hawes' "Fashion is Spinach" is still one of the best sellers in book stores.

### LET'S GO TO RADIO CITY MUSIC HALL

Stephen West takes you on a visit behind the scenes in the world's largest theatre, the Radio City Music Hall in New York, and tells how the great show seen by millions of visitors is put on. This is an article filled with lively interest.

### MUSIC'S DEBT TO SHAKESPEARE

Time and again we have had friends of THE ETUDE write, asking us for material to use in Shakespeare programs. Well, here it is, by W. F. Gates, with a great deal of very interesting additional information about the music of the greatest figure in English literature.

### MUSIC, THE MOST POPULAR OF THE ARTS

Walter R. Spalding, M.A., Professor Emeritus of Music at Harvard University, and famed for his rich experience and sagacity, discusses this subject in a very stimulating manner.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of delightful new music to play and sing.

## MUSICAL BOOKS REVIEWED

### Psychology of Music

By CARL E. SEASHORE

Thirty years ago we knew of only two comprehensive books in the English language (one British and one American) upon the subject of psychology; and they were both developed upon the very chimerical lines of the study of what was known as metaphysics, in which the author depended more upon his imagination than upon scientific research and measurement. In 1857 Wilhelm Max Wundt, a physiologist, commenced to lecture at Heidelberg, Germany, and during the next thirty years virtually revolutionized the study of psychology, by putting it upon a laboratory basis. He thus opened up another vast field for other investigators. Carl E. Seashore, who was born at Morland, Sweden, in 1866, was one of these. He was educated at Gustavus Adolphus College and at Yale (Ph. D. Sed.). He has done more in the field of Musical Psychology than any other worker. Therefore a new and comprehensive volume from Dr. Seashore, who, at the University of Iowa and at other universities and music schools, has had extraordinary opportunities for the observation of his scientific musical tests, is sure to attract the widest attention. While some have pointed out that occasionally students, who have successfully passed the tests, fail in achieving worthwhile musical results, the tests have certainly presented teachers with a means of determining values which hitherto never have existed. The twenty-eight chapters of the book, which is designed only for serious workers, cover a wide range. Much of it is an exposition of results obtained through acoustical apparatus. The chapters upon the musical instruments are especially interesting. The book will unquestionably find a wide usage.

Pages: 430.

Price: \$4.00.

### Chopin, His Life and Letters

By MORITZ KARASOWSKI

In 1879 William Reeves of London brought out a two volume edition of "Chopin, His Life and Letters," by Moritz Karasowski. Appearing only thirty years after the death of Chopin, it was sufficiently near to his activity to register much authentic information which might otherwise have been lost. Chopin has now been dead nearly ninety years, and Reeves is bringing out a third and enlarged printing of this notable work. One of the things which always has impressed us about this book is that Chopin's correspondence with his family is intimate and thoughtful as it is, is singularly naive, and deals largely with personal matters. There is very little dealing directly with art or the philosophy of music. The work however makes very interesting reading for Chopin enthusiasts.

Pages: 542.

Price: \$6.00.

Publisher: William Reeves, London, England.

### Songs of Praise

By LOUIS E. DANIELS

New hymn books usually contain new editions of compilations of established hymns. "Songs of Praise for America" is the selection of Louis E. Daniels, Doctor of Sacred Music, Canon of Trinity Cathedral, Cleveland, Ohio. It also includes a short psalter with canticles, simply pointed. So numerous are the little known settings of hymns, both ancient and new, that the book is like an entirely new assembly of material. People sing hymns best when they know the tunes. In these days possibly fifty percent of the members of a cultured congregation can read music. To them these new hymns will prove a pleasant surprise. Others may find some difficulty in becoming acquainted with the new themes. The work is splendidly edited.

Pages: 272.

Price: \$1.00.

Publisher: Oxford University Press.

## Fretted Instruments Department

(Continued from Page 60)

the steel.

To obtain good all round results it is essential of course to have a good guitar as an inferior instrument will nullify the best efforts of the player. Use only the best strings obtainable, made of bronze or copper wire; and all wound strings should be of the polished kind. For the Hawaiian guitar a heavier string than those used on the Spanish guitar is preferable; and many players use a regulation second string for the first.

Keep the strings free from rust by wiping them with a woolen cloth after playing; and place your guitar in its case when it is not in use. In conclusion, please remember that we are always ready to help with any problem that might seem too difficult to solve.

# THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

## An Alphabetical Serial Collection of THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3696 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued. Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

**Georg Philipp Telemann**—B. Magdeburg, Ger. Mar. 14, 1681; d. Hamburg, July 25, 1767. Comp., noted contemp. of Bach. In 1709 court cond. at Eisenach. Fr. 1721, town mus. dir. at Hamburg.

For thirty-eight years Century music has enjoyed the distinction of being one of the finest editions published, yet its price is but 15c a copy.

In the following list are featured some of our very latest issues, including the works of four of today's most popular composers.

Teachers, pupils and players will find them all of exceptional value, especially Kay Armour's "Modern Piano Method" and Walter Rolfe's "Book on Harmony." You can buy them at your dealer or direct from us.

Teachers who use and recommend Century music win the everlasting gratitude of parents who can't afford the high prices generally asked for teaching music. Century music helps you hold your old pupils and also aids in enrolling new ones.

Your money refunded without question, if not fully satisfied with your purchase.

# NEW and IMPORTANT

## A MODERN PIANO METHOD FOR BEGINNERS

by  
**KATHLEEN ARMOUR**  
PRICE 15c EACH PART

Here is something decidedly new and original. It is issued in five parts in sheet music form and each part sells at the regular price at 15c per copy, which enables the pupil to start the study of the piano with very little financial outlay. This modern work is based on the middle C approach and is so clear and stepwise that the pupil is playing little tunes almost at the outset. Profusely illustrated. Teachers, be sure to see this outstanding work.

3196—Part I—Learning Letters on the Keyboard  
3197—Part II—Notes, Bars, Time Signatures  
3198—Part III—Five Finger Exercises  
3199—Part IV—The 2/4 Time Signature  
3200—Part V—Introducing the 8th Note

## CENTURY PIANO SOLOS, 15c ea.

# ALSO THE CENTURY MANUAL OF HARMONY by WALTER ROLFE

A pocket sized simplified method of the elements of harmony, embracing the scales and their construction, the intervals, the triads in both major and minor keys up to and including the dominant 7th, and its inversions.

Everything is quoted in the simplest terms possible so that even a child with a year or so of piano study can easily "follow thru" with it. Be sure to see it. PRICE, 25c.

The Century Catalogue contains over 3000 titles, including: PIANO SOLOS—DUOS—TRIOS—QUARTETS—SAXAPHONE and PIANO—MANDOLIN and GUITAR and VOCAL.

Ask your dealer for Century music, and if he can't supply you, send your order direct to us. Our complete catalogue will be mailed you FREE on request.

## The World of Music

Interesting and Important Items Gleaned in a Constant Watch on  
Happenings and Activities Pertaining to Things Musical Everywhere

DR. FREDERICK  
S. CONVERSE

DR. FREDERICK SHEPHERD CONVERSE, eminent American composer and teacher, received the homage of musical Boston when recently the Music Lovers' Club of "The Hub" presented in historic Jordan Hall of the New England Conservatory a program devoted to his compositions. Especial interest was centered in a new "Piano Sonata in A minor" which had its world première on this occasion, at the end of which Dr. Converse received an enthusiastic ovation.

LA SCALA, of Milan, premier opera house of opera prolific Italy, opened its season for 1938-1939, on its traditional date of December 26th, with a gala performance of Verdi's "Macbeth."

THE PRIZE OF FIVE HUNDRED DOLLARS for a choral work suitable for high school voices, and dedicated to the World's Fair of New York, has been awarded to Norman Lockwood, associate professor in Oberlin Conservatory of Music. He used for text Walt Whitman's "Out of the Cradle Endlessly Rocking."

THE HAYDN BIRTHHOUSE at Rohrau, a humble cottage in which the master's father plied his trade as a wheelwright, is to be restored and turned into a Haydn Museum.

HARTFORD, CONNECTICUT, has been celebrating the eighty-second anniversary of the teaching of music in its public schools, and along with this the three hundredth anniversary of the establishment there of a High School in 1638, doubtless the first in America.

ALFRED CORTOT has been the recipient of the decoration of a Grand Officer of the Royal Order of the Phoenix, at Athens, Greece.

THE APOLLO MUSICAL CLUB of Chicago gave on December 27th its ninety-second performance of Handel's "Messiah." The two hundred voices were supported by the Chicago Symphony Orchestra, with Kathryn Witwer, soprano; Ruth Slater, contralto; Leslie Maddall, tenor; Frederic Baer, bass; as soloists, and Edgar Nelson conducting.

CLARENCE  
H. MACKAY

CLARENCE H. MACKAY, art patron, chairman of the board of directors of the New York Philharmonic-Symphony Orchestra, and a director of the Metropolitan Opera Company, died suddenly on November 12th, in New York. Mr. Mackay is credited with having been the moving spirit in the forming of the Chicago Grand Opera Company, in bringing Arturo Toscanini to lead the Philharmonic-Symphony Orchestra of New York, and he was a sponsor of the series of concerts at the Metropolitan Museum of Art, with David Mannes as leader.

JOHN McCORMACK gave what he declared to be his farewell concert, at Dublin, on the evening of October 8th, last, before an audience of four thousand people. Though but fifty-four, and with a voice in many ways at its prime, Mr. McCormack is said to have answered inquirers, "I would rather hear people say 'Why did you retire?' than 'Why don't you retire?'"

TWO UNPUBLISHED DEBUSSY COMPOSITIONS, *Crépuscule d'Été* and *Intermède*, as orchestrated by Maurice Dumesnil, were first heard in public when on October 31st they were on the program of the Orchestre du Conservatoire, under the baton of M. Lucien Niverd, at Tourcoing, France. Critics praised the instrumentation and the original charm of the works which showed many unmistakable signs of Debussy in his later years.

DON GREGORY SUNOL has been appointed director of the Pontifical School of Music of Rome. He was formerly at the Monastery of Monserrat, near Barcelona, Spain, which, we are pleased to learn, has not been damaged in the Spanish Civil War of the last two years.

THE NEW YORK MADRIGAL SOCIETY AWARDS, providing a professional début recital at Steinway Hall, on January 10th, have been won by Norman Goldblatt, violinist, of Dover, Delaware; and Josephine Neri, soprano, of Denver, Colorado; in a nation wide competition.

GEORGE BAKLANOFF, Russian baritone remembered as long a member of the Boston Opera Company and of the Chicago Opera Association, passed away on December 6th, at Basel, Switzerland, at the age of fifty-six. He first became famous because of his successful interpretation of the part of *Boris* in Moussorgsky's "Boris Godounoff" at the Imperial Opera of Moscow.

LISZT'S "CHRISTUS," in operatic form, was the work chosen for the opening of the season of the Budapest Opera House. As presented, it became one of the most picturesque and artistic events of recent years. Thus the ambitious manager, László Markus, broke with the traditional use of Erkel's "Hunyadi László" to initiate Budapest's "season."

ERNEST BLOCH'S new concerto for violin and orchestra was heard for the first time in public when, on December 15th, it was on the program of the Cleveland Symphony Orchestra, with Joseph Szigeti as soloist and Artur Rodzinski conducting.

MILAN OUTDOOR OPERA of the past summer, in the courtyard of Sforza Castle, offered a repertoire of eleven operas and one ballet. It is estimated that six and a half millions of listeners attended; that the nominally priced tickets realized above two million, one hundred and thirty-three thousand lire; and that the enterprise gave employment to two thousand people.

MASSENET'S "WERTHER" had, early in last November, its one thousandth performance at the Opéra-Comique of Paris, when the occasion was turned into an official gala night. President of the Republic and Mme. Albert Lebrun entertained in the state Box. A magnet of interest in the brilliant audience was M. Ibos, now seventy-eight, who, on January 16, 1893, sang the tenor rôle when this opera had its first performance at the Opéra-Comique; before which he had created, in 1892, this part in the world première of "Werther" at the now Théâtre Sarah-Bernhardt which in earlier years housed the Opéra-Comique.

MME. ELLY NEY was piano soloist at a late concert of the Philharmonic Orchestra of Berlin, with Max Fiedler conducting, when she played both of the great concertos of Brahms—the "Concerto in D minor, Op. 15" and the gigantic "Concerto in B-flat, Op. 83."

THE GOVERNMENT SUBSIDIES of the Grand Opéra and the Opéra-Comique of Paris have received an increase for the season of 1938-1939, of twenty-four million francs (about four million dollars at present exchange). And this is opera in impoverished Europe!

THE BIZET CENTENARY has been celebrated at the Théâtre de la Monnaie of Brussels, Belgium by presenting "Carmen" on the exact anniversary of the first performance of Bizet's masterpiece at this historic opera house. Those who know their "Carmen" traditions will recall that it was at this first performance at La Monnaie that "Carmen" won the enthusiastic acclaim which turned sentiment in its favor as perhaps the greatest of all French operas, after its première at the Opéra-Comique of Paris had been a rather complete fiasco.

VITTORIO GIANNINI, American composer, has succeeded to the position of instructor of composition at the New York College of Music, left vacant by the late Aurelio Giorni. Born in Philadelphia in 1903, Mr. Giannini first attracted attention by winning three years in succession the Grand Prize of the American Academy in Rome, and later when his opera "Lucedia" was performed in Munich in 1934, and his "Scarlet Letter" at Hamburg in 1938, the latter with the composer's sister Dusolina in the leading rôle of Hester Prynne.

RICHARD STRAUSS is reported to be engaged on the writing of a new opera, "King Midas with the Ass's Ears."

FRANK L. SEALY, widely known American organist and conductor, died on December 13th, in New York, as the result of an automobile accident. Eighty years of age, Mr. Sealy had been for long terms director of the New York Oratorio Society of New York; organist of the Fifth Avenue Presbyterian Church; president of the New York Manuscript Society; and during the ten years he was warden of the American Guild of Organists, the membership grew from eighteen hundred to forty-three hundred.

LEOPOLD GODOWSKY, distinguished pianist, composer and teacher of many now eminent artists, passed away on November 20th, in New York, in his sixty-ninth year. Born on February 13, 1870, he first appeared as a pianist at the age of nine; then studied under Rudorff at the Hochschule of Berlin; and at fourteen he began a series of American tours as accompanist of our own brilliant sopranos, Clara Louise Kellogg and Emma Thursby, and later with the famous Ovide Musin, Belgian violinist. In 1892 he became instructor of teachers at the Broad Street Conservatory of Philadelphia, and from 1894 to 1899 was director of the piano department of the Chicago Conservatory. He then made many world tours as pianist and became eminently known as a composer and editor. A coming editorial will tell more intimately of his wide achievements.

A TEMPLE OF MUSIC BANDSHELL has been given to the city of Milwaukee by Emil Blatz. The Temple stands in Washington Park. It was dedicated by a gala concert by the Wisconsin Symphony Orchestra under the baton of Siegfried Prager, before an audience of forty thousand music lovers, when Mr. Blatz formally presented the Bandshell, which was accepted for the city and county by Mayor Daniel Hogan.

DANIEL MELILLO, born in Castelgrande, Italy, and for his second six years a resident of Denver, has been awarded the Five Hundred Dollar Prize offered by the Colorado Federation of Music Clubs to violinists of that state.

HANDEL'S "BELSHAZZAR," now so seldom heard, was recently performed by the society "The Voice of the People," Amsterdam, Holland.

EVANGELINE LEHMAN, well known to our readers for her distinctive compositions which have appeared in THE ETUDE, has received her third recognition from the French Government, in the form of the "Ordre Latin," in acknowledgement of her many works of French inspiration and performed in that country. She had previously received the "Medal of the Ministry of Foreign Affairs" and the "Palms of an Officer of the Academy."

SEVEN AMERICAN WORKS will be performed during the season of the National Symphony Orchestra of Washington, under the direction of Dr. Hans Kindler. Four of these works will have their world première performances, these being a symphony by Roy Harris; a piano concerto by Paul Nordoff; a suite, "Miniatures," by Isidore Freed; and a tone poem, "Seven Visions," by La Salle Spier, one of Washington's leading musicians.

## Music And The Arts

**H**ENDRIK WILLEM VAN LOON (pronounce it Van Lone), he of the omnivorous mind and near omniscient outlook, represents a most singular figure in this day, when much writing dealing with world affairs is done by men and women with superficial experience and knowledge. Van Loon is, of course, a very great genius; but, notwithstanding his gifts and his training, he works as hard and long as could any hack, in turning out the material he has to his credit.

The interest of *THE ETUDE* in this remarkable man is heightened by the fact that he is an able and well schooled musician, capable of slipping into the violin section of any great symphony orchestra and taking his part with the best. Therefore, when he produces a six hundred and seventy-eight page book, such as "The Arts" (Simon and Schuster, New York), we hail it as a momentous occasion. This, of course, is in no sense an advertisement; but, after having read this huge work, we feel that every musician who has not already acquired the equivalent of the contents of it has an opportunity here to acquire a cultural grasp of the significance of the other arts which must make itself felt in all his musical work. As Dr. van Loon says in the beginning, "All the arts should have but one single purpose and should contribute, as much as it is within their own particular power to do so, to the highest of all the arts—the art of living."

The work starts in prehistoric times. It tells very cleverly and dramatically how a Spaniard, the Marquis de Sautuola, went with his little daughter into a cave in the Cantabrian Mountains; and how the child found a picture of a huge bull painted upon the wall. This mural, nearly twenty-seven thousand years old, is said to be the first of the famous prehistoric pictures to be discovered. So remarkable were the pictures found in this cave that the art critics of his day contended that the Marquis de Sautuola was a fakir, that he had hired expert artists from Madrid to paint them, because surely no savage, prehistoric people could possibly have done anything so extraordinary. The discoveries of other pictures in France and Italy vindicated the ruffled feelings of the injured Marquis. Thus, page by page, van Loon goes on telling the majestic story of the progress of art, down through the centuries. Of the sixty-four chapters, including a prologue, fourteen are definitely devoted to music, and two to dramatic art. The entire book of some three hundred thousand words is enlivened on each page with collateral anecdotes and

knowledge which make the work a most necessary one, particularly for the music student, the music teacher and the music lover, who cannot fail to benefit by a wider outlook upon the field of art as a whole.

The particular service that Dr. van Loon has rendered is that of assembling from the huge mass of universal knowledge which floods the libraries of the world, just those things about which a worker in the arts must know, to gain a proper perspective. To the general importance of the book, Dr. van Loon has contributed over eighty notable drawings and designs (many of them full page and printed in color), which contribute immensely to the stimulating value of the work.

The graphic and comprehensive manner in which he compresses a great deal of information into a very few words is shown in the following extract devoted to the piano:

"Good instrumental music was impossible without good instruments. The *Lied* depended for its development upon a suitable instrument with which to accompany the voice. The lute was too difficult. The sound of the violin was too thin. The harpsichord did not have volume enough. Then the piano was invented and the problem was solved.

"This most popular of all instruments, like its predecessors, the clavichord and the clavicembalo, was a keyboard instrument; but its tone was produced by means of padded hammers which struck a tightly stretched metal string. In the older keyboard instruments the strings were plucked in the same way you still pluck the strings of a mandolin or guitar. Furthermore, the old instruments were not able to vary the volume of sound they produced. The new hammer piano, unlike the old plucked instruments, could play either very loud or very soft. Hence its name when Bartolommeo Cristofori of Florence invented it in the year 1709, the *clavicembalo col piano e forte*, 'the clavicembalo that could play both loudly and softly.' That name was too long for practical purposes. It became the pianoforte, the 'loud and soft.' Even that was too complicated. Thereafter it became known as the *piano*. The *forte* was left to the player.

"The invention of Cristofori's did not exactly sweep everything before it. Another hundred years had to go by before the inner mechanism of the pianoforte was sufficiently simplified to make it an instrument everybody could handle.

"The first real improvements were introduced by a cer-

tain Stein, an instrument maker of Augsburg. But in Berlin there was an enterprising instrument maker by the name of Silbermann who had more or less stolen Cristofori's idea, and it was Herr Silbermann who manufactured those new pianos which so delighted the honest heart of Johann Sebastian Bach, when he was asked to improvise for the benefit of Frederick the Great. Sometime after 1775 these Berlin pianos found their way to London, and there a certain Broadwood started building them. By now all the great musicians were playing the piano and were expressing their preferences and their dislikes. They either went into raptures over the harder toned English pianos, or they would not touch a key unless they could have the lighter and more elegant pianofortes that were the product of the Viennese school. Mozart was a champion of the Viennese pianofortes. Clementi, the Italian, who during the first thirty years of the last century taught all the best families of London their piano (as his contemporary, Czerny, was teaching those of Vienna), was loud in his praises of the Broadwood variety.

"Soon afterward Erard in Paris began to put a piano on the market that combined the best features of both schools. Since then we can say that Cristofori's invention has penetrated into more homes than even the toothbrush or the automobile. For, in the New World, too, a certain Chickering began to build pianos of his own in 1823, and Steinway followed suit in 1853; and since then the number of different makes has run into the dozens.

"For the piano successfully solved the problem of the one-man orchestra. Until the days of Schubert, all really satisfactory accompaniments for songs had had to be written for orchestra."

Readers of *THE ETUDE* also will find the chapter, "New Ears Begin to Listen," an unusually fine and lucid exposition of the beginnings of notation.

The book is filled with the author's rare ingenuity and consideration for the reader's natural curiosity and interests. He even goes so far as to design and include a special bookmark. To our mind, bookmarks are indispensable, especially in this day when we are all obliged to get in our reading when our much crowded hours permit. There was a time when bookmarks were in almost universal use, and they were not needed nearly so much in that day as at this time. *THE ETUDE* publishes a bookmark for complimentary distribution to its friends, and some three hundred thousand have been requested. They are still available, *gratis*. Dr. van Loon is to be thanked for his efforts in reviving the useful reading help, the bookmark.

We hail Dr. van Loon's achievement as an indispensable volume in the cultural curriculum of all who have to do with the arts. One ingenious device present with the book is that of a jacket cover on the inside of which is an original chronological map (18 x 22 inches) giving the relative dates of the most important events in the history of the arts.

### Men in Great Places

**T**HE Rotary motto, "He profits most who serves best," has been demonstrated in the cases of thousands of successful people in all fields. The young man or the young woman who starts out in life with the single motive of "getting" rather than "giving" is often unconsciously throwing up a barrier which isolates the individual from the highest things in life. The phenomenon of getting through giving seems to work out in a way which is mystical to an amazing degree; but, after all, it is a most logical and practical resultant. The whole theory of Christianity is based upon sacrifice and service, and the greatest triumphs of the Christian religion have evolved from these noble attributes.

The late Theodore Presser, who acquired a large fortune, never had money as his objective. When he was preparing a new work for publication, he cautioned his helpers, "Never think about the profits. If there is an educational or a human need to serve, and if the publication has been properly prepared from a technical and an artis-

tic standpoint, you will never have to worry about its success. Set out with the idea of making money and, ten to one, you will produce a worthless or a very transient work." Time and again, he counselled teachers who applied to him for advice upon how to be successful, "Don't try to make money; make fine pupils and your troubles will be over."

Henry Ford has an identical philosophy. Mr. Ford is so remarkably like the late Mr. Presser in his expressions, reactions, simple democratic fundamental principles of procedure and physical movements, his rapid arrival at unusual and wise decisions, that your editor, who was intimately associated with Mr. Presser for eighteen years, was, upon meeting Mr. Ford, bewildered by this uncanny similarity. Note the following statement made by Mr. Ford and reported in the *Detroit Free Press* during the past year: "One thing I never thought about was making money. And in my life I have yet to know a man who set out to make a lot of money that ever succeeded." Put your own interpretation on what Mr. Ford really means.

Perhaps he had in mind some of the gentry who have taken to themselves "a lot of money" but who are now, despite their past millions, looking out through prison bars. Certainly no one could call them a success. In the same light, riches certainly can not be measured by mere money. Many a paupered genius has left a priceless fortune to the world. Service to mankind, however, is often the foundation for great fortunes. Service implies a vast responsibility. It was Bacon who said, "Men in great places are thrice servants"; and the most illustrious of men are usually those who have served most and best.

### Pipe Organs in Homes

**T**HE American home of to-day is rich in musical instruments. In the time of the Puritans the home that owned a fiddle, or a hautboy or a flute was one of wealth. How dumbfounded Miles Standish and Governor Winthrop would be if they were to return and go into a modern home where there are not only a piano, a violin, a phonograph and a radio but a real pipe organ, not pumped by hand power as were those of only fifty years ago but by an electric motor that may be turned on and off with the ease of turning a switch for a light. Time was, within the memory of the present generation, when the organ in a private dwelling was a comparative rarity. Fortunate was the host who could include this delightful form of entertainment for his guests. They, in turn, carried away, as one of the pleasantest of recollections, the memory of music such as only the organ can provide.

That rare treat is no longer for the few. Almost overnight, by leaps and bounds, progress in inventive genius and manufacturing skill as applied to the pipe organ, has made it possible for the average, instead of the exceptional, home, to have organ music that adheres to the ancient tradition in the incomparable quality of tone that comes from accurately voiced pipes.

This progress supplies a price to fit the purse, a design and size adapted to the individual home, an ease of installation that involves no building changes—in all, as simple as inserting a plug in an electric outlet in the floor or wall. These pipe organs with pipes, for the home, have the same rich tone quality as the great church instruments; they are voiced in their speech by the same artists who preside over this important phase of the largest of installations. It is not infrequently that one finds among business men, amateur performers who not only can give good account of themselves with Bach, Rheinberger and Merkel, but who also have a wonderful time delving into Debussy and Ravel.

### An Organist's Advice to Singers

**A** VOCALIST should be an all 'round musician, play the piano, know at least something about harmony and musical form, and be able to read at sight. A singer who cannot read at sight is of no use in any organization whatsoever."—Dr. William C. Carl.

# Smart Attire for Concert and Recital

By ELIZABETH HAWES

Distinguished American Designer

Author of "Fashion Is Spinach"

With Original Designs Made for The Etude

A Conference Secured Expressly for

The Etude Music Magazine

By ROSE HEYLBUT

The concert gown, whether used for student recitals or for celebrity performances, must be designed so that it does not detract from the main business of the wearer, which is the making of music. There must be no irritating trimmings; nothing that moves or sways; nothing bizarre; nothing, in short, which makes the audience stop listening in order to look. The lines of a concert gown should be dignified, reposeful, and worthy of their part in a sum total of music making. Lines should not go places on their own account; they should stay still. Keep away from dancing flounces, wiggly trains, floppy scarfs. Keep the lines of your gown quiet and inconspicuous.

"SWANEE"

A youthful frock of plaid taffeta with a Southern origin.

"VOLGA"

With plum velveteen green slip. This is very effective for informal recital.

"SCAPA FLOW"

Printed velveteen in modified lines for concert wear.

LIKE MANY OTHER important matters, the problem of dressing well becomes simplified, once you begin the work correctly. In selecting clothes for studio concerts and other public affairs, the participants should remember the same thing that all women should bear in mind about all clothes for all occasions; namely, that simplicity, line, and suitability mean a great deal more than furbelows, novelty, and "fashion." There, in a word, is the secret of dressing well.

It is, of course, in a so limited discussion, impossible to attempt detailed suggestions for individual frocks. There are a number of general suggestions, however, that can be applied to good advantage, by everyone. First of all, remember that it is not the dress that makes the person—it is the person who makes the dress. Many women have the discouraging experience of buying new things and then feeling disappointed in them. This can be often explained by the fact that they have chosen their frocks according to the dictates of fashion, without consulting the very definite requirements of their own particular style. Never wear anything simply because it is "new," or because someone else looks "perfectly adorable" in the same model, or because the saleslady tells you you "ought to have it." You must feel thoroughly comfortable in a frock, before it is really your own. It must suit you—and you must feel that it does—in line, color, and style. Otherwise it is not your rock; and no amount of studying the fashion notes can make it yours.

"GULF STREAM"

Smart lines in blue and yellow. A very successful recital model for any age.

## Tinting the Rose

AS TO COLOR SELECTION, any color is preferable to dead black—unless the material is velvet, which has sufficient warmth and softness to counteract the unrelieved tone of black. If you want a "colorless" color, choose white. Black is about the most unbecoming color to be found. It drains everything out of you. Women who are very young and very beautiful can wear black. Their personal vibrance allows them to wear practically anything successfully; but, otherwise, stay away from it. In cases where black is necessary, try to relieve it with a touch of color near the skin-line. Our studio made some concert gowns for a professional harpist who plays in an orchestra of men, and who would look undesirably conspicuous in bright colors against the severe black and white background of her colleagues. We conquered that difficulty by making one gown of vibrant black velvet and another, of crêpe with touches of gold at the throat and hands. Both gowns were black, to be sure, but neither had the devitalizing effect of unrelieved blackness. I believe that many women choose black, as a sort of last resort, because the usual colors available in the average ready made frocks are difficult to adapt to individual needs. Women have an excellent feeling for color; but the exactly right color is not always available. So they fall back on black, which is a pity.

As a matter of fact, a singer may wear any color she likes provided she wears it in her own particular shade. There is no color of which some shade will not suit her. The difficulty is to determine that absolutely correct shade. Most skins are yellow, to a greater or less degree. This can be easily proven by a glance at one's gloves. The shade which matches the skin is more yellow, or tannish, than pink or white. Keep that in mind when choosing dress colors. Blue is becoming to everyone, because blue complements yellow and tones it down. Therefore, select that shade of your favorite color which has most blue in it. There are bluish tints to be had in every color. Nothing could be more unbecoming than a yellowish brown, which heightens every yellow tint in the skin. But a bluish brown is very becoming, because the undesirable yellow tints have been toned down. Similarly, a yellowish gray is unbecoming, while a clear gray, built on a bluish base, is very flattering. Bluish green, bluish violet and even bluish red, can be worn very successfully by women who would look rather unattractive in the yellow tints of the same colors.

On the other hand, the colors for concert gowns should be kept quiet and non-distracting, exactly like the lines. Even though it is found that you can wear a brilliant bluish fuschia shade, do not do it when people come to hear you make music, because they will begin

many singers feel that they have to "do something" with their hands, and we often have trouble about the object they choose to "do things" with. One singer wanted a large, trailing chiffon handkerchief; and there was the danger that she would allow it to make motions of its own and cut across the singing. We finally persuaded her to use a smaller handkerchief, and to tuck it into her hand so that she might have the comfort of holding it without visible effects. This worked very well. If there must be something to be held, while singing, let it be something invisible. Do not trail handkerchiefs, or flirt fans, or wave flowers.

The most important thing, in selecting a dress, is to make sure it is the right dress for the one to wear it. This state of rightness has nothing to do with being "new" or "smart" or "different," nor with any other of the adjectives one often hears applied to clothes. It means simply that the dress shall suit you, express you, allow you to be your freest, best, most natural self when you wear it. In other words, you must feel comfortable and expressive in it. Nobody can tell you what that dress shall be; but when you are fortunate enough to find it, you will know by the feeling. And when you do, stick to it!

Do not (Continued on Page 138)

*A gay print especially adaptable for concert or recital. This was also designed for a trailing scarf.*

Concert gown of brown jersey laced with gold cord. This was designed for a noted prima donna.

to look at your frock; and, in proportion as they do that, their listening interest will be decreased. Keep away from any of the violent shades—Kelly green, Yale blue, brick red, eggy yellow. But, apart from that suggestion, try to find the particular shade of color—any color—that suits you, and be assured that it will serve you better than black. Older women often adopt black because of their years, or, possibly, their size. I think that is a mistake. Certainly, older faces should not attempt to carry baby colors or debutante shades; yet the correct tint of a warm, vibrant color will very definitely add radiance to their appearance. Indeed, older women, whose natural radiance is perforce decreasing, should look to colors to aid them in appearing at their best.

It sometimes happens that a well designed gown of the proper shade may have its effect nullified by an unwise use of decorations. I remember once telling a singer to point up her gown with a red camelia. She got three red camelias—and the desired effect was quite annihilated. In dressing, it does not follow that good ideas are improved by carrying them out in double quantity. Be very careful of flowers, whether they come as part of a gown, or whether they are freshly ordered ones. A singer should never wear flowers at her neckline, or anywhere near her chest. If she does, the flowers will rise and fall when she breathes; and the effect will be distracting, if not downright funny. Do not wear too many flowers, or too large flowers. Do not wear or carry anything that could by any possibility distract the attention of your listeners from the important business of music listening.

## Beware the Needless Bauble

SINGERS RUN THE GREATEST RISK of giving in to a fondness for "trimmings" of this kind. Instrumentalists have their hands disposed of, and they learn, too, that these decorations are more of a hindrance than a help when managing an instrument. But

Crepe gown, modelled on classic lines, with the added glamour of mink tails on trailing scarf.

## Elizabeth Hawes: Her Life

- 1903. Born in Ridgewood, N. J.
- 1912. At the age of nine sewed her own clothes.
- 1915. At the age of twelve did her first professional dressmaking for a small shop.
- 1921. Entered Vassar. Liked Economics. Outside of that, concentrated on clothes. At the end of second year at Vassar went to Parsons School for applied Arts.
- 1924. Summer as apprentice at Bergdorf Goodman.
- 1925. Graduated from Vassar and went to Paris to learn clothes designing.
- 1926. Became sketcher for prominent wholesaler and fashion reporter for New Yorker.
- 1927. Became Paris stylist for R. H. Macy.
- 1927. Later—Became Stylist for Lord and Taylor.
- 1928. April—Called at Paris Vogue office under Mainbocher.
- 1928. May—Took job as designer for Madame Groult.
- 1928. October—Opened shop in New York.
- 1930. First American designer to have an exhibition in Paris.
- 1931. Went into designing of accessories for wholesale Manufacturer.
- 1935. Invited to Russia to exhibit clothes.
- 1936. First showing of Hawes' new designs for MEN'S clothing.
- 1938. "Fashion is Spinach" is published.

# Why Music Is the Most Popular of the Fine Arts

By WALTER RAYMOND SPALDING, A.M.

PROFESSOR EMERITUS OF MUSIC AT HARVARD UNIVERSITY

MUSIC, IN OUR COUNTRY, is rapidly becoming the most popular of the Fine Arts, attaining, in fact, the position which among Continental peoples it has long enjoyed. This statement is corroborated by the growth of radio transmission, in quantity, quality and variety; in the emphasis laid upon the study of music in our schools and universities; and above all in the renaissance of music in the home music, that is, by nonprofessional but enthusiastic music lovers of all ages, who more and more crave the influence of this transporting art. Whoever has observed the popularity of Valter Damrosch's Radio Series, and the development of glee clubs, small orchestras and bands in our public and private schools, will acknowledge that here are manifestations of a definite trend in our national culture. This desire for music as an integral part of man's daily life cannot be stopped. The problem is how may it best be nourished, guided and brought to fruition. For we are still a young country with the restless zeal of youth for beginning at the top and doing everything at once.

It seems, therefore, just at this particular stage in our artistic progress, that certain fundamental reflections concerning music may be in order. Notwithstanding all the ferment, to say that as a people we are as yet cultivated lovers of music is wide of the mark. Whoever examines the conditions of school and college education will agree that the more special emphasis is placed upon the development of the brain, upon research, tabulations, graphs, documentation and the inferences therefrom, this attitude is doubtless justifiable and his machinery necessary in the Sciences, in History and in Political Economy, where exact data are available.

But what of those subjects of more subtle appeal, without which any education is entirely one-sided? Mere mention of the above terms implies the antithesis between them and the Fine Arts. For how can music be studied chiefly from the standpoint of the brain and of knowledge—in the reasonable sense of that term—when music is compounded of two factors, rhythm and sound, the influence of which we can feel but about which we know little or nothing? Music is a Fine Art, the language of the emotions and it makes, through the sense of hearing, its appeal to our imagination, spiritual intelligence and even to our souls. (if so be we have souls).

## The Breath of Art-Life

THE MOST FAMOUS COMPOSER who ever lived did not create his works primarily through his brain. That organ indeed would have been of slight avail had there not been underlying this a creative passion, an imagination, a warm emotional nature, all the attributes of our being which are bound up with the senses and the emotions. Beethoven proclaimed, in the inscription of his Mass—"From the heart it has come, to the heart it shall go"—and the modern French composer, d'Indy, has echoed the same sentiment—"la musique doit vibrer au cœur" (music ought to move the heart). Even the man on the street speaks of a tune he likes as "soulful" and says it makes him "feel good." He does not think of it as enlarging his brain and adding to his store of knowledge. As that great

WALTER RAYMOND SPALDING

prelate, Cardinal Mercier, eloquently puts it, "The intrinsic aim of Art is to move and to make an impression. A work which does not contain within itself a genuine source of emotion is not a work of art."<sup>1</sup>

This being so, what about the listener who should recreate the music in his own being, but too often is a mere passive recipient. Music being a reciprocal art, if the listener be lacking in imagination, enthusiasm<sup>2</sup> and in "bowels of emotion," though the composer speak with the tongues of men and angels it is impossible to communicate his message to ears that hear not, or to strike sparks from flabby tissue.

## An Art Trilogy

A FACT FROM WHICH stimulating inferences may be drawn is this: Music is a three-dimensional art, involving composer, performer and receptive listener; and among them must be a spontaneous and sympathetic spirit of coöperation. In this respect, music is in a class by itself, differing fundamentally from all the other arts. A work of poetry or prose, when created and printed, is at the disposal and for the pleasure of the reader, without an intermediary. We can walk through a cathedral, stand before a picture as long as we like, touch a work of sculpture; establish, in fact, a direct personal contact. How different is music. Works for the pianoforte, to be sure, we can play to ourselves. Music, however, for orchestra, string quartet, or for voices and orchestra, has first to be performed; and, as listeners, we get just what we can as the music rushes upon us. We may not say, "Stop, you are going too fast!" or "Play that part over again," unless we wish to be ejected from the auditorium.

Let us now ask what are the reasonable requirements to be made of these three factors: composer, performer and listener. A composer, who publishes a work for subsequent performance, obviously wishes to deliver a message to his listeners, that is, to say something to them, to make them

sharers in his own emotional and spiritual experiences. For him, therefore, directness and clearness of expression should be the highest ideal. Diffuseness, redundancy, that which Philip Hale used to call "treading water," noise for its own sake, the desire to make sounds and rhythms never made before—which only perplex and irritate the hearer—all these are intolerable. The glory of the classical composers is their directness and clearness. Yet these qualities are seldom displayed as mere craftsmanship, but are closely involved with warmth and spontaneity of expression. In fact, the more impassioned these composers were, the more they strove to be so direct that no one could miss their point.

Beginning, however, with the so-called Romantic School, praiseworthy as are its achievements in several aspects, so much emphasis has been laid upon self-expression, subjectivity and personality (horrid word!) that the composer often seems to be in a wild frenzy, merely "getting something out of his system." Even if he have something to say and be trying to express this, too often his ego forms a barrier between the music and the listeners. Since systematic repetition in some form is the basic principle of musical structure, themes, except when a composer is intentionally rhapsodizing, must be of such vital and definite outline that they can be grasped at a first hearing and remembered when they reappear—often after much new and contrasting material has been presented between the first and subsequent appearances of the main musical idea. Otherwise the structure of the composition, so far as the listener is concerned, tumbles to the ground and he is lost amid the ruins. For, as the critic Santayana wittily says, "To most people music is a drowsy reverie relieved by nervous thrills." In such circumstances a sympathetic reciprocal relationship between composer and listener is impossible.

What is the remedy for this situation? Let the composer aid his hearer with all the directness and clarity of utterance which his technic can command, removing any obscuring veil between his imaginative conceptions and their outward expres-

sion. As a modern musician well says, "We are prone to regard clarity too lightly and forget its depth. Depth seems associated in our minds with obscurity and oblique utterance. Our invariable formula for profundity is—'muddy your waters and they shall appear deep.' Hence most modern music with its surface intricacy, shattering dissonances, rich orchestration, swollen volume of sound—out of all proportion to the worth of the musical idea—seems more complex than Haydn, to use a specific example." Yet Haydn was renowned in his day for the power of his music to move men's souls. His music is nothing if not eloquent, and with no disparity between expression and design.

## As Oracle of the Musical Gods

LET US NOW CONSIDER the performer—solo pianist, violinist, singer, or the conductor of that composite instrument, the orchestra, upon which he is said "to play." It may be stated, without provoking contradiction, that the prime duty of the performer is to interpret the emotional message of the composer whose work is before him, and so to inspire the listeners that they gladly and spontaneously receive this message. But what a different situation we often find. With instruments having such an intimate appeal as the violin, the voice or the horn, a skilful performer can entrance his hearers merely by the beauty of sensuous effect. With the pianoforte, however, technical ability and mere display of virtuosity too often take precedence of the emotional message of the composer and of an intention to speak to the audience. If the instrument be a good one and in perfect tune, any pianist can make something of an effect merely by setting the strings in vibration. At the usual pianoforte recital we witness much finger agility, hear a good deal of noise—little shading or nuance—and the listeners, as may be seen from the apathy of their faces, sit like frogs on a log. We are tempted to indulge in the scathing irony of Rossini, who, when asked, as a stalwart young damsel was belaboring the pianoforte, what he thought of her execution, replied, "I am for it." Let a great artist, however, like Myra Hess, Rachmaninoff, or Horowitz, begin to play, and in a few moments everyone is on the alert, sitting on air, their faces animated, as they drink in the personal message of the composer.

Even some of our modern conductors, great masters as they are of the baton and of calisthenic gestures, seem to forget that the object of an orchestral performance is to present to the audience just what the composer himself would say, not a new subjective interpretation, often quite at variance with the directions in the score and with exotic meanings of which the composer himself never dreamed.

## With Ear and Heart Attuned

WE COME NOW to the listener, in some respects the most important of the trio. For music lives only when it is performed and heard; and, to be heard, someone must do the hearing. The cultivated listener, therefore, must fulfill certain logical requirements. He is not a mere passive receptacle like a dish, or even a beautiful bowl, into which so much liquid is poured. Listeners should coöperate actively, must exert on the receiving end as

1. See the "Life of Cardinal Mercier," by John A. Gade.

2. Enthusiasm: God within us.

much proportionate imagination, emotional sympathy and intelligence as the composer and the performer in their creative and executive capacities. To quote Daniel Gregory Mason, "There is a great modern need for forming a responsive but not biased or doctrinaire public; then for exposing composers to it as to an atmosphere, and letting them breathe or smother according to their own vitality." The art of music may be likened to an isosceles triangle; that is,

(This is a graph. So, let no one say this article is not modern! Music is now being studied through charts, graphs, formulae, and so forth, rather than by a direct appeal to the ear and the imagination.)

in which each factor in its preordained status is coequal with either of the other two. Music completely attains its object only when there is sympathetic coöperation along the whole line. The composer is speaking to a willing listener, asking him to share the emotional experience to which the composition owes its life; the performer

gives forth this message with all the artistic skill and eloquence at his command; the listener, with openminded enthusiasm, receives the message—seldom in its completeness at a first hearing, if the work be worth hearing at all.

One last suggestion for the listener—at the end of the line of transmission. It should be remembered that music is the freest and most experimental of the arts; for, with sound and rhythm, anything may be done or at least tried. There are no restrictions, material or specific, to hamper the fantasy of the composer. The genius is always ahead of his time; and, as Mendelssohn well said, "Every composer does the best he can"; and hence he should be given a fair hearing. Every composition of creative vitality, whether or not it sweep the hearer away at first acquaintance, should rouse a desire to hear it again. If this expectation be rewarded at successive hearings, the work will live; if not, it will be lodged in the dustbin of Time; and no tears need be shed. To stimulate such an artistic coöperation between composer and performer, and between performer and listener, that the trio shall become one of unbroken sympathy, should be the aim of every musician.

## Worth While Music in the Movies

By VERA ARVEY

AN INNOVATION in Hollywood is Metro-Goldwyn-Mayer's signing of the noted violinist, Toscha Seidel, to a contract, not to act in films, but to be a special soloist in the various pictures which require artistry in the execution of their musical backgrounds. Toscha Seidel's new contract is a result of the approbation accorded him after his work in "The Great Waltz." His next assignments were "The Shining Hour" and "Ice Follies." Incidentally, the next film scheduled for Miliza Korjus, soprano and star of "The Great Waltz," was "Madame Pompadour," for which Leo Frank wrote the music years ago. Subsequent reports from the studio indicated that there is a possibility of Joan Crawford's singing in this new film, and that Miss Korjus will play the part of a singing gypsy in the story by Robert Neumann called "Rozsa Sandor." At the time of writing, no definite decision seems to have been reached. Pleased with their decision regarding Toscha Seidel, however, Metro-Goldwyn-Mayer officials are now seriously considering placing other concert musicians under contract: a fine pianist, violoncellist, and so on.

Another world renowned violinist who has succumbed to the lure of films is Jascha Heifetz; though he, unlike Seidel, will actually be seen in a picture. He appears in "The Restless Age," playing five compositions, with orchestral accompaniment. His is not a dramatic rôle; for the only time he speaks is to give instructions to the conductor, just as he might in a formal concert. One might say, as was remarked of Leopold Stokowski when he appeared in "A Hundred Men and a Girl," that Mr. Heifetz "plays himself" in this film. A great deal of money was spent by Samuel Goldwyn, the producer, in getting a perfect recording. Mr. Heifetz himself spent two weeks of his own time in supervising the recording, and in the meanwhile astounding the technicians with his intimate knowledge of technical details and with the extraordinary sensitivity of his ear.

\* \* \* \* \*

"PIANO LESSONS: Special Pains given to Beginners," is reported to have been found on a shingle decorating the window of a Harlem piano teacher. And this in times when most teachers are finding beginners just a little cautious of the most "painless" lessons that can be provided.

## Radio Flashes

By PAUL GIRARD

SUNDAY NIGHTS at 8:00 o'clock EST., that intrepid musical director, Alfred Wallenstein, is sponsoring a Bach Cantata Series over the Mutual Broadcasting System network. These beautiful works were written by Bach to suit the varying resources of the Thomaskirche in Leipzig, during his cantorship there. For this reason they vary in length. In all, the noted composer wrote two hundred ninety-five cantatas, of which nearly two hundred have been preserved. It has been pertinently said that these cantatas represent one of the most valuable unexplored treasures of our musical culture. Thanks are due to Mr. Wallenstein for his competent and authentic performances of these works, and for his courageous pioneering in a musical field that has been too long neglected. The cantatas are performed in German, but the preliminary comments on them are sufficiently extensive to give a general idea of the text.

Thursdays at 2:30 P. M., EST, NBC-Blue Network, Harold Sanford, a former associate and friend of the late Victor Herbert, conducts his arrangement of "Selections from Light Operas," featuring, of course, much of Herbert's music. Sanford has been with radio for many years, and it is no exaggeration to say that he, perhaps more than anyone else, has been responsible for the development of appreciation for this type of program on the air.

Late in November, the Indianapolis Symphony Orchestra began a series of distinctly worth while broadcasts on Wednesday afternoons, 3:00 P. M., EST, Columbia Broadcasting System. Under the direction of Fabien Sevitsky, nephew of the eminent conductor of the Boston Symphony Orchestra, this group has grown in the past two years into a brilliant organization. Reorganized in 1937, with Mr. Sevitsky's advent, the orchestra is now composed of eighty-five men. The low average age of twenty-seven years for these musicians makes this one of the youngest personnels in the established professional orchestra field. Mr. Sevitsky's program making for his hour's broadcast is all to the good. Sevitsky, like his noted uncle, was a double bass virtuoso before he became a conductor. Graduated with high honors, from the St. Petersburg Imperial Conservatory, where at an early age he won the César Cui scholarship, he toured Europe before coming to this country in 1923, when he first joined the Philadelphia Orchestra and afterwards formed the Philadelphia Chamber String Sinfonietta (to be heard still on Victor records). Later he went to Boston as conductor of the People's Symphony Orchestra; where he also organized the Young Musician's Orchestra.

In the past two years or more, Alma

Kitchell, the American contralto, has been heard in short recitals over the NBC-Blue network. Mme. Kitchell is a regular stage artist. As a *lieder* singer, she is most gifted but generally speaking almost any song the artist decides to sing is one that is remembered for her richly voiced interpretation of them. Lately, Mme. Kitchell has been heard on Mondays at 2:30 P. M., EST, but she has been switched so often it may be that by the time of publication she will be singing at 6:30 P. M. on some other day. Look up her name in the weekly radio list and place a circle around it. We believe you will enjoy her broadcast.

Bernard Herrmann is one of the Columbia Broadcasting System's youngest and most adventurous conductors. Herrmann believes that there is a lot of music really worth hearing that people have neglected for no other reason than that they have not taken the trouble to look it up. Because it belonged to another age does not say it is dated. Very little music, in Herrmann's estimation, is "dated." Recently he has been presenting a series of programs on Mondays from 10:30 to 11:00 P. M., EST, which he describes as "excursions into the lace-ruffled past." The program is called Famous Musical Evenings, and among other interesting events it has presented an all-Haydn evening under the title of "Evening at the Esterhazys." The Esterhazys, it will be recalled, were the famous and immensely wealthy Austrian family whose service Haydn was employed for thirty years. Mr. Herrmann's unusual "musical evenings" are another series of programs to be marked with a circle.

Recently the Columbia Broadcasting System, by combining the facilities of two of its short wave stations in New York and in Philadelphia, has made it possible to direct its shortwave broadcasts to Europe and South America at the same time. In this combination the broadcasting system is able to cover a maximum area of both continents, at all times, with programs from the United States. If the American radio stations continue to progress in this manner, it may not be long before the better part of the world will look to America for its radio entertainment.

In connection with the Metropolitan Opera broadcast (NBC-Red network, Saturday afternoons), there is an important innovation this year. This is the Operalogues, presented by the Metropolitan Opera Guild every Thursday from 6:00 to 6:15 P. M., EST over the same network. Each Operalogue presents a short musical preview of the opera to be heard on the following Saturday. Designed to feature themes, important melodies, and excerpts from these short programs are planned to give the listener a more intimate understanding of the music of each opera presented over the NBC-Red network.

## Musicians in Mercurial Moods

A vain soprano succeeded in gaining Saint-Saëns' consent to hear her sing at his home. As she stepped to the piano, she remarked: "Master, I am so frightened that my whole body is trembling." "Mine, too," snapped Saint-Saëns.

\* \* \* \* \*

Millocker received this invitation: "Do come and dine with us midday on Sunday. My wife and daughter will do a little home music for you from twelve to one o'clock and then we shall have our meal." Millocker replied: "Thanks for the invita-

tion. I'll be there at one o'clock promptly.

\* \* \* \* \*

Richard Strauss and Dr. Carl Muck were co-conductors at the Berlin Opera where the latter was considered by far the stricter disciplinarian of the two. Strauss rehearsed a certain orchestral passage many times but could not get it played right. At last he exclaimed in desperation: "Gentlemen, let us try this once more and if you don't do it correctly, I shall send for Dr. Muck and turn you over to him." The passage was repeated perfectly.

RADIO CITY MUSIC HALL SYMPHONY ORCHESTRA; ERNO RAPÉE, CONDUCTOR

*The organization is shown in the pit of the world's greatest theater, with the graceful proscenium arch curving sixty feet above them. The Symphony Orchestra is a permanent feature of the programs in the Music Hall.*

## Let's Go to the Music Hall

How They Put On the Show in the World's Largest Theater

By STEPHEN WEST

IT IS NOT BY ACCIDENT that the world's greatest theater is called The Music Hall. New York's Radio City Music Hall builds its performances, and consequently the glory resulting from those performances, upon an entirely musical foundation.

The show consists of a motion picture feature; a newsreel; possibly an extra film diversion in the form of an animated cartoon or a glimpse of interesting happenings not strictly news; and a stage entertainment that lasts about an hour and a half. Excepting the feature picture, every moment of the three hour performance is calculated according to musical needs. Even

the shorter films are accompanied by a suitable tonal setting. Visiting the Music Hall as a spectator, one is conscious only of a sum total of superlative entertainment skilfully blended from eye and ear values. But visiting the working quarters of this gigantic enterprise leaves one with the curious feeling of having been turned loose in a conservatory. The movies themselves, manufactured in studios anywhere—in Hollywood, Long Island City, and the hills of Peshawar—seem hardly to touch the inner workings of the Music Hall. The flow of its life proceeds from conductors, composers, arrangers, copyists, a scholarly music librarian in charge of thousands of

scores, instruments, rehearsal rooms where pianos sound at all hours of the day, rhythm, melody, choral singing, and the crisp tap-tap of dance patterns. To-day, there is little that has been left unsaid about the size of the Music Hall, its decorations, its vast staff of employees. But few people realize that the source from which this activity springs is music.

### *A Music Hall with a Mission*

ACCORDING TO MAURICE BARON, composer to the Music Hall and chief of its staff of arrangers, the goal of the performances is to fill the gap that exists between the entertainment of the formal concert hall

and that of the variety show. There is a limited group of people who will listen only to Brahms symphonies and Bach chorales. At the other end of the scale, there is a limited group that wants only jazz and jazz values. But between those two limited groups there comes the vast majority of America's entertainment seekers, who want good things that are not overly high-brow, and popular things that are not vulgar. These are the people whom the Music Hall tries to please; and, if any conclusion may be drawn from the sight of its sixty-two hundred seats filled four times a day, and of the overflow crowds roped off in the lobbies waiting for admission, the

*Groups from the imposing Corps de Ballet directed by Florence Rogge at Radio City Music Hall. These groups do not include the famous "Rockettes" of Radio City Music Hall, which is a distinct and separate dancing ensemble.*

Music Hall not only tries but also succeeds. For that reason it is doubly significant that the foundation upon which the superstructure of successful entertainment rests is music.

The normal stage show at the Music Hall consists of an organ prelude, played at the giant console by Richard Liebert; an overture and incidental music played by the seventy-piece symphony orchestra under the direction of Erno Rapée, or the Associate Conductors, Mischa Violin and Lamar Stringfield, and including solo virtuosi of the stamp of Lucille Lawrence, the harpist; choral singing by the Glee Club; precision dancing by the Rockette group; and exhibitions of classic terpsichorean art by the *corps de ballet*. The contributions of these various groups are created and developed in the Music Hall by the various department heads. And always from a strictly musical point of view.

"Our performances may be likened to an immense musical cuisine," says Mr. Baron, "where everything, from symphonies to tap dancing, is blended in such a way that the spectator may transfer his enjoyment from one to the other without incongruity. The important thing is the blending.

"Suppose that our feature picture for next week is laid in a Mexican setting. The producer, assisted by the directors of our various departments, may decide upon a Mexican flavor to bind the units of the stage show together. Miss Florence Rogge, director of the ballet, will hit upon some special dance number for her group—perhaps a harvest scene. Then Russell Markert, director of the Rockettes and one of the producers, will choose for his dancers a scene depicting a Mexican cockfight. And the Glee Club will want adaptations of Mexican folk songs. Thus far, there is only the idea. It comes to life through music.

### And so We Begin

"THE FIRST STEP is a consultation with Erno Rapée, our distinguished musical director—and I may fairly say that the musical success of our entire organization is due to his decision, courage, and thoroughness. The various ideas are outlined, and Mr. Rapée's wishes as to a musical setting are consulted. Familiar as he is with the library of every known instrument, he advises whether the desired scores exist or not.

"If they exist—anywhere, in any form, for any instrument—they are immediately secured and dissected for arrangement. Not only must themes be extracted, but also the scores themselves must be adapted. Only the great symphonies are written for an orchestra of seventy—and not all of those. In our recent production of 'Merry Widow Melodies,' for instance, we found that the complete score, as it originally existed, had to be modernized, enlarged, reharmonized, adapted to the peculiarly individual needs of the Music Hall. No, it is not enough that a suitable musical setting exists. Each score we use must go through the hands of our arrangers and copyists for reworking; songs may be shorn of their texts and equipped with orchestral accompaniment for the dancing; a dozen Chopin piano numbers must be strung together, like pearls, and orchestrated for the use of the ballet. But the greatest amount of reworking is a comparatively simple task—if the original score exists.

"A harder job is the creation of special music. If Mr. Rapée reports that there is no music suitable for depicting the spirit of our Mexican cockfight in precision dancing, it then becomes my pleasant duty to supply such a score, especially for the desired number. That, in its turn, may require lengthy research into the individual characteristics of cockfighting—its general pace, the sounds the animals make, and so on—or of definitely Mexican tonal combinations. Much of our music is created in

this way; and it is surprising how many fine ideas there still are, which never have been given complete musical expression. There are all sorts of fairy ballets, for example; the emotions of street cleaners, who must make an audience know, by their motions, whether they work on Park Avenue or on the waterfront; the spirit of the mannequins or the farm hands."

### A Home of Activity

WHEN THE MUSIC FOR THE FORTHCOMING show has been determined, and while the adapters are at work upon it, special piano sketches are given to the various department heads for use at rehearsals. Then it is that the difficult and exacting dance routines are worked out. Miss Rogge and Mr. Marker, or Gene Snyder, Rockette co-

ciently well rehearsed to put the entire performance together on the stage. The final dress rehearsal takes place on the seventh day, and an hour later, the new show is ready for the public. Only veteran showmen could accomplish such results in such time, and the Music Hall staff of experts are just that. Many of them, including Messrs. Rapée and Baron, got their training twenty years ago, when stage shows consisted of a property moon and two chorus girls dressed as *Pierrot* and *Columbine*; and they have been perfecting their art ever since. Indeed, the advancement of the motion picture theater stage show may be traced, in a marked degree, to their pioneer work.

Many interesting musical devices have come out of the Music Hall, to be seized

(spirit of the times) would result in an attempt to write shorter works. Right or wrong, modern America is quick, nervous, and in a hurry. It is useless to say that the proverbial tired business man ought to seek his diversion in the lengthily developed works of Bach or Brahms. It may be he will and it may be he will not; and, if he will not, the chances are that he will turn to jazz, not because jazz is the perfect expression of the modern American world, but because our serious art composers have not yet presented us with anything that is.

"I do not counsel shorter works because they are easy. They are not easy. It takes infinitely more time and effort to condense one's themes so that only the essential remains, than it does to write long transitional passages in the orthodox style. Do you remember the immortal line of Mme. de Sévigné, when she said that her letter was too long because she had had no time to make it short? There is a lesson there!

"America is not unmusical. Musically, it is imperfectly understood. No one—excepting Gershwin, perhaps—has given America its own music. People keep on giving it European music of the eighteenth and nineteenth centuries, in modern dress. That is not the same thing. Once America is presented with a music of its own, a music reflecting the enormous vitality of the people, its curiosity, its eagerness for new sensations, we shall see a magical transformation in the attitude of the rank and file citizen towards concerts and concert going. There is no reason why we should not one day produce even finer music than Europe, considering the rich, cosmopolitan background we have, from which to draw. But it must be natural, timely music. And it must stress theme values above mechanical development. The young composer must study his musical grammar, certainly; but along with it, let him study his people."

### MAKING ORCHESTRAL ARRANGEMENTS

From two to ten copyists are constantly at work in the vaultlike Music Library under the stage of Radio City Music Hall

director, create new and suitable dance patterns, and demonstrate them to their groups. The Music Hall undertakes no training or drilling of its dancers. The ballet and precision dancers are masters of their art, able to execute the most exacting steps after a few demonstrations of what is to be required of them. But while there is no training, there is rehearsal aplenty.

At the top of the building lie the rehearsal rooms, long and spacious, equipped with full length mirrors along one entire wall, and chalked off, on the floor, to correspond with the turntables and rising platforms of the stage. There, to piano accompaniment, the ballet and the Rockettes practice for next week's show, moving in exact tempo to the well defined rhythm of the piano, watching themselves and their neighbors closely, in the mirrors, as they make their way across the room. Again and again. The tap-tap of the dancing shoes; the scuffle and slide of ballet slippers. In another room, the Glee Club rehearses its songs. Rehearsals are called for the morning hours, before the house opens its doors to the public, and also at those times during the performance when the picture is being shown and the various groups are not needed on the stage. Then, between rehearsals, certain rooms are set aside where the dancers and singers may practice piano and violin on their own account, for many of them are accomplished performers.

### And so To Work

FOUR DAYS AFTER THE IDEAS for the new show have been conceived, the orchestral parts are arranged and copied, ready for distribution, and the various units are suffi-

upon by orchestral organizations all over the world. The Music Hall's snaredrummer, Mr. W. G. Gladstone, is the inventor of a new and highly sensitive snare drum, as well as of a special baton for use in the dark. The baton is made of a pliable and translucent composition, and it contains a small electric battery. When the theatre is dark the conductor can turn on the battery, and the baton glows with a dull light that does not disturb the audience and yet makes the conductor's every beat clearly visible to the men.

### The American School of Music

AS DEAN OF COMPOSERS to the Music Hall, and creator of many of its most successful musical numbers, Mr. Baron has interesting things to say to America's students of composition.

"I know our studios are full of ardent young people with genuine creative ability," says Mr. Baron; "and I know that each and every one of them dreams of someday startling the world with 'The Great American Symphony.' No one knows who the lucky one will be to accomplish that, nor the methods he will use to bring about his accomplishment; but the best advice I can give to our aspirants is to apply an ear to the ground and to study, not only the orchestrations of Beethoven, and Bach's 'Art of The Fugue,' but also the temper and the needs of the public for which they expect to write. We must, of course, base our work upon the theories evolved by the masters of the past; but we should not lose sight of the fact that all art must reflect the life and the temper of the people for whom it is written. To my mind, a careful study of the American *Zeitgeist*

### How to Play Notes

By Marjorie Gleyre Lachmund

MOST PIANISTS, upon reading this title, will say to themselves, "But of course I know how to play notes."

Many of you do, but there are also many people who think all that is necessary is to look at the notes and then play them. (We refer now to the mechanics of playing, leaving interpretation out of the discussion.) These people do not recognize all the intermediate steps involved.

What occurs—or should occur—is:

1. The eye sees the note.
2. The impression is conveyed to the brain where.
3. The note is recognized.
4. A message sent to a finger.
5. This finger plays its note in the required manner.

The last phrase also implies a whole set of "mechanics." Messages have to be sent, not only as to where to place the finger but also as to the required muscular control, the amount of weight to be used, the kind of touch required, and so on.

The steps we want to emphasize here are those of consciously recognizing the note, and actually finding it with the finger before playing. Most poor (painful!) reading is caused by jumping from the first to the last step. The player looks at the note and lets his finger fly at something on the piano. How the brain does hate to think!

The cure for this is to play slowly enough to name the note mentally and to let the finger touch the key and have its position verified before playing. If this kind of practice is kept up faithfully, a marked improvement in accuracy and ability to read will be evident in a surprisingly short time. Needless to say, the method should become a habit.

## Music's Debt to Shakespeare

By W. FRANCIS GATES

NO STUDENT OF SHAKESPEARE, no casual reader, but is impressed with the Bard's knowledge of, interest in, and use of music, in both its practice and its terminology of his day. Now, as we near the month which saw both his birth and death, it is an appropriate time to review what he brought to music, and what he gave to it.

As near as can be found out or conjectured, April 23rd seems the appropriate date both of his entrance and his exit. Most of his work was done as a young man, say from twenty-five to fifty-five years. When did he have time to accumulate the mass of information shown in his plays? The lawyer wonders at his legal information; the doctor, at his medical; the general reader, at his historical knowledge; and the musician, at his fund of musical lore.

His musical errors are but few and casual. Compare this with the host of modern authors and their often comical mistakes, when they venture to use a musical reference or illustration. From Browning and Tennyson down to the writer who speaks of a Chopin nocturne as a song, they all would be the better by the services of a musical editor. Not so with Shakespeare. We go to him for musical information—the principal source of knowledge of music in his time and country.

All the knowledge of his day that came to his door was grist for his mill. He pictured music as he found it; and it was in no more settled or codified condition than was the language of his day; a social pleasure with little of art or science.

One must remember that Shakespeare antedated Bach by a century and a quarter; and Bach is regarded as being the

fountainhead of modern music. In Shakespeare's day art music may be said to have been in its pining infancy.

And what of our tonal art may we find between his covers? There are times when his pages seem to lean heavily on music for their best emotional thought and expression. His lines are enriched with multitudinous references to the instruments of his day, and make many an allusion to such theory of the art as was then in practice. And especially does he make use of song in every aspect.

Even the casual reader recalls such references as "I am never merry when I hear sweet music"; "If music be the food of love, play on"; "Here we will sit and let the sounds of music creep in our ears"; "The man that hath no music in himself"; and a score of others that are common knowledge, as well as hundreds that are not. It may be often but a word or a phrase; but it shows the sympathetic attitude of the poet.

### Marvelous Theoretical Knowledge

IN THE MATTER OF MUSICAL TERMS, he occasionally mentions the consort (concert), and frequently speaks of the instruments used therein. The viols and the recorders mentioned are the most often named. The viol was a flat backed violin, the bass viol being the only member of this family now in use. The recorder was a straight flute with a flageolet mouthpiece. The sackbut was a forerunner of the slide trombone of to-day. The cornet was entirely different from the modern cornet and has no descendant in the modern orchestra. One also finds mention of the virginals, the lute, the organ, the fife, the drum, and the bagpipes.

The English gentry of Shakespeare's day were supposed, as a matter of course, to take part in the music that was a part of every social gathering, especially in song. And so it is not surprising, that Shakespeare's musical references are largely toward the vocal side of the art.

The modern author well may take vocal lessons of him. He speaks of singing "flat" and "sharp"—of individual parts in counterpoint—of "concord" and "discord"—of "descant," "base," "rests," "diapason," "frets," "gamut," "key," "tuning"—and of various other theoretical terms common in musical terminology. This technical knowledge proves him to have had an acquaintance with vocal and instrumental music, perhaps unequalled in his day.

His appreciation of music reaches into its æsthetic and psychological aspects. At times, by one stroke of the pen, he will delineate a character, in its appreciation of or obtuseness to the musical side of life. For instance, *Lorenzo* shows a sensitive nature by his apt appreciation of the power of music; but *Othello* "did not greatly care for music." And *Caesar* says, "I do not know the man I should avoid so soon as that spare Cassius; . . . he loves no plays, he hears no music."

### A Song Anthology

THE SONG WORLD has gone more frequently to Shakespeare for its texts than to any other poet. Speak of "Shakespeare in music" and at once there come to mind a half-dozen of his poems, possibly more, that have become ineradicably associated with the art. And his plays are rich in lyrics. Into the mouth of many a character is put a song which moderns have set to music—at times to music which the "gentle bard" might not have recognized as such. From the tender lyrics, such as the *Hark, the Lark of Cloten* and the *Willow Song of Desdemona*, to the bacchanalian outbursts of *Stephano* and *Caliban*, his lyric music pours forth a flood of song of which the world seems never to grow weary.

Shall we recall the first lines of a few, at random?—"Take, O, take those lips away"; "When daffodils begin to peer"; "O, mistress mine, where are you roaming?"; "Blow, blow, thou winter wind"; "Under the greenwood tree"; "Tell me, where is fancy bred"; "You spotted snakes, with double tongue"; "Full fathoms five thy father lies"—and near a hundred more.

What song composer has been brave enough to resist the temptation to set Shakespearean verses to music? It has been said that "Take those lips away" has been the inspiration of some thirty settings; "Orpheus and his Lute," of twenty-one; "Who is Sylvia?" of eighteen; and how many more there may be that have not seen the light of fame.

One commentator finds ninety lyrics in the collected works suitable for musical setting. Only five of the thirty-seven plays have no mention of music in some form; and the sonnets and longer poems are rich in musical figurations, "Lucrece" being especially beholden to the art.

### And Operas Galore

THE OPERA IS PARTICULARLY INDEBTED TO Shakespeare for texts and dramatic sug-

gestions. Composers, great and small, have fled to him for inspiration; librettists have found in him their greatest single mine of textual wealth. They have used him in original form, at times, but most largely in adulterated and garbled shape. Some of the Italianized Shakespeare is pitifully, if not laughably, changed to suit the Latin taste.

"Romeo and Juliet" had been set to music seventeen times, it was said twenty-five years ago; and how many more today? "Hamlet" has been used by thirteen composers, nine of them Italian; "Merry Wives of Windsor," by six, including Verdi's "Falstaff"; "Othello" was chosen by two; "Macbeth," by three; "Antony and Cleopatra," by two; "Winter's Tale," by three; "Twelfth Night," by four; "Measure for Measure," one—but that one, Richard Wagner; "Machado," by one; "Taming of the Shrew," by one.

Strange as it may seem, "The Tempest" was the most attractive to composers, between fifteen and twenty having used its plot.

To give credit for some of the principal Shakespearean operas:

"Romeo and Juliet"—Bellini and Gounod; and Berlioz (symphony with voice).

"Merry Wives of Windsor"—Nicolai, and Verdi in "Falstaff."

"Taming of the Shrew"—Goetz.

"Winter's Tale"—Max Bruch, in "Hermione."

"Henry VIII"—Saint-Saëns.

"Macbeth"—Verdi, in which he introduces a ballet and has *Lady Macbeth* sing a drinking song.

"Othello"—Verdi and Rossini.

"Hamlet"—Ambroise Thomas.

Of perhaps more value to the general musical atmosphere is the inspiration which the Shakespeare plays have given to composers of orchestral music. Sixty or more orchestral works, with their origin attributable to the greatest poet of all time, are catalogued. Perhaps one can be forgiven for being a bit catalogical in naming a part of them:

*Overtures*: "The Tempest"—Benedict, also Corder; "Hamlet"—Gade, also Tschai-kowsky; "Othello"—Dvořák; "Antony and Cleopatra"—Rubinstein; "Julius Caesar"—Schumann; and a *Dramatic Overture* by the modern Englishman, William Shakespeare.

*Symphonies*: "King Lear"—Berlioz, also Heidingsfeld; "Othello"—Fibich; "Macbeth," Music—Edgar Stillman Kelley; "Hamlet" and "Ophelia"—tone poems by Edward MacDowell; and, last and best of all, the "Midsummer Night's Dream" music of Mendelssohn.

Such is a hasty sketch of a part of the Shakespearean record in music. Will it continue to be so written in musical works? Probably not; as the modern composer seems more easily provoked to pen his inspirations by the clang of hammers, the rush of railroad engines, the din of factories, the clash of the forces of nature, and of men, than by the finer sentiments and the dramatic intellectuality of a Shakespeare.

### Musical Foresight-Hindsight

From our distinguished French contemporary, *La Semaine Musicale et Théâtrale*, we recently culled the following tid-bit of musical history.

"Lully, the composer, had severely injured his foot while beating time with a cane. The injury not having been properly treated, he was threatened with an amputation of his leg. Believing his life to be in danger, Lully sent for his father confessor, who refused an indulgence unless the

sketches of a new opera were destroyed, as a penance for having written for the theater; and, with this mandate obeyed, he received absolution.

"One of his friends, having heard of this catastrophe, exclaimed, 'What! You destroyed the opera. Are you crazy?'"

"No, no," replied the crafty Florentine, "Not quite. You see, my dear sir, I have another copy of it."

## RECENT RECORD RELEASES

By PETER HUGH REED

**T**URNING THEIR ATTENTION back to the music of Richard Wagner, after a silence of some time, the recording companies, in both this country and in Europe, recently honored his genius anew by several outstanding releases. Chief among these is a complete recording of the third act of "Die Meistersinger," with Hans Hermann Nissen as *Sachs*, Margarete Teschemacher as *Eva*, and Torsten Ralf as *Walther*, issued by the Electrola Company in Europe. The absence of a complete "Die Meistersinger" has been long a subject of discussion among music lovers. In the opinion of many, it is, next to "Tristan and Isolde" the composer's greatest score.

When, in 1936, the Philadelphia Orchestra toured from coast to coast, one of its featured numbers was Stokowski's own arrangement of music from Wagner's "Tristan and Isolde." The noted conductor has arranged his score by using the *Prelude* to the opera (complete), the *Introduction to Act 2*, part of the lovers' duet, *Brangäne's Warning*, part of the music from *Tristan's Vision* in Act III, and lastly the *Liebested* in its entirety. Several years ago Stokowski recorded a similar arrangement of this music; but later he added to the score, and the new set (Victor M-508) is a far better balanced version.

In like manner Sir Thomas Beecham's performance of the *Overture* to "The Flying Dutchman" by Wagner is one of power, eloquence and brilliance. All the essential drama of the opera is condensed into the storm tossed *Overture*, which opens with one of the composer's triumphantly enduring themes, that signifying the *Dutchman*. This theme, and another taken from *Senta's Ballad*, form the basis of the overture. Less compelling musically, but none the less welcome in Sir Thomas' fine performance, is the *March* from the Second Act of "Tannhäuser," which fills up the last side of the recording.

Last but not least of the new Wagner releases are two scenes from "Parsifal": *Amfortas! Die Wunde!* (Act II) and *Nur eine Waffe taugt* (Act III), and *Lohengrin's Farewell*, sung by Lauritz Melchior, accompanied by the Philadelphia Orchestra directed by Eugene Ormandy (Victor set M-516). These records are some of the finest that the great Wagnerian tenor has given us to date, and they conclusively prove him to be the foremost Wagnerian tenor to-day before the public.

Celebrating Beniamino Gigli's return to America this season, Victor (in Sets M-518-19) brings us his interpretation of *Rodolfo* in Puccini's "La Bohème" (recently recorded in Italy). Since Gigli is recognized as the foremost Italian tenor of his day, plans are under way to record Gigli in several operas, two of which, "La Bohème" and "La Tosca," already have been accomplished. The recording also engages the services of the chorus and orchestra of the La Scala Theater (Milan), with Umberto Berrettoni as conductor.

An attractive orchestral suite is Respighi's "The Birds," based on pieces by seventeenth and eighteenth century clavicinists. In selecting his pieces the composer was wise to choose those in which the delicate humor of their subject was entirely comprehensible, and in transcribing them for orchestra he was careful to preserve their intimate charm. Desiré Defauw, conducting the Brussels Conservatory Orchestra, gives a good account of this music (Columbia set X-108).

"The 'Pops' Ride a War Horse!" Thus does Victor describe their recorded performance (set M-515) of Tschai-kowsky's

*Overture 1812*, as played by the Boston 'Pops' Orchestra. Under the direction of the redoubtable Fiedler, the orchestra ride an old steed valiantly; and the recording is sufficiently realistic to impress one's neighbors. It did ours!

Philippe Gaubert, the French composer and conductor, is represented in a disc capacity in Columbia set X-109, where he conducts his orchestral suite, "Les Chants de la Mer." This is pleasant music, reminiscent of Wagner and Debussy, by turns idyllic and rhapsodic in style, yet hardly a vital score. More impressive is the "Last Nursery Suite," by D. E. Enghelbrecht, another French composer and conductor (Columbia disc 69339D). It is a delightfully piquant little suite, music that is witty and playful, saucy and pert.

The great Chaliapin is dead, but not his art. Long associated with the rôle of *Boris*, it has been said his name was synonymous with the part. Proof of this would seem to be furnished by Victor disc 15177, in which the singer gives us his inimitable performances of the *Prayer* and the *Death Scene* from the last act of "Boris Godounov." This recording, a really remarkable one, made at an actual performance of the opera on July 4, 1928, at Covent Garden in London, is a true collector's item.

Sometimes a bit of music comes our way, and its simple expressiveness is so momentarily treasurable that we cannot find words to describe it. Such an experience was ours when we heard the recording of *The Holy Family Resting by the Wayside* from Berlioz's "The Childhood of Christ" (Columbia disc 69340D). The music moved us deeply, and when reading that the recording was given a *Grand Prix* in France, we were not surprised. It is the perfect gift record.

The Vienna Choir Boys, who have been concertizing recently in this country, are heard to advantage in a group of "Christmas Carols of Many Lands" (Victor set C-3). The simple purity and ethereal quality of the boys' voices have been admirably caught and preserved in the recording.

Musicaft records, which previously released a worthy recording of Mozart's early "Mass in F major," (K. 192) (set No. 23), sung by the Motet Singers, directed by Paul Boepple, recently brought forward an even more worthily performed recording of the "Missa Brevis" of Buxtehude, interpreted by the same singers (24). In this work Bach's great predecessor shows that he, too, was a most gifted polyphonist.

An unusual pair of records, emanating from Musicaft Studios, is the "American Folk Songs," from the remote parts of the upland South, sung by the Old Harp Singers of Nashville. The records contain what the singers call, "Folk Fun," a moving religious ballad and a rousing spiritual song (discs 221-22).

Egon Petri's performance of Brahms' "Variations on a Theme of Handel" (Columbia set 345) does notable justice to work of true genius. Brahms, here taking an ornate theme from Handel, has ingeniously built a series of twenty-five masterful and impressive variations.

Recommended: The Swedish Augustan Choir's performance of Jakob Handl's *Adoremus Te Jesu Christe* (Victor disc 15214); Maria Muller's singing of Brahms' *Feldensamkeit* and Reger's *Waldensamkeit* and *Zum Schlafen* (Victor disc 15218); and the performance, by the French two piano team, Weiner and Doucet, of Mozart's "Sonata in D major," (K. 448) (the only such work by this master).

# Mystic Dances and Music of the Far East

By the noted American Composer long resident in India

LILY STRICKLAND

ALMOST MY FIRST IMPULSE on arriving in a strange port in the Far East has been to set out on a search for local music and dancers. This is never difficult, because, since most of the dances in the Orient are connected in one way or another with a religious festival, and since there are many such celebrations annually in every Eastern land, one has only to seek out the various temples, dagobas, or shrines and there, almost without fail, his objective is found.

The Hindus have some sort of a religious celebration every three days, and a great many of these ceremonies include music and dances. The large Hindu temples maintain a coterie of nautch girls and musicians as a part of their common equipment; and dances are performed daily in accordance with special ritualistic laws laid down in the Brahmanic traditions. But it is not with these stereotyped forms of dancing that we are so much concerned; constant repetitions of the ordinary nautch tends to take away something of the novelty and newness to the onlooker.

During some festivals, however, where a little research will illuminate the fantastic or obscure interpretations of some of the performers, we find ourselves immensely interested by some strange dance that has little in common with the known traditions of religious ceremonies. Almost invariably these unique, or bizarre, dances are traced to animistic origin, the primitive, pagan, and ancient influences that antedate all polytheistic or monotheistic religions.

## Masked Dances

THE SUBJECT of dancing-masks is a very fascinating one, and, although only comparatively recently introduced into modern dancing, it has been a part of the oldest known dance forms in the East. Even the lost civilization of the Mayas and Aztecs had used dancing-masks from unknown centuries. Many African Negro tribes use to this day weird and hideous dancing-masks in their old traditional and ceremonial dances. In fact masks have been used throughout the more ancient parts of the world, from time immemorial.

In some cases, where masks are lacking, the face is painted in white, ochre, red or other natural pigments, to simulate the effect of a dancing-mask. The symbolism of these masks or facial make ups, almost invariably traces back to animistic influences. Hinduism, in its lower forms, is filled with superstition, black magic, fetiches and aboos; and, from our observation, it is usually these more atavistic forms in the religion which are practiced by the more ignorant and primitive Indian.

The festival of "Holi" is at once famous and infamous. It is sometimes called "The Night of Kali," the Black Mother, and it was once the custom of Kali priests to take part in orgiastic dances on this occasion. To-day a sort of echo of these dances is given by laymen who go about at night with paint smeared faces and dance grotesquely with sticks. There is nothing beautiful about this Kali Stick Dance; on the contrary, it is ugly and awkward and apparently meaningless. However, one may be sure that back of every traditional dance in India there is some sort of idea to be expressed.

This rather obscure and little known type

of dance is seen only at the annual celebration of the Holi festival, and it is such an oddity that we were tempted to look up every possible reference to the subject in some out of print books and old manuscripts to which we had access. After most diligent searching, we finally ran the origin of the Kali Stick Dancers to earth in a venerable tome on Hinduism.

## Dance of Destruction

KALI HERSELF, THE CONSORT OF SHIVA, the God of Destruction, is depicted as a hideous and repulsive woman, wreathed in human skulls and carrying in her many arms the implements of death. Her dreadful aspect is intended to put fear in the heart of the evildoer as well as to remind her followers of ultimate dissolution and decay. There is nothing beautiful and benign in the terrible goddess, nor was there anything redeeming in the ancient dance-rites of the Kali priests; rather was the idea of her attributes carried out in uncouth, soulless, ugly, and revolting movements.

Some sense of these qualities is expressed in the Kali Stick Dancers, as the men go through the holiday crowds at night crouching and leaping and pretending to fight each other to the fierce beat of a drum. The dance of a nautch girl seems idealized in comparison. But the sudden appearance of these unattractive and fantastic men, in an amiable and animated crowd of people, usually creates an impression in which fear is mingled with amusement.

If the religious ecstasy expressed in fanatical rhythm can be called dancing, then one sees on rare occasions the insane appearing gyrations of self-hypnotized penitents of Hindu persuasion, who work themselves up to a high pitch of emotional excitement through dancing to drum-beats. The object of these weird dances seems to be to arouse or excite the performer to such an extent that he is not conscious of the pain that he inflicts upon himself with knives or other sharp instruments.

## Mortifying the Flesh

IN EXCORIATING THE FLESH, the devotee wins merit, and his wild surrender to the mesmeric power of primitive rhythm renders him partially insensible to torture. This frenzied dance is similar to the Dervish dances commonly seen in Egypt; they are both expressions of religious obsession,

although the Dervish dance is deliberated and conforms to a type, while the Hindu penitent seems to dance without rhyme or reason when in a tense state of hysteria.

We see that dancing is a most elastic term and covers a multitude of rhythmic postures, gyrations, leaps, whirls, and the like. They are essentially primitive, pagan and even savage, and are instinctive reactions to primal emotions that go back to the beginning of all dancing. For that reason such performances are strangely interesting as a picture of the influence of rhythmic expression, or impulse, on the unexpressed, natural and primitive oriental.

As man becomes more and more civilized the call to expression through inarticulate motion grows fainter and fainter. We are taught "artistic restraint," emotional control, physical immobility in conversation, and the like. But, in countries where western civilization is still only a veneer, the people react naturally to all emotions. All conversation is accompanied with gesticulations and motion; music is judged by the quantity of sound rather than the quality of tone; singing is always *fortissimo*, and dancing is perhaps the freest of all the emotional expressions.

It is true that the wildest, most extraordinary forms of dancing that I ever have seen in the Far East always have been of religious significance. To the oriental the expression of religious impulses is a vital part of everyday life; in fact, religion enters into every act of his existence. We of the western world, or of the occidental race, have no conception of how tremendous the influence of religion is upon Easterners. It is therefore only natural that the various faiths of the East are, in legend and tradition, the background for the unique symbolical dances of the people.

## Seasonal Dances

THE ABORIGINAL OR ANIMISTIC PEOPLE of India have dances that antedate the Hindus by unknown centuries. There are many tribes of such people still living in remote parts of the country, and they all have various tribal and seasonal dances of folk character, which are extremely fascinating to watch. The Oraons of Chutia Nagpur have a remarkable number of dances. They live very close to the heart of nature and have many dances celebrating the seasonal changes, the seed planting and the harvest,

the hunting dances, the dances of love and marriage, and even war dances.

As is usual with the more primitive tribes, all dances are performed seriously, with dignity and respect. Man has to be civilized in order to appreciate jazz and the frivolous, superficial and light dance music of the day. The natural dignity of the savage and semisavage is something we know very little about. I, for one, have found the simplicity, sincerity and earnestness of the animist or primitive Indian greatly to be admired.

In southern and central India, from Madras through Bengal and on through Bihar and Orissa and Chutia Nagpur, the music is found to be largely Hindu or pre-Hindu in influence. One must go farther north to see the famous Devil Dances of the Buddhists. But there is one form of dancing in Bengal which is outstanding and worthy of mention, and which is not Hindu but Moslem.

## A Useless Ban

MOHAMMED FORBADE the use of music to his followers, a very useless rule, as events proved. He stated that music takes the mind away from spiritual things and brings one to earth (just the opposite from the Hindu belief in the divine origin of all music). In the case of Mohammed's mandate, the law may as well not have been made. Moslems are no different from other people in their natural reactions; and, as far as dancing is concerned, we have only to mention the dervish dancers, the famous dancing girls of the Ouled-Nail, the sword dancers of Afghanistan, and other dancing cults that have sprung up among peoples who profess Mohammedanism as their religion.

Some of the most charming and interesting dances are those performed by Afghans and Baluchis at the "Feast of the New Moon," the season of rejoicing after the Moslem Lent, a period of fasting and prayer. These striking dances are given by men who dance with swords or sticks in lieu of swords, to the beating of drums. There are no native women present on these occasions, as the men of the Borderland in the Northwestern Frontier come down into Bengal to carry on their trades, but leave their women behind them. They are "orthodox" Moslems, and their ladies are kept from the rude gaze of the world; but they themselves openly break their religious laws in performing these forbidden dances on annual festival occasions. And we are very glad that they do, since they have added some fascinating dance forms to our book of oriental music.

## Dances of the North

THE MOST REMARKABLE DANCES in the Himalayan regions of northern India are performed by Buddhist lamas and laymen. The various Buddhist festivals are celebrated by Devil Dances against the natural background of the magnificent snow range not far from the borders of Tibet.

The courtyards of Buddhist monasteries are frequently used as a stage for these dances, and we have seen some wonderful performances at two special monasteries in and around Darjeeling. The costumes of the dancers are Mongolian in the main, and the addition of grotesque masks makes the men still more unique and striking in ap-

NAUTCH DANCERS AND MUSICIANS IN CALCUTTA

pearance. The Devil Dances are performed by men; but Tibetan, Sikkim-Bhutan or Nepalese women mingle freely in the audiences, as Buddhism imposes no *pardah* laws upon its feminine element. Beside the Devil Dances, there are the dances of the Black Hat Sect and dances incidental to the lama mystery plays; all of which are quite individual and original in form and entirely different from the dances of southern and central India.

Having contributed to THE ETUDE an article on the subject of the Devil Dancers, we shall not here go into a detailed description of these interesting performances. We merely desire to point out a few unusual types of dances, and would like to say that the male dancers of the western world would be especially inspired and encouraged if they had the opportunities to see and study the work of men dancers in the Far East.

Superficial students of Indian music imagine that the nautch girl stands for the dance, but to us her work seems the least interesting of all. She is ubiquitous and commonplace, in comparison with the dances already referred to in this paper, only one of which includes women. The nautch girl is as a rule a solo dancer, though groups of these women perform in a crude ensemble at large temples; but the dances of the aboriginals or animists are different in that the music is entirely in the folk manner.

### The Khasis Dances

IN ASSAM ON THE BURMESE BORDER the Khasis also have a great number of dances that include both men and women, although there are special dance forms sacred to each sex, in which either men or women dance alone. This peculiar race of people represents one of the few known matriarchies in

existence. Their religion is animistic in part but largely built upon ancestor worship. At certain seasons of the year the Khasis have great festivals where dances are performed for days at a time, and on such occasions the beautiful hills of Assam make a striking background for the colorful costumes of the *al fresco* performances of the Khasi clans.

The dances we have mentioned are seldom seen by the casual visitor to India. One must live at considerable length in the country to be able to go at certain seasons to outlying districts in the great continent, to witness the dances of various races and sects whose strongholds might be a thousand or more miles distant from each other.

Those, who spend a few days in Bombay, Calcutta, Agra, Delhi, or the "mongrel ports" and show-places of India, never see these dances at all; so it is but natural that they should accept the much advertised

nautch girl as the representative dancer of the country. We would not underrate the status of the nautch girl; she has learned romance, color and interest in Hindu India from time immemorial. But we feel that the less known forms of dancing deserve their share of praise as well.

### Self-Test Questions on Miss Strickland's Article

1. What are used sometimes in place of masks, in "masked" dances?
2. What qualities are expressed in the Khasi Stick dances?
3. Name four seasonal dances.
4. What was Mohammed's conception of music? the Buddhist's estimate?
5. What are peculiarities of the Khasis and their dances?

## Music Elects a Governor

"Pass the Biscuits, Pappy"

By MARIE SEACORD LILLY

IN JUNE OF 1938, W. Lee O'Daniel, Governor-Elect of Texas, was known to thousands of people throughout the state merely as a voice with personality, which had been an intimate of their radio circles for eight years. It had come to them with the music of a band which advertised flour by a program of folk songs of the picturesque Southwest. Six weeks later over five hundred thousand of these same citizens nominated him their governor, with a majority so large that a run off primary was unnecessary. And nomination on the Democratic ticket means an election in Texas.

This Governor-Elect is a typical American, forty-five years old, who went to Texas thirteen years ago. His assets were a handsome wife, who was also thrifty; a charming daughter; and two healthy, good-looking sons. In a recent campaign broadcast Mr. O'Daniel said, "We have money enough, a good home and some ranch land. The time has come when I feel that I can devote myself to the interests of others." Sounds as if some one had been rubbing Aladdin's lamp; but music did it. The music of W. Lee O'Daniel and his "Hillbilly Band" made him governor.

The Governor-Elect has never had formal training in music. Rumor recalls that "He was always good at singing songs on the last day of school." "He always had a fair voice."

His sister is an excellent musician. She tells us that on one or two occasions she induced the shy lad to sing a duet with her, before the church circle. The fact remains that the nickname, "Canary," was bestowed upon him early in his career, in recognition of his vocal fireworks with the town quartet.

### "No Excellence Without Great Labor"

A TIRELESS WORKER, he lay awake of nights, trying to devise new ways to make people buy the flour which he had come to represent as salesman. Then came the idea which eventually led him through the hill country of Texas, straight to the governor's chair in Austin. A group of musicians approached Mr. O'Daniel with the proposition of presenting a radio program of Texas folk songs as an advertisement for his flour. From the first broadcast the plan was a huge success. The people of Texas liked hillbilly music. The result was the organization of "The Light Crust Dough Boys" from Burrus Mills.

Later he chartered a bus and had it wired

for sound, to take his band on personal appearance tours in remote towns and hamlets. The band played for all such events as country fairs and commencement programs, always donating their services. Everywhere they went they were feted guests; and the sale of their flour pyramided.

Gradually Mr. O'Daniel took over the leadership of the band and began to sing the solos himself. He then began to intersperse his advertising speeches with little talks seasoned with homely philosophy. Folks liked his pleasant voice, and also the sermonettes which seemed to touch the heart of the problems of their daily living. His name became a byword in the hill country.

From his boyhood the writing of verses upon intimate family events had been a hobby of "W. Lee," as he became affectionately known to his radio fans. While traveling through the varied terrain of Texas, admiring, in turn, mountains and plains, wooded hills and low lying seacoast, he composed a poem which eulogized the beauties of his native state. Then he

hummed a tune to fit the words. By the time he returned to Ft. Worth, he had in his mind a completed song. He whistled his composition to a member of his band who wrote it out for him. Thus *Beautiful, Beautiful Texas*, was born.

### A Composer "Arrives"

ON HIS NEXT BROADCAST he sang his composition. It caught the fancy of people everywhere. Requests for copies of the song poured in, but there were none. Finally they heard about it in New York. A Manhattan publisher wrote to Mr. O'Daniel, requesting publishing rights. The song was launched by a New York orchestra, over a nationwide hook up. It was a hit. Shortly it was used on one of Major Bowes "Family Hours," and then everybody was singing it. The future Governor of Texas had broken into Tin Pan Alley in a big way. There were many other compositions evolved during those years of broadcasting, many of them occasional or of local significance; but *Beautiful, Beautiful Texas* and *The Sons of The Alamo* have already stood the test of considerable

time and seem to grow in popularity.

In 1935 Mr. O'Daniel decided to turn his talents, musical and otherwise, more directly to his own account, and severed his connection with The Burrus Mills. He formed an organization of his own, called W. Lee O'Daniel and his Hillbilly Band. His two sons joined the new group, all of whom were officers in a new flour brokerage business; for Mr. O'Daniel had become a miller without a mill. He bought flour, packaged it under his own name, as Hillbilly Flour, and sold it literally by the ton. The broadcasts were over a less powerful station, but the "voice with a smile" still drew its audience.

Early in 1938 Mr. O'Daniel told his radio friends that one of them had suggested that he run for governor. "Send me a postcard," he said, "and tell me what you think I ought to do." Returning mails brought fifty-four thousand four hundred and ninety-nine cards urging him to make the race. That was enough. He had his call. He hooked up his sound truck and started out to stump the state, using *The Sons of The Alamo* as theme song and battle cry.

### A Family Phalanx

THIS TIME DAUGHTER MOLLY went along too. The boys were already members of the band, and Molly's function was to pass among the crowd, with one of the small flour barrels marked "FLOUR—NOT PORK," to collect funds with which to finance her father's campaign. Everywhere his friends thronged to see him. Nickle and dimes poured in, oversubscribing the campaign expenses by eight hundred dollars. And every man and woman, who contributed a nickle from that point on, considered W. Lee O'Daniel their personal candidate. Texans came to be amused and went away to elect the leader of the Hillbilly Band their governor.

The zenith of his musical career was probably reached immediately following the confirmation of his nomination, when The Music Corporation of America offered Mr. O'Daniel twelve thousand, five hundred dollars a week for a ten week personal appearance tour of the east. He was also offered fifty thousand dollars to appear as master of ceremonies over a national radio hook up. These were *bona fide* offers; and the time of the Governor-nominate was known until his inauguration in January, 1939; but he declined both offers, cradled in the confidence that music may do more than soothe the savage breast.

### "PASS THE BISCUITS, PAPPY"

Note the musical chariot that carried W. Lee O'Daniel to the gubernatorial chair of the largest state in the Union, a domain larger than all of France. O'Daniel is standing behind his two fine looking boys in the center of the picture. Gov. O'Daniel first used music to sell flour.

# Lessons With Ossip Gabrilowitsch

Piano Virtuoso and Conductor

An Apostle of Beauty in Piano Playing

By MME. CECILE DE HORVATH

## Part III

GABRILOWITSCH'S SENSE OF HUMOR frequently found its way into the class room. For instance, when one pupil found that she had to start the beginning of the piece every time Gabrilowitsch interrupted her, he told her that she reminded him of the couple who were unable to dance unless they started in the mantel piece.

On another girl whose fingers were not long enough for the last movement of "Sonata Appassionata" of Beethoven, he exclaimed:

"That should sound like the roaring of the ocean, and you make it sound like a syphon of soda!"

On still another pupil, who had met his Waterloo in the Handel-Brahms *Variazioni*, he said, a bit cynically:

"This dramatic variation should be played with a great deal of dignity, but the way you do it, it sounds like a back fight."

While we were studying with Gabrilowitsch, he was studying conducting with Mr. Brander Matthews; and it so happened that, the day when he made his Berlin debut as a conductor, one of his pupils had had a particularly poor lesson. Gabrilowitsch had an unusually severe with her. After his evening debut the whole class trailed into a green room, headed by the pupil he had scolded, who was by far the wittiest member of the class and said to him, "Do you know how I feel? I feel just like the English butler who boasted that he had been kicked by a duke!" The next lesson was marvellous to her.

## Encouragement of Individuality

I WAS VERY MUCH INTERESTED in an essay of Mr. Brander Matthews, on *The Art of Imitation* in which Matthews says: "Imitation is the strict duty of every artist in the formative period of his career."

When he agreed with up to a certain point, I have explained before. However, he is quick to encourage real individuality when he found it. He was delighted if we did think up some individual way of our own of solving a technical problem. "She shows how to help herself!" he would exclaim. In truth, one of the greatest things about him as a teacher was his broad-mindedness. He would say:

"My interpretation is different from yours; but yours is logical and artistic. I would advise you to keep it. With the exception of this effect, which could fit into my interpretation but does not fit into yours."

Again, he said to a pupil in connection with the third *Prelude* in Bach's *Well Tempered Clavichord*:

"I see you play that throughout with the color of the una corda; I do it quite differently myself, but I find your idea very interesting and should advise you to leave it as it is. The color might be altered a bit just here (and he played

the passage in question), but on the whole it doesn't fit into your general scheme, and you would do better not to change it."

Gabrilowitsch recommended the Busoni edition of the "Well Tempered Clavichord," on account of the excellence of the phrasing.

## Artistic Effects

HE WAS CONSTANTLY SAYING:

"Do not forget the melodic essence. Keep the melodic curves. You are playing the notes like a finger exercise. I do not hear the melody."

During the "Sonata in G minor" of Schumann:

"In syncopated passages the rhythmic pulse must occasionally assert itself, or the structural line will be lost."

"Where the melody is two voiced, try to give the effect of two clarinets."

It is better not to use too much pedal in sustaining the melody, as the tone quality of the left hand here must be purposely kept a little dry.

"In the Adagio, the sixteenth notes must not be played too slowly. The character of this movement is placid and lyric, but not sentimental, and should be raised to dramatic coloring only at one point."

"Here is the coda the oboe is heard and later answered by the violoncello."

Ex. 4

"The last movement is not to be played too legato; give it more of a fluttering quality in the broken octaves, by holding the hand a little bent toward the thumb, so that the little finger can be lightly thrown."

"The coda is not to be thought of as one long crescendo, but as built up of a series of short ones, gradually increasing in intensity."

In the *Etudes Symphoniques*:

"Play the fortissimo chords with nobility of tone, or the quality could easily degenerate into that of a brass band."

In the *Fantaisie in F minor* of Chopin:

"Have you a clear picture in your mind of the character of this episode? Is it lyric or passionate?"

OSSIP GABRILOWITSCH AND MRS. GABRILOWITSCH  
AT HAVANA, CUBA

Mrs. Gabrilowitsch, formerly Clara Clemens, daughter of Mark Twain, has just written a biography of her husband, recently published by Harper and Brothers.

In the short staccato episode in E-flat major, one pupil plunged too drastically into the center of things.

"Do you not like this better?"

Gabrilowitsch played it and made it sound like a melody being faintly intoned by the French horns while the strings furnished a delicate *pizzicato* accompaniment.

Ex. 5

Gabrilowitsch, being an orchestral conductor, very naturally produced a great many orchestral effects on the piano, as we see from many of the above examples. In Chopin's *Ballade in G minor*, for instance, the following passage in the bass must sound like French horns. In the *pianissimo* repetition it is supposed to sound like an echo, but of course with the same hornlike quality of tone.

Ex. 6

To quote him:

"Always make a nice entrance into a new theme or key as if you would say, 'Now listen to this! I have something new and interesting to say.'"

"Try to feel the warmth of the changing harmonies and always bring out the harmonic changes in the accompaniment."

He was only interested in teaching the finest and best in music; and if we brought him any composition which he considered unimportant, he refused to bother with it, saying,

"You can study that sort of thing by yourself."

Again he says:

"When a figure is taken through several repetitions, it must be made prominent the first time in order to impress it upon the ear, and after that it may proceed normally."

The Gluck-Sgambati *Melody*, Gabrilowitsch called,

"A forest where no breezes stir and just one bird sings."

He took his art very seriously, and his concentration at the lessons was so great that I have known him to look several times at a friend who visited the class for the first time and not even know that she was there. The tension in his class was great, and often we pupils were exhausted from sheer concentration alone.

He very sensibly warned us against our friends. "Never believe anything your friends tell you," he warned repeatedly. He felt that well meaning friends and families could do a great deal of harm by injudicious praise.

I often have held him up as an example to pupils who were ambitious for careers, who practiced five or six hours a day, but who I felt had no real love for the music they played. He loved music so that he was always exclaiming over the beauty of compositions he was playing; for instance, the *Prelude of F-sharp minor* by Chopin, which he considered the most beautiful of all the "Preludes." In this *Prelude*, he emphasized interesting organ point effects in the bass, such as in the following example where, by skillful pedaling, the F sounds through several measures.

Ex. 7

During our stay in Berlin he had to go to America for a concert tour. While there he married Clara Clemens, daughter of Mark Twain. He was uncertain as to whether he would teach any more, when

# The Threshold of Music

## Linking Chords into Sentences—And Punctuating Them

By LAWRENCE ABBOTT

Assistant to Dr. Walter Damrosch

This article is the Eleventh in a series on "The Doorstep of Harmony." The first appeared in The Etude for January, 1938, and an article will appear each month hereafter.

IN THE FORMATION of musical sentences three chords play dominating rôles. They are the same three chords which we have already met as the three simplest chords in music: the triads on the tonic, dominant, and subdominant notes (Do, So and Fa). Those three chords, you remember, form the notes of the major scale. They are the only three major triads of the scale, the other four being minor and diminished triads.

The Tonic, we discovered, is always the last chord of a piece of music—the "home" chord.

The Dominant is usually the next to the last chord. We always expect the dominant seventh to move to the tonic, and are surprised when it does not. The dominant triad gives us somewhat this same feeling, too; it leaves us distinctly "up in the air" and poised to go somewhere else.

The Subdominant is the chord which usually harmonizes the first syllable of "A-men" at the end of hymns. It is placid, gentle, a foil to the sterner character of the dominant.

These three chords, we are going to find, occupy strategic positions of great importance in nearly every musical phrase and sentence, and particularly in those parts of a piece of music which are known as cadences.

### Cadences—the Punctuation Marks of Music

JUST AS WORDS ARE PUT TOGETHER into units called phrases and sentences, so chords are put together into what are called musical sentences. A sentence is a short stretch of music which comes to a stopping place, or to a resting place, where we can pause for breath before going on. In songs these pauses usually coincide with the pauses at the end of each line of verse.

A person, talking, will let his voice fall at the end of a phrase or sentence. In music there is a similar fall—not necessarily a literal drop from a higher note to a lower one, but a figurative falling off in the flow and movement of the music—called a cadence. Certain combinations of chords give us the feeling of arrival at a stopping point or a resting place, and these combinations are classified as different kinds of cadences.

There are four important cadences.

The Authentic Cadence—the dominant chord followed by the tonic (So to Do)—the most final and satisfactory way of reaching our stopping place. We have already spoken of these two chords as the next to the last and last chords.

Examples of the authentic cadence may be found in almost any piece of music. Here is one from the "Sonata in A" (K331) of Mozart:

And this, from the same work, closes with a half cadence:

The Half Cadence—a cadence which pauses, not on the tonic but on the dominant. It may consist of any one of several chords (tonic, supertonic or subdominant) followed by the dominant: Do to So, Re to So, or Fa to So. From Re to So is especially effective because its bass, following the Bass Law, suggests an authentic cadence in the dominant key. The Half Cadence takes us to a "halfway house"—a temporary resting place on one's journey to the tonic.

A classic example of the half cadence occurs in the *Hymn of Joy* theme in the finale of the "Symphony in C minor, No. 1," by Brahms.

The Deceptive Cadence—usually the dominant chord followed by a triad on the submediant (La), is a surprise cadence, which pretends to lead us to the tonic, even

going often so far as to obey the Melody Law in the movement of its upper notes (Fa down to Mi, and Ti up to Do) but fools us completely with its bass by moving, not from So to Do, but from So to La, as if to the tonic chord of a closely related minor key. It more rarely uses a chord other than submediant and may even prepare a modulation to a related key.

The hymn, *Abide With Me*, by William H. Monk, begins with a four note phrase which comes to rest on a deceptive cadence. The fourth chord, instead of being tonic, is a triad on La:

The deceptive cadence occurs on the words "with me."

Perhaps the greatest deceptive cadence in musical literature is one which Beethoven included in the *scherzo* of his "Fifth Symphony." It is part of a passage which reveals Beethoven as the supreme dramatist among musicians. Instead of bringing the movement to a full close with an authentic cadence landing on the tonic triad of C minor, he introduces without warning an unexpected triad on La, and then, for fifty measures, holds us in breathless suspense during a gradual crescendo which leads into the crashing opening measures of the *Finale*. Here is the cadence:

The last two chords form the deceptive cadence—So to La in C minor.

The Plagal Cadence—the subdominant chord followed by the tonic (Fa to Do)—one of the most famous of cadences, used in hymn tunes to harmonize the word "A-men"; and forming the tremendous close of the *Hallelujah Chorus* of Handel's "Messiah." The combination of these two chords dates from mediæval times, when the ancient Church Modes were in everyday use; and its name is taken from one of these old modes. It is less decisive and more peaceful than the authentic cadence.

Seventeen year old Mendelssohn wrote into his *Overture to "A Midsummer Night's Dream"*, one of the tenderest and dreamiest of melodies, and capped it with a pair of plagal cadences that are unbeatable for their sheer effectiveness:

The dictionary tells us that the word *amen* is a term used in solemn ratification meaning "so be it." The plagal cadence has a similar function in the language of music. Certainly the plagal cadences in this passage from Mendelssohn set their twin seal of approval on the preceding melody.

The chord combinations used in cadences are not restricted to the ends of musical sentences. They sound equally well at any stage of a composition and help to produce the effect of a logical and inevitable flow of musical ideas.

(To be continued in March)

\*\*\*\*\*

"That there has grown and developed definite school of American composers during the past five years, can no longer be doubted by any one who has been in contact with American music. United by a common idiom, and directed by a common ideal, young American composers have certainly produced a music which is, up to now, the first coherent musical expression to be produced in America."—David Ew in the London Musical Times.

## Integration in Music Study

Educators in the field of music are beginning to realize the serious significance of integration in modern music study. The work that is being done by boys and girls, in bands, orchestras, and choruses, in our public schools and colleges, is truly magnificent; but it will not result in a well rounded musical education unless each student is given a practical working knowledge of music as a whole, which may be obtained only through studying the structure of music (melody and form), the composition of music (harmony and counterpoint), and the color and texture of music (instrumentation). Even when these subjects cannot be carried to an advanced degree, the ability to play a keyboard instrument brings all of the integral parts together within the grasp of two human hands. The pupil is no longer a "one track" musician. That is the reason why in European schools, no matter what other subject the student takes as first study, the rule is: **Piano is Compulsory.**

# BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

## The Band Repertoire

THERE IS A GREAT natural difference between the band and the orchestra, and the distinction between the two need not be pointed out to even the most unskilled of listeners. They have separate histories, but a common sphere—individual characteristics but an inseparable bond that is becoming stronger with the passage of time.

For many long years bands have been regarded by the more æsthetic music lovers as orchestral musicians as a necessary evil, and a somewhat inferior offshoot in the musical family. Bands were for the purpose of the mob—it was their duty to use music with loud voice and martial music. Their appeal was to the senses, and their progress stopped with the easily satisfied tastes of the mass of people.

But actual progress seems to be an invariable law in almost every phase of life, and were it not so, the band would be doomed to extinction. We have firm faith in the future of the band, symphonic and otherwise, and can see no reason why it should not attain a greatness hitherto reserved alone for the orchestra.

There have been many obstacles to the advancement of bands, and perhaps the greatest of these has been the limitations of the band repertoire. There is no comparison between the tremendous repertoire of great music available to the orchestra and that for the band. A primary reason for some of the disdainful attitude of some musicians and audiences lay, and, in a measure, still lies, in the narrow confines of such music as has been written, arranged, transcribed and published for band.

For many years bands have been forced to use music of inferior quality, and arrangements that are not suited and that ill-adapted to concert purposes. Limited instrumentation was a contributing factor to the ineffectiveness of band arrangements and transcriptions. Most of us are quite familiar with the typical municipal band, whose instrumentation was predominantly brass, attempting the performance of the *Overture to "William Tell"* and *Poet and Peasant Overture*. Instruments of the brass family were freely substituted for oboe, bassoon, French horn, and oftentimes the flute; and the percussion lent its accompaniment to the rather noisy final effect. Such performances did little for the cause of bands and band music.

### The Park Band

PERHAPS THE ENVIRONMENT in which bands had to survive helped to lower the worth of the average band. The usual park audience was busy with its search for gaiety, and band music competed with the crackling of peanuts and popcorn; with chewing gum, restless movement, and an intensified volume of conversation. It is possible to appreciate the position of the average band leader, who had to consider the limited remuneration, facilities, and type of audience catered to by the bands of the day. Doubtless the reason for present heaviness of brass and percussion in band arrangements is that there is still a hangover of these conditions.

February, 1939

arrangers for this limited repertoire, for it could hardly have been a profitable venture for them to attempt arrangements for symphonic band when there was no such organization existent. Yet it cannot be denied that the inadequacies and compromises necessitated did little toward elevating band performance or public attitude toward the band as a musical organization.

In the matter of original material, by which is meant compositions expressly for band, there was pitifully little, and that which was available consisted chiefly of galops, characteristics, medleys of various tunes discreetly called overtures. In this lack of suitable and worth while material we can understand how greatly handicapped bands were in attempting to create programs containing musical value and at the same time meeting with the general approval of the public. Arrangements were satisfactory only insofar as they overcame competitive noises of crowd and street or surmounted the popping of bags and constant chatter of park concert fans. In no wise could band repertoire be considered a musical achievement.

Tradition, in many respects, has made the band its slave. There are yet many people who regard the band simply as a military or "beer-garden" unit. The band was perhaps born a military unit, and for many years has emphasized that phase of its activity. For this reason there are those people who think of the band as a noise making, marching group which owes its existence to parades on holidays such as Armistice Day, Labor Day, and Independence Day, and to the activities on the gridirons of our high schools and colleges.

While this phase of a band's activity is important and should be supported, it should not represent the finest standards musically possible. The fact that our bands

can so conveniently fit into so many situations should indicate a versatility in musical accomplishment which it would be wrong to judge simply from performance on stirring occasions. Priming for such occasions soon becomes dangerous, in that we find ourselves rehearsing only that music which captures the fancy of holiday crowds.

It is tradition with band audiences to look upon the band as an organization whose chief objective is to furnish the spirit for combat, whether it be in a game of football or in the serious game of war. Traditional also is the concept of the band as an entertaining group indispensable to gay times—picnics, circus shows, races, and other similar affairs. That the band should provide entertainment goes without contradiction; but it would seem that such entertainment can be in the form of good music, and not solely in the form of vaudeville performance.

Where tradition has thus permitted a limited repertoire for band, it has afforded the orchestra entirely opposite treatment. From its inception the orchestra has been recognized as a concert organization. Its repertoire has been blessed by the best efforts of our great masters. Its wide and varied instrumentation has not changed a great deal, and the functions for which it exists remain unchanged.

Composers have been attracted constantly to write for the orchestra, and the orchestra conductor has not been faced with the necessity of building his program from transcribed music, as has the band conductor. The finest of musical literature is at his disposal, and in most instances scarcely one note need be changed. The bandsman, however, has found it inevitable to be constantly editing, arranging and re-arranging, rewriting parts, and redistributing cues.

Very little original music comparable to the great orchestral symphonies and overtures has been written for band; and the practice has been simply to transcribe most of the orchestra, organ and piano compositions for band purpose. In so doing, the transcriber is faced with many perplexing problems. To begin with, he must decide the question of what to transcribe. Certain compositions which sound beautiful in orchestral performance are totally unadaptable to band. The very instrumentation of some compositions makes them impractical for band, and with others the character of the music may be the reason for unsuitability. In the second place, the transcriber must give attention to the problem of technical difficulties. For instance it is one thing to perform a tremolo or flying *staccato* passage on the violin, viola, or violoncello and yet another to execute the same passage on a clarinet, bassoon, or other wind instrument. Thirdly, there must be consideration of key changes, proper coloring, and limitation of ranges.

### What to Transcribe, and How

THE PROBLEMS CONCURRENT with transcription are self-evident. Certain compositions belong to the orchestra, and never sound well for band, no matter how admirably transcriptions are made. The problem returns to the need for original works and greater efforts to improve and adapt for modern band those transcribed works which do not lose value in the change. In this respect, great strides have been made in the repertoire for band, and we find excellent transcriptions of masterpieces originally written for orchestra. There have even been instances, in the works of Bach, Wagner, Tchaikowsky, Saint-Saëns, Massenet, and others, where transcription has proven the composition more effective for band than for orchestra. However, the result in works of Mozart, Haydn and others of the classical era, has not been so gratifying. They do not seem adaptable for band, although the serious study of these works will prove edifying to any musical group. Those works which were written principally for stringed instruments rarely are suitable for band—they are idiomatic to the orchestra.

One of the most profound movements which has changed the status of bands is the development and growth of the school music program. Thousands of students in band and orchestra programs have changed the complexion of musical audiences, and this has been heightened by the great numbers of music appreciation classes affecting hundreds of thousands of students in our schools and colleges. The amazing development of radio and sound recording has added its large share in such growth, with the result that a generation of young men and women has arisen who attend concerts not with the view of being entertained for entertainment's sake, nor for the purpose of conversing with neighbors, but for the real satisfaction and enjoyment which comes with true appreciation and intelligent understanding of what one hears in music.

Such growth in musical knowledge and

SOUS LES TOITS DE PARIS

"On the Roofs of Paris"—here they are, thirty-eight young men and young women, who, as an American College Orchestra, are touring Europe under Dr. Henry Wallace Stopher, head of the Music Department of the Louisiana State University. The roof is that of a modern hotel in the old Latin Quarter. They all look as though they were shouting, "What an Opportunity!"

# MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music  
appearing in  
the Music Section  
of this Issue

## GERMAN DANCE

By KARL DITTERS VON DITTERSDORF

In the last analysis the dance is a form of expression—in gestures. Quite aside from national traits and characteristics, the character of the gestures employed vary according to the culture and general background of the dancers themselves. For instance, the peasant dances are much more primitive in every way than the more sophisticated court dances—even though in many instances the court dance evolved from the folk dance of the peasant.

The German dance, in triple rhythm, differs materially from the refined Viennese waltz, also in triple rhythm—although it is quite possible that the waltz form, with its many nuances, grew out of the rugged and more primitive *deutscher tanz*.

All of which is automatically sensed by those naturally gifted with musical talent. But what about the pupil not so gifted? What direct help can be given that will enable him to make a distinction in his playing, between a folk dance or court dance? Mostly it is a matter of rhythm. In the folk dance, let the accents be rather emphatic—on the first beat of each measure in this case; keep the *tempo* steady and slur rather sharply. Think of wooden clogs dancing rather laboriously on the village green rather than gilded slippers gliding over a polished ballroom floor. This does not mean that the treatment need be lacking in grace. But let the atmosphere suggest healthy, exuberant spirits rather than the affected *ennui* of aristocracy.

This little dance has a charm all its own and should depict the freshness of the outdoors. In other words, it should indicate the gestures, set to music, of a people having a good time and making no effort to conceal it.

## VENETIENNE

By G. A. GRANT-SCHAEFER

As indicated by the title, this piece is intended to depict a Venetian scene.

Because of its many street canals, Venice and the *barcarolle* (a piece in six-eight rhythm suggesting the swaying of a boat) are practically synonymous. This swaying effect is automatically achieved if the rhythm, as outlined, is followed.

The first theme is played *allegretto* and the second theme—beginning at Measure 25—a little more slowly.

In the second section be sure the rhythm is preserved where the inner voice passes from right hand to left. The pedal is important and should be applied exactly as indicated.

## FLASHLIGHTS

By FRANK GREY

This number makes very free use of triplet figures; and perhaps, therefore, a few words about triplets in general may not be amiss.

Since musical notation makes no provision for indicating notes having one-third the value of others, the familiar triplet sign is used when groups of three notes are to be played in the time ordinarily given to two of the same value. However, there are triplets and triplets.

A certain elasticity of performance is allowable—in fact, intended. We have for instance the so-called "lazy triplets," the "brilliant" triplets, and those played with a certain *rubato*.

In this particular piece the triplets should be played with more or less mathematical precision.

A common error, and one to be avoided in this piece, is that of playing a triplet figure, followed by a dotted eighth and sixteenth, without making any rhythmical distinction between the two. Thus

is quite incorrect when played as if it were written

The first group is divided into three equal parts,

while the second is divided into four equal parts, each a sixteenth note in value, like this:

It would be well to guard against this pitfall, by which many have been tripped.

## MUSICAL CLOCK IN THE ANTIQUE SHOP

By EVANGELINE LEHMAN

Descriptive pieces have a special appeal for most people and this number by Miss Lehman is very frankly that type of piece.

Notice that both hands are played one octave higher than notated. Try to produce a "tinkling" tone such as that associated with the familiar music box of an earlier age.

The pedal is indicated to be used twice to each measure, and this will be found effective. However, to those who are more skilled in its use, a slight blurring with the pedal will enhance the effect even more.

Slow up the *tempo* toward the end, indicating that the clock is gradually running down.

## IN A RICKSHA

By ELIZABETH L. HOPSON

Another piece in the descriptive style is this one by Miss Hopson. The 'ricksha (*Jinrikisha*) is a two wheeled affair pulled along the street by tireless Chinese coolies and is the oriental idea of taxi service. The opening theme depicts a gay street scene, the left hand part indicating the steady dog trot of the coolie who harnesses himself between the shafts of his vehicle, as though he were a draft animal of some sort.

The second section changes character (and rhythm) and is played in stately manner at slow *tempo* while "passing the Temple gates."

Give your best singing tone to the melody notes played in unison by both hands throughout this section.

The first theme (also the first scene) is repeated at Measure 50 and continues to the end of the piece.

Throughout the piece make as much contrast as possible between *staccato* and *legato*.

## IMPROMPTU

By LILY STRICKLAND

The term *impromptu* was probably used originally to designate a piece improvised or extemporized. But since no piece which is first written, then engraved and published, can be considered *extempore*, the term is used for a piece having the char-

acter of an improvisation. The most outstanding piano pieces in this form are the "Impromptus" of Chopin. There are several sets of pieces by Schubert called "Impromptus," but it is extremely doubtful if this title was given by the composer himself. It is generally believed the term was applied by the publishers.

However, the title sometimes, as in this instance, gives a direct clue to the interpretation. Play it in a manner not too dogmatic, apparently following the mood of the moment.

Note the change of pace, also change of metre. Follow the many guides to expression as shown in the text, and the result is bound to approximate at least, the intentions of the composer.

## FROSTY MORNING

By GEORGE HAMER

Play this little number with the crispy freshness indicated by the title.

If you happen to be a purist, and need something more definite than a proper "mental attitude," try following all the accents, slurs and other marks shown in the text, and the music will start speaking for itself! Give proper resonance to the notes played by the right hand thumb in measures 5 and 6 as well as in other measures where accented dotted halves are shown.

It need hardly be pointed out that the *tempo* must be brisk at all times and the pedal used sparingly.

Don't "dawdle" over the *rallentandos*; and make a quick recovery of the *tempo* as the original pace is resumed.

## SCHERZO

By FRANCES TERRY

Here is an excellent study for the development of the forearm attack.

Be sure to play all repeated chords on one arm impulse, and give plenty of significance to the accented chords as well as those bearing *sostenuto* marks.

Naturally this composition should be learned first at slow *tempo*, with rather broad *staccato*, allowing the fingers to remain on the keys long enough to register the "feel" of the chords. Later, as speed develops, the *staccati* should be made more brittle, until finally they are heard *staccatissimo*.

Keep the character playful in accordance with the title and make the most of the dynamic changes which cover a wide range.

## ADAGIO IN F MAJOR

By F. J. HAYDN

This *Adagio*, like most of the slow movements written for those forerunners of the piano—the harpsichord and clavichord—contains many embellishments. Because of the tonal limitations of the earlier keyboard instruments, it was necessary to use embellishments rather freely. However they should be played with the utmost skill and delicacy and never allowed to obtrude on the melodic content or trend of the piece.

No matter how quickly the various passages are played, to conform with their respective rhythmical divisions, the feeling of *adagio* must never be lost. Avoid anything verging upon a "chills and fever" performance. Simplicity and dignity are the watchwords.

Although closely related to each other, think of each voice as having a "soul" of its own—in other words play it in orchestral fashion, each voice representing a different instrument of the orchestra. To be

thoroughly enjoyed, these slow movements from the classics assume not only intelligent performance but intelligent listening. They must make an appeal to the intellect as well as to the emotions. Among musicians, this type of composition is referred to as being "pure music."

## SONG OF SPRING

By A. VON HENSELT

Henselt is looked upon by some authorities as a sort of connecting link between the style of Hummel (his teacher) and that of Liszt, which followed some time later. To the perfect *legato* of Hummel he strove to add more sonority, breadth and brightness which of course ultimately reached greater heights under the fingers of Liszt. The qualities are evident in his many fine compositions for piano.

This number is very lyric in character and while the right hand sings its song in double notes, the left supplies an extended *arpeggio* accompaniment designed to add a feeling of expanse as a background. This particular version has been revised and edited by Constantin von Sternberg, who, before his death, was eminent as a pianist and teacher in Philadelphia.

## LITTLE BROWN BEAR

By B. R. COPELAND

A short, sixteen measure piece for first grader.

The melody is divided between the hands for the most part and words are supplied to these tunes so that they may be done as songs as well as piano pieces.

## HAPPY HANDS

By CYRUS MALLARD

A waltz to be played in lively *tempo*. In the first section in G major, the right hand carries the melody, mostly in thirds. In the second section the left hand has the theme while the right hand supplies accompaniment chords.

## THE MARCH OF THE TIN SOLDIERS

By MILDRED ADAIR

Here is a piece for left hand alone always welcomed by the little Willies who like to eat popcorn while they practice. Both *staccato* and *legato* come in for equal share of development.

A novelty number which can be used to good effect by ingenious teachers.

## SQUIRRELS AT PLAY

By OLIVE ENDRES

Besides being a cute little number, this piece has pianistic value as it develops playing of triplets, grace notes and intricate *staccati*. The group of notes in Measure 16 should be played with a rocking motion of the hands—fingers held close to the keys—to sound like a *glissando*.

## THE VALENTINE

By HELEN CRAMM

A tuneful little number with the melody in the right hand while the left hand supplies a broken chord accompaniment.

## A BIRD CALLS IN THE WOOD

By BERNARD WAGNESS

Strict observance of slur signs is necessary in order to imitate the bird calls suggested in this number.

Notice that while some slurs are thrown off very sharply, others end on *sostenuto* tones. A distinction between the two is an essential part of interpretation.

# THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

## Understanding the Teaching Field

Does the piano "field" offer anything more to the teacher than to organize a class of private students? I have had a successful class for many years, but am finding it more and more difficult to keep up my enthusiasm. I would like to expand, but how?—P. M., Montana.

Do you organize your students into weekly or biweekly classes? If every pupil required to attend such a class, you will be obliged to find stimulating programs to keep your classes going at red hot temperature. Do you play to your students, briefly at their lessons, or as an occasional special event? Have you ever thought of organizing a group of preschool children for general music training? If teaching one of those fascinating subjects of "music appreciation" for adults? Have you discovered the joys of piano ensemble (four and eight hand) classes, composed of young or adult students?

Have you ever thought of submitting a program to your local radio station for a weekly fifteen minute piano program with you in charge? The possibilities offered by such programs are only now being discovered by teachers. Local stations are usually willing to fill up their hours with interesting broadcasts, even though they are seldom asked to pay for the time. Yet there is always the chance that, once started, the programs will be found attractive enough to persuade the broadcaster to "rake up" funds to keep them going.

Just as you say, you have had long experience, why not follow the lead of a progressive teacher in a small city of the West? She writes thus:

"I have an excellent class of thirty years' standing in Washington, D.C. I tell you of a grand project recently undertaken by the need to escape from four studio teachers. I have just completed my second year working with piano teachers in Washington in each of three towns—Ketchikan, Sitka, and Fairbanks. The opportunities for constructive work and a marvellous experience are only limited by one's vision and energy."

Yes, after thirty years of teaching! An inspiration to the rest of us. And not necessary to go to Alaska, if you have fertile ideas in your head, and vitality to bring them to fruition. In every region there are many backward districts where conscientious, aspiring music teachers are waiting for the chance to attend a course on some phase of piano—class piano or preschool methods, teaching material, elementary interpretation, or a course in modern technique. Yet teachers, even those who can "deliver the goods," have had the courage to put a plan across. Perhaps you are one who can and should. Why not try?

## To Develop Speed

I am an advanced piano student, but still have trouble working rapid scales, études and pieces up to tempo. Can you give me suggestions which might help to overcome this difficulty?—A. C., New York.

During the last three years I have often had the speed problem in these columns, but am willing to take one more shot at it before writing "finis" to the column. Just remember that you can play as fast as you think, and that thinking lightning speed ahead of your fingers

requires every ounce of intelligence, perseverance and push that you can command. Only morons and geniuses can get away with anything else. The rest of us moderately gifted middle of the road unfortunates must use our brains! And (you know as well as I) unless we coerce our poor little minds every day to force this thinking technic to higher and higher levels, we will not get anywhere. That's where the severe, experienced teacher comes in—he must be on the job, watching, exhorting, constantly demanding sharper concentration. Unfortunately this takes so much of a teacher's "life-blood" that few are willing to force the issue.

As an example of intelligent musical thinking let us work out part of a difficult cadenza passage from Liszt's *Paraphrase on themes from "Rigoletto"*:

This passage in chromatic minor sixths is best fingered by using the fourth on all black keys, excepting that very small hands may use the second and fifth on B-flat, G-flat. Note that I have phrased and numbered the four note groups as the first step toward clarifying the passage. Play the left hand of group one (wrist high!) lightly and slowly, accenting gently only the last notes (F, A) thus:

In all these phrased groups, feel that you are going to the final tones. You can even say aloud as you play them, "I go to here." Above all avoid accenting the first notes of the phrase. Now play group one in the various other octaves of the piano (left hand alone), then the same group very rapidly in each of these rhythms,

all over the keyboard.

Practice group two and group three in the same way; then combine groups one and two in this rhythm;

practice very slowly and very fast (lightly!). Now combine groups two and three and groups three and one, similarly; then play the same groupings (1, 2-2, 3-3, 1) without pause, thus

and finally the three groups together—1, 2, 3; 2, 3, 1; 3, 1, 2. Later, put the right hand through a similar process; and afterwards, both hands.

See what's happened? You have been

compelled to think ahead; you have felt the shape of each phrase; you know definitely where you are and where you are going. Do not work in this intensely concentrated way too long at a time. Rest often, and take a turn around the room. Then return to the piano, and compel yourself to think each group through to the end before you play it. I predict you will soon be able easily to exceed the speed limit!

But you will have to decide for yourself whether you are willing to go through this "agony," or whether you belong to one of those other categories!

## Help on Modern Music

What modern music, Debussy and others, would you give to a pupil who is intelligent, musical and a good worker? She has just finished her second year in high school. She plays the Bach "Two Part Inventions"; and in a recital she played the *Adagio*, second movement, of the "Sonata in C minor," by Beethoven, really well. Her phrasing and shading were nicely done and her technic was good. She has a long, slender hand, not large or heavy. As she is preparing for the conservatory, I am wondering if a concerto, something of Schumann and Chopin of moderate difficulty, would be advisable.—I. M. B., Massachusetts.

"Modern" pieces, not difficult: Cyril Scott, *Passacaglia*; Debussy, *Nocturne*; Debussy, *Prelude in A minor*; Pinto, *Childhood Scenes*; Juon, *Etude* from "Nymphs and Satyrs"; Ireland, *Ragamuffin*; Cervantes, *Cuban Dances*; Respighi, *Nocturne*; Pattison, *Morning Songs along the Arno*; Dohnanyi, *Rhapsody in C major*; Sgambati, *Nocturne*; Medtner, *Idyl, Op. 7, No. 1*; Berners, *Sailors' Hornpipe*; Albinez, *Cordoba*; Rachmaninoff, *Prelude in G major*; Prokofieff, *March in F minor*; Tchereninin, "Bagatelles, Op. 5"; Poulenc, *Pastorale*; Ravel, *Pavane*.

There are no concertos by Chopin or Schumann of "moderate difficulty"; all are difficult virtuoso compositions. Why not try Weber's *Konzertstück*, Mendelssohn's "Concerto in G minor" or "Concerto in D minor," or his *Capriccio in B minor*, or Mozart's "Concerto in A major" or his "Concerto in C minor?"

## Starting a Class

I have the opportunity to take little children in class work this fall, but am not sure that I am prepared. I am a graduate of a small conservatory and have had ten years' teaching experience. I have been studying Ada Richter's "Kindergarten Class Book" and "My First Efforts in the Piano Class," Book I. My idea is to have five pupils in a class, ages five and six years; to have four pupils to work at a table on paper keyboards and charts, while one child is at the piano; and to give them twenty minute periods, three times a week.

Would the same idea do with older children who do not have an instrument at home, giving them three thirty minute periods a week, with home work on the paper keyboards? Is there a text book that would serve as a guide in conducting the classes, other than the music books; and are any other music books needed?—M. S. G. F., West Virginia.

If you can put over your plan for three class lessons a week for the very young children it will be an ideal arrangement, excepting that each class should be at least thirty minutes long.

For the older groups, and especially for those pupils without home instruments, the periods should be an hour. If you plan the lesson carefully, using any one of the

teachers' manuals for class piano methods which the publishers of THE ETUDE will gladly recommend, every moment of the sixty minute period can be made spontaneous and profitable.

## Counting!

I have been in doubt as to the correct way of teaching my pupils to count. Should they be taught to say 1 and 2 and 3 and so on, or 1, 2, 3, 1 have been told that the "and" is not in use in modern counting. I have watched THE ETUDE closely each month, but have not found this information.—O. P., Kansas.

I am glad to know that there are still some teachers old-fashioned enough to insist on "counting"; but I hope you resist the temptation to do this for your pupils at lessons, and that your students count only when necessary to feel the correct note values. There is nothing more deadening to concentration and musical feeling than the soporific reiteration of the same monotonously measured numerals. (What a grandiose way to put it—I just couldn't resist the temptation!)

As for the use of "one and," and so on, I see no objection whatsoever. If you prefer "wu-un, too-oo, three-ee" instead—go to it!

## A Jealous Parent

I have a parent problem—a mother who knows some music and has taught some. She sends her daughter to me because she wants her to have the more modern approach in foundation and classical music. After the child returns from her lessons, the mother often telephones me offering suggestions and criticisms that I have either omitted a subject, spent too much time or too little on this or that until my usual diplomatic and intelligent way of meeting this has about exhausted and failed me.

This parent has, I believe, a "jealous" complex of a niece, also studying with me, doing excellent work, results of which I have cited as due to "non-interference" on the part of the parent.—E. D. G., New York.

"So, what?" as our youngsters would snap! When the taut strings of your patience finally give way, why don't you say just that to the pesky mother? Or if you still feel it necessary to play the diplomatic game with her, why not suggest that she write down an outline of exactly what she wants done, and you will carry it out to the last dotted "i" and crossed "t." But insist on the writing, and on specific directions for at least three months. That ought to hold her! She'll have no further comeback—if you follow her directions.

I have had several unhappy experiences with mothers closely related to each other, whose nieces or nephews were more gifted or made more progress than their own children. In every case I have tried my utmost at recitals to emphasize the excellent musical characteristics of each, and to show that one rival was in his own way as good as the other, so that both mothers' darlings could shine by their own colored lights. That seemed to keep the children friendly and happy, but did not seem to have any salubrious effects on the mothers! They, alas, remained implacable enemies.

All musical people seem to be happy. It is the engrossing pursuit, almost the only innocent and unpunished passion.—Sydney Smith.

# The Meaning of Musical Ornamentation

## The Psychology Behind These Interesting Tonal Decorations in Music

By The Noted Pianist and Teacher

JAN CHIAPUSSO

JAN CHIAPUSSO

THERE IS A SOURCE of most irritating annoyance to students and artists alike in these little quaking, quivering ornaments, trills, mordents, inverted mordents, grace notes, appoggiaturas, slides, and a host of confusing, microscopic mosquito legs, seemingly invented by pedants to gall students and to spoil their fun. Everyone knows that they are governed by rules, rules, which are sternly dictated by that awe inspiring ghost, tradition. And there always are people who wield the imposing rod of prestige by this magic word "tradition." If it is tradition to play an ornament a certain way, all heads bow down in reverence, and the joyous voice of musical instinct is struck mute.

In our modern days of greater freedom in which we drift steadily farther away from ancestral authority, we are apt to see the past entirely through modern eyes, and to interpret it with twentieth century feeling; or rather with that musical sentiment which still rings in our ears with the strains that delighted us in our innocent years. And the repertoire with which we are brought up, is largely of the romantic and post-romantic school.

Pure piano music delights audiences and students more spontaneously than music conceived for old instruments. Consequently we are apt to think old music in terms of romantic and early XXth Century music. The melodies of this familiar epoch do not need adornment of these frills and curlicues. And now we have made the mistake to think that what seems natural to us, always has been natural; so that we look down into the dusty museum of musical history with great pity for those poor people who had to embellish their music—because, as it is generally believed, their instruments could not carry the tone long enough. This is still the current theory taught in many a class room, and many a text book on musical history supports this theory. The tone of the harpsichord—so teaches the thoughtless doctrine of the badly informed—was so thin that it did not last but a few seconds. In order to overcome this primitive deficiency, the unfortunate artists, such as Rameau, Bach, and even Mozart, living in these "backward" times without pianofortes, had to take recourse to trills, mordents and the like to create the illusion of a continuous, singing tone.

Indeed, one can forgive the holders of this opinion for thinking thus erroneously—for the old François Couperin himself made the statement in his book, "L'Art de Toucher le Clavecin," that the reason for the existence of these embellishments was the short duration of the harpsichord tone.

When an artist tries to be professorial, and tries to give causes for effects, he often makes very curious statements. If Couperin meant what he said, then why does he write as many ornaments into his organ scores, and into his trios? Why then did singers in the middle of the XVIIth Century adorn their singing with so many trills and fancy pyrotechnics? Bach, who was in possession of Couperin's works, his music as well as his treatise on the art of harpsichord playing, was somewhat annoyed by the overabundance of ornaments in this

Frenchman's works. There is hardly a single note in Couperin's compositions, which is without some curlicue or other. In spite of this disapproval, Bach went right ahead and belaced his melodies almost as much as his French colleague. The Leipzig Bach Society Edition has the authentic ornaments, which originally adorned (just to pick an example at random) the Three Part Inventions. The F minor one, for instance looks like this, when written out.

Ex. 1

Now we play it merely.

Ex. 2

Examples of this kind could be quoted without number.

It is rather astonishing to see this little melody thus overlaid with jewelry of this trembling and sparkling sort; but it is still more astounding to see them on a choral prelude for organ, placed there by Bach's own hand. Look, for instance, at Bach's variation on his organ chorale (Peters Edition, Vol. VII, page 88). As the chant opens it reads as follows:

Ex. 3

More embellishments could hardly have been crowded into this little melody. And this is for organ! What becomes of the argument of Couperin and the advocates of the aforementioned theory? Look at this melody of Couperin, from *La Lugubre*.

Ex. 4

If we take the curly wig off this little piece, and contemplate its natural appearance, it turns out to be a very simple and goodhearted little tune, not quite unlike a folk-song, or a sustained melody as we find them among Bach's works.

Have the history professors actually measured the tone duration of a harpsichord and compared it to that of the pianoforte? If not, let them take a chronometer, in hand and make the experiment. They will find out that the modern Steinway string does not continue its vibration any longer than the modern harpsichord string of Pleyel or of Dolmetsch, or the one of Mr. Challis in Ypsilanti, Michigan. They may say that these instruments are better than the ones Bach and Mozart used. This

is quite doubtful. Certainly we cannot judge the old instruments by museum pieces. If we would place the most beautiful Steinway in a museum, I am sure that, after a period of some two hundred years, it would sound as thin as Bach's harpsichord does after the same lapse of time.

### An Age of Artificiality

FOR WHAT REASON, then, were those XVIIth Century and XVIIIth Century musicians so fond of embellishments?

This is a question which is very hard to answer with certainty. Some philosophers, observing this tendency toward ornament in other phases of human culture, in manners, speech, dress, hairdress, furniture, and architecture, have tried to trace it to a general psychology of artificiality and dissimulation, which swept like an epidemic over Europe at the time of Louis XIII and Louis XIV.

When the ever warring feudal lords of France gradually had to yield to the strongest potentate among them; when the greatest power segregated around the king; and when finally an absolute monarchy emerged from the struggle; then a situation of a unique psychological tension had arisen. Proud nobles, whose ancestors had ruled independently over larger territories, now were stripped of their power and reduced to mere vassals of the king. To prevent their revolting, which they did not fail to attempt, the French kings kept them contented by giving them large fortunes and a luxurious and idle life at court; all the while disciplining them by means of the most elaborate program of etiquettes. Thus they were invested with a mere afterglow of power, while their real worth and dignity became but a fiction.

All the labored refinements and exaggerated formalities of the court life were designed to train the nobility into servility. Every trivial daily occupation of the king was turned into a solemn ceremony, if not a pageant. From the great and portentous moment of getting out of his royal bed, (the rising ceremony was called the *petit lever*), of dressing, of breakfasting, conducting the state's business, receiving ambassadors, to his august majesty's undressing at night, his laughing, his coughing, his eating, his games, everything was made into a great occurrence to which it was a royal honor and duty to be present. Nobles vied with one another for a preferred place in the files of bowing and admiring spectators to witness Louis XIV putting on his august stockings, or of watching the daily miracle of his being shaved, or even triter things than that. Many an intrigue has been wrought to win a more advanced place in this audience, or in the royal chapel, or in the little theater. To be amongst the favorites who could be in the king's bedroom, instead of staying with the lesser nobles, who had to do their bowing and scraping in the corridor, was often an ambition which it took endless pain and much chicanery to satisfy.

### Individuality at Discount

BY THE NATURE OF THEIR LIVES these courtiers were soon turned into sorts of

human lapdogs and playthings. Their taste became effeminate, highly ornate, artificial. Their entire psychology became one of the utmost artificiality. Since their only ambition was to be in favor with the king, they had no true and natural standards of their own. Those, who had once been a race of mighty feudal lords, had turned into a cast of laced, powdered and bewigged dolls.

Man cannot live without an ideal. And so in France the ideal of the age grew in the desire to beautify, to dissimulate, to exaggerate flowery ornament. Every gesture, every speech, all dress, the structure of furniture and architecture, everything bore the stamp of affectation. All taste that age betrays the will to dissimulate, make things appear more graceful than they are. Hence the wigs, the hoop skirts, the flowery speeches, the profusion of liars, shells and flowers on furniture, of buckles on men—and of trills and grace notes on melodies.

Furniture was not made for lazy comfort like that of us Americans who throw our legs over the round cushioned arms and sink deep into the pillows, or of women who fold their feet under their legs and curl up in a sofa's corner. No, it was made to sit on, erect, and to form an elaborate frame of carved wood around a human figure in lace and crinoline.

Even conversation was beautified and made artificial to the nth degree. The polished and elegant language of the *Précieuses* as these affected creatures styled themselves, used the most florid and elaborate phrases to beautify, or adorn the most ordinary speech. For instance, a mirror they called "a councillor of graces"; a chair, "a commodity of conversation"; never eyes, but "stars or suns"; a butler "a superfluity." Instead of saying to an entering visitor, "Please take a seat," they gave the beflowered speech, "Allow me a commodity of conversation to embrace your Sir." Even an entire dictionary of such elegant expressions was compiled. To the butler, after dinner, to blow out the candles, the hostess would say, "Superfluous one, extinguish this glowing ardor!"

It is unnecessary to mention other phases of the artificial in this Rococo life. They are all too well known. The interesting thing in such historical phenomena is that the same underlying psychology produced the same will to embellish in so many fields. And music did not escape this. To be sure musical ornamentation is a product of Rococo imagination.

### Tradition Has Its Value

NOW IF A PIANIST of our day wishes to play Couperin, Rameau, or Bach, or Handel, without their embellishments, he might as well play a comedy of Molière in a tuxedo, or wear a Louis XIV costume. (Continued on Page 134)

# IMPROMPTU

This fine recital number appeared in The Etude a number of years ago and is repeated by request. It is very pianistic. The work has a forceful climax which declines instantly to a tranquil and effective pianissimo in the final measures. Grade 5.

LILY STRICKLAND

Andantino espressivo M.M. ♩ = 72

The musical score is written for piano and consists of 55 measures. The key signature is one sharp (F#), and the time signature is 3/4. The tempo is marked 'Andantino espressivo' with a metronome marking of M.M. ♩ = 72. The score includes various musical notations such as slurs, triplets, and dynamic markings. The first system (measures 1-10) begins with a treble and bass staff. The second system (measures 11-20) includes the marking 'poco rit.' and 'f'. The third system (measures 21-30) includes 'f stringendo', 'con forza e rit.', 'marcato', and 'poco cresc.'. The fourth system (measures 31-40) includes 'ff', 'rit.', 'poco accel.', 'molto cresc.', and 'con spirito'. The fifth system (measures 41-50) includes 'poco rall.', 'dim.', 'a tempo', and 'poco a poco cresc.'. The sixth system (measures 51-55) includes 'rall.', 'dim.', and 'stretto'. The score concludes with a final chord in the bass staff.

Grade 4.

Molto vivace M. M.  $\text{♩} = 72$

FRANCES TERP

The musical score is written for piano and consists of 60 measures. The key signature is D major (two sharps) and the time signature is 3/4. The tempo is marked 'Molto vivace' with a metronome marking of quarter note = 72. The score includes various dynamics such as *mf*, *p*, *f*, *ff*, *pp*, and *mp*. It also features articulations like accents, slurs, and fingerings. Tempo changes include 'poco rit.', 'a tempo', 'poco rit. p', and 'leggierissimo'. The score is divided into systems of two staves each, with measure numbers 10, 20, 30, 40, 50, and 60 indicated. The final measure (60) ends with a double bar line and repeat signs.

MASTER WORKS  
\*  
ADAGIO IN F MAJOR  
From the Sonata in C major

This delightful *Adagio* from one of Haydn's lesser known sonatas is given as Opus 79. However, it has so many Mozartian touches that it would seem that the work was probably written after the memorable meeting of Mozart and Haydn in Vienna in 1781. Mozart, the younger, learned much from Haydn, then an established master. Haydn, later in his career, learned from his brilliant younger friend. This composition has decided educational value, particularly in well balanced rhythm and adroit phrasing, as well as refinement of exquisite embellishment.

Grade 6. Adagio M.M. ♩ = 58

FRANZ JOSEPH HAYDN

The musical score is presented in a standard format with a single system of two staves. The right hand (treble clef) carries the main melody, while the left hand (bass clef) provides a steady accompaniment. The notation includes various musical symbols such as notes, rests, slurs, and dynamic markings. The piece is marked 'Adagio' and 'M.M. ♩ = 58'. The score is divided into measures, with measure numbers 1, 5, 10, 14, 15, and 21 indicated. The piece concludes with a trill and a final cadence.

This page of musical notation is for a piano piece, likely in the key of B-flat major (two flats). It consists of six systems of staves, each with a treble and bass clef. The notation includes various musical elements:

- System 1:** Treble staff starts with a measure marked '20' and 'cresc.'. The bass staff has a measure marked 'mf'. The system ends with a measure marked 'f' and 'p'.
- System 2:** Treble staff has a measure marked 'mf'. The bass staff has a measure marked '25'.
- System 3:** Treble staff has a measure marked 'poco cresc.'. The bass staff has a measure marked 'p'.
- System 4:** Treble staff has a measure marked 'cresc.'. The bass staff has a measure marked '30'.
- System 5:** Treble staff has a measure marked 'f'. The bass staff has a measure marked 'f' and 'p'.
- System 6:** Treble staff has a measure marked 'p'. The bass staff has a measure marked 'f'.

The notation includes various musical notations such as notes, rests, dynamics (crescendo, fortissimo, piano, mezzo-forte), and fingerings (1, 2, 3, 4, 5). The page is numbered 104 in the bottom left corner.

# SONG OF SPRING

Adolf Henselt was born 1814 in Bavaria, but lived in Russia, where he became pianist to the Court of the Czar. The compositions of this master gest quite clearly a treatment with an ultra-refined touch, closely supervised by a keen, critical, and sensitive ear.

*Revised and fingered by  
Constantin von Sternberg*

ADOLF HENSELT

Grade 4. Lento

Allegretto M.M. ♩ = 56

The musical score for "Song of Spring" by Adolf Henselt is presented in a single system of six staves. The first staff is the treble clef, and the second is the bass clef. The key signature is one sharp (F#). The time signature is 6/8. The score begins with a piano (p) dynamic and a Lento tempo. The first measure is marked with a piano (p) dynamic. The score includes various musical markings such as *rall.*, *a tempo*, *cresc.*, *rit.*, and *perdendosi*. The score is divided into systems, with measures 10, 15, 20, 25, 30, and 35 marked. The key signature is one sharp (F#). The score ends with a fermata on the final note.

# ETUDE'S COURSES IN CULTURE

## MAKE YOUR OWN VALENTINE" PARTY

WHEN sending out invitations for your Valentine party, specify that the girls are to bring as their entry tickets, valentines they have made, secretly labeled with their own identifying marks. Since a Valentine party is more fun, if there are even numbers of boys and girls, you should have, if possible, just the right number of valentines to put on a tray, from which each boy will pick one, thus finding "his valentine" for the supper to follow.

To start the party in the right mood, play the musical items of the program. Play love songs, or sentimental songs, wisely interspersing them with games, such as "Musical Chairs." For the game, place a row of chairs, one less in number than the guests, in the center of the room. The guests are asked to march around the chairs in time to the music. When the music is abruptly stopped every so often. Then the guests must try to get into a chair. The last person left standing is out of the game. After each round one chair is removed, and finally the winner is awarded with an appropriate souvenir for his or her victory.

Another game, that is good fun, is "Sculped Sculpture." Each guest is given a small bag of assorted sizes of wooden toothpicks and a dozen wooden toothpicks. A figure of some animal, human figure, or preferably a famous character, is to be "sculped," using only the candies and toothpicks as the media for the sculpture. The best figure wins a prize. This game is made more intricate by suggesting that the figures be only along a given theme. Everyone will be astonished by the marvelous results of this game.

A third game, that will take the guests back to the days when they were children, and will cause great hilarity is the "Cupid Game." Draw a great heart on a large sheet of cardboard and tack this up. Make cardboard arrows (one named for each guest) and put a tack through the tip of the arrow. Tack each guest. Spin him three times, put the thumbtacked arrow in his hand, and tell him to pierce the heart. The person in the center and Cupid will undoubtedly give him his heart's desire. The guests will be most humorous. To the nearest guest, give an amusing prize, carefully wrapped and marked "Heart's Desire." The prize could be anything your sense of humor dictates. When refreshment time comes, lead the guests to the gaily decorated table described above. The Valentine decorations will make of paper, and your nimble fingers will make short work of assembling them, if you will follow the directions that I will be glad to have sent to you upon request.

Since this is really a children's type of party, keep the feeling of childhood, and have a supper in the same mood.

### MENU

"Queen of Hearts" Sandwiches  
"Valentine" Sandwiches  
Hot Chocolate  
Sentimental Cup Cakes  
Candy (Red if possible)

### RECIPES

**"Queen of Hearts" Sandwiches.** With a heart shaped cookie cutter, cut slices of brown bread. Butter thickly and spread with homemade cottage cheese, topped with currant jelly and another slice of heart shaped bread.

**"Sentimental" Cup Cakes.** Cream one-half cup of butter with one cup of sugar. Add yolks of two eggs; one-fourth of the rind of a lemon, grated; one-half teaspoonful of vanilla. Beat whites of two eggs to stiff froth. Sift one and one-half cups of flour with one teaspoonful of baking powder. Stir mixtures together, with cup of cold water or milk. Fold in whipped whites of eggs. Line smallest cup cake tins with paper baking cups of same size. Put about one teaspoonful of batter into each cup. This should make forty-eight cup cakes. For icing, cook one cup of granulated sugar, five tablespoonfuls of hot water, three tablespoonfuls of corn syrup, and three egg whites beaten over boiling water, stirring vigorously for seven minutes or until it makes a good stiff froth. Add one teaspoonful of vanilla. Beat. Ice the cakes with this and inset a small motto candy heart into the top, or sprinkle with small, red, heart shaped candies.

**"Valentine" Sandwiches.** With the heart shaped cookie cutter, cut slices of white bread, butter thickly and spread with milk-softened peanut butter and top with chili sauce. Cover with another slice of heart shaped bread.

If you do every bit of this yourself, it will be truly a "make your own valentine" party; for it will be found that you yourself have made many more valentine friends among the young people, who will have had, in their parlance, "a swell time." Teachers will find that such a party is not only a builder of much good will among present pupils but also an exceptional stimulant for new students, who like a little pleasure with their music.

Share your ideas of a novel party with me, and I will, in my turn, help you plan your table, give directions for making the decorations yourself, arrange your menus and give you the recipes, upon request. Make this department of real service to you, by using it often. Elizabeth Fairchild, Room 613, 350 Madison Avenue, New York.

## A CULTURAL TRIP IN 1939

### To Soothe the Savage World

"Music," it has been said, "is the universal language of mankind." The charm of melody knows no barriers of nation or tongue. It is not strange, therefore, that a gigantic musical schedule should form a vital part of the activities of the New York World's Fair, called "The World of Tomorrow"—an enterprise in which eighty to ninety nations will participate officially, a gala event to which visitors will throng from every part of the globe, and which is dedicated to international amity and peace in "The World of Tomorrow."

To bring the best of European orchestras and soloists to New York, a fund of \$1,200,000 is to be set aside, according to *The New York World-Telegram*. Opera companies from Paris, Glyndebourne, and Budapest have already agreed to perform. Part of the fund will be used to air condition the Metropolitan Opera House and Carnegie Hall, so that these two landmarks of American music may be fully and comfortably utilized during the summer months. The more intimate Steinway Hall will also probably be actively used during The Fair season. In addition to musical programs, Steinway Hall will feature an art exhibit, and the personal stamp collection of Theodore Steinway.

Mayor La Guardia of New York calls the World's Fair musical program, one "the like of which has never been presented anywhere, at any time, in the whole world." The musical calendar will include six months of opera, symphony, solo, choral, and folk music, and ballet. America will provide the opening event, a Wagner cycle with the Metropolitan Wagnerian cast, starring Kirsten Flagstad and Lauritz Melchior. National Music Week, the first week in May, coincides with the opening week of the Fair, and will be observed at the Fair's music building.

### Crossroads

And so, more than ever before, New York City is due to become, in 1939, one of the greatest centers of international travel. Many signs of the oncoming flood of foreign visitors to The Fair are beginning to appear. The French Line is scheduling a special cruise from France, and the London office of the Canadian Pacific reports a deluge of inquiries from prospective British visitors. Both the Holland-American and the Cunard Lines will have new superliners afloat in time to handle the traffic to and from The Fair. One European nation intends to send about twenty thousand of its children to spend a week at this great international exhibit of the promise for peace and progress in "The World of Tomorrow."

Preparations are also being made to serve a greatly increased number of tourists from New York to the countries of Europe, to South America, Newfoundland, Bermuda and the Caribbean country. New York has always been the principal jumping off place for world travel by Americans, and it is expected that many who come to the Fair, especially Westerners, will seize the opportunity to take those ocean trips they have always wanted, while in the East.

In the intermingling of nations at the Fair, we Americans will see the beginnings of a superb movement for peace and progress. We will see the examples set by foreign countries in visiting this country. Many of us will want to return the visits of our friends from abroad, to see more of the foreign world of today, and its promise for the future, as predicted by The Fair. Spurred by the international flavor of The Fair's musical programs, real music lovers who can afford it will be eager to hear the national opera of France and the operas of Italy, the ballads of Wales and Scotland, the beautiful music at Bayreuth and Salzburg, or the distinctive folk rhythms and harmonies of the Latin American countries.

Thus will the New York World's Fair become, for the time, the vital crossroads of the world in every sense—a center for the exchange of ideas, sympathies, and hopes of the peoples of every tongue, of art and music and industry, and of friendly visitors, from all lands.

### You and the Fair

That readers of THE ETUDE are going to be well represented at The Fair, and in the subsequent ocean trips, cannot be doubted, on reading the many inquiries that are coming to this department after the January announcement.

One reader writes, "Your article on the World's Fair proved most interesting and gave me the idea that I had better 'put in my oar' early. I, like many others, plan to attend the Fair and would like some information on a suitable place to stay. Do you know if there will be rooms available in private homes close in? What are the best hotels in the down town section at moderate rates? Also what hotels are for women only, and what are their rates?"

A Canadian ETUDE reader says, "I expect to participate sometime in June, as a member of the Schubert Choir of Brantford, Ontario, who are asked to sing at the Fair." What a glorious opportunity—to see the Fair, and to be a part of the musical life!

All sorts of family groups are planning to go and they write: "My mother and I are coming to see both New York and the Fair"; "Special electrical displays or features will interest my husband, who will accompany me"; "We will be a family party of three adults and one child."

Those readers who have not yet written, or who require further information, should direct their inquiries on The Fair, or other trips taken in conjunction with the Fair, to the ETUDE Travel Editor, Suite 613, 350 Madison Avenue, New York City. You know you want to come. And don't forget that ocean trip you have always wanted to make. Why not start your planning now?

## Concert Make-up

### SYMPHONY IN CYCLAMEN

Recently I watched a young person don a hundred-year-old plum colored taffeta dress, which she was going to wear while portraying Elizabeth Barrett Browning at a masquerade. Her usual high coloring paled perceptibly, which necessitated artificial stepping-up to get a proper blending with the costume.

Plum and other shades that have a blue tone to them, whether they be pink, lavender, red or grey, are sometimes trying, even to the youngest and freshest of complexions. Care should be taken that the "right" make-up is used, when wearing these attractive colors. This care is even more needed by the performing musician, who is expected to present a perfect picture on and off the concert stage.

Since a knowledge of platform make-up is one of the musician's "musts" and since Elizabeth Arden is the leading advocate of harmonized stage make-up, I consulted with her experts concerning her "Cyclamen," which I feel is the perfect complement of the new blue-toned pastels and deeper shades. (This make-up is also very lovely with white.)

Miss Arden recommends that all make-up should be put on the skin when it is absolutely free from grease, and so we started this month's makeup test with a thorough cleansing, using her "Make-up Remover," which is a creamy liquid that has a pleasantly swift action, leaving the skin ready for the "Lile de France Lotion." For Concert, use a dark rosy shade, and spread it heavily all over the face. The best way to apply it is with a pad of absorbent cotton that has been previously moistened in cold water. This pad aids in getting the base perfectly and evenly distributed.

Two shades of eyeshadow are used by Miss Arden's experts. When combined, they say these give a less "painted" look to the eyes and correct minor facial faults. For example, if the eyes protrude, a dark blue shadow with brown will make them less noticeable; if they recede, a bluey-green will bring them forward. In the Arden Atelier, all of the shadows are put on with a camel's hair paint brush, in order to give a transparency and evenness to the various tints. This brush is easier to use than the fingers, and I recommend it strongly to all who must make up for public appearances. (It's good for private appearance, too!) To make up the eyes, start from the center of the eyelid and paint lightly with dark brown, up and out, following the line of the eyebrow. With the second shadow (bluey-green for normal eyes), paint a chinaman's slant from the center of the eyelid. If you want to know where to get the right kind of a brush, write me.

Now using *Rouge Coquette* for the cheeks, bring the color high to the lower lid (after rouging for your shape of face), cutting across the "circles" that are under the eye. Blend the color well around the outer edge of the eye. This will help to eliminate those dark, shadowy "circles". If they are too dark and noticeable, paint them out (before rouging) with "*Stage and Screen Foundation Cream*", in a color to match the lighter portions of the skin. This is also fine for the woman with very small eyes, as it tends to make them appear larger.

Since wide eyebrows are fashionable this

## Behaviourism

year, they should be merely trimmed, not plucked. Brush your eyebrows skyward, and bring them into line across the top only. If your eyebrows need darkening, or lengthening, soften the eyebrow pencil (in your shade) with cream. Use this as you would an oil paint, and with a camel's hair brush, put in what is needed.

To keep this make-up fresh and clear, and to give enchanting undertones to the complexion, two types of powder are dusted on heavily. First, use "*Illusion*" in a pink, if your skin is sallow; or the color suited to you, if normal. Over this, use "*Cameo*" powder in a darker shade (*Special Mat-Fonce* is a lovely shade). Brush away the surplus. Never rub or scrub the powder; pat it on heavily for the best results.

Now with a brush, put on "*Cyclamen Daytime*" lipstick. A little cream, mixed on the brush with the lipstick, will impart an intriguing, glistening quality to the lips.

Mascara your upper lashes only, using a nearly dry brush. If you haven't enough rouge, apply dry rouge of the same color (*Coquette*) with a rabbit's foot.

Your nails can either match your rouge exactly, or be of a neutral shade.

Be sure and always practice your make-up before a brightly lighted mirror several times before you plan to wear it. In this way, you will know just how much of each color is right for you.

Should you find yourself in a dilemma on what platform or street make-up to wear with whatever color you wish to wear, you can always find out from Theodora Van Doorn, Room 613, 350 Madison Avenue, New York City.

## MIND YOUR PLATFORM MANNERS

While attending a concert of the Singers' Club of New York a year ago, I was delighted by the beautiful platform manners of James Melton, who was guest artist. After he had graciously acceded to the encore requests of the audience who had asked for several of his well-known successes, he turned his back on the audience and sang one of these numbers to the performing members of the club, whose guest he was. Such unusual consideration for his co-artists so impressed his audience and his fellow singers, that the applause stopped the concert.

Stage hands, electricians and all those who are met before the musician even steps on the platform, should be recognized as important contributors to the success of any platform recital. Their good will and interested assistance is sought by every noteworthy performer, for a misplaced or wrongly colored light, or a badly fastened piece of stage setting can throw a most carefully rehearsed recital completely out of kilter. A smile and a friendly greeting will do much to gain their cooperation. Should you find that lights or set need attention, a soft, gracious request, instead of an imperious command, will bring a more swift compliance with your ideas. This kindly attitude is, of course, just as beneficial to you, because you will find it lets you remain perfectly relaxed and at ease, and you will not be forced to cope with an unplanned-for burst of "temperament".

Since your accompanist (if you are soloist) is an integral part of the entire unit,

## New Charm Aids

### NEED A LIFT?

In England, the word for elevator is "lift". I suppose that is where the expression "it gives you a lift", used by a famous manufacturer of cigarettes, had its origin. Busy musicians, teachers, housewives, even debutantes and yes, sub-debs, need a "lift", when they want their eyes to appear at their very best, but have had no time for the customary long rest period. You can still have that fresh, dewy look, by using a splendid new discovery in the form of a domino-shaped, saturated piece of felt, which when left over the eyes for from ten minutes to half an hour, exhilarates and refreshes the whole eye area. *Mastin's Eye-Lifts*, used as illustrated, release a special formula that is said to be most beneficial to eyes that look old or fatigued, since it has a pleasantly astringent effect on the lines about the eyes. The *Eye-Lifts* can be used over and over again. The price of \$2.00 for a jar of 12 is very reasonable. Once you have enjoyed the results of this simple, effective "lift", you will wonder why you hadn't used them long ago. You won't "need a lift", you'll have one. Shopping information on request.

### MORE WEATHER AHEAD

To clean the wind-ravaged complexion and to protect it from further rough treatment, *Conti's All Purpose Olive Oil Cream* is just what it says it is—an all-purpose cream. You will undoubtedly discover many uses for this most adaptable, Virgin Olive Oil, apple green cream, (write me about them.) If you alternate its use with *Conti Pure Olive Oil Castile Soap*, (which is by the way, a perfectly grand hand and body soap as well), you will have a smooth, unchapped complexion, through the blustery February and March days ahead. (See December issue for special advertising offer on these products). The cream is sold in 50¢ and \$1.00 size jars, the soap in 10¢ and 25¢ sizes. The manufacturer will be glad to furnish you direct—if you can't buy them locally—upon receipt of the advice that you are an *ETUDE* reader and your money order or check.

Space does not permit us to present to you a number of other New Charm Aids, but we will be back with you in the March issue with other helpful suggestions.

## Character Make-Up

### AMERICANA

"Yankee doodle came to town—yankee doodle dandy". February, the birth month of two of our greatest Americans, George Washington and Abraham Lincoln, is usually chosen as a fitting time to give operettas, parties, pageants, and recitals whose themes are based on the times and lives of these great patriots.

Continental soldiers at Valley Forge, the Spirit of '76, Plantations down South—these are often favorite tableaux. With the portrayal of these characters, a full stage make-up gives you the healthy, ruddy, out-in-the-open look, that the defenders of our rights had. Then too, young people can take the appearance of age only with the skillful blending of grease paints.

So while I was helping to plan a brand new grease paint practice kit, that *M. S.* is about to assemble for amateur use, will have all the basic colors, from which nearly every type of make-up can be had. I used the grease paints, in stick form, to compound the previously mentioned Continental soldier's complexion. The result was most realistic.

Here is how it is done. After you have prepared your face in the usual manner, blend, in the order given, #1 (pink), #10 (juvenile flesh) and #11 (sallow old age) and a small bit (if still needed) of #12 (carmine). Blend the #18 on the cheekbones lightly. Shadow the eyes with #9 or brown lining. Be sure the make-up does not end at the jawbone, but continues down the neck and well behind the ears.

Before powdering, you now have a splendid base on which to try character make-up (different types of eyebrows, wrinkles, lines and so on). There are perfectly simple, easy-to-follow directions on how to transform yourself from a youth to a disheveled old woman or man in the "*Stage Make-Up Manual*". (If you haven't a copy of this helpful booklet, write me for one gratis.) For example, wrinkles in the forehead, are horizontal and slightly down the corner lines, painted with a deep brown color and underlined with a lighter brown, which, when blended into the deeper brown, give the shadows thrown by deep wrinkles. One can study character lines by observing older people; then by trying them on your grease make-up. Thus one can supplement the information from the manual.

Looking into a well lighted mirror, with half-closed or squinting eyes, you will just about what your audience will see.

Be sure to accentuate your eyes and eyebrows, and form smile wrinkles at the sides of your eyes. Rouge your lips sparingly with #18 carmine.

It is great fun to experiment with your paint sticks, just as if you were an artist creating a character in crayon. You remake your own face to suit any type you chose; be any age or character you wish—on the stage. The secret is to practice with your grease paint sticks, you have the true values of the colors under ordinary bright lights. Special conditions will need special handling and advice.

These and any other stage make-up questions will be answered through this column as promptly as possible, as we want to be a real service to you and to music in its alliance with the theatre, the pageant and the masquerade. Send your questions to Theodora Van Doorn, Room 613, Madison Avenue, New York City.

## A Magnificent New "The Mikado" in Technicolor

A Cinema Presentation from England Which Accomplishes the Unbelievable

By WILLIAM ROBERTS TILFORD

FOR YEARS The Etude has assailed harmful movies, but it has realized that the moving picture producers are incessantly faced with the problem of making movies that will appeal to the largest possible audience, not those which appeal to a limited few. If a movie with a wide scope can be made, and at the same time excite the interest and patronage of people of taste and education, the production managers hail it with delight.

The Etude has been hearing reports of the production of a new Technicolor filming of the Gilbert and Sullivan "Mikado," made at the Pinewood Studios, in London, and distributed in America by Universal Pictures. We were, therefore, requested to attend a private showing of this film. We went clad in old Savoyard prejudices, and came away filled with enthusiasm. We could not conceive that the exquisite and convulsive satire of Gilbert and the delightful tunes of Sullivan might not lose some of their precious fragrance in the transfer to the movies. The opposite has happened, and we predict that this film will give as much joy to the chronic Savoyard as the casual film goer.

The first difficulty, of course, was that of articulation. Every word of the Gilbert libretto is precious. Only the actor, trained in the traditions of the Savoy Opera Companies with the high routines of D'Oyly Carte, knows the true great value of this. In the choruses particularly, which often tell part of the plot, every blessed word must come out, not merely so that it will be understood, but also so that it will have its proper significance. In this particular, this film should stand as a classic model of diction. There has never been anything like it.

Musically, the production, while varying here and there from the order of the original, is altogether superb. Imagine having "The Mikado" done with the accompaniment of the London Symphony Orchestra, and with the real D'Oyly Carte chorus. All this is accomplished without taking liberties with the text or score.

The brilliant Japanese setting gives room for a riot of color and poetic background that are a thrill, even in these days of thrills. Great wisdom has been shown in the selection of Victor Schertzinger as Director. Schertzinger was born in Pennsylvania, his father the descendant of an old Viennese family, and his mother, Pauline von Weber, a descendant of the great Composer, Von Weber, and a concert violinist. Victor Herbert was his godfather. He studied violin with Henry Schradieck and Eugene Ysaye and wrote many scores for moving pictures in Hollywood, including the first film operetta, "The Love Trade," for Jeanette MacDonald and Maurice Chevalier. His most popular songs are doubtless *Marchetta* (it sold 4,000,000 copies) and *One Night of Love*. The producer, Geoffrey Toye, is one of the most favored in Europe, and the

Technicolor was done under the direction of the Virginia girl, Natalie Kalmus, who is the leading expert in the field. The cast includes John Barclay as the *Mikado*. Barclay is an English Grand Opera singer, trained by Jean de Reszke, who has made this rôle famous in his day and generation. He was the *Mikado* in the Winthrop Ames production in New York, in 1926. Kenny Baker, an American born in California, as *Nanki-Poo*, proved a real find. He is one of the most popular radio singers in the United States. Martin Green, as *Ko-Ko*, is inimitable. Born in London, the son of a famous singer, he became a member of the D'Oyly Carte cast and has made a huge success at *Ko-Ko*, on both sides of the Atlantic. Sidney Granville is "history" in any Gilbert and Sullivan rôle. A member of the D'Oyly Carte Company since 1907, he has convulsed millions with his drollery, and in this film, as *Pooh-Bah*, he is a masterpiece.

The *Yum-Yum* of the film "The Mikado" is a Sussex girl. Dainty, delightful and exceedingly pretty, she brings rare charm to the picture. *Pitti-Sing* (Elizabeth Paynter) and *Peep-Bo* (Kathleen Naylor) are both English girls who seem to have been destined by birth to have a rôle in the inimitable trio, *Three Little Maids from School*.

"The Mikado," first given in 1887, was the sixth in the great series of operettas done by these famous partners. It was preceded by "The Sorcerer" (1878), "The Pirates of Penzance" (1880), "Patience" (1881), "Iolanthe" (1882) and "Princess Ida" (1884). These works were given first by Richard D'Oyly Carte, at the Savoy Theater in London, and addicts have since come to be known as Savoyards, of which there are thousands on both sides of the Atlantic. Philadelphia, for instance, has maintained a "Savoy Opera Company" for years. It is composed of highly talented amateurs and some professionals infected with the Gilbert and Sullivan germ. A production is given every year at the Academy of Music.

W. S. Gilbert, who was born in Soho, London, in 1844, the son of a musical instrument maker, was one of the keenest of English wits. His mind sparkled like a cross circuit on a high power line, and his humor is just as funny to-day as it was fifty years ago. Once when he was asked his opinion of a certain man whom he did not like, he replied, "No one could possibly have a higher opinion of that man than I have, and I think he is a dirty little beast." Sullivan caught the humor of Gilbert and put it to deathless tunes, and the writer predicts that this fresh and original filming of "The Mikado" stands well to bring about a revival of the wonderful fuore which greeted these works in the Eighties. No longer can people, who revel in real fun and like to have it combined with beautiful settings, expert acting and incomparable music claim that the movie producers are not giving the world their best.

Watch for "The Mikado." Here is a real treat in store for you.

# THE FORWARD MARCH of MUSIC KEEPING FIT PHYSICALLY

A Department Providing the Study-Basis for a Broader Musical Background

## WISE PIANO INVESTING

WE HAVE just recommended the purchase, for two hundred dollars, of a baby grand piano over thirty years old. The instrument had normal use and showed slight damage. One or two of the ivory keys had to be replaced and the ebony veneer was "checked"; that is, it was creased all over with little lace-like lines which do not show at all if one stands a few feet from the instrument. To refinish the case was not thought worth while, as such a job would have been expensive. We examined the piano for tone and general playability, but we did not examine it for mechanical or technical defects. We had an expert tuner, a real piano maker, do that, and he certified that with repairs the instrument could be put in really fine condition. It is always unsafe for a musician to pass upon the state of an instrument. Only an expert piano mechanic can discover irreparable damage.

The piano in question had had "normal" use and care. It "stood" the purchaser with repairs and carting, two hundred and seventy-two dollars. It was a real and somewhat rare bargain. Most pianos of such age have been overused and abused; and it is a risk to buy a second hand piano unless it is certified by a responsible dealer. If sold through a legitimate dealer or an auction room, the piano we have described might have cost two hundred dollars more.

The point is that the piano was a superb instrument when new, one of the finest instruments made. It had stood the test of time and still had ten years of good value in it. The piano cost when new about \$1200. The purchase price, after thirty years was, after reconditioning, \$272. Therefore it cost the owner of the piano for thirty years use only \$928.00 (without the relatively small cost of upkeep), or only a little over fifty cents a week and all the time the owner had possessed a really fine instrument. There it stood, eloquent of the years of joy it had given its owners. Who knows how many weddings it had seen? What solace it had brought to those in sorrow? What refreshment it had given to overworked minds? How many baby fingers had climbed into the musical world over its keyboard? Compare its cost with that of an automobile at a similar purchase price. The motor car had to be a mighty good one if it did not part company with its owner at the end of five years. Generally speaking, pound for pound, and dollar for dollar, an automobile costs about six times as much per "use-year," and almost twenty times as much per "upkeep-year" as a piano.

Strange, isn't it, that many who in some way contrive to buy an automobile for anything from \$600 to \$1200 hesitate at these figures for a piano. Yet the piano is always relatively far cheaper. Not everyone is able to pay \$1200 for a piano even when the cost is carefully budgeted. The objective should always be to spend all that one can rightfully afford and then make it a point to deal with a legitimate dealer. Do not expect the very commercial cheap piano "to stand up" and do not let anyone try to convince you that it will. Such pianos fill a big need for those whose means are limited and can buy no others; but when it comes to "use-years" the fine piano, even more than the fine automobile, is by far the cheaper. There are thousands of pianos at ten years of age that could

(Continued on Page 128)

## MONTHLY MUSICAL CULTURE QUIZ

After each question in parentheses will be found the number of the page in this issue upon which may be found the answer to the question. Let each question count for ten points. After you have set down your answers, correct them by referring to the pages mentioned. Then credit yourself with ten for each correct answer. Total this amount and you will have a revealing estimate of your general musical knowledge.

1. Where was a famous evidence of pre-historic art found in Spain? (Page 77)
2. Who was the teacher of the great American baritone, David Bispham? (Page 124)
3. What did Henry Ford have to say about making money? (Page 78)
4. Was the Gregorian Chant sung accompanied or unaccompanied? (Page 126)
5. What did Cardinal Mercier describe as "the intrinsic aim of art"? (Page 81)
6. What American university orchestra toured Europe last year? (Page 91)
7. What great tenor of the past will be the subject of a new movie? (Page 82)
8. Who wrote one of the earliest keyboard methods, "The Art of playing the Clavecin"? (L'Art de Toucher le Clavecin)?
9. Did Shakespeare make many musical errors in his plays? (Page 85)
10. When should the music pupil count? (Page 93)
11. How did the composer Lully injure his foot? (Page 86)
12. What is an authentic cadence? (Page 90)

## EXPANDING YOUR CULTURAL AND MUSICAL LIFE

By Joel Anderson

BOOKS are like music in that they must appeal to a great variety of tastes, degrees of receptivity, and life experience in education, travel, and contacts with men, women and affairs. Therefore, your counsellor, in endeavoring to select those books which "the average reader of THE ETUDE" (if indeed there is an "average" reader) might peruse with the expectation of extending his culture and grasp of life to-day, has had the valued advice of practical trained librarians.

Among the books which appeared in the holiday season are two entertaining and somewhat sophisticated pictures of New York city, "The Tales of a Wayward Inn" by Frank Case (Frederick A. Stokes Company, \$3.00), a veteran, but very lively hotelman who "just knows everybody." Its interest to readers of THE ETUDE lies particularly in the fact that the genial understanding boniface, while operating The Algonquin (Hotel), found himself running a kind of incubator for genius, political, dramatic, literary, musical and otherwise. He gives a very extraordinary first proof etching of many of the most distinctive figures of the last twenty-five years. Of course, a very large part of the book has to do with hotels, particularly his own extraordinary hostelry, with all of its notable human phases. But New York is the largest hotel metropolis in the world. Over a third of million people sleep nightly in New York hotels. Mr. Case's very penetrating record is full of witticisms of the great and quasi great. For instance, when Godowsky was asked his opinion of a recent composition of a very mechanical composer, he said "It sounds as though he had written the fingering first and then put in the notes."

The other book about Gotham bears the possessive title, "Cecil Beaton's New York" (J. B. Lippincott, \$4.00), and is by the brilliant young English artist and photographer, Cecil Beaton, whose portraits of the Duke and the Duchess of Windsor attracted wide attention at the height of the international romance which still keeps many rubbing their eyes. Mr. Beaton writes lightly, philosophically and with uncanny prescience for his years. With its gay and crisp sketches and photographs, it is what the author obviously hoped to make it, smart and debonair. On the whole, we feel that Mr. Beaton's lens saw more accurately than his pen, that he wrote about things as he wanted to see them. The camera knew better. Witness the following quotation, "The American has his food everywhere, but comparatively few meals are served at home." Even in New York this is probably seventy-five percent wrong and elsewhere in America about ninety-five percent in error. America is a large place, and Mr. Beaton has only penetrated the cuticle. It is illogical to try to make the part represent the whole. Charles Dickens, for instance, when he visited America in 1842, was obsessed on prison reform; and the chapter in his "American Notes," upon the city of Philadelphia, is given over largely to the Eastern Penitentiary. One reading it might imagine that Philadelphia was famed chiefly for its grim prison.

(Continued on Page 132)

Kerchoo!

THOSE gasp-and-explosion sneezes followed by heroic fanfares of nose blowing that you hear around the house from October to April have their humorous, homey side. When one of your family is rendered inarticulate by a "cold id de dose," one's apt to be the object of some good-natured banter. Yet we all know that the dangers of serious complications put the common cold among the most treacherous of human ills.

Take, for instance, so seemingly innocent a feature as that trumpet-like sequent to the sneeze. By blasting away at both nostrils with all the pressure your lungs can muster, you force quantities of germ-laden mucous deposits into the delicate mechanism of the middle ear. Thus, you risk involving the ears in what started as an ordinary head-cold. Everyone has experienced the temporary sensation of deafness that so often accompanies a severe cold. Even partial impairment of the hearing would be doubly sad for those of us who rely largely on music as our medium for the expression and enjoyment of beauty. The tragedy of Beethoven is a case in point.

For securing greater breathing comfort with a stopped-up nose, your doctor or pharmacist can recommend any one of a number of palliatives. Among these are many inhaling devices, both in home and pocket sizes. To reduce danger to the ear, your handkerchief-tactics should include the following rule: Blow one nostril at a time, and blow gently.

Soft absorbent tissue paper handkerchiefs which are used once and easily disposable have a number of advantages for the cold sufferer. In clearing the throat of phlegm the tissues provide a means of expectorating without spreading contagion in public and semi-public places. Use of the same cloth handkerchief several times causes a burning red inflammation around the nostrils. An endlessly running nose will begin to put a strain on your laundering arrangements and your supply of lined handkerchiefs. A clothes hamper full of drenched handkerchiefs exposes the rest of the household to contagion. Paper handkerchiefs seem to offer the solution to all of these problems, and your supply can be conveniently economized during a long siege by tearing the tissues in half. Combining these advantages with an inhalant there is also a mentholated variety of tissue paper handkerchief.

### Two Seasons in One

SINCE COLDS are highly contagious, it's a unfortunate fact that the cold season and the busiest music season coincide so exactly. As an auditor or a performer at a sort of musical gatherings through the winter months, or as a teacher seeing a number of pupils a day, you are constantly exposed to colds, which may seriously curtail your important musical activities.

Voice and wind instrument performances are all but paralyzed by a cold, and the "pep" needed for any sort of practice, study or teaching is sharply cut. The teacher cannot safely continue to see her pupils while she is down with a cold. Once you have a cold, it is unwise for your own sake and unfair to others to participate, even inactively, in any large gathering.

In view of the added risks and liabilities music lovers ought to give particular attention to minimizing the chances of contagion in every way possible without limiting

(Continued on Page 141)

# OUTSTANDING VOCAL AND INSTRUMENTAL NOVELTIES

## THE SWEETEST STORY EVER TOLD

One of the very successful "heart songs" of all song literature. It has been sung by popular demand by many of the most famous singers of recent times. Mr. R. M. Stults, a very prolific and gifted composer, was born in Hightstown, New Jersey, on June 1, 1861 and died March 24, 1933 in Ridley Park, Pa.

# PRELUDE IN D MINOR

ABRAM CHASINS, Op. 13, No. 5

Arranged for Violin and Piano by Michael Pr

Andante M.M. ♩ = 92-100

*molto espressivo*

VIOLIN

PIANO

*molto espressivo*  
*p sempre legato*

The musical score is written for Violin and Piano. The Violin part is in the upper staff, and the Piano part is in the lower staff. The key signature is D minor (two flats). The tempo is Andante (M.M. ♩ = 92-100) and the mood is molto espressivo. The score includes various musical notations such as dynamics (p, f, mf, pp, ppp), articulation (legato, staccato), and tempo changes (poco rit., a tempo, allargando, Lento, molto rall.). The score is divided into five systems, each with a Violin staff and a Piano staff. The Piano part includes fingerings and pedaling instructions. The Violin part includes slurs and phrasing marks. The score concludes with a final cadence in the Piano part.

# SARABANDE

FROM SIXTH SONATA FOR VIOLONCELLO IN D MAJOR

J. S. BACH

## SECONDO

Lento M.M.  $\text{♩} = 72$

Handwritten musical score for the Sarabande, Second Movement, by J.S. Bach. The score is written for a single melodic line on a single staff, with a key signature of one sharp (F#) and a 3/4 time signature. The tempo is marked "Lento M.M.  $\text{♩} = 72$ ". The score is divided into measures by vertical bar lines. The first measure is marked "p espressivo". The second measure is marked "cresc.". The third measure is marked "pp dolce". The fourth measure is marked "cresc.". The fifth measure is marked "p". The sixth measure is marked "mf". The seventh measure is marked "mf". The eighth measure is marked "poco cresc.". The ninth measure is marked "p dolce". The tenth measure is marked "pp". The eleventh measure is marked "cresc.". The twelfth measure is marked "f". The thirteenth measure is marked "p". The fourteenth measure is marked "dim.". The fifteenth measure is marked "pp". The score ends with a double bar line.

# MAZURKA

HERBERT SANDER

Moderato

## SECONDO

Handwritten musical score for the Mazurka, Second Movement, by Herbert Sander. The score is written for a single melodic line on a single staff, with a key signature of one sharp (F#) and a 3/4 time signature. The tempo is marked "Moderato". The score is divided into measures by vertical bar lines. The first measure is marked "f". The second measure is marked "mf". The third measure is marked "mf". The fourth measure is marked "mf". The fifth measure is marked "mf". The sixth measure is marked "mf". The seventh measure is marked "mf". The eighth measure is marked "mf". The ninth measure is marked "mf". The tenth measure is marked "mf". The eleventh measure is marked "mf". The twelfth measure is marked "mf". The thirteenth measure is marked "mf". The fourteenth measure is marked "mf". The fifteenth measure is marked "mf". The score ends with a double bar line.

# SARABANDE

FROM SIXTH SONATA FOR VIOLONCELLO IN D MAJOR

PRIMO

J.S. BACH

Lento M.M.  $\text{♩} = 72$

The musical score for the Sarabande is written for two staves. The key signature is D major (two sharps) and the time signature is 3/2. The tempo is Lento, marked with a metronome of 72. The score includes various dynamics and articulations: *p espressivo*, *cresc.*, *pp dolce*, *cresc.*, *dim.*, *p*, *mf*, *mf*, *poco cresc.*, *f*, *p dolce*, *pp*, *cresc.*, *f*, *p*, *dim.*, and *pp*. The piece concludes with a *poco ritard.* marking. The score is divided into measures with fingerings and slurs indicated.

# MAZURKA

PRIMO

HERBERT SANDERS

Moderato

The musical score for the Mazurka is written for two staves. The key signature is D major (two sharps) and the time signature is 3/4. The tempo is Moderato. The score includes dynamics such as *f*, *mf*, and *Fine*. The piece concludes with a *D.C.* (Da Capo) marking. The score is divided into measures with fingerings and slurs indicated.

Tp.

(Do not play if there is a Trumpet)

This musical score is for the 'March of the Boy Scouts' by G. A. Grant-Schaefer, orchestrated by Louis Adolphe Coerne. It is written for Violin, Piano, and Trumpet (Tp.). The tempo is 'Tempo di Marcia' and the key signature has one flat (B-flat major or D minor). The score is divided into four systems. The first system includes a Violin part and a Piano part with a note to 'Do not play if there is a Trumpet'. The second system includes a Trumpet part and a Piano part. The third system continues the Piano part. The fourth system includes a Violin part and a Piano part, ending with a 'D.S.' (Da Capo) instruction. The score features various musical notations including notes, rests, dynamics (f, ff, sf, p, mf), and articulation marks.

# FIFTY YEARS AGO THIS MONTH

VIN B. CADY, a virile influence in early American musical life, gave this vigorous sage on "Technical Development" and mission in music.

When we speak of technical development we usually think of muscles and nerves operated upon and subdued by the will, made to perform certain motions, or else able to perform motions. This is a very limited view. Broadly conceived, it involves the unity of muscles, nervous force, mental power—including emotion, thought, and the spiritual being. These are not, however, so many separate elements to be brought into unity, as our textbooks would lead us to think, for this unity already exists by virtue of the unity of being. But what we must do is to develop the consciousness of this unity through the expression of itself in art forms, which are taught forms.

A study of technic, then, involves the consideration of the unity of the spiritual, mental, and physical, in the order of cau-

sation—truly a large subject and worthy of the most exhaustive study. Its practical realization on the part of a student means the highest knowledge and control of self. In fact, this is too large a subject for consideration at the present time, and we must confine ourselves to the relations between the mental and physical, endeavoring to show that physical activities are the exponents of definitely definable mental activities; that physical technic is the exponent of a clearly definable mental technic, and that therefore any true development of physical technic will be secured rationally only through the mental—the causal technic.

"In the relation of these two factors, what is the primary medium for the manifestations of thought? Is it muscle or nerve? Not at all. These are secondary media. The primary medium for thought emission is what is termed nervous force. Muscular energy is the manifestation of molecular action, induced by this mysterious agency, nervous energy."

## Lessons With Ossip Gabrilowitsch

(Continued from Page 89)

wrote him a letter urging him to come. To my joy, he promised he would; when he returned to Berlin, I heard for the first time in recital.

### An Epoch Making Occasion

truly uplifting moments do not come every day in our lives, and so they are all more treasured in one's memory. This recital marks the most thrilling episode in my whole experience. I had, of course, known him before, with orchestra; but this recital was an epoch making occasion in every respect, and a momentous event in his own career, as Berlin, heretofore, never appreciated many of the pianists who were popular in America. The Germans frankly did not care for the romantic school of playing. The musical god of Berlin was Busoni; and his disciple, Petri, was a great favorite. Other successful pianists were Schnabel, Lutschg, Goldnidt, Godowsky and Lhévinne. We were wondering how Berlin would respond to Gabrilowitsch, who was distinctly of the romantic school of playing.

That evening, in Beethoven Hall, excitement was intense. There was another on for our excitement, as we were to hear his lovely bride for the first time.

When Mr. Gabrilowitsch proceeded to play, it was a revelation to me. Never before had I heard the piano sing like that, never had I seen an audience so emo-

tionally worked up. Such poetry and such temperament! His climaxes in the *Variations Serieuses* of Mendelssohn were so exciting that we clutched each other! There was a moving simplicity about it all. None of us could sleep that night, we were so excited.

The critics lavished the most unqualified praise upon Mr. Gabrilowitsch, and his triumph over Berlin was complete. I have often pondered over his success in winning Germany over to romanticism in piano playing, and it seems that this was partly owing to the fact that his playing never degenerated into sentimentalism. He always sought the truth, the very soul of the composition, and his creed was simplicity and sincerity in interpretation. As I had already known from the class room, he was a past master of balance and proportion and had no patience with superficiality. That, of course, included sentimentality, which is an artificial distortion of the real thing. He was able to touch the hearts of the Germans because the feeling in his playing was deep and real; and, although he possessed a fiery temperament, all his playing was backed by the repose which he regarded as essential in putting an audience under a spell. The combination of consummate taste with inspiration made him an impeccably safe model for us to follow.

(To be continued in THE ETUDE for March.)

## Musicians Should Read History

By ARTHUR O'HALLORAN

AMERICAN SINGER, David Bispham, enumerating ten factors of prime importance to the student of singing, placed "moral education and culture" as one of them. This applies equally (possibly more) to the pianist. Every serious student of piano should read much including history. By history we do not mean "musical history," important and necessary as this is to musical culture.

History has played an impressive part in musical composition, having influenced Beethoven, Chopin, Liszt, Wagner, Elgar, Debussy, MacDowell, and others, in many of their works. A good knowledge of history helps towards both the understanding

and enjoyment of many of their compositions.

Take, for instance, the "Siberian" and the great *Polonaise in A-flat* of Chopin; or the epic tone poem, "Finlandia," of Sibelius. Can it be denied that the understanding, enjoyment and interpretation of these works, steeped in national feeling, are not heightened by a knowledge of the stormy trials and tragic vicissitudes of Polish and Swedish history?

Neither can we conceive anyone making a success of Cyril Scott's delightful "Egyptian Suite," unless versed in ancient lore of the Pharaohs.

Be intelligent in all your study.

Now!  
The Piano Course You  
Have Waited For!

by

T. ROBIN MacLACHLAN  
and MICHAEL AARON

These two music educators need no introduction to teachers of piano. Their years of actual experience in teaching small, medium and large children, together with their natural ability to write *tuneful* technical material assures the teacher and student of interest and progress with each lesson.

As specialists in the publication of piano teaching material SCHROEDER & GUNTHER, INC., recognize the MacLachlan-Aaron Piano Course as the greatest forward step in a century.

Edited for February by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

## The Tremolo: Its Cause and Cure

By HOMER HENLEY

IN THE DAYS WHEN DAVID BISPHAM, the baritone—then the light opera idol of London—was studying with William Shakespeare, he began to feel an urge for study in Italy. "Master," said he to Shakespeare, "I must go to Italy to study."

"If you do," replied Shakespeare, "you will come back with a *tremolo*."

"Even so, I must go," rejoined the famous baritone. "I feel that my vocal destiny would be unfulfilled unless I had the experience of actual study in Italy for at least a while."

"Very well," said Shakespeare; but he smiled when, after two years absence, David Bispham came back to him and said ruefully, "Well, Master, I've come back with that *tremolo*, as you predicted. Now, how long will it take you to cure it?"

"Another two years, my boy," replied the great teacher, blandly.

And so Bispham struggled for a long two years to set his voice right again. He had acquired a bad case of *vibrato* (they often call it *tremolo* in Europe), in Italy; because the *vibrato* is in "the Italian taste." They like the *vibrato*—the Italians. They think it gives to the voice the flavor of grandeur necessary for grand opera. For them, it is a direct technic for the expression of the emotions. Without it, the voice (to them) would be like food without salt—tasteless.

And are they, these Italians, so far wrong?

Let us examine the case a little.

The instrumentalists of the orchestra employ *vibrato*, for effects of beauty and emotion. The brass and reed players use it, and so do the *virtuosi* of the violin family. Some instrumental pedagogs—rightly or wrongly—deliberately teach the *vibrato*. Other pedagogs believe that the *vibrato* should only grow out of the player's budding artistic consciousness. But they all, these pedagogs, believe that the *vibrato* is a definite part of the equipment of every artistic player.

### The Wisdom of Vocal Sages

WHAT SAY the voice teachers? That is, the good ones?

I think it is reasonable to affirm that they believe a certain amount of *true vibrato* automatically accompanies the perfectly free emission of vocal tone, in passages of song where stresses of emotion occur.

But now we have arrived at the point where it is necessary to make clear the difference (for there is a very great difference) between *true vibrato*—which is permissible—and that dreadful bleating sound known as the *tremolo*, which could never be admissible under any circumstances whatsoever. The *vibrato* is, in a sense, an evidence of vocal freedom, when it is not carried to excess. The *tremolo*, on the contrary, is produced only under the most unfortunate conditions of throat tension. David Bispham did not have a *tremolo*—he had an exaggerated *vibrato* (which in Europe is often named *tremolo*), but which, however, can be at times almost as bad as the *tremolo* itself.

The *vibrato* might be almost termed a leading characteristic of the grand opera voice; for nearly all of the great voices in grand opera possess it. It cannot be denied that, in opera at least, the *vibrato* lends itself to the expression of emotional effects. Nor can it be denied that many of our foremost singers, in opera and out of it, employ a degree of *vibrato* that adds little to their artistic stature. On the contrary, it has become a fault with them, where once it probably spelt a virtue; and then, perhaps, only on account of its having been allowed to grow beyond the boundaries of taste and discretion.

### The Church and Vocal Sins

OUTSIDE THE REALM of grand opera, the excessive *vibrato* is not looked upon with any great degree of favor. In church choirs, for example, it is distinctly not encouraged. Church congregations appear to regard it as almost immoral. I recall the case of my own pupil, Leonora Corona, now prima donna soprano with the Metropolitan Opera Company. During her three years study with me she sought, from time to time, to eke out her limited financial resources by church choir singing. She obtained five different church "jobs," but lasted less than three months in any one of them; for Corona's voice was of the true grand opera *timbre*: powerful, emotional, thrilling indeed, and with a pronounced, though not excessive, *vibrato*. She could and did create leading operatic rôles at La Scala under Toscanini; she sang prima donna leads at the Metropolitan, alternating in some of them with Rosa Ponselle; but she could not hold a church "job"; they did not want that type of singer in church. Somehow it did not seem to fit in.

It always has been a claim of the vocal purists that the ideal tone is that which is represented by a straight line of sound; a steady, unwavering column of tone unblemished by any taint of the waving undulations of *vibrato*, or of the horrid, jagged graph-line of the *tremolo*. That such a straight-line tone would be a fitting ideal for the calms of church singing might readily be granted. But that it would be equally ideal for the emotional tumults of grand opera is a question on which opinion would be rather widely divided. Yet the

living, pulsing, moving thrill which accompanies a tone sufficiently free to vibrate naturally, on its own momentum, so to speak—this, of course, without excess—lends to the voice sufficient color to escape always the charge of coldness.

### Partners in Vocal Crimes

HERE, THEN, ARE TWO eminently desirable types of vocal tone. What of the undesirable types?

Greatest offender is the *tremolo*. Second is the excessive *vibrato*. Both nearly equally bad. Both of them aural outrages to a musical ear. Both outside any laws of recognized taste. And both quite inexcusable; for the excellent reason that they can be cured.

What is a *tremolo*? It is an intermittent vocal sound made by constantly successive rapid tensions and releases. Exactly like a gasoline engine: a compression, an explosion; a compression, an explosion; indefinitely. But the human sound resembles the bleat of a goat.

What is an excessive *vibrato*? It is the long, continuous and (seemingly) uncontrollable waving undulation of the singing voice, resultant on the flaccidity engendered by singing with too relaxed a throat. (Oh, yes! It is easily possible to sing with *too open* a throat; and William Shakespeare always sounded its dangers to his students. It is generally brought about by "open throat" enthusiasts among the teaching fraternity, who have not yet learned that their slogan can be carried to unfortunate extremes.)

These two vocal evils, then, are the results of two diametrically opposed causes. The *tremolo* is the result of overtension; the excessive *vibrato* of overrelaxation.

And are their cures according to methods which, also, must be diametrically opposed? Curiously enough, the answer to that must be—no. Much the same curative laws may be applied to these two widely disordered, but equally pernicious, habits, to eradicate the causes which have brought them into being. In both cases the bad habits have resulted from a wrong conception of breath control; which, in turn, in the majority of cases probably arose from using the wrong muscles to balance the breath; and nothing could be more fatal to the

balanced freedom of the voice.

Just exactly which are those muscles? For the answer to that, let us turn to the acknowledged models on which the singing world predicates its beliefs of what should constitute right singing—the great singers. How do they breathe? Why, precisely alike. All of them. How do I know? Because I have spent hours with nearly every great singer in the world; and they all have sung for me in private, and breathed for me, and shown me with meticulous exactitude every detail of their singing and breathing processes. And how, then, do they breathe? Very simply. The stand with high (and *held high*) chest. Shoulders down and back. Abdomen slightly flattened, by inclining the body graciously forward toward the audience.

Dr. Frank E. Miller, the famous throat specialist, in his book entitled "The Voice," very rightly states: "This forward inclination of the body, which retracts the abdomen, automatically brings about a proper adjustment of the diaphragm, and is the final detail in the correct method of drawing in the breath; and one on which the old Italian masters of *bel canto* insisted."

### That Vital Breath Control

FROM THIS CORRECT POSITION results the correct horizontal expansion of the ribcage, wherein the breath is rightly controlled by the muscles of the sides and back. And when it is said that this breathing process is simple, it is just that which is meant. Here is the formula again: If the chest is held high; if the shoulders are never suffered to rise; if the abdomen is drawn slightly inward; if the body is inclined pleasantly toward the audience; if all these things are *maintained* whilst singing, you will be breathing for singing as do the great vocal artists of the world. As I said before; *All* of them.

These simple processes balance the breath correctly, because they bring into play the proper muscles for right breathing, and cause them to adjust their tensions to the miracle of nicety—nothing overstrained, nothing underdone. And if the breath is balanced correctly, then immediately has begun the business of curing both the *tremolo* and the over-*vibrato*. The word "begun" is used advisedly; for long continued habits of wrong singing may not be cured as quickly as they were formed. But they can be cured, if certain devices are employed to carry on that structure of healing which was (presumably) reared on the foundation of the balanced breath.

These devices come under four main headings: Holding back the breath. Utilizing more fully the supporting column of tone in the head cavities. Dwelling more and more firmly on the mental picture of singing in, rather than singing out. And the unremitting concentration of will power on the daily and hourly practice of tone control.

Set these four admonitions on your piano, where your thought may constantly dwell on them. Memorize them. Think them. Do

\* \* \* \* \*

### Joys of the "Home Sing"

"I wonder how many of those, who think of family singing as something left over from the days of Victoria, have ever taken part in a really jolly sing-song. If they had, their views would be quickly changed. When choirs meet together to sing, or when a few friends gather 'round a drawing-room piano, they experience a great joy and peace they have not known before.

"Whether they are picked voices singing one of the great oratorios, a few friends singing lightly through the well-known arias of Gilbert and Sullivan, or the latest dance tune success, the effect is just the same. Hearts are uplifted, troubles forgotten, and the whole world turns 'round on a more even keel. While voices are uniting in song the singers stretch out their arms in friendship for each other. So would it be the world over if all would sing. Singing throughout the world would do far more for world peace than all the diplomatic visits that statesmen have made from one country to another."—Clara Novello Davies.

them. Separately, at first, and with infinite care given to listening to the tone. Later, try to unite any two of them. Little by little it will be found that each device acts like a grappling-hook in holding the tone both firm and steady. When you have arrived at the point of being able to join these four around and *through* your every tone, confidence will begin to wait upon results (no matter how slight at first) and you will go forward to a goal of perfectly steady tone emission, and, consequently, of a vastly improved tone quality.

Here are some definite exercises which should be undertaken, daily, and in the order mentioned.

### So Ills Are Healed

SOUND THE VOWEL Ah on any convenient note in the lower-middle range of the voice.

Whisper it at first, but *think* the tune as you whisper it. When you sense the freedom of throat and absence of effort which the whispering engenders, it will be discovered that there is absolutely nothing in the whispering which even distantly suggests either *tremolo* or *vibrato*, nor can there be. Certainly this column of air is perfectly steady. Repeat the whispering many times before going on toward an attempt to reproduce the steadiness of the whisper in an equally steady singing tone. But sing the tone as softly as possible, striving to emulate that same freedom of throat and absence of effort which you felt in the whisper. Follow the *ah* with other vowels, on the same note. Later, attempt notes on either side of the one on which you started.

The next step should be to begin again on your original comfortable note, with the vowel *ah*, and essay the *messa di voce*—

which is the swell and subsidence of the tone, thus,

Ex. 1

Ah.

and carry this on as before, with all vowels, up and down your scale. The vowels may be followed with words of one syllable; and, presently, with longer words and short verbal phrases. But take care that, in this exercise, you do not sing loudly at any point. Indeed, my own opinion is that no loud singing whatever should be attempted until a thorough mastery of the steady tone is regained.

One should now enter upon progressing from one note to another in seconds, thirds, fifths, and so on, up to and including the octave skip; with the ear kept constantly alert for any departure from a perfectly steady, controlled tone. These progressions may be sung first on single vowels; then on short words; then on long words and phrases, as before. But always and ever keep in the front of your consciousness the four main imperative points which must be *maintained* throughout every step of your practice:

1. Hold *back* the breath.
2. Intensify the tone in the head cavities.
3. Sing *inwardly*; never outwardly.
4. Use your will power, on every tone, for determined steadiness.

With persistence and resolution in the frequent daily employment of these exercises, there is every reason to believe that any voice suffering from the evil effects of the pernicious *tremolo*, or the equally undesirable over-*vibrato*, may emerge afresh into a tone control which will satisfy the ear of its owner as well as that of his audience.

## What Do They Hear in My Singing?

By LESLIE E. DUNKIN

"WHAT DO THEY HEAR in my singing, which they do not hear in the singing of others?" was a question that helped Roland Hayes to start and to continue to give his vast audiences of enthusiastic listeners an individual touch—individual with Roland Hayes himself. This questioning thought was given to him by an appreciative lover of good music—good singing—in California, after one of his concerts.

Having digested the significance of the question with which we began, Mr. Hayes thus counsels young singers:

"The aspiring singer takes this question seriously and at once seeks an answer to it. He keeps this thought foremost in his mind, while singing to his large audiences. The pondering of such a question will help any singer, whether amateur or professional, to improve himself, so that 'He's a good singer' will be changed to 'He can really sing!'

"The sincere artist keeps himself, as an individual, far in the background. He does not feel that he faces an audience, whether large, or but one or two persons, to call attention to himself as an individual. He is a very modest person. During the concert and afterward, he does not want the listeners to talk about himself.

"He may make a practice of singing while busy at his work, no matter whether it is heavy labor in a foundry or being a page in an insurance office; but he will make no deliberate effort toward a mere display of the fineness of his voice. Early in my preparation for professional singing, my mother helped to cure me of 'merely

singing,' when she so emphatically advised that listeners want to hear what one is singing; they want to understand the words and their message.

"There are two answers to that initial question.

"The first answer is that the auditor wants to grasp the song's special contribution to music and to life. Before facing any audience with a new song, the artist should make a special effort to fix within himself the message and spirit of that particular song. This must mean to him more than mere perfect melody, harmony, and rhythm. Once he has absorbed this message and spirit, himself; then, with no thought about the display of his own individuality, he must so sing the song that each listener will catch its import.

"The second answer is that the hearer must be made to feel, though ever so unconsciously, the singer's own contribution to music and to life. The singer must have found and developed a message and spirit for himself and for his singing—one which he desires, above all other considerations, to 'get across to' his listeners. Each time he sings he wants each and every listener to feel that music and life have been made better and stronger because of his individual contribution to them through his singing.

"This double answer to that personal question will help to stamp the aspirant as an individual in his singing. He will give to his listeners a message that will help them, through music, to see life as more meaningful."

"Early Discipline is most necessary. One cannot live as one desires; one must learn to give up for the sake of the future, and future advantage. Today one must be willing to sacrifice pleasure that one may be able to do the work of tomorrow."—Lillian Nordica.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## Enriching Organ Accompaniments

By WILLARD L. GROOM, F.A.G.O.

AN ORGAN RECITAL may be one way of bringing out the beauties of organ and of organ playing, but it is not the only way. Every church service offers fine moments for artistic achievement in the playing of improvisations, interludes, organ music, and in accompaniments. It is the latter activity that we are considering in this particular instance.

The style of accompaniment to be used is based, first, upon recognized standards of propriety, and, after these have been considered, then, upon personal or individual ideas of æsthetic beauty as it enhances religious worship.

As an illustration, let us cite the case of Gregorian Chant. All the eminent authorities in the field of the chant maintain that traditionally it was sung unaccompanied. They feel that the unisonous nature of the plain chant is its chief beauty, and they agree that where accompaniment is to be used, it must be used sparingly, just enough of a background to give support to the singers when played upon plain foundation stops of the nature of diapasons. In the face of this situation, then, it would seem inexcusable and unreasonable to accompany the *Asperges me*, the *Mass of the Angels*, or even a Vesper psalm on a Gregorian Psalm tone, with any such stops drawn as the oboe, Cornopean, Vox humana, Tremolo, or with any use of contrapuntal *obbligati*, no matter how ingenious. Now that we are finding so many uses for the plain song in the various Protestant services, this fact is most significant. There is practically no point to introducing the mediæval music, unless it is to be given the mediæval flavor and atmosphere. It is impossible to modernize Gregorian Chant and yet to have it to make sense.

There is an interesting story in regard to this point. It is said that Richard R. Terry, late organist of Westminster Cathedral in London, once, in his younger days, made modern four part arrangements of all the responses for High Mass, to be sung by a solo quartet. These were eagerly seized upon by many choirs in England. Later, when he became one of the eminent authorities on liturgical music, he expressed the wish that all of those spurious responses could be gathered up and destroyed.

### Adding New Riches

IN THE MATTER OF HYMN PLAYING, with the announcing of hymn tunes and the accompaniment of processions and congregational singing, so much good material has been written that there is little left to be said. One phase of the work, not quite clear in the mind of the organist, is the matter of "filling in."

Now a large number of purists think that the chord of a hymn, as it appears on the paper, is something sacrosanct, and that in no case should it be tampered with. They elevate some effusion of Stainer or Barnby to the pedestal of a Beethoven classic. They think that, if a hymn writer wanted extra notes played, he would have written a special organ score. Now that is exactly what Dr. Noble did in the case of

*For Thee, O dear, dear country*, and it has been done in many other cases. The fact is that good organists do the same thing, *ad libitum*, every time they have to play a wheezy small organ, or every time they have some need of lending a massive effect to a processional hymn, or for stimulating vigorous congregational singing. The practice of broadening these accompaniments is especially significant in the case of the pianist who is associated with a revivalist. If he should limit himself to the simple four parts, as printed in the hymn book, it would be impossible to stir a large group into hearty singing.

### When Hymns are Varied

IN CHURCHES WHERE FINE MUSIC is a tradition, a general plan is followed which is no doubt familiar to all of my readers.

1. For those hymns of a smooth quiet devotional nature, the clear four part score is followed, with perhaps the addition of sixteen foot bass notes, where depth is needed.

2. On all hymns where power and majesty are desired, or on special verses of certain hymns, the chords are filled in; and this must be done cleverly, without altering the general scheme of harmony, unless the choir and congregation are singing in unison.

Hymn playing is an art, potent with unlimited possibilities for beauty. When we consider the differentiations possible through changes in rhythm, registration, phrasing and touch, we can understand how some organists make each playing of a hymn a real work of artistic merit.

Many of the changes in the style of

accompaniment can be tabulated. Hymns of a certain type may be announced, with the melody taken on a solo stop, such as *Peace, Perfect Peace*, with the introductory verse played with its melody on the Oboe, against a soft sympathetic stop or combination to take care of the alto, tenor and bass parts, played by the left hand and pedal. Strict *tempo* should be maintained, and it should be played in the time at which the congregation is expected to sing it.

A powerful effect, and a very familiar one, is to have the choir to sing the last verses of hymns, such as *America; O God, Our Help in Ages Past; All Hail the Power of Jesus' Name*; and so on, all in unison, and to accompany these with full chords on the manuals and a running counterpoint of approximately the second species on the pedals. It is the discretion, with which these various adjuncts are used, which expresses the real musicianship of the player.

At least this can be said, these preparations show some thought and some attempt to bring forth the power of dignity and feeling of devotion, rather than the mere grinding out of hymns in a routine fashion, all on the same combinations.

### A Unique Art

THE ACCOMPANIMENTS to Anglican chants should be mostly given out on the manuals, without sixteen or four foot couplers. Here is another type of work which is done in a clean and unadorned style, a style set by tradition and those who know how. There are certain of the Anglican chants which can be sung *sotto voce*, in unison, with beautiful effect; and in such cases the

organist may alter the harmony with verse, shunning, of course, any effects that are too bizarre.

The organ background for anthem canticles can be studied and turned with consummate skill and artistic finish. A woman is the very successful organist of an important Episcopal Parish and splendid accompaniments are the result. Careful listening to the organ playing of many of our famous American organists is a richer experience than could be gained from any one person.

The simplest *Jubilate* or *Anthem* can be registered and phrased in such a way to make it a much finer piece of music than it at first appeared to be. Personally it has been found to be a splendid idea to take a piece of choir music to the organ and to register it as though it were orchestrated for full instrumentation, due regard to balance of parts, volume and dynamics. For some melodic passages, ing marks may be inserted, as though they were to be played by violins. It is these minute details that one receives much enjoyment in playing from orchestral versions of the works of Saint-Saëns and French composers.

These few suggestions may help some toward giving that symphonic touch to the cathedral-like atmosphere to church music, no matter how small the church, nor how limited the organ.

### "Do It Differently"

By DAVID R. ADAMSON

MUSICALLY, many a service consists of an anthem and an organ offertory, week after week. Why not reverse that order occasionally?

Have the anthem during the offertory and put the organ piece in the place usually occupied by the anthem.

Call it an *Organ Meditation* on the Latin. Select something melodious, not too long; prepare it carefully, register it effectively, and the chances are that the congregation will be talking about "pleasing innovation." But prepare it fully, for it is a great chance to have the congregation really listen to the organ.

If a piano and capable pianist are available, a veritable gold mine of variety is right at hand; for there are many pieces which lend themselves readily to this combination.

Any piece in which the sustaining capabilities of the organ and the arpeggio scale capabilities of the piano can be utilized will sound well, if treated in this way. If a violin is added to this combination the effect is still further enhanced.

There are many violin solos the accompaniments of which are not at all satisfactory on the organ. But, if the accompaniment is put on the piano and harmonies sustained on the organ, the effect is fine. Notable examples of this are *Meditation from "Thaïs"* and the *Mass of Saint-Saëns*.

Console of the New Organ of Westminster Abbey, London

## PRECISION TEMPO INSTANTLY CONTROLLED the FRANZ ELECTRONOME

First requisite in mastery of music is perfect timing under conditions, especially where a sudden change of tempo is indicated. Absolute accuracy and never-failing dependability is assured by the

### Franz Electronome

is precision-built instrument operates in any position—upside down, on its side, or on an incline—with perfect timing. It is graduated from 40 to 208 beats per minute; no springs to wind; no tension to take. Operated like an electric clock and timing only a little more than old fashioned, dependable, clock work metronome, the ELECTRONOME is controlled by one of the world's finest precision motors. It is made of life-time of service and is sold on 6-day trial, with a written five-year guarantee.

### WRITE FOR FREE BOOKLET

Whether you teach music, play professionally, are taking your first lessons, you will be amazed at the improved technique possible with the ELECTRONOME. You simply cannot go wrong in the matter of tempo with this scientifically constructed instrument. ## Her Last Début, Perhaps?

One evening at a young debutant's emergence from the musical caterpillar cage, attended by the usual gathering of relatives, pressed-into-service husbands, brothers and vague friends, the attitude of the proverbially hard-boiled critic was amusingly brought to my attention. The potential prodigy stiffly picked her way to the front of the concert platform and gave a rapid little fusillade of carefully rehearsed bows, the audience broke into an epidemic of applause. A comfortable look-matron twisted and turned in her seat, mortifying all those within her range to double their efforts. In the seat directly before me another music critic seemed to be doing the purposeful matron at her word. Her friend was aghast.

"My word, she hasn't played a note yet," gasped. "What are you applauding for?" "I may never get another chance," replied the cynical one.—A Callow Critic.

## On Obviating Some Mechanics in Organ Playing

By PARVIN TITUS

HOW CAN I GET THAT STOP or coupler on? Or, how can I close my swell boxes at this point? These are questions which arise continually in the performance of organ works. The answer is, of course, that there is always a way to be found which will produce the desired result with as much ease and as little interruption to the flow of the music as is expected in the performance of an accomplished pianist or violinist.

By way of illustration, we may desire the addition of a 4' Flute on the third beat of measure 46 in Mendelssohn's *Second Prelude*. During the phrasing of the melody, on the second beat the stop is added by the right hand; or, if the desired combination is set on a piston convenient to the left hand while C on the third beat is played with the second finger.

Guilmant's *Invocation in B-flat*, measure 19, offers a still better example of good technic in registration. The right hand must be phrased after the third beat, so we take advantage of that breathing point, and of the slight *ritardando* implied in the music, to add with the right hand a light 8' Flute in the accompaniment. On the next beat the melody (played by the left hand) is phrased, so the left hand adds the desired stop or coupler. The original tempo is resumed in measure 20, with no disturbance to the listener because of a chord prolonged or delayed without regard to strictly musical considerations. A return to the original registration in measure 29 is effected with equal smoothness by the left hand.

Measure 54 of Bach's five voiced *Fugue in C* (Peters, Book II; Schirmer, Book

III) is a case in which musical phrasing does not occur at a point demanding a change in registration. Here the trick of "playing" combination pistons may be used, the left thumb pushing a piston on the Great while the right hand plays the second sixteenth note of the third beat, thus,

Ex. 1

No break or interruption in the contrapuntal flow has resulted from the addition of stops.

The organist must train himself likewise to use the right or left foot with equal facility on swell pedals or pedal pistons. In the *Prelude in G major* by Mendelssohn a slight *diminuendo* in measure 38 and a *crescendo* in measures 39-41 will be made by the left foot. In the pedal part of measure 42, high C will be played as an eighth note; the left foot will depress the Great to Pedal reversible during the succeeding rest, then prepare low B while the right foot plays the E-flat on the third beat, thus giving a perfect *legato* to the phrase.

Turning of pages (if music is used in playing) should be planned as carefully as changes of manuals or of registration. If a thorough study reveals no alternative, an assistant to turn pages, and even to aid with registration, is infinitely preferable to awkward pauses or painful inaccuracies at crucial moments. Organ music can, and must, sound as if no mechanical problems whatsoever confront the player.

## Learning From Other Choirs

By EDWIN A. LEONHARD

LIKE THE SCHOOL TEACHER who visits classes other than her own, in order to gain new educational ideas, both choir and choirmaster may profit by hearing for themselves how singers outside their own particular church render choral music.

The choirmaster himself, if, during part of the year, he should have no evening services, may sometimes attend those at other churches.

There is, however, one objection to this. The season when his own evening services are not held is likely also to be the time when other choirs have only the morning service to sing. A possible alternative is for the choirmaster to send a representative

to various churches from which something can be learned, to report in each case to the next choir rehearsal.

Taking his singers once or twice a year to an afternoon service at one of the cathedrals or other large churches within convenient distance is also profitable, both to hear vocal effects and to acquire something of the spirit of worship there.

Finally, joining with other choirs in union services and taking part in choir contests have a certain value. In the latter, comparison of the renderings of each body of singers with the work of his own vocalists gives the choirmaster a clearer view of the goal toward which he ought to move.

## Try Playing the Organ

By ERNA BUCHEL KOEHLER

A GREAT ORGANIST and teacher used to say, "If you would know how badly you play the piano, try playing the organ."

I would go a step further, and say, "If you would really improve your piano playing, try playing the organ."

Because:

1. The organ has no damper or "loud" pedal to cover up your inaccuracies. You hear what you play.

2. You must raise your fingers well to keep from inadvertently sounding extra

notes. This makes for clearness.

3. Organ music is written in parts. This gives excellent mental and manual training, makes for accuracy, and for precision of thought and performance.

4. Reading the third or pedal line and manipulating the organ's pedals give mental training and act as a mental stimulant.

5. Your efforts at registration develop imagination.

All these things have only salutary effects on the pianist's playing.

\* \* \* \* \*

"In the foreground of Schubert's artistic imagery stands melody as he took it over from his musical ancestry and elevated it to a burst of joy in song that stands unrivaled in the annals of the Song."—Guido Adler.

This WICKS owner says, "The tone quality is far more beautiful than other organs I have heard."

## Brings lasting joy..

Miss Amy Ahrens of Monsey, New York, expresses her unsolicited delight with her new WICKS, shown above. Many such letters are received, praising not only the tone, but the sturdy construction and unexcelled, exclusive Direct-Electric Action

priced from \$895 upward

## Wise Piano Investing

(Continued from Page 110, Col. 1)

not possibly compare with the thirty year old grand which was purchased. There are large numbers of old, cheap pianos now in existence which should be placed on the bonfire. There are a few makes, however, that have been put out by responsible well equipped "mass" manufacturers that are a real credit dollar for dollar to the maker. These pianos, however, are honest pianos, into which the maker has put as fine workmanship and as good materials as the price allows. Methods of manufacture, to-day, make it possible to sell certain instruments much cheaper than they could be sold a few years ago. Let us cite one case. Formerly fine pianos were given many coats

of varnish and then rubbed down with pumice stone, by the human hand, at great cost. To-day, lacquers are used, which may be successfully put on in a fraction of the former time, are far more durable than the former finishes, and cost far less.

We know of one institution, however, with an "appropriation," that bought three cheap grand pianos. They all sounded like muffled xylophones. None of them were any good. The entire appropriation, invested in one piano, would have given the institution an instrument that would still be in excellent shape when the others are fit for the junk shop. Moral: Pay as much for a new piano as you can afford.

# HOW TO BUY A NEW PIANO

Piano facts which will save the buyer money and help him to make a safe and satisfying selection.

By William Roberts Tilford

Prepared after extensive research conducted by

THE ETUDE MUSIC MAGAZINE

THE ETUDE has conducted an extensive survey of the piano manufacturing field—interviewing manufacturers and technicians of pianos of all types and has now in process of publication a booklet which should be in the hands of every musical person interested in knowing what makes "good value" in a piano investment.

You may secure one of these booklets absolutely without cost by sending us your name and address, and also the names and addresses of at least five musical friends who might be interested in the purchase of a piano. You may use the following coupon, or write the names and addresses on a plain sheet of paper. Address your envelope to

"How To Buy A Piano"  
c/o The Etude Music Magazine  
1712 Chestnut St., Philadelphia, Pa.

I want one of these valuable booklets without cost.

## ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. In reading recently, the May, 1936, issue of THE ETUDE, I became particularly interested in the article concerning "The Electrical Amplifying of Church Organs." Our organ is a very fine instrument, but in its placing in the church and the arrangement for the choir it is very difficult for the choir to hear distinctly, as the choir loft is under a canopy. Will you kindly give me information concerning this subject?—C. H. M.

A. We suggest your communicating with J. J. Backer, 109-111 Bell Street, Seattle, Washington, who is factory man for Webster Electric Co., Racine, Wisconsin. Mr. Backer can give you information on the subject.

Q. I recall your remark about the "Invisible Choir" stop in THE ETUDE. It is a rank Celeste 8' treble stop. I saw one in a reed organ made by the A. L. White Manufacturing Company of Chicago, Illinois.

A. This information was sent by Mr. Carroll O. Whaley, of Chicago, Illinois, and we thank him for his kindness.

Q. I desire information regarding the world's largest reed organ—where it is, to whom it belongs, and its size. Will you send me the names of some reed organ makers where I might purchase parts? Can you put me in touch with a person or firm who has for sale a very small, used pipe organ at a low price? Some months ago a friend bought such an organ for one hundred dollars. Was that just luck or is it possible for me to get one like it? It has two manuals and pedals, but I am unable to get the name of the firm that sold it.

A. We cannot supply the information you desire as to the largest reed organ. For information as to used pipe organs, we suggest that you communicate with various organ builders, such as the W. H. Russer Manufacturing Co. of Hagerstown, Maryland and the National Organ Supply Company, Seventeenth St. at Cascade, Erie, Pennsylvania, advising them of your wish to secure a used instrument and asking them to advise you when they have one available, with information as to its size, condition, and cost. If the instrument secured for one hundred dollars was a good one, the purchaser certainly was fortunate, and you might have difficulty in duplicating such a bargain.

Q. Our church is contemplating the installation of a small pipe organ, and our choice at the present time seems to lie between a Wicks organ (Fuga Style) and an organ which would be built on the same specifications by an individual in Freeport, Illinois. If the console were placed in the position marked X on enclosed sketch, with the cabinet in Sunday School Class room and a grill directly over the console would the sound be so retarded in reaching the choir loft that this arrangement would not be advisable? We have found that the choir has difficulty in hearing a piano when it is placed at XX. Our main auditorium seats about two hundred and fifty. With the room at the rear, the balcony and extra chairs we can seat approximately five hundred. We enclose specifications of proposed instrument. Would you advise any changes and do you think them adequate?—MRS. R. L. H.

A. As the instrument you propose to install is small, and the choir has difficulty in hearing the piano at the point indicated on your sketch, we doubt the advisability of placing the instrument as suggested. We suggest the including of a Bourdon 16' in the Pedal Organ, instead of reeds. This will be slightly more expensive, but worth the additional outlay. To judge the adequacy of the instrument for your auditorium, we suggest your hearing a similar instrument in a room approximately the same size. Acoustics are likely also to affect the efficiency of the organ.

Q. Enclosed is the list of stops of our thirty-five year old (tracker action) organ. We have one thousand dollars available for modernization. What action is advisable, electric or electro-pneumatic? What stops might we add or what other changes would you suggest either within our present financial limits or for future consideration?—G. L. R.

A. We would not advise electrification of a tracker action instrument, and we cannot in these columns give an opinion on the comparative merits of electric (direct) or electro-pneumatic action. Our suggestion would be that you entirely rebuild the organ—using such of the old pipes as may be desirable, as well as the present case work. This would provide you with a new organ except for some pipes and the case. We suggest the following specification for the new instrument, based on your present instrument and including some unification:

### GREAT ORGAN

|                    |        |          |
|--------------------|--------|----------|
| Open Diapason      | 8'     | 73 Pipes |
| Dulciana           | 8'     | 85 Pipes |
| Melodia            | 8'     | 85 Pipes |
| Dulciana           | 4'     | 73 Notes |
| Flute              | 4'     | 73 Notes |
| Octave             | 4'     | 73 Pipes |
| Dulciana Twelfth   | 2-2/3' | 61 Notes |
| Dulciana Fifteenth | 2'     | 61 Notes |

### SWELL ORGAN

|                   |     |          |
|-------------------|-----|----------|
| Liebllich Gedackt | 16' | 97 Pipes |
| Violin Diapason   | 8'  | 73 Pipes |

|                    |        |          |
|--------------------|--------|----------|
| Stopped Diapason   | 8'     | 73 Notes |
| Sallcional         | 8'     | 73 Pipes |
| Vox Celeste        | 8'     | 61 Pipes |
| Flute              | 4'     | 73 Notes |
| Nazard Flute       | 2-2/3' | 61 Notes |
| Flautino           | 2'     | 61 Notes |
| Oboe (synthetic)   | 8'     | 61 Notes |
| Cornopean (bright) | 8'     | 73 Pipes |
| Clarion            | 4'     | 61 Notes |

### PEDAL ORGAN

|                   |     |          |
|-------------------|-----|----------|
| Bourdon           | 16' | 44 Pipes |
| Liebllich Gedackt | 16' | 32 Notes |
| Flute             | 8'  | 32 Notes |
| Flauto Dolce      | 8'  | 32 Notes |

Couplers, mechanical accessories and forth. Two expression chambers, with two Swell pedals are advisable, if there is room available, and financial conditions will permit. The prospective builder can suggest stops to be provided for and installed later, if finance will not permit the organ to be completed at this time.

Q. Can you inform me whether or not there is a special shoe built for playing organ? so, kindly furnish me with the name and address of the maker, and the price of the shoe, if possible. If no special shoe is made, describe a shoe which would be best suited for the purpose.—A. R. T.

A. We think there was at one time a shoe made that was supposed to be useful for organists, but we have not heard of it for some years. We know of one prominent organist who used dancing pumps but presume most organists use ordinary shoes. We advise that the shoe should be not too heavily constructed, and any change were made in construction, the heel have a little less of flat surface—quite so expensive.

Q. In THE ETUDE for January, 1936, you mentioned a newspaper clipping containing information about an organ to be used at meetings of Music Clubs. I should like to have the clipping, and if you will send it to me, I will return it after using it.—P. H.

A. Unfortunately, we do not recall the clipping was ever returned as requested, and therefore we cannot send it to you. You might, however, gather material from the other sources mentioned in the column of that number.

Q. Enclosed find list of stops on our manual reed organ. Can you give some information as to the stops to be used in playing for a mixed choir of sixteen voices, also for solo organ parts?—T. A. G.

A. For ff singing by the choir you might try full organ, which is probably available through the opening of both knee swells. For mf singing you might try the two Dulciana 8', the two Diapasons 8', and the two Flute 4' (Sub Bass, if available and producing the desired effect). For softer effects use the Dulcianas. The stops to be used for solo organ parts depend on the character of the passage to be played. You might secure the effect of solo stops by the use of 8' treble stop or stop accompanied by a 4' stop for the left hand played one octave lower. This use is limited to passages permitting such treatment.

Q. An organ of enclosed specification, rebuilt and reconditioned is being offered for eighteen hundred dollars. I am chairman of a committee appointed to select an organ for a church of approximately one hundred and fifty members and shall appreciate your frank opinion of the organ described, or any suggestions for a better instrument at about the same cost.—E. F. H.

A. Since the specification includes four sets of eight-five pipes each; one set of 61 pipes; Pedal Bourdon of 12 pipes and Chimes of 2 notes, the price of eighteen hundred dollars seems entirely reasonable, if the quality is a good standard. Since you did not state the builder of the original instrument, we cannot accurately judge the quality, and of course we are not familiar with the treatment the instrument has received while in use. The specification is not ideal, but we could not suggest a new instrument of similar specification for the price you name. Your alternative would be to secure estimates for a new organ of a specification not controlled by an instrument already built, at increased cost.

Q. My church wishes to purchase chimes for a two manual tracker organ. Approximately how much would they cost plus installation. Are any secondhand chimes available?—C. W. S.

A. There are various grades of chimes and of course, varying prices. We are sending you information by mail in reference to makers of chimes. The installations are frequently made by some organ builder or practical organ mechanic, and we are sending you names of such builders by mail. We suggest that you communicate with them, asking for price for installation, also for furnishing and installation. Perhaps the builder of your organ is still active and can furnish and install the chimes. We presume that secondhand chimes might be available and suggest that you make inquiry from the builders with whom you communicate.

# Have You Studied Harmony?

Music is a universal language and like the language of speech has its own grammar. The grammar of Music is Harmony—and you have not studied the subject you should not delay any longer.

Learn to analyze compositions—to identify the chords used and thereby gain an intimate knowledge of the intention of the composer. You get at a real understanding of the basis of phrasing, accent, which is interpretation, through a knowledge of the chords used. A knowledge of Harmony helps satisfy the natural curiosity of every ear, which is "How did the composer do it?"

By the study of Harmony you learn correct errors in notation, which occur even in the best editions of music; so to know when apparent discords are correct.

Harmony will help you to memorize more easily and more permanently because you understand the reason for the progression of chords used, and are able, therefore, more readily to carry the composition in mind.

Let us give you free, a practical demonstration of the thoroughness of our University Extension Conservatory methods and how easily you can master any of our courses. Sample lessons will be sent without obligation to you.

Only by making an examination of actual lessons can you form an intelligent opinion of the real merit of this remarkable method of music instruction. Let us send you these lessons. They will show you how quickly you can equip yourself for greater things in musical way and make more money in music than ever before.

Get Catalog and Sample Lessons of our Harmony course or any of our other courses which interest you the most. As this will place you under no obligation whatever, you have everything to gain and nothing to lose. Write age and course in which interested. Try the Lessons, then decide.

## THE ACCORDION DEPARTMENT

### Give Your Accordion Proper Care

By PIETRO DEIRO

As told to Elvera Collins

SCARCELY A MONTH PASSES without some new idea or improvement being introduced by accordion manufacturers. The instruments are constantly being made finer; and, with the advent of multiple switches and countless other novel effects, it is only natural that the scheme of the mechanism must become more and more complicated. Yet, with all this, the accordion cannot be classified as a fragile instrument. It is quite surprising the amount of abuse to which it can be submitted before it gets out of order. However, just because an instrument will withstand a lot of abuse is no reason why it should receive it.

Manufacturers cannot do the impossible. They have done their part in using fine raw materials and skilled workmanship to make accordions; but coöperation is needed on the part of players, so that the instruments are accorded proper care after they are purchased. As we look over the many new models which are priced around a thousand dollars, we cannot help but fervently hope that the ultimate purchasers will realize their value and not neglect them.

We have been in homes where a piano was treated as something apart, upon which the finest of care must be bestowed. A violin was considered almost sacred and always carefully placed in its case when not in use. Yet a fine accordion might be carelessly balanced on one end at the edge of a chair, where the slightest jar could knock it to the floor. An accordion is never the same after it has been dropped. It may be skillfully repaired but the perfection of the new instrument cannot be restored.

Let us briefly consider the construction of an accordion, which will show why certain precautions are essential in its proper care. As we know, the instrument is covered with celluloid. This makes it imperative that it should never be exposed to the direct rays of the sun. The heat causes the celluloid to buckle; and it may cause the piano keys and buttons to stick. The latter condition is more prevalent on inexpensive instruments than upon the late models. Excessive heat from the sun also tends to loosen the wax which holds the reeds in place. Therefore be careful that your instrument is never left near a window where the sun enters at any time of the day. Accordionists, who play for summer picnics and fiestas, should be sure to protect their instruments from the sun.

#### A Winter Hazard

THE WINTER WEATHER ushers in another hazard, that of carelessly placing the accordion near a radiator or in an overheated room. Always remember that too much heat is injurious to an accordion. The reeds are partly covered with a tiny piece of leather; and when these leathers are submitted to too hot a temperature they dry and shrink. This permits the air to escape, making it necessary for the player to work much harder in manipulating the bellows, to create sufficient air, as so much is wasted.

Parents should caution their children to be sure their hands are clean before practicing; but, unfortunately, adults are not always as careful as they might be in this particular. Accordionists, whose hands perspire freely, should be very careful to wash in warm water and then apply talcum powder, as the acid from perspiration often stains the celluloid on the piano keys and bass buttons. Nothing can be done after

the acid has eaten much into the celluloid.

When you set the accordion down, do you do so gently or with a jar? An occasional jar will not hurt an accordion; but if this becomes a habit there will be numerous jars and jolts during the course of a month and a year. Form the habit of resting the accordion on its base rather than on one end, as it is less liable to topple over. Select a dry, moderately cool place where the accordion can be kept when not in use. Do not let the instrument set about on chairs where it can collect dust and dirt and serve as an invitation for friends to pick it up and try to play it.

An instrument can be kept reasonably free from dust and finger marks if it is regularly wiped with a soft cloth. Occasionally one may use a few drops of denatured alcohol on the cloth, but this is seldom necessary. I do not recommend the frequent use of a damp cloth to wipe the piano keys, because there is always a tendency to use too moist a cloth and the dampness gets into the piano keys, causing some of them to stick.

A dry, very cold temperature cannot injure an accordion, although it may have an odd temporary effect upon it. After an instrument has been exposed to extreme cold, it may have a peculiar sound until the reeds have had an opportunity to warm up. There will be a sort of muffled sound, which gives the impression that something may be loose within the instrument or that two reeds are playing at once. The technical explanation of this is that the reeds are made of steel, which is a hard metal, while the blocks upon which they are mounted are made of aluminum, which is a softer metal. A greater degree of contraction occurs in the aluminum than in the steel, and it is this difference in contraction which prevents a perfect functioning of the reeds, for a few minutes.

Accordionists, who do public playing during extreme cold weather, should always allow sufficient time before their playing, so their instruments will have an opportunity to absorb the room temperature. Although the reeds may sound peculiar, the cold does not injure them in any way.

#### Protect from Dampness

EXPOSURE TO DAMPNESS is quite another thing and should be avoided if possible. Many of the better made instruments are now so constructed that they can successfully withstand considerable dampness, but needless exposure is not recommended. Accordionists who spend their summers near the beach should be careful to place their instruments in the case as soon as they finish playing. The modern, well constructed cases, with their heavy padding and plush linings, provide quite a protection for the instrument. If one does not possess such a case, a good substitute may be found by wrapping the instrument in a flannel cloth before putting it in the case.

Do not lift the accordion by the straps. Always grasp the instrument firmly by both ends of the box, for if the straps should become unfastened or break, the instrument crashes to the floor.

If you must smoke while practicing, be careful of the ashes. Celluloid is inflammable, and hot ashes or even a tiny spark can quickly mark the surface of an accordion.

The bellows of an accordion may be covered at a minimum expense; but this (Continued on Page 144)

## NO GIFT MORE PRECIOUS

No Instrument More Appealing

• The future of your children is in your hands. For the sake of their happiness, be sure it includes the wholesome pleasure of music. Let the accordion be their passport to the fascinating world of melody. No instrument is more satisfying, none more completely adaptable to every mood. In effect it places your child in command of an orchestra with an infinite variety of shadings and tone colorings. The BRINDISI Accordion offers what exacting parents insist upon—a perfect combination of Italian craftsmanship and American styling at popular prices.

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## The Hand Position Basis of Violoncello Technic

By LELAND R. LONG

**M**ANY TALENTED STUDENTS of the violoncello have been handicapped and sometimes halted in their studies because of lack of attention to the details of left hand position at the very beginning of their work. The importance of forming the proper habits in connection with fingering is recognized by the student, but the necessity of dividing his attention between the bowing and fingering presents a formidable obstacle. After a certain amount of practice on the open strings to acquire familiarity with the handling of the bow, he is immediately concerned with the problem of fingering the notes. The thought we wish to present is that the entire hand and arm position should be the object of his concentration, not the fingering of individual notes.

The disadvantages of an unorthodox hand position become most apparent in orchestra work. The student is often placed in the orchestra before he is fully prepared, due to the scarcity of violoncellos in most school orchestras. Then, unable to hear his own tone clearly, except in occasional solo passages, he becomes the victim of a situation in which his talent is of little assistance. Instead of becoming better, he becomes worse, plays out of tune, and ultimately finds himself in the deplorable position of not knowing what remedy to apply. The suggestions here given it is hoped may help this type of student to discover his faults and to learn to play more consistently in tune.

Before proceeding to the technical elements involved, the principles governing the proper functioning of the left hand should be understood. First, the fingers not only must be made to reach all of the notes within the compass of the hand, but also should be held directly above these notes if there is to be any facility in playing. The shortest distance between two points is a straight line, and the shorter the line, the more rapid the traversing of this distance. Tie four short strings to a pencil, representing the fingers and hand, and imagine the finger board of the violoncello horizontal like the piano keyboard.

Ex. 1

If the fingers are held directly above the notes, as represented by this illustration, short, piston-like action is all that is required to bring them in contact with the string.

Another fundamental precept requires that when possible the player should definitely measure the intervals he is to play, either by the natural reach or by the extension of the fingers of the left hand. To a person uninitiated in the methods of string playing, the absence of frets or keys presents an apparent obstacle. Good intonation, particularly in an orchestra where one cannot hear himself clearly at all times, depends largely upon the proper use of the hand in measuring the intervals to be played. After one note has been ascertained, others within reach are readily determined. Applications of this principle are numerous; but it is often overlooked by the beginner. The possibilities involved in the use of this principle are shown here.

### The Fundamentals

VIOLONCELLO TECHNIC in the positions located on the neck of the instrument is based primarily on two positions of the hand, the *closed*, or chromatic, and the *open*, or extended. The terms open and closed are preferable, since they are short and do not sound as complicated to the beginner as chromatic and extended.

The *closed* hand position consists of a moderate extension of all fingers to form intervals of half steps between them when all are applied to the string. Particular attention needs to be devoted to the stretch between second and third fingers. With the fingers arched, it is necessary with most hands to make the third finger stretch as far as possible away from the second in order to make the proper reach. Special exercises, such as placing the palm of the right hand between the second and third fingers of the left, forcing them apart with gentle pressure, will serve in time to increase this stretch. Daily attention for a short period at the beginning of study is usually all that is required in learning to make this interval. In case of a pronounced web between second and third fingers, or an unusually small hand, this stretch must be concentrated upon for a longer time.

In the *open* position the interval between first and second fingers is increased to a whole step. This extension permits the second finger to occupy the place taken by

the third in closed position, and the fourth finger takes its place one half step in advance of the position it formerly occupied. In other words, by widening the interval between first and second fingers an addi-

JOSEPH HOLLMANN

tional interval of one half step is brought within the reach of the hand.

### Teaching the Closed Position

A WISE PROCEDURE in teaching a beginner to acquire the proper spacing of the fingers in closed position includes several important steps. First, form a circle by applying the tip of the second finger to the tip of the thumb. Then separate these two members so that the distance between is approximately an inch, or just the space necessary to permit the thumb to slide to the middle of the underside of the neck, with the second finger immediately above, over the B-flat on the G string. Now tense all the fingers, keeping them in line with the string, and being particular to stretch the third away from the second. Then press

the fingers firmly on the G string, making sure that their spacing remains the same. Should a student have a very short first finger, it may be held quite straight with less arch than the others. The index finger should be well arched and very slightly inclined toward the scroll.

Examining the hand and arm position carefully, several points should be noted. The thumb is directly beneath the second finger, on the under side of the neck. The tips of the fingers in the fleshier part, opposite the curve of the nail, are applied to the string. The knuckles of the left hand are flat, and exactly parallel to the plane of the finger board underneath. First joints of all fingers are rounded and are not permitted to cave in. The elbow is raised approximately half way to the level of the shoulder; hand, wrist, and arm form a natural curve away from the finger board. The elbow should not be thrust backward or forward, but should be raised straight from the side.

After the correct position has been maintained long enough to become natural to the pupil, the fingers should be raised and allowed to strike the finger board in order. The example here shown may be the first exercise on the G string.

Ex. 2

In this exercise the fingers should only strike the finger board, but also maintain firm pressure on the string. The above notes indicate that this contact with the string is maintained until the ascending notes are played, when one finger is removed at a time. Pressure should come from the hand and arm, not merely pinching the neck with the thumb. It is often necessary to have a student practice without the thumb entirely for a short time in order to prevent too much pressure on the thumb, which later on prevents re-shifting. The purpose of the thumb is strictly to keep the hand in the proper place with each finger directly above the note it is to play. After these notes have been played, the notes of the closed position should be practiced on all of the strings.

(Continued in our March Issue)

## Treasures From Cremona

By JASPER B. SINCLAIR

A RECENT AUCTION of musical instruments in London was featured by the sale of several of the treasured products of old time Cremona craftsmen.

An Antonio Stradivarius violoncello, a violin by the same master, and another violoncello by Nicolo Amati were included in the sale.

The Stradivarius violoncello brought seventy-five hundred dollars. It bears a label dated "Cremona, 1707." It was originally an instrument of large dimensions, and "has been very skillfully reduced in

size to bring it into conformity with the instruments made by the master after 1700."

The last Strad violoncello to be sold under the hammer in London changed hands for a mere one thousand fifty dollars, but it is said to have been sold privately some years ago for twenty thousand dollars.

The violin by Stradivarius changed hands at this recent auction for sixty-two hundred fifty dollars. Dated 1724, it is known as the "Bentinck Strad." The violoncello fashioned by Nicolo Amati, and dated 1677, found a buyer at the comparatively modest

price of forty-two hundred fifty dollars.

Incidentally, the auction of these three Cremona masterpieces was deemed of such importance that it was broadcast throughout the British Isles by the British Broadcasting Corporation.

Overshadowed by the sale of these three treasures, several other musical instruments were disposed of at this sale. One of these was a four stringed double bass by Testore, of Milan, which brought five hundred dollars.

A violin by Francesco Rugeri of Cre-

mona, dated 1673, was auctioned for fifteen hundred dollars; and one by Giovanni Grancino of Milan, dated 1695, changed hands for twelve hundred dollars.

*An artist who always moves in the style and groove becomes in the end a peevish mannerist; and nothing does him more harm than to content himself too long with a given style, simply because it is convenient.—Schumann.*

## Advanced Studies for the Violist

By DR. ALVA P. TAYLOR

SSITY is said to be the mother of invention. Laziness sometimes has the same tendency. At least it was so in the case of the writer, who is taking rather advanced work on the viola. A number of technical studies have been arranged for viola, as the Etude may or may not know. In addition to methods and elementary studies, Schradieck's "School of Technique" is available for viola, as are Putzner's classic "Forty-two Studies" and Fiorillo's "Twenty-four." But, so far as we know, Fiorillo has not been transcribed for viola. So, when my instructor calmly announced that I was to transcribe Fiorillo's "Twenty-four," I must confess my heart fell. When I was seriously transposed and copied the first study, and then tried to play from the manuscript, my heart fell even further. I was inspired. And here is where laziness or inspiration came to the rescue; so in the hope that this experience may help other ambitious violists that it is here forth.

First a good edition of Fiorillo's "Thirty-two Etudes or Caprices" for violin was purchased. The only other necessary equipment was a very small camel's hair brush, a waterproof poster ink, a ruler, and a good pen or indelible pencil.

This is the procedure:

1. Carefully paint out with brush and poster ink the top line of each staff, except where parts of this line should serve

as first added line above the staff. At the same operation also paint out the upper fourth of each bar line between measures.

2. Add a new line at the bottom, with ink or indelible pencil. This will pass through the first added line below the staff, and will be the new first line of the staff.
3. Extend the bar lines between measures to the newly added line.
4. Block out with white the violin clef and key signature. When the white ink is thoroughly dry, a viola clef and new key signature can be drawn in. Add one flat to the original signature, if in a natural or flat key, and take away one sharp in sharp keys.
5. The new clef and key signature may be made on manuscript paper and pasted over the violin clef, if one wishes to have a very neat job. A little experimenting will show which is the better method.

When you have done this—all of which is easier than it sounds, and much easier than transcribing the whole etude—you will have music which is as easy to read as any printed music, and there is no danger of mistakes, which, as every one who copies music knows, are hard to avoid.

Violinists who wish to play the viola can apply this method to old violin works with which they are familiar, and they will find their mastery of the viola greatly expedited.

## The "Earthquake" Violin

By F. BASIL ABRAMS

SEISMOGRAPH violins and violoncellos," explained by Dr. Hugo Benioff, associate professor of seismology at the California Institute of Technology and world famous inventor of earthquake measuring instruments, were recently successfully introduced to the musical world at an interesting and enjoyable concert in Pasadena, California.

The stringed instruments were made for years of study by the savant; and the experiment made before an audience of several hundred musicians and scientists by enthusiastic applause.

The violins are much the same in size and shape as standard instruments; but they have no sound boxes, their resonance coming from an aluminum container under the strings. This container holds a crystal which is disturbed by the vibrations of the strings, much as the earth's crust vibrates in an earthquake or as the needle of a seismograph vibrates in response to a shock. Attached to the skeleton instruments are sound devices to which a wire connects the vibrations electrically. Dr. Benioff

explained to his audience that experiments have disclosed to him that it is possible to produce the musical sounds with an electro-magnetic device instead of the crystal.

During the engaging experiment, the instruments were connected by wires with a super-high amplifier at the rear of the stage and the musical numbers rendered carried a clearer tone and volume than that of the ordinary instrument.

Musicians who took part in the concert stated that the tones produced on the seismograph instruments have a far greater mellowness than the ordinary instrument and that they require a much lighter touch.

Dr. Benioff is an internationally known figure in the scientific and invention world. He has been associated with the California Institute of Technology since 1924, and his seismographic instruments are in use all over the world.

The commercial value of the newest musical invention is expected to center around future symphony concerts and in radio productions.

## Radio History

RECENTLY, in 1896, the first electro-magnetic waves without wires. Then on March 27, 1899, wireless communication was established between England and America, a distance of thirty miles.

Another milestone was reached in 1909, when an experiment to broadcast from the stage of the Metropolitan Opera House was made and Caruso's voice was heard in a laboratory in Jersey City.

Broadcasting as we now know the term,

began experimentally in 1916, at Medford Hillside, Massachusetts; and the *Detroit News*, the first newspaper to establish a radio news station, began broadcasting daily programs in August, 1920. Almost simultaneously, Pittsburgh opened a more powerful station under the Westinghouse Company, and thus less than two decades ago was begun a movement, the course of which has been marked with wonderful expansion.

## A Titan Wields the Hammer!

"That which you would call invention," Brahms once said to George Henschel, "that is to say, a thought, is simply an inspiration from above, for which I am not responsible, which is no merit of mine. Yes, it is a present, a gift, which I ought even to despise until I have made it my own by right of hard work. And there need be no hurry about that. It is like the seed-corn: it germinates unconsciously and in spite of ourselves. When, for instance, I have found the first phrase of a song, I might shut the book there and then, go for a walk, do some other work and perhaps not think of it again for months. Nothing, however, is lost. If afterward I approach the subject again, it is sure to have taken shape; I can now really begin to work at it."

# CAN YOU ANSWER THESE QUESTIONS?

On Home, Personal Appearance, Entertainment,  
Health, Travel

Study this issue carefully—then ask yourself  
these questions—score five points for each  
correct answer

1. What unusual courtesy did James Melton accord members of a chorus with which he appeared?
2. What is "gumdrop sculpture"?
3. How do blue-toned fabrics affect skin appearances?
4. Name four buildings in which musical activities will be held during the New York World's Fair.
5. How will the Fair act to promote international good-will?
6. How may minor faults be corrected in eye make-up?
7. What is the main value of pure olive-oil to the skin in cold water? (See January issue.)
8. What are the advantages of paper handkerchiefs?
9. Describe the stage make-up for old-age.
10. What are the essential rules for a good normal posture? (See January issue.)
11. How is the "Cupid Game" played?
12. From which port do most American tourists leave for Europe and Latin America?
13. Who makes an excellent cyclamen shade of cosmetic preparation?
14. What is the recipe for "Queen of Hearts" sandwiches?
15. Which technique of eyeshadow application is recommended by a famous cosmetician?
16. Where is the cold virus usually lodged?
17. Name a well-known rest-cure for tired eyes.
18. How may fellow performers and stage-workers be kept co-operative?
19. What are some common sources of cold contagion in the home?
20. What is the principal requirement in decorating the modern studio? (See January issue.)

## Expanding Your Musical and Cultural Life

(Continued from Page 110, Col. 3)

"Ten Thousand Letters of Charles Dickens," have been assembled in three recently published volumes, edited by Walter Dexter (Nonsuch Press). It aggregates 2,577 pages, indicating the immense by-product of the active writing man. Dickens probably wrote over twice as many letters. An attendant in the library of Congress once estimated that there were over fifty thousand letters and official papers of President Lincoln in the collection. The letters of Charles Dickens should be very valuable in giving intimate information about his methods of work. The letters of Anton Pusinelli (Alfred A. Knopf), for which Mrs. Edward Bok, paid a fabulous price in order that they might be published in translation in America, have thrown many splendid new lights upon the life and works of the great master.

"Lafayette," by W. E. Woodward (Farrar and Reinhart, Inc., at \$3.50), lifts the curtain upon some of the most vivid scenes in French and American history. If the book does nothing more than to reveal how tremendously important was the assistance of France in the birth of the United States, it will be significant. One lively chapter has to do with Lafayette's remarkable

friend, Pierre Augustin Caron, known as Beaumarchais (1732-1799), the incredibly versatile watchmaker, musician, essayist, dramatist, and prodigiously successful business man, who secretly induced Louis XVI to help America. How this amazing genius sent shipload after shipload of munitions to America, in open defiance of Great Britain, is one of the most dramatic stories of our past. This music teacher, who created *Figaro* (thus making possible Mozart's "The Marriage of Figaro" and Rossini's "The Barber of Seville"), was an intimate of Louis XV and gave lessons to his daughters, the royal princesses.

We list three new and highly praised books about the ballet. "The Dance" (Thomas Y. Crowell, at \$3.50); "Tribute to Ballet," poems by England's laureate, John Masefield, eighty-six pages (The Macmillan Co., at \$7.50); and "Ballet in Action," by Melwyn Severn, one hundred twenty-eight pages (Oxford University Press, at \$12.25).

Any of the foregoing books will be secured for readers of THE ETUDE as an accommodation and sent postpaid upon receipt of price (non-musical books are not sent on sale and are not exchangeable).

# VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

### "Hopf" Violins

G. W. B.—There were two violin makers of note named Hopf, David Hopf, and Christian Donat Hopf. Both worked in the XVIIth Century at Klingenthal in Germany. I have known of violins of exceptional quality by these makers to sell as high as one hundred dollars. However, violins actually made by either Hopf are rarely met with. The great majority of violins, branded on the back "Hopf", are factory fiddles of doubtful value. These sell in the trade at from five dollars up, and have been manufactured during the past two centuries. A first rate violin maker would scarcely take the trouble to imitate "Hopf" fiddles.

### A Violin by Meinel

G. W. B.—There were four different violin makers named Meinel, who made violins in the vicinity of Markneukirchen in Germany. Your card does not state just which one you are interested in. Besides, I could not give an opinion of the quality of any violin, unless I could see the exact instrument in question, as violins made by the same maker often differ in quality. Even Stradivarius did not make his violins all of the same high quality. Some were better than others. You had better have the violin in which you are interested sent to you on approval, and get the opinion of an expert on its quality.

### Johann Georg Hellmer

E. A. T.—If genuine, your violin was made by Johann Georg Hellmer in Prague, who lived in that city from 1687-1770. He was a pupil of Eberle. Many of his violins have G strings of inferior tone. One of his labels reads, "Joannes Georgius Hellmer, Pragensis me fecit, 1735." *Fecit* means "made." The label is in Latin. I cannot tell you anything of the quality, or whether the violin is original, without seeing it. Since you live in Los Angeles, a large city, you will find many violin experts and dealers there. Consult the city directory, or the telephone directory; or any leading violinist can refer you to an expert or dealer. After a careful examination they will be able to tell you all about the instrument, its quality and whether it is genuine.

### A Maker Named Hamn

F. J. T.—I am sorry I cannot get any information about a violin maker named Hamn. None of the violin books consulted seem to list him. As you know, there are thousands of violin makers, past and present, very few of whom are really well known, not to say famous. You might write to a number of dealers in old violins, as some of them may have come across a violin by this maker.

### On Submitting Articles

M. J.—All articles submitted to the Violinist's Etude receive careful attention. I cannot give an advance opinion on the articles you propose submitting on your "Violin Intonation Detector Fingerboard." If you send them in, they will be given a careful reading.

### Preparing to Teach

J. K.—I should have to write a book of one hundred to two hundred pages to outline the art of violin teaching from the beginning to the most advanced stages. As lack of space forbids this, I refer you to these books which will be of great assistance in learning the art of teaching: "Violin Teaching and Violin Study," by Eugene Gruenberg; "The Violinist's Lexicon," by George Lehman; "The Art of Violin Playing," by Frank Thistleton; "Violin Playing, as I Teach It," by Leopold Auer; "The Child Violinist," by Edith Winn; "How to Produce a Beautiful Tone on the Violin," by H. Timmerman; "The Violin and How to Master It," by a Professional Player; "Violin Talks," by Edith Winn; "How to Prepare for Kreutzer," "How to Study Fiorillo," "How to Study Gaviniès," "How to Study Kreutzer," "How to Study Rode," all by Edith Winn; "Scale Studies," by Henry Schradieck, and many others.

### For Study of the Position

G. G. J.—As you are having so much trouble with the positions, I would suggest that you get the "Violin School" (Part Second) by Hubert Ries, formerly professor of the Royal School of Music at Berlin. This work contains studies in the seven positions of the violin, and is a really scientific work on the positions. It is used by many of the leading violin teachers everywhere. A careful study of this work will give you an excellent knowledge of the positions. It is designed for advanced pupils.

### Violin Terms in French

T. H. C.—*Coffre* is a French word, meaning the body of a violin. *Collet de Violon* is also French, and means the neck of a violin.

### Repairing the Violin

C. H. K.—The glue with which you repaired your violin and which failed to hold, may have been of good quality, but probably you neglected to apply clamps to the mended parts. In the case of an old violin, where the ribs

have become loose from the top or back of the violin, the old glue should be removed, so that the surfaces to be glued are clean and dry. Then apply fresh glue, and clamp the parts together. In a day or two, the surfaces will hold firmly together.

### A Valuable (?) Find

H. G. L.—The clipping you sent me about an alleged Stradivarius violin having been found in a gold miner's cabin at Oroville, California, was interesting if not true. The violin was discovered in a burlap wrapping at the bottom of an old trunk. It has been placed in a modern steel vault, pending the probate of the deceased owner's will. There is a remote possibility that the violin might be a genuine Stradivarius, but the chances are that it is an imitation, worth perhaps five or ten dollars. You can hardly pick up a news paper but what you will see an account of somebody finding an old violin. What happens? The finder looks through the FF holes of the violin, and there he spies the magic name of Stradivarius, with a date reaching back one hundred fifty or two hundred years. He takes a pencil, and figures out the great age (3) and consequently tremendous value of his find. Now it is quite possible that there is only one chance in five hundred thousand that a violin found under such circumstances, is a genuine Strad.

### Listen to Good Music

C. P.—Violin students should listen to as many concert violinists as possible, as well as to symphony concerts. Students who live in large cities have many opportunities of this kind, but those who live in the country, or small cities, can rarely hear high class concerts or symphony orchestras. Such pupils have to depend on the radio. They should never miss the concerts of the New York Philharmonic-Symphony Orchestra, directed by John Barbirolli, and broadcast from New York on Sundays at 3 P. M.; and the NBC Symphony Orchestra at 10 P. M. Saturday evenings, under the direction of Toscanini; also the orchestra of the Music Appreciation Hour, at 2 P. M. on Fridays, under the direction of Dr. Walter Damrosch. This famous director is now on the air for the eleventh consecutive season of this radio hour. This series again will be available to students in class rooms throughout the country, through the medium of broadcasting. There are many other fine orchestras, string quartets, famous violinists, and vocalists to be heard on the radio, giving music students an opportunity of hearing the best. The names and numbers of the stations broadcasting these works can be found in the daily papers, or in the radio journals.

### A Violin by Fichtl

L. D. W.—I. Martinus Mathias Fichtl was an Austrian violin maker in Vienna in the Eighteenth century. A label in one of his violins reads, "Fichtl, Martin Mathias, Fec. Viennae 1736." *Fec* stands for *Fecit*, which means "made." Fichtl was an obscure maker, and I do not know where you could obtain much information about his life and work. 2. Possibly you could obtain the approximate price of his violins, by writing to several dealers in old violins.

### To Rosin a New Bow

T. R.—I am afraid you do not go about it right when rosinning a new bow, or one which has been freshly rebaired. The hair of new bows do not have any rosin on them. Take a small piece of rosin and crush or pound it into a powder. Put some of this pulverized rosin on a piece of cloth, and rub the bow hair over it until it is thoroughly coated with rosin, and then finish by drawing the hair over the rosin cake in the usual manner. Then rub the hair over a fresh piece of cloth, and this will spread the rosin evenly over the entire length of the hair. The bow will then be ready for playing. Never attempt to rosin the hair of a new bow by drawing it to and fro over a smooth rosin cake. When you buy a new cake of rosin, it is a good idea to scratch the smooth, glossy surface with a pin or sharp pointed instrument. This will leave the surface of the smooth rosin cake with a coating of pulverized rosin, which will apply itself to the hair.

### To Master the Trill

R. L. A.—I do not know any method of mastering the trill as good as a constant and thorough study of the trill studies in the famous "Forty-two Studies for Violin," by Kreutzer. Anyone who has made a systematic study of these exercises, will have a most complete knowledge of the trill. They are quite difficult, and, if possible, should be studied under a first rate violin teacher. If you are not advanced, you will find easy trill exercises in almost any method for the violin. Practice the trills slowly and evenly at the start, increasing the speed as facility develops. A perfect trill is quite difficult, and violinists consider it a major accomplishment of the art of violin playing.

## Bands and Orchestras

(Continued from Page 91)

discrimination cannot help but have its effect in bringing the band into its proper station. Already it has had far reaching effect in the type of music being written for bands, and its influence in the future will be greater still. No longer need the band conductor call for a galop, polka, or novelty composition, to assure himself of an audience. The young people, who have had the excellent training available in our public schools, quite often are familiar with the better compositions; and they are quick to recognize mediocrity as well as to listen with a critical ear.

The study of instruments and the completeness of instrumentation of our high school and college bands have also served to enrich the musical experience and tastes of our audiences. In many communities we find the school and municipal band memberships combined, and by this action an organization with complete instrumentation is achieved. Once more "William Tell" can be played, but this time with a complete complement of instruments, without substitution of parts, and in a most satisfying manner. The small brass town band is rapidly disappearing, and with it will go the inadequate and sorry repertoire of the past. In its place we have and will have excellent school and community bands playing for appreciative audiences those works which until now were never thought possible or appropriate for band.

No longer need arrangers be concerned with abbreviated instrumentations, since the modern complement of woodwinds is complete. Where there is any reason for substitution, original instrumentations are being retained, with cues for the substitute instruments. Former transcriptions often gave an intended oboe solo to the cornet or clarinet; the arranger having figured that either there would be no oboe present, or the passage would be too difficult for oboe (in which he was probably correct). Nevertheless his transcription was hardly authentic and the result not exactly artistic. Modern transcriptions are more accurate in adhering to original instrumentation, color, and score voicing. Thus they sound as the composer intended.

### Do Not Attempt the Impossible

ALTHOUGH THERE HAS BEEN this great change in the type and quality of music performed by our bands, we must be careful in what we attempt. It would be a grave error for any band to attempt the works of Wagner, Bach, Strauss, and others, unless the group is capable of performing the work in an intelligent and truly musical manner. We need not be so much concerned with the difficulty of Bach or Wagner as with how their music will sound. There is, after all, no magic in either name that will lend perfection to performance of Bach and Wagner, simply because it is their work. Our concern should rest with the degree of capability developed in our bands which will enable them to tackle such great compositions. Many audiences have failed to get a true

appreciation of Bach and Wagner, because they have not heard a performance commensurate with the quality of the music.

That the public in general is ready, and has been for quite some years, to accept enthusiastically band performances of great compositions, has been definitely proven by such bands as those led by Gilmore, Sousa, Goldman, Pryor, Simon, and many others. These great bandmasters have made distinct contributions to the cause of band repertoire. Mr. Sousa left many manuscript arrangements of some of the world's finest music. Dr. Goldman has for years championed the cause of better band music, and his library contains countless manuscript arrangements of numbers by almost all composers, expressly suited to his band. The Pryor and Simon libraries likewise contain many splendid manuscript arrangements. When one is privileged to hear any of these bands perform, he is impressed with the real quality of the music, the excellence of arrangement, and the sure artistry with which it is played. When a band reaches these three points of transcendence, it truly comes into its own, and we can realize how important a factor repertoire has become.

The music publishers have done much to aid in the development of bands and school music programs. Their continued cooperation, coupled with the efforts of the American Bandmasters' Association, lead one to believe that the band future is bright. We cannot help but improve under the existent stimuli. Yet we must not lose sight of the fact that the band has its individuality, and for that reason we are not to disregard those phases of its work which differentiate it from the orchestra. There should be, indeed, a happy medium. No band program is complete without a march or two; and, if properly rendered, a march can be played just as musically and with as much merit as any other number of the program.

The band conductor must be aware that audiences have not reached the zenith in musical understanding and appreciation, and must guide himself accordingly. Fortunate is the conductor who can arrange his program so as to satisfy the "rhythmic," the "emotional," and the "intellectual" elements of his audience. Music ranges through the emotional, rhythmic, romantic, classical, impressionistic, sad, happy, melancholy and the spirited; and we must offer this variety, but always ascertain that it is sincere music and that it is good music.

The heights to which the band may rise need not be limited by existent compositions. The band repertoire cannot be considered as consummate because it contains some works by famous composers. There can be counted among the efforts of even these geniuses works which might be open to challenge as great music. There is a large field of music to draw from, but there is yet unborn a wealth of great band literature that will bring about the change in band status to which all of us may pin our confidence.

### "Next Lesson We Advance A Little"

A FAVORITE STORY of Continental green rooms is that of a very meticulous German teacher of the tympani. His name was Pfund, which in English becomes "pound," and this in itself is sufficiently humorous as the name of a drummer.

This Herr Pfund had an English pupil whom he was initiating into the mysteries of the "Pastoral Symphony" of Beethoven. In the first three movements the tympani are not used; but Pfund had his pupil to

count each measure diligently.

The pupil happened to be thoroughly familiar with the symphony; so he awaited the thunderstorm of the last movement. Just before this came, however, and after approximately nine hundred measures having been counted, Pfund took out his watch, shrugged his shoulders excitedly, and hurriedly announced, "Sorry, but your lesson time is gone. Next lesson we will advance a little."

**EASY to Own—EASY to Play**

It's new, it's thrilling, it's spectacular—a genuine 21<sup>st</sup> octave DEAGAN marimba, embodying DEAGAN standards of quality and beauty, at the lowest price in history.

The DEAGAN STU-DETTE is your opportunity, at negligible cost, to stimulate the musical interest of your children, develop their musical talent. No instrument gives greater expression to musical abilities. None wins greater applause—or is easier to master.

There's fun for all the family in the DEAGAN STU-DETTE. Shall we send you particulars? . . . J. C. Deagan, Inc., Dept. E2, 1770 Berteau Ave., Chicago.

**Deagan**

**STU-DETTE MARIMBAS**

The world's largest Carillon (75 Deagan Tubular Bells) will ring forth from Florida's exhibit at the New York World's Fair—and serve afterward as the Golden Voice of the magnificent FLORIDA STEPHEN FOSTER Memorial on the banks of the Suwannee, at White Springs.

**EASIEST to master!**

**THIS NEW P-A**

Such beautiful tone, and so easy to play! Just touch a key and blow normally; you can't miss. Nothing to compare with these new P-A Saxes, Clarinets, Trumpets, and other P-A instruments. Fully guaranteed; your success assured. See your music dealer or write direct for beautiful free book. No obligation. Easy terms. Greatest fun, easiest with P-A. Write today sure.

## The Meaning of Musical Ornamentation

(Continued from Page 94)

without a wig, or take a carpenter's plane and shave off all the little shells and flowers from a piece of French furniture.

But, indeed, it takes quite a tedious study to learn the true execution of these little musical artifices. And the instinct cannot help one very much; for what we mistake for instinct is nothing but a habit of thinking in a familiar idiom. But the familiar is not always in the right style; and the old masters insisted on exactitude.

It is a characteristic of the classical mind to impose rules. There are rules for everything in these days of pre-Romanticism. Not only were etiquettes enveloped in a maze of rules designed to challenge one's poise; rules dominated the drama, the art of letter writing, the art of reasoning, and, last, but not least, music. An opera composer had to submit the sequence of his musical play to an incredible amount of rules. There always had to be a prescribed number of arias of a fixed character; and they had to follow one another in a certain order. No man of authentic taste would dream of breaking this royal tradition. And thus this stiff jacket of musical etiquette was equally tightly laced around the dainty waists of Rococo melodies. Couperin, and all the musical schoolmasters of Europe of that time, insisted that mordents begin on the beat, and should not be played before it. The natural tendency of that period, curiously enough, seems not to have differed from habits in our own time; for we hear their professors at all occasions lecturing their pupils against this ill-bred habit of playing mordents before the beat, instead of *on* the beat and *with* the bass. It was considered the height of laxity and the banal betrayal of bad taste, to give in to the vulgar urge of playing

Ex. 5

in such a style as

Ex. 6

instead of

Ex. 7

Beethoven and Schumann were not so strict in observing these codes. In fact they always took particular pleasure in breaking traditions. But Chopin, strange as it may

seem, had his copy of Philipp Emanuel Bach's treatise on the "True Art of Playing" always on his instrument, taught his pupils in the severest tradition of ornaments, incorporating them with their stiff convention in his composition.

To insist with equal severity upon true and traditional execution of niceties, is entirely a matter of taste. A thing can be done beautifully, if it is done convincingly; but, if one desires to play true style, it is necessary to be acquainted with the old masters' own desires as to execution of their works.

If the student only would take the trouble to read what the old masters themselves have written on this subject, he would discover the true style of these antique composers. There is a vast literature on this subject; but it is covered with years of dust, for its books are seldom opened, if so, they are generally closed by the tortured patience of the disgusted reader.

To mention only a few authors who have written on the subject of ornamentation, there are Diruta (1625); Praetorius (1619); Purcell; Thomas Mace; Couperin; Geminiani; Quantz, pupil of Bach; Muffat (1718-1795), contemporary of Bach; Leopold Mozart (the father of Wolfgang Amadeus); Türk (1789); Clementi; Hummel. Most of these are written for instruction of pianists, although some of them had violinists in mind. Quantz, court flutist of Frederick the Great, wrote for singers. Besides these, many explanations of ornamentation can be found in prefaces and editions of old masters of the XVIth, XVIIth, and XVIIIth Centuries.

If one cannot reach the original source of this information, modern writers, such as Dannreuter, Dolmetsch, and articles in musical dictionaries, can be consulted. The truth can be always found, if one only wants it; but it often is a tedious task to find it through the tiresome unravelling of ancient rules and prescriptions.

It is not an uncommon experience of students and artists alike, who for the time occupy themselves with this research, to revolt against the artificial result of their discoveries. Their so-called instincts are generally offended when they find out that certain arpeggios receive the accent on the up beat instead of on the main note where it seems "natural." But then it is time to educate their imagination, to accept the undeniable word of written authority, and to digest it.

## When to Start Teaching Music

By EDNA FAITH CONNELL

IN DIRECT OPPOSITION to the view that is held by most musicians, the writer would like to express her personal experience on the subject of when it is advisable to begin to teach.

We have studied several instruments with many different and experienced teachers; yet it was from the youngest and the least experienced (in teaching) that we learned the most.

The young man in question was an excellent violinist, had studied extensively and knew his instrument and the music that was written for it. He was in doubt regarding his ability as a teacher when first approached, and we have since thought that his reason for this was because of his knowledge of the disgust that nearly all veteran teachers hold for the young and

uninitiated—their own students included.

After taking a few lessons, I found it to recommend him. He gave freely of time in order that he would leave no stone unturned to have his pupils make progress. He was interested in the profession for itself, and not alone for the income he received. He was not afraid to say that he did not know when we asked upon anything about which he was in least doubt. He was most particular as to position, tone, time and every last detail that entered into the making of a violin. What more could a prospective pupil want?

Children, especially, like the young violinist, is it not possible for a musician to teach what he has learned, even as a young man can help children with school work and about which little criticism is given?

# QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in *THE ETUDE* unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## Unusual Dulcimer

Q. Here in the foothills of the Kentucky mountains the five- or six-string dulcimer, homemade and plucked with a good quill, is occasionally found, but until this year I had not seen a homemade harp like the one I secured recently.

Query: What is the name of it?  
I enclose a rough diagram showing only a part of the sixty-two strings.

The player beats on each side of the middle

bridge, using a hammer in each hand. Occasional bass notes are added by striking the bass strings in front of the bridge at the right, and using the right hand. Sixteen of its sixty-two strings are grouped in two's and pass over the bridge at the right, making the eight bass notes. Notice that these bass strings pass through rough holes under the middle bridge. The other forty-eight strings are tuned in groups of four to make twelve treble tones in ascending scale. Those in the way are passed through holes in the short bridge at the right so they will not interfere with striking the bass strings, but all the treble strings pass over the middle bridge. Local citizens call these instruments harps, dulcimer harps, or harps of a thousand strings.

Should I use brass or steel strings on it?  
Any information on playing, construction, origin, number now in existence, strings to be used, or any history of the instrument would be welcome.—E. G. W.

A. I have talked with several musicians and have written letters to several others but can find no answers to your questions. The dulcimer appears in various forms and sizes in different parts of the world, and this particular one was probably made by some amateur instrument maker and then either pilfered for commercial purposes or copied by other instrument makers.

## Teaching Accent.

Q. 1. I would like to know if a pupil should always—in every piece, I should say—be taught the accent.

2. Where should the accent fall in six-eight and nine-eight time.—Mrs. H. B.

A. 1. Measure accent is more subjective than objective. In other words, it is the performer's feeling that a certain beat is stronger, rather than an audibly louder tone at the beginning of each measure. But certainly the pupil ought to be taught which beats are accented in each kind of measure, and at the beginning it may be necessary to have him play the accented tones a little more loudly in order to get the feeling started.

2. In six-eight time the accents fall on one and on four; in nine-eight, on one, four and seven.

## Trills and Turns in Mozart.

Q. 1. Will you please answer the following questions regarding the piano accompaniment of Mozart's "Sonata in F, No. 7 (Köchel 54)?"

1. How should the turns be played in measure 35 (Allegro movement)? Also measures 18 and 49?

2. How do you play the trills in measures 6, 16, and 17, and 18. Also the trills measures 29, 30—35 through to 39, and 40 and 52 of the Andante movement?

3. In the Rondo, how is the trill in measure 7 played? Also measures 17 and 18? How the turn played in measure 97?—M. E.

A. 1. Allegro.

(The turns in measures 48 and 49 are like those in measure 35.)

2. Andante.

(Measure 6 is like measure 5.)

FEBRUARY, 1939

(Measures 16 and 18 are like measure 17.)

(Measure 30 is like measure 29.) Trill four notes to each sixteenth; if this is too fast, trill only two to each sixteenth. Measures 51 and 52 are like measures 5 and 6.

3. Rondo.

Measure 7.

Measures 17 and 18.

Measure 97.

## Harmony Questions.

Q. 1. Will you please explain augmented and diminished intervals or give some reference where I might find information on the subject. Are they found in the same or in different voices?

2. What are hidden or concealed fifths and octaves?

3. What are outer voices?—E. F.

A. 1. An augmented interval results when any perfect or major interval is increased in size a chromatic half step. A diminished interval results when any perfect or minor interval is reduced in size a chromatic half step.

You mention that you are studying "Harmony," by Chadwick. A complete discussion of intervals is to be found in that book, pages 12 through 14. If you need still further help in this matter I would refer you to "Harmony for Ear, Eye, and Keyboard," by Heacox, Lessons 10 and 25.

Augmented and diminished intervals may be found in either the same or different voices as the following examples show:

In (a) the leap in the soprano from C to F-sharp is an augmented fourth; so also is the resulting interval between the soprano and the alto in the second chord.

In (b) the interval between the alto and soprano in the second chord (C-sharp to B-flat) is a diminished seventh, as is also the leap taken by the soprano from the second to the third chord. Leaps of augmented and diminished intervals in the same voice are usually forbidden in strict four-part writing.

2. When two voices go in similar motion to a fifth or an octave, hidden (concealed or covered) fifths or octaves result. For example:

For a discussion of these progressions, see Chadwick, p. 20, or Heacox, Lesson 30.

3. Outer voices are those sounding the highest and lowest parts; in ordinary four-part writing they would be the soprano and the bass.

## Danny Boy?

Q. 1. What were the original words sung to the Londonderry Air?

2. Should an audience always stand when singing My Country 'Tis of Thee?—Miss J. O.

A. 1. I have not been able to find the original words as used in Ireland; but here in America I believe the words of Danny Boy were the original ones.

2. Our national anthem is The Star Spangled Banner, and it is therefore the only song about which there is any real compulsion so far as standing is concerned. However, in many places My Country 'Tis of Thee is also regarded as a national song, and children in schools are therefore taught to stand during its rendition.

## FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

## The Guitar in Chamber Music

IF YOU SHOULD HAPPEN to visit the "rare book" room in the Congressional Library in Washington, do not fail to pause before the glass case containing some of the greatest musical treasures existing in this country. This case is the permanent home of five stringed instruments created by the most celebrated violin maker of all times, Antonio Stradivarius. The collection consists of three violins, one viola and one violoncello, together with a bow for each. These bows were made by the great François Tourte of Paris and are excellent examples of his work. All of this represents a gift to the nation by that public spirited lady, Mrs. Matthew John Whittall. In times past instruments of this nature were bequeathed to Museums, their voices stilled, never to be heard again; witness the priceless violin of Paganini resting in a glass case in a Genoa Museum for many years, from which it was never moved. A recent examination revealed that it had deteriorated to such an extent that it is almost useless.

To avoid such a calamity Mrs. Whittall provided a trust fund, the income from which is to be applied, through the Music Division of the Library, to the maintenance of the instruments, and to programs in which they will be used. Thus Mrs. Whittall's generosity and foresight assure these precious instruments not merely security and proper physical attention, but also an active and continuing service to the cause of music and musical appreciation.

Antonio Stradivarius was born in Cremona, Italy, in 1644 and died there in 1737 in his ninety-third year. According to reliable statistics he produced over eleven hundred instruments, mostly violins, violas and violoncellos; but he made as well some violas-de-gamba and a few guitars.

The five Stradivarius instruments in this collection were created during the master's best period, and each one is a perfect specimen of his matchless work. The "Betts" violin, made in 1704, is generally conceded to be the most beautiful and perfect violin he ever made; and the "Ward," dated 1700, is a close second; the "Castelbarco," 1699, is a perfect specimen of the "long pattern" violin; while the "Cassavetti" viola, 1727, and the "Castelbarco" violoncello, 1697, are equally perfect from every point of view.

To give here a complete history of these instruments is beyond the scope of this article; they passed through many hands before finally coming into possession of Mrs. Whittall and, through her generosity, to the Music Division of the Library of Congress.

### Provision for Concerts

ONE OF THE STIPULATIONS in creating the trust fund was the inauguration of a series of annual concerts by some of the outstanding chamber music organizations, at which these instruments are to be used; and on December 2, 1938, in the Elizabeth Coolidge Auditorium of the Library of Congress, the public was privileged to be present at the first concert sponsored by

the Gertrude Clarke Whittall Foundation and played by the Stradivarius Quartet, New York. This Quartet appeared again on December 4. The other organizations booked for this series, extending through December, January and February, are the Gordon Quartet, the Musical Art Quartet and the Roth Quartet of Budapest. Tickets to these concerts are free to the public, but there is a service charge of twenty-fifteen cents per ticket. Reservations for the February concerts are available on and after January 30. All the concerts are being broadcast in part; so it is advisable to consult your radio time table.

Of special interest to guitarists will be the two concerts scheduled for Thursday evening, February 23, and Saturday afternoon, February 25, when Andres Segovia will appear on the programs with the Roth Quartet. While no details of the numbers to be played are available at the time of this writing, it is probable that the Schubert "Quartet for Violin or Flute, Guitar, Viola and Violoncello," and some of the Boccherini quintettes for two violins, violin and violoncello will be heard. The two days, when the instruments of Stradivarius mingle their exquisite voices with that of the "Hauser" guitar in the hands of Segovia, should be marked down as "rare letter" days for the guitar.

It is to be regretted that the guitar is not heard more frequently in chamber music, as its tone blends most beautifully with that of any other instrument. Due to the fact that the guitar is used for flute or violin and guitar; and trios and quartets in which the guitar takes a prominent part would appeal to any music lover. A great deal of chamber music with guitar was published in the early part of the nineteenth century, and many of the numbers are listed in some of the foreign catalogs.

### Some Excellent Program Material

HEINRICH ALBERT, guitar virtuoso and composer, has done excellent work in revising a number of these compositions. Amongst them are trios for violin or flute with viola and guitar, by Molino, Kreutzer and DeCall; three quintettes for two violins, viola, violoncello and guitar; L. Boccherini; "Grand Sonata for Violin and Guitar," by Mauro Giuliani; three sonatas for violin and guitar by Gragnani; two quartets for four guitars by Albert and Op. 15 by Ferdinand Sor; and last but not least, the Schubert "Quartet" discussed in detail in the October issue of THE ETUDE.

In the fretted instrument field we have three plectrum quartets by Carlo Munier, also one by Giangreco, that are full of beautiful effects of each instrument; and while the original score calls for first and second mandolin, mandola and mandocello there is also a guitar part for each of them; and, since it almost duplicates the mandocello part, it may well be used in place of it, as sometimes it is difficult to find a player for the latter instrument.

Frequently a good guitarist may not have all that it takes to become a top notch soloist, but he may prove a valuable player with a small chamber music organization.

## OBERLIN CONSERVATORY OF MUSIC

Advanced study in all branches for Mus. B., Sch. Mus. B. degrees, combination with Oberlin College for A. B. Distinguished faculty of specialists. Excellent equipment. For entrance, high school or equivalent. Dormitories. Catalog. Frank H. Shaw, Dir., Box 529, Oberlin, Ohio

**Answering Etude Advertisements always pays and delights the reader.**

## PEABODY CONSERVATORY BALTIMORE, MD.

OTTO ORTMANN, Director

One of the Oldest and Most Noted Music Schools in America.

## VOICE QUESTIONS

Answered

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

### Real or Popular Songs?

I am fifteen years of age and I want to sing. My voice is fairly good and I have over the local radio. My teacher tells me I will ruin my voice if I sing popular songs. She thinks I want to be an opera singer, really want to be a radio singer. What I do?—D. L. C.

You do not say whether you have a soprano or a contralto voice, so your question is difficult to answer. At the moment, a contralto of deep contralto voice is very popular over the air. If you have this kind of a voice you should study some popular songs, but a great deal of attention to your pronunciation and being careful that you have a smooth, pleasant tone. Tremolo is very offensive over the air. Do not scream, nor sing the utmost power of voice, or the result will sound badly; but try for the steady, smooth, well controlled tone, sounds best over the air. If you have a soprano voice, the same remarks apply, but type of song must be different. Learn to sing in Italian and French. You cannot get far without some understanding of these languages.

### Range of Some Great Singers

I am sixteen years old; and I have a range from C in the second space of the bass to F on the third space above it, in natural tones; and up to E-flat in the fourth of the treble staff in falsetto. My falsetto is clear, not strained.

How would my voice be classified? Tell me the ranges or top notes of Melba, Pons, Caruso, Gigli?

What are the ranges of a dramatic soprano and of a tenor robusto?—D. G.

1. You are very young, and it sounds your voice is not as yet thoroughly settled. You can find a good singing teacher in your neighborhood, be subject to his advice, as if you were not too young to start lessons. Do not sing too high, too low, loudly, nor too long without rest. Progress, quietly, reasonably.

Melba's voice had a range something like

#### Ex. 1

distinguishing characteristic of her singing, however, the beautiful, natural tone, the velvety smoothness of her scale, the perfection of her phrasing. She could perfectly sing staccato, and every nuance of expression was at her command. She was a perfect example of *bel canto*.

Pons is a *coloratura* singer, but she can sing beautiful lovely songs of Debussy, Ravel, and even Brahms. I have heard her sing from

#### Ex. 2

and comfortably, the middle and upper being the best, clear and silvery.

Caruso's voice had a very wide range, the tones being almost like those of a baritone, while the upper ones, especially when he sang, were clear and vibrant. As he grew the voice became thicker, stronger, heavier. He was one of the greatest dramatic tenors the world has ever heard. How low he went it would be hard to say, but I have heard him sing a magnificent, strong, virile

voice. He is the ideal Italian lyric tenor, possesses superbly controlled voice capable of full *legato*, soft effects, as well as considerable volume, upon the high tones. He is the few tenors who can sing comfortably and gracefully even above the high C.

The range of the dramatic soprano is from Middle C to C on the second added line of the treble staff; and the range of robust soprano is similar but an octave lower, beginning on C in the second space of the bass staff and ending on C in the third space of the treble. All their tones should be full and strong. They are very rare voices.

### Hoarseness and Laryngitis

A few years ago I was a good baritone, keen on choir singing, and training. I was in attack of influenza and my voice has been the same since. I could not speak in a whisper, for three months, but it is all back now. Even now my singing is good up to B on the first space above the staff, then it suddenly gets breathy and turns into a croak. I have tried singing softly, as recommended by Behnke (Koo, Koo, Koo), but they do not much. Can you give me any advice in this matter?—F. T.

It sounds as if the influenza had left with an inflammation of the Crico-arytenoid and Thyro-arytenoid muscles. The vocal cords seem to have been involved also at that time. But from your letter they seem to be normal now. It may be that there is a slight inflammation of the cords. You should have a high laryngoscopic examination, conducted by a best physician in your neighborhood. When you sing an ascending scale, the

muscles I have mentioned and several others, must contract with increasing firmness. In your case they refuse to do so. Subject to your doctor's advice, I suggest the following exercises.

#### Ex. 1

They should be sung very softly upon a hum until you can produce a tone or two higher than the one you speak of, without effort. Then open the mouth a little and try singing the same exercise on *ave* and *o*, without allowing the tone to drop back into the throat.

Avoid A as in *Bay*, A as in *cat*, and EE as in *meet*, until you are better. You will find these exercises in my small book, "What the Vocal Student Should Know," issued by the publisher of THE ETUDE. Your case is not a very easy one to cure; but a good doctor's advice and careful singing exercises can do it. Read Fillebrown's book, "Resonance in Speaking and Singing."

### How to Cure Trembling of Jaw and Tongue

Q.—Two of my students, sopranos, have a most pronounced trembling of tongue and lower jaw when they sing. Thinking it due to tension, I have suggested many relaxation devices but none of them eliminated it. What can I do to remedy this obnoxious condition?—J. W. W.

A.—Trembling of the jaw, tongue or larynx may be the result of nervousness. Are either of these ladies of a nervous temperament? Are they of the same family? It is quite unlikely that the trembling can be cured by relaxation exercises. The truth is that both jaw and tongue are probably so relaxed that they are out of control. They tremble like a leaf in the wind.

The usual exercises to overcome this difficulty are, soft, sustained tones in the best part of the voice, the soprano singing in the range indicated in Example 1A and the alto using the range indicated in Example 1B.

#### Ex. 1

The tones should be produced steadily and with very little breath effort. Try two or three different vowels:

A as in *father*.

A as in *fat*.

EE as in *meet*.

Make the pupil use a hand mirror and watch to see that the tongue jaw and throat do not tremble.

This is a difficult habit to overcome, but do not despair. As soon as the trembling becomes less, go on with the more usual vocal exercises but see that the pupil never forces her tone.

### Soprano or Contralto Once More

Q.—My singing teacher tells me that I am a contralto, but I feel that I cannot sing low enough for a contralto. What is the range of a contralto? When I first start singing in the Glee Club, I can really sing in a low, clear, full voice; but after I get through I am hoarse. Am I straining my voice? I am sixteen years old. Do you think the range of my voice may change as I grow older? Do you think it is good for a young girl to imitate the great singers?—I. C.

A.—There seems to be a difference of opinion as to whether you are a soprano or a contralto. This should be cleared up once for all by having a thorough examination by the best singing teacher in your neighborhood. Few voices can stand a great deal of work at sixteen. Are you sure that your Glee Club rehearsals are not too long and too strenuous for you? Are you singing too loudly? Your hoarseness after rehearsals suggests both of these things.

The usual range of the alto voice is about

#### Ex. 1

Some unusual altos can go one or two tones higher and some one or two tones lower. As you get older your voice, like the rest of your body and mind, will mature. If used correctly it should become stronger and capable of more sustained effort. You may imitate singers whose voices are of the same type as your own; but if you imitate a voice of an opposite type you will be almost sure to strain. You are very young; therefore proceed slowly and carefully.

Music, in the best sense, does not require novelty, nay, the older it is and the more we are accustomed to it, the greater its effect.—Goethe.

# SAMOILOFF

will hold

## SPECIAL SUMMER MASTER CLASSES FOR TEACHERS, SINGERS AND BEGINNERS

at his

BEL CANTO STUDIOS & OPERA ACADEMY  
610 SO. VAN NESS AVE., LOS ANGELES, CALIF.

REPERTOIRES • LANGUAGES • ACTING

Everything for the singer is taught at the Samoiloff Studios.

## EASTER CANTATAS

For Mixed Voices Unless Otherwise Mentioned

### HAIL! KING OF GLORY

By Lawrence Keating (New) Price, 60c  
An Easter cantata for volunteer choirs without trained voices. Short easy solos, duets and a trio, all of which may be sung in unison, make for variety in the musical content.

### VICTORY DIVINE

By J. Christopher Marks Price, 75c  
One of the best of all cantatas for Lenten or Easter-tide use satisfying to the lover of good music as well as to the non-musical folk, small choirs of volunteer singers with fair soloists or splendidly trained choirs numbering several hundred voices. Time 1 hour.

### Other Appropriate Cantatas for Easter

|  |        |
|--|--------|
| The Risen King (Wooler)                | \$0.60 |
| The Greatest Love (Petrie)             | .75    |
| Everlasting Life (Forman)              | .60    |
| The Glory of the Resurrection (Spross) | .75    |
| He Lives, The King of Kings (Risher)   | .60    |
| The Rainbow of Promise (Baines)        | .60    |

### MESSIAH VICTORIOUS

By Wm. G. Hammond Price, 75c  
A stimulating and uplifting musical presentation of the Resurrection and Ascension. There always is predominating a musical fervor in its decided melodic and rhythmic construction. Time, 30 minutes.

### IMMORTALITY

By R. M. Stults Price, 60c  
A well planned cantata with texts taken chiefly from the Scriptures. Time, 35 minutes. Also published for Treble Voices—2 part. Price, 60c

|                                   |        |

## Smart Attire for Concert and Recital

(Continued from Page 80)

feel that you have to change your frock each time you appear, simply for the sake of wearing something that you did not wear the last time. Wearing a restless array of dresses does not mean a thing—except, possibly, that you have not yet found that *right dress*. It certainly does not mean that you can afford to buy many frocks. I have the pleasure of dressing one of the most glamorous of our *prime donne*, a singer whose revenue from the opera, concerts, radio, and the films would allow her to purchase a new outfit every time she leaves the house. But she chooses to do something very different. Some three or four years back, I designed a concert gown for her that was completely right for her. I thought it was right; and, what is much more important, she felt it was right. She wore that dress the entire season through—every time she appeared in concert, and she has had it copied three times since. Once, in order to make it seem like a new gown, we tried it in another color, but the singer found that she felt best in the original shade of turquoise blue. As far as the "look of the thing" is concerned, this very attractive soprano keeps on appearing in the same gown.

### Let the Feathers Fit the Bird

THAT IS A WISE WAY to go to work. Try to find the thing that suits you, and then keep on wearing it, for the very excellent reason that it does suit you. Do not worry about having to appear in something new or different. Keep to your own style, even if you have to have the dress recopied. You cannot improve on what is already perfect.

We have spoken about the lines of your gown, and you may naturally wonder what these desirable lines are. One cannot discuss such a highly individual thing as dress designs in anything but a most general way; yet there are certain precautions that are always applicable.

### And the Season, Too

LET THE TIMELINESS of the occasion play its part in the selection of a frock. If you are taking part in music making at all, remember that the occasion is one of dignity, and do not dress as for a jazz party. This applies to the youngest girl. Let her be a *jeune fille* (young miss), by all means; but she need not wear sashes and ruffles. Age values need but little emphasis. The one, who is young, will look young, even in the simplest and most classic lines. Timeliness has its part, also in determining skirt lengths, sleeve lengths, and neck lines. For an afternoon recital, the skirt should be long, the sleeves should be long, and the neck should be high. Even for formal evening performances, there should be either a jacket, or some sort of arm drapery. There is something about the feeling of great music which makes an overexposure of arms or chests highly unsuitable. There is no rule about this, of course; it is just a matter of taste.

The general lines of well designed gowns are not so radical as one might think. We went through one hideous period, around 1925, when skirts were short and waists were long, and the general effect was as unnatural as it was unflattering. But, for the most part, there is an ebb and flow in the sort of lines one might call classic, in the same sense in which music is called classic: they are timeless and seldom change. Under this heading come the Empire waists, the Greek draperies, the Directoire slimness, and the Renaissance curves. Any and all of these are suitable for concert gowns,

always with the important provision that they also suit the individual wearer. The Empire gown, with its high waist, is suitable only for the slim figure. The classic severity of the Greek line is suitable only for a person with a naturally good figure. Directoire and Renaissance gowns are adaptable.

### To the More Mature

OLDER WOMEN, WOMEN OF ANY AGE, with less than perfect figures, and singers with developed chests, should be careful not to get their dresses too tight. Many women seem to feel that they make themselves look slender by suppressing excess material; that they slim themselves down by a skin-tight fit. Nothing could be worse. The loose fit, the more concealing the gown. Instead of emphasizing the bumps of a figure by stretching the material tight across it, the gown should be so draped that the observer will not be conscious of where the gown ends and the singer begins. An unbelted princess model is very advantageous for the stout woman or the singer. Then, too, a cleverly draped scarf can do wonders for concealing stoutness. But the scarf should be caught in some way, so that it does not float, trail, or cause excess motion of line. And never wear a scarf, or anything else, that cannot be easily managed.

Both singers and instrumentalists should allow for plenty of arm play. One does not have to wear a sleeveless gown to get it. The secret of roomy sleeves has nothing to do with the sleeves themselves. Roominess is provided by a generous cut of the back of the dress. Be sure that your gown has this ampleness of back. Do gymnastics in your gown before you appear in it, and make certain that you have room enough to feel perfectly free and comfortable. If the back is cut with proper fullness, you can have the sleeve itself fitted as tight as you like. The harpist, of whom there have been mention, had her gowns made with long, tight-fitting sleeves; but they never pulled, because the back was cut correctly. When the gown that suits has been found, wear it. Hang it away in the closet for a year, to let it grow young again, but do not alter it. If a new gown for a special appearance is being selected, consider the rest of the surroundings in which it will be seen. Let the curtain, the backdrop, the coloring of the hall itself, have their influence on the color to be chosen.

Do not wear gloves, or any other adornment, unless you feel really comfortable in them. Some people are used to managing gloves on formal occasions, and it makes no difference to them to keep them on while singing. Others, particularly very young people, feel ill at ease in them. You know how you feel about gloves, and nobody can argue you into a different feeling. A change in feeling must come through experience and experiments of your own. It is infinitely better to appear at ease without gloves than to look awkward in them.

Choose your lines with an eye to simplicity and suitability; choose your color according to the shades that are most becoming to you, individually; feel completely comfortable in your things; and bear in mind that the first object of your frock is to help you to do honor to music. Then go ahead; dress yourself; and you will not go wrong. When the singer has found the apparel that helps her to achieve all these ends, let her keep on wearing it regardless of the mannequins in Paris.

\* \* \* \* \*

"Girls, if you feel the divine spark of music with you, let nothing deter you from fanning it into flame! Study for opera."—Emma Calvé.

| YOUTHFUL TENOR, THE—SONG ALBUM                 | .35    |

## The Cover for This Month

Perhaps some great sage sometime, somewhere said something to the effect—"Show the pupils who have love and respect for their teacher and you will be showing me pupils of a successful teacher." What a contrast between the modern teacher, who, with a genuine love of children, makes use of their natural love of melody and rhythm in guiding youngsters to a knowledge of those things which make it possible for them to enjoy music made under their own fingers at the piano keyboard; as against the type of teacher, frequently met a generation ago, who virtually amounted to a task-master and disciplinarian, insisting that the child must take a dry technical approach to music and like it.

The cover on this month's issue of THE ETUDE symbolizes the happy relationship between the teacher and pupil of to-day, particularly such teachers as those specializing in young children. While it is true that a well brought up pupil in piano playing should have such study material as will supply a substantial foundation for real pianistic ability in the future, the technical things do not have to be crowded into the little of his first season of music study.

That THE ETUDE cover of this month is representative of a Valentine that well might be placed upon pianos of thousands of teachers throughout this country is clearly established in the tremendously large annual sale of such attractive publications for young piano beginners as *Music Play for Everyday*, *Tunes for Tiny Tots* by John M. Williams, *Thirty Rhythmic Pantomimes* by Dorothy Jaynor Blake, *My First Song Book* by Ada Richter, *Bilbro's Kindergarten Book*, *Playtime Book* by Mildred Adair, *Folk songs and Famous Pictures* by Mary Bacon Mason, *Technic Tales* by Louise Robyn, *What to Do First at the Piano* by Helen L. Cramm, *Tunes for Toddlers Taught with Scissors* by Rachel Crawford Hazeltine, and numerous other such books with a strong appeal to the juvenile.

We are indebted to the photographic studio of H. Armstrong Roberts for the delightful juvenile portrait montage utilized in the preparation of this cover.

## Nothing Left But The Squeal

• A very active music teacher writes, "When I get through with my ETUDE, it is like the pig at the meat packers—nothing is left but the squeal." It has been a very great compliment to us that THE ETUDE is read from cover to cover with what another reader has called "microscopic zeal." We endeavor to present the magazine so that nearly every page has an opportunity for advancement for the reader. This may be found in an inspiring and instructive article, in any one of the collection of pieces published each month, or like as not, in the advertising pages, which for ETUDE readers are Chronicles of business news for the home and the studio. In fact, we find that many of our readers turn first to the advertising pages to read what active advertisers have to offer. The preparation of the copy for these pages is often a difficult and expensive matter for the advertiser and we do not wonder that our readers take such interest in them.

## Easter Music

The Theodore Presser Co. in supplying a nation-wide patronage with music selections for the special services of Lent and Easter must carry in stock a wide variety of suitable anthems, cantatas, and solos. Even where only a few untrained voices are available to form a choir, the special musical contributions to the church service man as much to the worshippers as do the more pretentious musical efforts of the best professional soloists and highly trained choirs singing for congregations whose metropolitan musical opportunities have developed highly discriminating musical tastes.

Both these extremes of choir abilities, as well as all degrees of choirs in between, may give of their best to the Easter church service if the choirmaster allots sufficient time and thought to selecting anthems, cantatas, or solos. One of the best possible procedures for a choirmaster to follow in choosing music for this Easter Season is to write to the Theodore Presser Co. requesting a selection of Easter or Lenten anthems to be sent "on approval," accompanying that request with some little description of the choir's ability or the statement "We have been using" (naming three or four of the best selections the choir group uses).

As a result of such requests one of our clerks trained in choosing music for choir groups will pick out single copies of a number of anthems that should be acceptable and these will be sent "on approval," a charge being entered upon our books for the music and the nominal postal charges incurred in sending it. This music may be examined and any or all of it returned for credit. The only obligation incurred is the small amount for postage used in sending the music to you and the payment for any selections which are kept.

Another phase of the liberal examination privileges offered by the Theodore Presser Co. is the fact that practically any established anthem, cantata, or solo may be specifically requested for examination. This is particularly true in the case of publications from the Presser, Ditson, and Church Co. catalogs. Folders listing the Easter offerings

in these catalogs will be sent cheerfully to those requesting our list of Easter Music. These lists will help you locate Easter music by composers whose works generally have appealed to you; but whether you use the request for a selection made up by our choir music experts, or whether you want to request lists to name numbers you would like to examine, take immediate action so that your preparation for Lent and Easter will not be rushed.

## Planning Spring Concerts and Recitals

Proper planning and plenty of practice, to use "alliteration's artful aid," is probably the best recipe for successful concerts and recitals. The teacher or music director, who lays plans well in advance, has taken the first step in the right direction, will probably receive the cooperation of the student participants, and can look forward, with reasonable security, to a satisfactory presentation of the program.

School music educators may be required to plan several programs—the spring concert of choral and instrumental groups, an operetta or cantata, the baccalaureate services, and the June graduation exercises. Private teachers of voice, piano and other instruments usually present their pupils in recital, at or near, the end of the fall-winter season.

A most satisfactory method for selecting material for these activities is the "on sale" plan of Theodore Presser Co. Many ETUDE readers are well acquainted with this plan and regularly rely on Presser Service. For the benefit of those who may not be familiar with the plan—the teacher, or director, requests music in the various classifications required, selecting numbers from catalogs or programs in her possession, or asking our expert clerks to make a selection for her, and this music is sent "on approval," or "on sale" with ample time allowed for examination and full return privileges on all copies not found satisfactory.

Folders listing choruses, operettas, cantatas, instrumental numbers and materials for piano pupils' recitals cheerfully will be supplied upon request. Write now for further information, if needed.

## The Etude Historical Musical Portrait Series

Few regular features of THE ETUDE have evoked so many expressions of appreciation as has this unique collection of the world's best known musicians and musical personalities. "So comprehensive," "... a real treat to see so many familiar faces," "invaluable for ready reference," "... ideal scrap book material," "... very interesting and worthwhile," are typical comments from regular readers everywhere.

In directing special attention to this feature we feel that we not only are complementing the judgment of those who already have "discovered" it, but perhaps may earn the gratitude of many new readers for pointing it out to them.

This month's instalment, which will be found on page 74, includes pictures and interesting information concerning 44 outstanding musical celebrities whose names begin with the letter T. For any of our readers who may have missed some instalments and wish to have a complete set, as well as those who may want separate copies of this, or any past instalments, to cut up for scrap books, we have printed additional separate copies of each instalment to date. These we will be glad to supply at the rate of 5 cents each.

## One-String Solos For Violin Beginners By Kate LaRue Harper

The publishers are exceedingly pleased at the expressed demand for this book in advance of publication. When the manuscript was accepted for publication it was felt that there was need of such fascinating material for young beginners on the violin, both private and class pupils.

We believe that many upon receiving this book will be surprised at the really musical quality of the little tunes, aided, of course, by the well-harmonized piano accompaniment. The violin book will be especially attractive. Each piece is accompanied by a charming text, which may be sung, if desired, and is illustrated with an appropriate picture. This part also contains diagrams showing the correct location of the notes on the fingerboard and the proper finger position for each string. Only three fingers are used.

The parts for violin and piano will be bound separately. In advance of publication copies of the violin (pupils' book) may be ordered at 15 cents, and of the piano at 20 cents postpaid.

## Play and Sing Favorite Songs in Easy Arrangements for Piano By Ada Richter

Giving young music students things which they find a delight in playing at the piano, and which at the same time help to develop fluency in music reading, natural sense of phrasing, a true rhythmic feeling, and withal make for real progress in the coordination of the muscular action of the hands and fingers, seems to be best done by the use of familiar melodies.

The fact that these melodies are ones which are familiar to the young music student, as well as to the parents or others in the home who give some supervision to the pupil's piano practice, insures a proper conception of the rhythm, and through the familiar words carries along a proper handling of the phrasing.

Mrs. Richter is particularly gifted in making such easy arrangements, and forty selections (Continued on page 140)

## Play and Sing

(Continued)

tions embracing favorite school songs, songs of other lands, songs of my country, songs from operas, and songs of my country, songs long ago, in arrangements that retain all of the identifying elements of the familiar airs and which at the same time are easy enough for the young pianist to play, are included in this forthcoming publication *Play and Sing*. This collection furnishes a splendid supplementary book to follow Mrs. Richter's very successful *My First Song Book*, or independent of that book will fit nicely into any piano pupil's assignments in the second grade of study.

Any one living in United States or Its Possessions may obtain a copy of this book at the special advance of publication cash price of 25 cents, postpaid.

## Out of the Sea

An Operetta for Children  
In One Act

Book and Lyrics by  
Ethel Watts Mumford

Music by  
Lily Strickland

This tuneful operetta can be played by children without the assistance of adult characters. The action takes place on a rocky sea shore. Two lively youngsters, Jacky and Jilly (in trim bathing suits), wander into a group of sea people: King Neptune (majestic, yet easily upset); Undina (both jolly and full

of womanly sympathy); the Sea Serpent (inclined to be both critical and "weepy"); the Oyster (very boastful); the Hermit Crab (exceedingly "crabby"); the Fiddler Crab (just the opposite); Davy Jones (sore at Mr. Beebe for drawing his locker out of the ocean's depths); and the Aviator (a land person skeptical, yet "seeing things"). Naturally, the different points of view thus drawn out make sparkling dialog and humorous situations. The sea people have been greatly upset because the deep sea has been unduly invaded by an inquisitive land man named Beebe. Finally, out of a clear sky an aviator bumps to earth, and the frightened sea people can't scamper back into their native ocean fast enough.

Some of the songs are: *I Am King of the Sea*, by Neptune; *I Was a Pirate Bold*, by Davy Jones; *Weep with Me*, by the Sea Serpent; *Song of the Oyster*, by the Oyster; *Hey Diddle, Hey Diddle*, song and dance by Jack and Jilly; and *Sing Me a Waltz Song*, by Undina. The solos are easy and of moderate range, and the choruses and refrains are partly in unison and partly in simple two-part form; all are easy to learn and the musical numbers are well varied.

The setting can be made very attractive and colorful at a comparatively small expense. Included in the book are full directions for staging, costuming, and dancing.

Those wishing to secure single copies at the special advance of publication cash price of 35 cents can send in their orders now and receive copies as soon as printed.

## The Youthful Tenor

An Album of Songs for Studio  
and Recital

Probably no voice requires more care and attention than the youthful tenor, just about changed from the childish treble to the beautiful lyric or dramatic quality that is so highly favored by the general public. It is at this stage of the young singer's development that the services of an experienced teacher are absolutely indispensable.

The day is past when students at this age, or any other for that matter, can be kept on a diet of vocalizes 365 days in the year. Whatever the merit of such teaching procedures, every sensible teacher knows that just as satisfactory results may be obtained if a pleasing-to-sing song occasionally is assigned.

To supply songs for these young tenors that will place no strain on their vocal organs with too-high or too-low notes, is the aim of this collection. It also will provide them with an interesting first repertoire at a quite reasonable cost.

This book is now in preparation and copies may be ordered at the special advance of publication cash price, 35 cents postpaid.

## All-Classic Band Book

Arranged by Erik W. G. Leidzén

School band directors no longer are satisfied to have their organizations act merely as the background for pep rallies and athletic events. Many school concert bands of today are equal, if not superior, to some professional bands of a decade, or a score of years ago.

One difficulty in training young bands for concert playing has been the dearth of material. True, this movement in school music has brought forth a number of "beginners" band books, but every good musician knows that an early introduction to the classics is the best method of teaching appreciation for the best in music. And band players, as well as orchestra players and embryonic pianists, must have this appreciation for good music if intelligent performances are to be given and if the cooperation of the individual performers is to be expected.

The author of this band book is an experienced arranger whose work is well known to American band men and the public, especially for the brilliant transcriptions he has made for the celebrated Goldman Band and others. In making the arrangements for this book he has endeavored to introduce as many phases as possible to give students real band experience and familiarize them with signs, symbols and procedures they will encounter as they advance. Different styles of playing such as soft tonguing, legato and staccato are introduced.

The instrumentation is complete for the modern school band. In fact, the use of the book need not be confined to first year bands as these arrangements have a distinct program value for more advanced bands and they make excellent sight reading material. Excerpts from Haydn, Schumann, Bach, Schubert, Martini, Beethoven, Mendelssohn, Mozart, Verdi, Handel and Gluck are included in the 16 selections that make up the book.

While this new work is in preparation for publication, single copies of the instrument parts may be ordered at 15 cents each; 25 or more parts at 10 cents each. The special advance of publication price on the Conductor's Score (Piano) is 25 cents postpaid. Copies will be delivered when the books are published.

## Manual of Fugue

By Preston Ware Orem, Mus. Doc.

The student who has advanced in his musical theoretical subjects to where he is capable of taking up the study of fugue seldom needs encouragement in the way of attractive text material. But it stands to reason that an easily-comprehended presentation of the subject and pleasingly musical examples will produce more satisfactory results, as a rule, than a dry-as-dust volume crammed with musical mathematics.

Thousands of aspiring young composers, college and conservatory students have enjoyed the colloquial style employed by this noted authority in his highly successful works: *Harmony Book for Beginners* (\$1.25), *Theory and Composition of Music* (\$1.25) and *The Art of Interweaving Melodies* (First Studies in Counterpoint) (\$1.25). Dr. Orem makes the "art of fugue" a delightful means of writing beautiful music, not a "musical-crossword puzzle."

In advance of publication orders for copies of this book may be placed at the special cash price of 40 cents, postpaid.

## The Youthful Baritone

An Album of Songs for Studio  
and Recital

The prospects of success in the field of radio, plus the interest created by national and state school contests, has brought to the studios of voice teachers hundreds of ambitious pupils. Naturally, there has arisen, as a result, a demand for vocal solo material that will appeal to these young students, songs that will not unduly tax their limited voice range. If such material can be obtained at little expense, so much the better, as teaching fees and music purchases combined sometimes are a heavy burden on the resources of these ambitious young folk.

It is the publisher's intention, in this book, to present a nice collection of songs, safely within the limited range of young voices and having texts that are appropriate for use in

their public appearances. Of course, these songs also may be sung by more mature singers; in fact, most of them will make dandy encore numbers.

Orders may be placed now for this collection at the special advance of publication cash price, 35 cents, postpaid.

## Organist's Resource

A New Collection of Organ Music  
Selected from the Compositions and  
Arrangements of I. V. Flagler

Judging from the large number of orders already received for this new organ collection, it would seem that present-day organists are aware of the contribution to organ literature of I. V. Flagler, for many years organist and composer of Albany, New York.

The comprehensive series of five volumes comprising his *Collection of Organ Music* contains many of the masterpieces of organ literature, as well as original compositions and arrangements by the author. For this new book, our editors have selected the very best of the compositions and arrangements appearing in these volumes, representing the works of Dubois, Lemaigre, Bizet, Guilmant, Beethoven, Widor, Meyer-Helmund, Massenet, Rubinstein, and others. The book will be published in the convenient oblong size, 12 x 9 inches.

Orders placed now at the special advance of publication cash price of 60 cents per copy will be filled immediately upon publication. The sale, however, is restricted to the U. S. A. and Its Possessions.

## Fragments from Famous Symphonies

Compiled and Arranged for Piano  
By William Baines

The symphonic masterpieces of Mozart, Haydn, Beethoven, Schumann, Schubert, Brahms, Tchaikowsky and Dvořák are replete with delightful themes that merit more frequent hearing than is possible through performances by symphony orchestras. Naturally, the piano is the most satisfactory instrument for home enjoyment of this beautiful music, when radio and recordings are not available.

In this new work Mr. Baines has selected "fragments" from the better known symphonies and has made them into interesting piano pieces for pupils in the earlier grades. Teachers certainly should appreciate the cultural advantages of having their pupils play these clever arrangements.

Excellent progress is being made in the preparation of this work for publication but there still is time this month to order single copies at the special advance of publication cash price, 30 cents, postpaid.

The sale of this book will be restricted to the U. S. A. and Its Possessions.

## Sixteen Modern Etudes

For the Advanced Trumpet Player  
By John Huber

Modern arrangements for band or orchestra require trumpet players who possess a thorough knowledge of their instrument, good musicianship, and the ability to produce fine tonal quality. The first trumpet player of today's band has a position of importance and responsibility.

The student who has such a goal in mind will find in this new volume the material necessary to help him along the road to success. It contains daily embouchure drills, exercises for triplets, chromatics, trills, mordents, rhythm, and velocity playing. Helpful suggestions precede each study as an aid toward overcoming the technical difficulties which are encountered. Ample opportunity is provided in these studies to develop flexibility of the lips, single and triple tonguing, correct tone production, proper breathing, and general interpretative ability.

Mr. Huber is a well-known trumpet authority, having appeared with famous bands and theatre orchestras of the East, as well as with such symphonic organizations as the Philadelphia Orchestra. He has taught in New York City and Philadelphia.

Single copies of the book may be ordered in advance of publication at the special cash price of 40 cents, postage prepaid.

(Continued on page 141)

## World of Music

(Continued from page 76)

HARRY BENJAMIN JEPSON, organist and director of the chapel choir and, since 1907, Professor of Applied Music at Yale University, will retire in June, to become an assistant professor in the School of Music. He will be succeeded in his former posts by Luther M. Noss, organist of Cornell University.

THE NEW BACH SOCIETY of Leipzig formed in 1900, after the dissolution of the original organization, held its twenty-ninth festival from April 22nd to 26th, under the direction of Prof. Karl Straube, cantor of the Thomaskirche and one of Germany's greatest authorities on Bach and his music as the moving spirit and conductor. He was assisted by the Thomanerchor (one of the most famous boys' choirs of all the world), the Gewandhaus Orchestra and chorus, and Günther Ramin, organist of the Thomaskirche.

CHARLES NAGINSKI has been awarded the *Prix de Rome* entitling him to two years of study in the American Academy of Rome with an annual pension of fourteen hundred dollars and residence at the Academy. Born in Egypt in 1929, he has lived in America since 1929.

THE AMERICAN ORCHESTRA is a new activity in the rather fervid musical life of New York City. Leon Barzin, conductor of the National Orchestral Association and of the Hartford Symphony Orchestra, is the moving spirit and conductor of the organization. Its chief function is to be the furnishing of accompaniments for soloists; and for its first program on November 7th it presented Frank Bishop, pianist, in Bach's "Concerto in D minor," Schumann's "Concerto in A minor," and Rachmaninoff's "Concerto in C minor."

## COMPETITIONS

A ONE HUNDRED DOLLAR PRIZE is offered by the Society of Professional Musicians, of New York, for a chamber music composition for not more than eighteen men which must be playable in fifteen to twenty minutes. Compositions must be submitted under pseudonyms, with real names of composers in attached envelopes. Entries close February 15, 1939. All communications, to Society of Professional Musicians, 234 West Thirteenth Street, New York City.

A PRIZE OF TWENTY-FIVE DOLLARS is offered by the Aroostook Federation of Music Clubs, for a musical setting of "A Song of Aroostook." The contest closes March 1st. Words of the poem and full particulars may be had from Mrs. Mary A. Guild, 11 High Street, Fort Fairfield, Maine.

TWO PADEREWSKI PRIZES of one thousand dollars each are available to American composers. One is for an orchestral composition of fifteen to twenty minutes length, another for a concerto for solo instrument with orchestra and not less than fifteen minutes in length. Manuscripts must be received not later than March 1, 1939; and complete information may be had from Mrs. Elizabeth C. Allen, Secretary of Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

THE CALIFORNIA COMPOSERS AND WRITERS SOCIETY will be especially recognized on August 22nd to 25th, 1939, as the sponsors of leading activities of the Golden Gate International Exposition of San Francisco. California born musicians are asked to communicate with Galen M. Harvey, Secretary, 616 Aileen Street, Oakland, California.

AMERICAN COMPOSERS are asked to submit works to Howard Barlow, Columbia Broadcasting Company, 485 Madison Avenue, New York City, to be considered for performance on the *Everybody's Music* orchestral series over CBS. Having begun with July 24th, each program now includes one American composition—a fine recognition and opportunity for our creative musicians.

## Studies in Black and White

For the Piano

By Mana-Zucca

The compositions of this celebrated American artist-composer-pianist have enjoyed unusual success. Her songs, piano numbers and compositions in the larger forms are frequently programmed. She has been equally successful with her teaching material and pieces for beginners, and teachers, everywhere, are familiar with her noteworthy contributions to piano teaching literature.

This new collection of studies compares favorably with those of Clementi, Loesch, Heller, von Bülow, and Cramer and includes helpful material for students in the third grade and higher. Each is attractively illustrated and exemplifies some technical problem in these grades, viz: *A Sky-Line* (to develop the stretch of the hand); *A Misty Sea* (melody and accompaniment in legato); *Autumn Leaves* (octave study in staccato); *The Dancing Spray* (wrist work); *A Seascaper* (left hand arpeggio with right hand melody); *A Spanish Dance* (study in contrasting rhythm); *Clouds over the Ocean* (double notes); *Still Life* (study in legato); *Flowers in Bloom* (study in quick attacks); and *The Fountain* (study in velocity).

Mana-Zucca's new work will be included in the celebrated *Music Mastery Series* of Studies, each volume of which is uniformly priced at 60 cents. In advance of publication orders may be placed for single copies at the special cash price, 20 cents, or paid.

## Do You Wish to Bind Your 1938 'Etudes'?

We offer to those who subscribe for THE ETUDE, a first class binder holding 12 issues. The binders regularly sell for \$2.25. If you send your renewal for 1939 promptly, the regular price of \$2.00, we will send you one of these binders on receipt of check for only \$1.25 additional, or a cash price of \$3.25. In other words, you pay only 10 cents for the binder.

The binder is made of fine blue silk cloth, stamped in gold "THE ETUDE." You know you will be delighted with it.

## Reward Cards for Music Pupils (Second Series)

For the information of new music teachers who may not be acquainted with the First Series, we state that these cards are intended for presentation to pupils whose progress has been high. They are the size of a U. S. post card. The illustration above given shows their general appearance.

The Second Series of *Reward Cards*, like the first, is intended for work well done. It is a well-known fact that information brought to our attention as a reward for hard, serious study impresses us more lasting than the same information packed between the covers of a dry text book.

Every *Reward Card* is beautifully colored, showing, on one side, a perfect likeness of the composer, with either a picture of his birthplace or a view of some scene associated with one of his compositions. On the other side are the dates of his birth and death, a brief but comprehensive sketch of his life and accomplishments, a facsimile of his manuscript writing, and a reproduction of his autograph.

Uniform with the First Series, the Second Series consists of sixteen cards showing the following composers: Bizet, Chaminade, Debussy, Dvořák, Elgar, Gluck, Grieg, MacDowell, Massenet, Moszkowski, Moussorgsky, Rimsky-Korsakov, Rossini, Rubinstein, Saint-Saëns, and Sibelius. Accompanying these 16 cards, and at no extra cost, is a handsome *Prize Card* containing an artistic group of 8 famous composers.

The regular retail price of each series of *Reward Cards* is 50 cents, and that of the *Prize Card*, when bought separately, 10 cents. Our advance of publication sale plan enables the customer to order single sets now of the *Reward Cards* (Second Series) at the cash price of 35 cents, postpaid, delivery to be made as soon as the cards are printed. This applies to the Second Series only; the First Series is priced at 50 cents, of course.

## Advance of Publication Offers Withdrawn

In preparation for the Lenten Season, which begins this month, and for the glorious feast of Easter, which is not so far away, our Publication Department is releasing these cantatas recently listed and described in these pages. Copies ordered in advance of publication should reach those who subscribed for them in ample time to order the requisite number of copies for the first rehearsal of Lenten and Easter programs. As is customary the special prices at which these works have been offered for introductory purposes are now withdrawn and copies are obtainable from any music dealer. If you have not ordered copies in advance of publication ask for them now "on approval."

*Penitence, Pardon and Peace* by J. H. Maunders, arranged for Three-part chorus of Treble Voices by James C. Warhurst is a standard Lenten cantata with which most choir directors are acquainted in its original form for mixed voices. This new arrangement makes possible its rendition by choirs where the men's section is weak, or unreliable, or by groups of all-girls' voices. The work, which runs about 45 minutes, may be given in three sections and at different times. Price, 75 cents. Sold only in the U. S. A.

*Victory Divine* by J. Christopher Marks, now arranged for Three-Part Chorus of Treble Voices by James C. Warhurst is one of the most popular of all Easter cantatas in its original arrangement for mixed choirs. Well-trained choirs with proficient soloists, and volunteer choirs of limited experience, both include it in the repertoire. The publishers believe that the beautiful choruses, especially, of this cantata will be equally well liked in this arrangement for treble voices. Price, 75 cents.

*Hail! King of Glory*, by Lawrence Keating is a brand-new Easter cantata for volunteer choirs. It should prove especially acceptable for the choir without trained voices. The chorus numbers are all arranged for mixed voices and there are short, easy solos for soprano, alto, tenor and bass which may be sung in unison. A couple of duets and a trio add variety to the musical content. The text was written and selected by Mattie B. Shannon. Price, 60 cents.

## Etude Advertisements are Bulletins of Splendid Buying Opportunities

## The World Is Full of Metaphors

When the snow falls on city streets, there is an appealing beauty in the fresh whiteness, but in all too short a space of time the traffic, the tramping of many feet, plus outpourings of many chimneys, make it nothing no longer wanted. The snow that upon the mountain tops, however, holds place for a much longer period.

Music many publications in the "snow-of newness" find temporary favor, but real successes are those which stay on, ported by the mountain tops of substantial judgments passed on them by music lovers, and others in major music activities. The Publisher's Monthly Printing Orders, and the publications which have received support of such able and considerate merit.

Bringing to these columns a selected of numbers from the catalogs of the Theodore Presser Co. and the John Church which came up for reprinting during the month, we make the suggestion that any teacher, school music educator, choir and music director, wishing to become acquainted with any of these should take advantage of the Theodore Presser Co.'s readiness to send single copies "on approval" with full return privilege on those which the examiner does not wish to retain and purchase.

## Shopping for Charm

### MIND YOUR PLATFORM MANNERS

(Continued from Page 108, Col. 2)

she must not be neglected, when your acknowledgments are being made. She has doubtless worked just as hard to perfect her part of the program as you have your part, and should be given the credit due. Except for this brief moment the accompanist should however always stay in the back-ground. No effort should be spared to keep from drawing attention from the featured performer. Both will lose nothing by the sharing. This mutual graciousness and modesty will make them both doubly appreciated.

This same attitude is a valuable one for a member of an orchestra or band. The platform manners of each individual are essential to the well-being of the entire group, as no individual should focus attention on himself, thus depriving the unit of its entity. Courtesy and consideration to your fellow artists before, during, and after the concert will create a harmonious mental attitude that will reflect itself on both sides of the lights. Nothing is ever gained by taking the most prominent position, blocking someone from being seen, or by self-aggrandizement.

Mind your platform manners and express true harmony before, during, and after your recital. You will reap benefits tenfold, if you do.

## Keeping Fit Physically

(Continued from Page 110, Col. 4)

attendance at meetings, concerts, recitals, and practice-sessions. The best thing to do about colds is not to have them.

### Perils of Home

YOUR OWN HOME or studio ranks alongside a crowded concert-hall as a source of contagion. Many intimate and unsuspected points of contact link infected members of the family with potential patients. The common toothbrush rack, a carelessly washed drinking glass, or a doorknob may serve as germ spreaders. Every effort should be made to isolate a member of the household who has a cold. The children, having no pressing responsibilities, can and should be put to bed when afflicted. You'll be amply repaid for this trouble by speedier recoveries. Special tableware should be reserved for the patient's meals and sterilized after each using. Unusually liberal doses of disinfectant should be applied in cleansing the bathroom, frequently handled doorknobs, and other danger spots, while anyone in the house is suffering from a cold. Remember the safety-value of disposable paper handkerchiefs, and be sure that the laundry which the patient unavoidably accumulates is not kept in a common clothes hamper frequently opened by others.

Whenever you have reason to suspect that you have been exposed to contagion, either at home or abroad—which is liable to be most of the time during the cold season—a wise precaution is the use of an antiseptic gargle. It is believed that the cold virus is usually lodged in the mucous membranes of the nose and throat. In selecting and diluting a gargle, singers especially should be careful to have a mild solution that won't irritate the throat.

### Cover Up!

IF YOU FEEL a maddening anticipatory tickle in your throat, or if a series of gasps announces a forthcoming nasal eruption, turn away from those present, and dive into your handkerchief. This is a simple rule of courtesy, almost always followed—yet it cannot be emphasized too often. A runaway cough or sneeze leaves particles of moisture hanging in the air for hours, bearing a probable cold for some unfortunate victim who crosses your path. If you yourself are the potential victim, avoid an indiscriminate "cougher" and "sneezer" as you would a Pariah.

### Beware of Swindlers

We are in constant receipt of complaint from music lovers who pay out good money to strangers and fail to receive copies of THE ETUDE. Do not pay money to any one unless you are convinced of his responsibility. Do not accept common stationery store receipts. Regular accredited representatives of the Theodore Presser Co. carry an official receipt. Any legitimate agent will offer you the printed receipt of the company for which he works. Read any contract carefully. Do not permit alteration. Pay no more money than the contract calls for and above all, assure yourself of the agent's reliability. Help us to protect you.

## "The Father of His Country" and Famous Fathers of Music

By Aletha M. Bonner

(Sing this song-sketch of Washington, to the tune of *Auld Lang Syne*):

George Washington, first President,  
We honored place assign;  
Birth, Seventeen and Thirty-two,  
He died in 'Ninety-nine.  
Virginia born was this great man,  
Whose fame the world affirms:  
The "Father of his Country" served  
Two presidential terms.

In paying tribute to the great "father of his country," let us likewise honor other "fathers who have served a Cause with zeal." Music in all forms, it is interesting to note, has had many fathers of the art; to name them one must head the roll call with Jubal, of Biblical distinction, for the Scriptures describe him as being the "father of all such as handle the harp and organ."

Next on the list is Terpander, of the Seventh Century, B.C., called the "Father of Greek Music"; and with the passing of years Giovanni Palestrina (1525-1594 A.D.) was born to be known by the all-embracing title of "Father of Music," such an honored sobriquet being bestowed for musical services rendered to Italy, the land of his birth, and to the art world at large.

England's contribution to the honor roll of famous fathers of music includes Thomas Tallis (1510-1585), called the "Father of English Cathedral Music"; and the German born, but English naturalized George Frederick Handel (1685-1759), known as the "Father of the Oratorio."

The Austrian composer Franz Josef Haydn (1732-1809) gained the title of "Father of the Symphony," because he was first to write well developed creations in this form of music. His most illustrious pupil, the young Mozart, so loved him as to call him "Papa Haydn," and so started this name in musical history.

## Rhythm Fun

By Florence L. Curtiss

BETTY AND EDITH were on their way to the newly formed music club. "What are we going to do? Do we play for each other or what?" asked Edith.

"Miss Pitt said we were going to find out who had the best rhythm, for one thing," answered Betty.

"I'm not very good in rhythm, and I never did like to count," confessed Edith.

At the meeting Miss Pitt had each pupil to play by turn, while the others conducted with a baton in two-four, three-four and four-four time. The pupils were asked to notice the players who kept with the conductor perfectly. Then Miss Pitt played some pieces and the pupils listened to see if the rhythm was in threes or fours.

On the way home the girls decided that it had been lots of fun and helped their rhythm very much. "I think my rhythm troubles are over," said Edith; and this proved to be true.

## JANET'S ANNIVERSARY PIECE

(A Playlet)

By ERNESTINE and FLORENCE HORVATH

Characters:

George Washington

Nellie Custis

Janet

Aunt Mary

Scene: Interior, with piano and chairs.

(Janet is seated at the piano, playing the Minuet from Haydn's "Military Symphony." Aunt Mary sits near by, knitting.)

JANET (stopping suddenly): Oh dear! Aunt Mary, somehow I don't feel like practicing this Minuet for the George Washington anniversary!

AUNT MARY: You know Washington was inaugurated as our first President one hundred fifty years ago, Janet. You should be happy to study a piece to play in school, in his honor.

JANET: Washington and music! Sometimes I think the two just don't go together.

AUNT MARY: You may be sure they do! But there's the bell. Now practice, dear.

(Goes.)

(Janet plays idly. Rubs eyes, then resumes. Plays a few bars of Yankee Doodle. Enter George Washington.)

WASHINGTON: I could imagine that you were Nellie Custis, if you played the harpsichord, instead of the piano.

(Janet turns, startled.)

JANET: George Washington! Yankee Doodle brought you here. I almost knew it would!

*Jan. Dear Sir  
Your note about  
very pleasant  
G. Washington*

(Washington's Signature)

WASHINGTON: Yes. I always liked music. As a boy I took music lessons, you see! During my life many songs were written in my honor. I also encouraged little Nellie Custis to learn to play the harpsichord, so that I might listen to the melodies I liked best. Yes, I had something to do with music, after all!

JANET: Please tell me more! Please do,

George Washington!

WASHINGTON: But first let us hear Nellie Custis play.

(Seats self.)

(Enter Nellie Custis. Curtsies.)

JANET: How do you do, Nelly. I am so glad you like music.

NELLY: Oh, yes, I do. And Grandpapa was always very fond of minuets. I shall play one now.

(Plays Mozart's Minuet, from "Don Giovanni.")

JANET (applauding): That was beautiful! I'm learning to play a minuet, too, for the school celebration in your honor, sir.

(Bowing toward Washington.)

WASHINGTON: Then I should hear it! (Janet plays a minuet by Bach)

WASHINGTON: Bravo! That was charming.

NELLY: Bach, Handel, Mozart, Haydn—who came after?

JANET: Schubert, Wagner, Chopin, Grieg, Brahms—and so many others! The list is too long to mention.

WASHINGTON: Then play us a piece by a modern composer. You see we never heard any.

(Janet plays one or more selections by modern composers, announcing the names. As she finishes, the others clap heartily.)

WASHINGTON: Delightful. But very different from the music we used to hear!

JANET: But please tell me more about music—and you, sir!

WASHINGTON: Well, The President's March was written and played for me, in 1789. It was one of the many pieces composed for me. Let me see if I can play it for you.

(Goes to piano; plays. The music of Hail Columbia is that of The President's March. Washington may explain this, telling that the title was changed, and the

(Continued on column four)

## Listening Lessons

By E. A. G.

To a Wild Rose, By Edward MacDowell  
EVERYONE should have a few American compositions in his repertoire; and *To a Wild Rose*, by MacDowell, is a simple melody that is popular and easy to learn.

You have often heard it played on piano as it was originally written, but you may also have heard it played by string orchestras or various combinations, several different arrangements of it have been made.

MacDowell died in 1906, but his memory is perpetuated in the MacDowell colony in Peterboro, in New Hampshire, where many creative artists do their work in little cabins in the woods.

*To a Wild Rose* has a simple motive, eighth notes and quarters.

Some players play this piece very correctly as to notes, rhythm, rests, pedals, and all details, and yet fail to make it musical or interesting. One must do more than handle correct details, because musical feeling and understanding must be present.

LISTEN to this piece carefully when you or someone else plays it, and see if this necessary musical feeling is present.

## Musical Jig-Saw

Game for Club Meeting

By Anna P. Myers

CUT PICTURES of famous composers from magazines and paste them on cardboard. Then cut them at odd angles into small pieces. They may be put together by group or by individual players.

## Janet's Anniversary Piece

(Continued)

words added, later on, in 1798.)

NELLY: At Valley Forge, Grandpapa had a musical birthday. The ragged militia band serenaded him! Later on, when Grandpapa, as President, entertained there was always music. So you see George Washington loved music, inspired people to compose and play it, and encouraged young people to study it. (Plays a selection by Bach or one of other older composers.)

WASHINGTON: Now one more modern piece, Miss Janet, please.

(Janet plays. Washington and Nelly smile, bow and curtsy to Janet, and Janet finishes, rubs eyes, leans head on hands.)

(Enter Aunt Mary.)

AUNT MARY: Wake up, Janet! You must practice your piece!

JANET: Oh, yes. Of course. But just think of Washington and music! They had more to do with one another than I thought! Yes, Aunt Mary, I'll practice until I play the minuet as well—as well as I did in my dream for George Washington and Nellie Custis.

## Grace Improves Her Portamento Touch

By DAISY LEE

IS IT REALLY NECESSARY for me to play those notes in the second measure of my piece with that *portamento* touch?" Grace inquired of her piano teacher.

"Yes, it is," replied Miss Mitchell. "The composer put them there for a certain reason, and it is our duty to carry out his wishes. But why are you so worried about them?" she added.

"Because I just cannot get them to sound right," Grace answered with a sigh. "I get them either too snappy, or too smooth and connected."

"How would you play four notes written like this?" asked the teacher as she quickly sketched the following measure on her writing pad:

"I'd play the notes on the main counts," said Grace, "and lift my fingers off the keys or the rests coming on the half-beats."

"Why not do the same thing with that

*portamento* measure in your piece?" Miss Mitchell suggested as she wrote out the four notes again, but this time without the rests:

"Now," she went on to explain, "all you have to do to get that *portamento* effect, is to play the notes with a firm pressing touch, and then on the 'ands' make little rests by raising your wrist and gently pulling your fingers off the keys."

"Oh, that isn't hard to do!" declared Grace as she tried it. "And it does sound detached like the real *portamento* touch should!"

"Well," concluded her teacher, "if you will always remember to put tiny rests like these between the notes of *portamento* passages, you'll never be bothered any more by having them sound too snappy or too smooth."

## Who Knows

- Who wrote *To a Wild Rose*?
- Where was Brahms born?
- What is the interval from A-flat to E-natural?
- What note is on the fourth ledger line below the bass staff?
- What is the signature of the minor scale whose seventh tone is A?
- What country built the first opera house?
- What is Schubert's best known symphony called?
- What does *senza crescendo* mean?
- Is the lute still in general use?
- What instrument does it most resemble in appearance?

(Answers on this page)

## Musical Octagon Puzzle

By Stella M. Hadden

Each dotted line is an eight letter word.

- Singers of high parts.
- A term meaning opposite of *legato*.
- Composer of *Joyous Farmer*.
- In a monotonous manner (colloquial).
- Students.
- Composer of *Hark! Hark, the lark*.
- Music sung under a lady's window.
- One skilled in singing.
- around to 9. One skilled in singing.

## Honorable Mention for November Puzzle:

Arnold Richard Thompson, Sara Schott, Eddy Wolfe, Alicia Marsden, Jack Coolman, Eurietta Waters, Louis Bonelli, Aldred Richards, Clara Jacobs, Naomi Peterson, Louise Unsall, Rita Elaine Scogna, Andrew Mellor, Betty Jean Cooper, Gloria Ruth, Frances Truckman, Sue Dent, Alberta Winston, Margaret Cole, Emily Dickson, Gladys Mack, Mickie Brown, Bettina Fox, Anna May Barlow, Julia Ishie, Berta Maguire.

JUNIORS of INDIANA, PA.

(Earl Steel; Carl Swanson; Harry Butson; Bobby Way; Roy Penfield; Tommy Brown; Marjorie Beers; Gloria Moulton; Marjorie Watson; Betsy Orr; Katherine Jane Houck).

## What Music Means to Me

(Prize winner)

MUSIC MEANS to me a great and precious thing to have and to understand. It is a triumph to play, sing, hear, learn and, finally, to understand music. Many do not understand music, and many do not even like it, though I do not see how anyone can not like music.

We have a great many fine compositions, and we will for ever be thankful for them, and also for the radio, which brings them to so many of us. If you do not think of other things, when you are listening to music you will hear wonderful things. Chopin likened music to a tree with its branches awaying in the wind. You can hear many other things in music, too, if you really listen.

God gave us a great and wonderful thing when He gave us music. Let us all do our share toward keeping it wonderful.

ESTHER ADELINE THOMPSON (Age 13)  
Class B, North Dakota.

## Answers to Who Knows

- MacDowell; 2. In Hamburg, Germany; 3. An augmented fifth; 4. F; 5. Five flats; 6. Italy; 7. The "Unfinished Symphony"; 8. Without increasing the power; 9. No; 10. The Mandolin.

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "Music in My Home."

Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by February Eighteenth. Names of prize winners and their contributions will appear in the May issue. The thirty next best contributors will receive honorable mention.

## RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not

have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

## What Music Means to Me

(Prize winner)

TO ME MUSIC MEANS more than anything in the world, because I love it so. It means restfulness when I am tired. Sometimes sad music makes me sad, but at other times music makes me so happy I want to dance. Slow, soft music, especially that of an organ in a quiet church, makes me feel that the whole world is at peace. To me, music means peace, security and happiness. When we begin to study music it is like standing and looking at the Sahara Desert, but when we become more familiar with it and we really begin to love it, it becomes a part of us. To me it is my whole body and soul.

I hope I have told you what music means to me. I wonder if it means that much to you?

BOB SETZER (Age 14) Class A,  
Florida.

## What Music Means to Me

(Prize winner)

MUSIC MEANS just everything to me, because I want to make it my life work. I am planning to go to a music school and to become a music teacher. I think it would be fun to guide children into the magic land of music. I remember when I played my first piano piece for my daddy. It had only two notes, C and D and I was only four years old.

It seems hard to practice violin and piano while other children are outside playing, but I know I must practice every day, if I want to become a musician. I am beginning the classics, and some are pretty hard; but I like them just the same. Now don't you think music means a great deal to me?

KATHLEEN GRAMS (Age 8) Class C,  
Minnesota.

## Honorable Mention for November Essays:

Audrey Lee Watson, Nettie Lay, Virginia Shuly, Charlotte Thiele, Sheila Falconer, Connie Carter, Alice Ogden, Audrey Woolfall, Selma Karau, Mary Kelly, Ruth D. Beane, Dorothy Bowen, Gloria Krantkramer, Betty Jane Rogers, Carol Laubenstein, Elva Stearns, Lambert Griggs, Joseph Durham, Richard Stearns, Bernice Turco, Roberta Anderson, Ann Sleadham, Elizabeth Bentley, Anita Bridges, Anita May Turner, Jean White, Lillian King, Mildred Lovit, Emily Mesner, Mary McMullin.

## Answer to November Puzzle:

BEETHOVEN

Prize winners for November puzzle:

Class A, Sheila Falconer (Age 15), British Columbia.

Class B, Darleane Christian (Age 12), Iowa.

Class C, Josephine Johnson (Age 9), Texas.

## Letter Box List

Letters have recently been received from the following, which limited space does not permit including in the Letter Box: Margaret Gillard, Patricia Hansen, Concetta Starantino, Rebecca Miller, Viola E. Clark, Wilma Simms, Lillian Moran, Ruth Meyer, Fernando Horcasitas, Murrel Brite and Andrew Wilson.

ACCORDION BAND  
Reserve C. B., Nova Scotia

## Enigma

By Marvin Rolis (Age 10)

My first is in FRY but is not in BOIL,  
My second's in WATER but is not in OIL;  
My third is in SUN but never in MOON,  
My fourth is in SWAN but is not in LOON;

My last's in STACCATO, and in PIZZICATO;

My whole is the name of a famous opera.

Answer: "FAUST"

## Music Clubs

TO THE ETUDE:

A Music Club is, from the teacher's standpoint, an excellent means of 1. sustaining interest among her pupils; 2. keeping in contact with former pupils who have been forced temporarily to discontinue lessons; and 3. attracting new pupils. The pupil receives the benefit derived from many activities for which there is all too little time at the regular lesson period, such as a study of famous musicians, music theory, rhythm drills, and other subjects of musical interest.

The club which I sponsor calls itself "The Merry Music Makers," and fully lives up to its name. I am more than pleased with the enthusiasm which the girls display in running it. They elect their president and secretary from the group, but I myself plan the programs and assign the topics, striving always to make the programs varied and interesting, with a generous sprinkling of musical games and fun. Refreshments are served at the close of each meeting. The club meets at the studio for two hours on alternate Saturdays. There are no dues; I bear the slight cost of the simple materials used and of the refreshments, looking upon it as a legitimate expense for " upkeep and advertising." Prizes are offered for the best notebook and for the greatest number of points earned by fulfilling certain requirements. The teacher must exert every effort to make the programs worthwhile and at the same time avoid the rigid atmosphere of the everyday classroom. THE ETUDE MUSIC MAGAZINE provides an unfailing source of suggestions for papers, illustrations and games.

During the Christmas holidays the club members entertained their mothers at an open meeting and party. Invitations were made from old Christmas cards, and the programs, decorations, refreshments and so on, carried out the Christmas theme. The members responded to roll-call by playing a carol, then short talks were given about Christmas customs in other lands. The second part of the program consisted of regular recital pieces, a number of which were found in THE ETUDE.

—FLORENCE W. BEAN, Missouri

## Accordion Department

(Continued from Page 129)

is not often necessary if a player is careful to see that there is no unnecessary friction against the bellows while he plays. Ladies should avoid protruding belt buckles, buttons or other ornaments which rub against the bellows. Men should adjust their coats so there will be the least possible friction from buttons.

There is often a temptation to get a pair of pliers and a screw driver and take the accordion apart if it does not seem to be working properly. Refrain from such an impulse, because instruments are frequently permanently injured in this way. Take the accordion to the store where it was purchased or to a reliable repair man, as in the end this will be found the most economical. Have your accordion checked at least once a year, to be sure it is in tune. Good reeds seldom go out of tune; but, even if only one reed in the entire instrument is off pitch, it may make the rest of the instrument seem out of tune. Then, too, constant listening to an instrument which is not in tune is harmful to one's musical ear.

Owners of new accordions are somewhat like owners of new cars; the utmost care is given in the beginning, and, after the novelty wears off, neglect begins. Remember that if you want to get the best service out of the accordion it must be given the best of care. Even though you buy one of the finest instruments and invest considerable money in it, you cannot expect perfection if you constantly abuse the instrument. The manufacturers have certainly done their part, and it is up to the owners to do the rest.

Pietro Deiro will answer questions about accordion playing. Letters should be addressed to him in care of The Etude.

Music is the poor man's Parnassus.—Emerson.

## This Month's Schedule

By LESLIE E. DUNKIN

EACH MONTH at our house the new copy of THE ETUDE determines the music schedule for the next thirty days. Five of us—two adults and three growing children—are directly interested in the musical contents as well as the reading material. We feel that our month's schedule helps us to make definite regular progress with our various grades of playing and also to gain more benefit from each copy. Our schedule includes the following: 1. Playing at sight; 2. Advance music; 3. Review music; and 4. Reading help.

As soon as the new copy comes, each person selects one piece of music half a grade below that in which the advanced

made until the music is mastered to the satisfaction of the group of musicians in the family. When this is done, a second "Advance" piece is selected, if the month has at least a week yet before the close. Special effort is put forth by each of us to see if we can master at least two new advance pieces each month.

The new copy of THE ETUDE furnishes new review music each month. Of course, we have all the "advance" music mastered in previous numbers of THE ETUDE. To these are added the new pieces in the latest copy, for grades below the one in which we are working with our advance music. As rapidly as the new advance

## Next Month

THE ETUDE for March, 1939, Steps Out with New Features

GUIOMAR NOVAES

### GUIOMAR NOVAES TALKS

The brilliant and beautiful Brazilian pianist, who has made many successful tours of America, gives THE ETUDE a splendid article upon "Simplicity in Pianoforte Playing."

### THE INCOMPARABLE VICTOR HERBERT

Irish in spirit and ancestry—"Sure didn't his famous grandfather, Samuel Glover, write *The Lone Backed Car*?"—Victor Herbert was educated at Baden-Baden, Germany. When, at the age of twenty-seven, he landed here—full of song as a lark; vital, strong, genial and witty—America took him to her heart, till in 1924 he passed on. Gustav Klemm—his pupil, assistant and disciple—presents a vivid pen picture of the Herbert of hundreds of bubbling, sparkling melodies.

### THE ROMANCE OF ANNIE LAURIE

The song that has set millions singing about a Scotch lassie of other days, has a very stirring romance behind it which Robert James Green reveals to readers of THE ETUDE.

### WILLIAM MASON, AN AMERICAN MASTER

The Mason method, which is employed in its various phases by thousands of teachers, is finely described by Miss Florence Leonard. Dr. Mason was one of the greatest piano teachers of history; and many of his teaching devices should be a permanent part of all piano instruction.

### GOOD SINGERS MUST BE NATURAL

Bruna Castagna, widely hailed contralto at the Metropolitan, discusses one of the great fundamental secrets of the prima donna's success. In a simple, direct manner, the reader is led into sympathy for the simplicity so characteristic of all great art.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of delightful new music to play and sing.

## MUSICAL BOOKS REVIEWED

### The Violinist's Tone

By LIONEL TERTIS

When the doctor gives you a prescription may contain less than twenty words, but I do not hesitate to charge five dollars for The "Beauty of Tone in String Playing" by the noted English viola player and violin authority, Lionel Tertis, contains about twenty-five hundred words (about the size of an Etude article); but Fritz Kreisler and these words "A very valuable contribution to the pedagogical literature of our art." It is a book of very practical and pertinent advice. The chapter on the left hand is particularly interesting, as is that headed "Memoranda." One may secure in a booklet of this length ideas that can change a life career. It is a common experience at THE ETUDE office to receive letters saying "that one article was worth five dollars to me." *Multum in parvo.*

Pages: 22.

Price: \$7.75.

Publishers: Oxford University Press.

### How to Write for Radio

By JAMES WHIPPLE

Every new invention brings new opportunities for work and financial returns. When broadcasting began in 1920, few people dreamed that eighteen years later a leading publishing house would consider it commercially desirable to publish a 449-page book upon how to write copy to be read over the radio. The author of "How to Write for Radio," who, as head of the radio department for Lor & Thomas, the noted advertising firm, and as instructor of the radio classes at the University of Chicago, has had wide experience, covers in excellent fashion all of the worth while phases of writing for the radio, such as "The Unit Drama," "The Episodic Serial," "The Biographical Drama," "Adaptation of Stage Plays," "Programs for Children," "Sound Effects," "Radio Monologues," and so on.

The tie up of radio with advertising has brought great musical advantages to the American public, and, at the same time, a great deal of very extraordinary entertainment, which without the advertising would not be possible. Mr. Whipple devotes one chapter to the Radio Script Market and makes some interesting suggestions, though he does not tell how much such efforts bring in the market. He refers the reader to Philip Wittenberg's "Production and Marketing of Literary Property," for ways to dispose of his wares.

Pages: 449.

Price: \$3.50.

Publisher: McGraw-Hill Book Co.

### Technics of the Organ

By EDWIN EVANS, SR.

In the large and excellent group of English writers upon music, none has been more productive than Edwin Evans, Sr., F. R. C. O. and his prolific son, Edwin Evans, Jr., who have produced a long series of admirable analytical and critical works. The elder Evans, a well known organist, has now contributed a very illuminative treatise upon the technics of the organ. The book deals with the ground technics of the keyboard, the technics of the manuals, the technics of the pedals, the technics of accessories, extemporization, the organ's power of expression and accompaniment. It is an excellent compendium of useful information for the organist and the student.

Pages: 140 (large size); with numerous notation examples.

Price: \$4.00.

Publisher: Charles Scribner's Sons.

### Mozart, the Man and His Works

By W. J. TURNER

Fortunately for the art of music, the lives of most of the great masters have been singularly romantic. This has provided the material for many imaginative biographies, some, alas, too imaginative. It is therefore a relief to find such a book as "Mozart, the Man and His Works" by W. J. Turner, done with meticulous documentation, so that it is valuable as a reference work and at the same time a very interesting and readable book presenting a large amount of material relating to Mozart that we have not hitherto seen in English. There are many very human touches, one for instance being the account of how Count Leopold Anton von Podstatzky opened his home to the Mozart family when he found that little Wolfgang had the smallpox. Thus the eleven-year old child with a serious sickness was taken from a damp, smoky hotel room to a palace. After his recovery his sister was immediately taken down with the same disease.

One of the finest revolutions of Mozart's fine character is a very simple and beautiful letter to his father, telling of the young composer's desire to marry Carl Maria von Weber's cousin, Constanze Weber. Mozart was not deceived, because he wrote, "She is not ugly, but is far from being beautiful. Her whole beauty is in her small black eyes and good figure. She is not intellectual but has enough common sense to fulfill the duties of wife and mother. . . . she understands housekeeping and has the best heart in the world. She loves me and I love her truly—could I wish for a better wife?"

Pages: 466, with sixteen full page illustrations.

Price: \$4.00.

Publisher: Alfred A. Knopf.

pieces are for this person. Without previous preparation or practice, this person plays the new piece at sight. The player then sees how his or her playing at sight can be improved—especially after the rest of us have added our friendly suggestions. Each month we all try to show an improvement in our playing by sight. Other music in this same copy of THE ETUDE, for the half grade below the player and also for his own grade, is available for later individual practice, together with the sight reading.

Each month one piece of music for the grade of that musician is selected in the new copy of THE ETUDE, as the advance work to start the month. At least half an hour is spent each day in a concentrated practice on exclusively that one piece. Once the choice has been made, no change is

music is mastered, this, too, is added to our growing group of review music. Then too, as we advance to a new half grade or grade, we have all the pieces of music for our review work in the new grade, in previous copies of THE ETUDE. The practice or playing of review music always comes after the half hour on the advance music has been completed for that day.

The reading material of the new copy of THE ETUDE is used for informal presentation and discussion at our evening meal, each day, when we are not too hurried. The various important articles are assigned to different members of our family, for reading and presentation. The same is done with the shorter important articles. In this way all of us benefit from all THE ETUDE each month.

# WHERE SHALL I GO TO STUDY?

## PRIVATE TEACHERS (Western)

**FREDRIK E. BLICKFELT**  
Voice Specialist

Four years with Vincenzo Sabatini, Milan, teacher of John McCormack, and Antonio Cotogni, Rome, teacher of Battistini.

3224 Marmont Lane Just off Sunset Blvd.  
(opposite Chateau Marmont)  
Hollywood, Calif.

# OUR PUPILS WANT CENTURY MUSIC FOR LESS MONEY EDITION CENTURY COSTS ONLY 15¢ A COPY 15¢ 20¢ IN CANADA

TEACHERS—You can encourage parents to keep up children's music lessons if you don't discourage them with the cost of music. CENTURY EDITION—at only 15¢—keeps the cost of pieces at a minimum—yet, doesn't restrict your teaching in any way.

Remember, this standardized price has not been achieved by printing an inferior Edition. If you are at all skeptical regarding this, we would urge you most earnestly, for your own sake and for the benefit of your students, that you secure a copy of Century and compare it with any other existing edition which you may have or may be familiar with, and we are certain that Century will prove positively and conclusively that it has no superior.

All the suitable classics and a multitude of Standard modern compositions are available in "CENTURY" at this standardized 15¢ price, irrespective as to whether the Edition contains two or twenty pages.

Here are a few selected at random from our catalogue:

## CENTURY PIANO SOLOS, 15c ea.

(Capital letter indicates key—number the grade.)

# FOR MUSIC LOVERS

A COMPREHENSIVE collection of more than two hundred well known classic, modern, light operatic and sacred compositions. NO MUSIC LIBRARY COMPLETE WITHOUT THIS VOLUME.

AN outstanding collection of standard favorite songs. Words and music. Included are many home, sentimental, operatic, sacred, children's, southern, college, sea, rounds, hymns, patriotic, national and folk songs, popular in Radio Broadcasts.

Each volume contains 536 pages.  
Cloth Binding ..... \$3.00 each  
Reinforced Paper Cover  
Binding ..... 2.00 each

## FOR SALE AT ALL GOOD MUSIC STORES

If your dealer cannot supply you we will send postpaid on receipt of price. Money cheerfully refunded if not entirely satisfied. (NOT SOLD IN CANADA.)

## The World of Music

Interesting and Important Items Gleaned in a Constant Watch on  
Happenings and Activities Pertaining to Things Musical Everywhere

JOHANN  
STRAUSS

**JOHANN STRAUSS**, Austrian composer and orchestral conductor, son of Eduard Strauss and nephew of Johann Strauss of *Blue Danube* fame,

passed away at Berlin, on January 14th, at the age of seventy-three. Like his father and uncle, he was for some time court music director at Vienna, but abandoned this post to live in Berlin and to travel with his orchestra.

A NATIONAL BUREAU OF FINE ARTS at Washington is the purpose of a bill drafted by Dr. Walter Damrosch, to be presented to Congress.

"A LIFE FOR A CZAR," by Glinka, one of the great patriotic operas of the imperial era of Russia, had a Moscow revival in January, under the Soviet decreed name of "Ivan Susanin." Susanin was a peasant who in the seventeenth century sacrificed his own life to save the Czar from assassination.

KIRSTEN FLAGSTAD celebrated in mid-December the twenty-fifth anniversary of her operatic debut, when a party was tendered the great *diva*, in the grand tier foyer and smoking room of the Metropolitan Opera House, with five hundred guests, including every singer on the roster, the entire chorus and orchestra, conductors, stage directors, press agent, ticket collectors, box office employees, wardrobe assistants, scene painters, electricians, stage hands and ushers. Why slight the stage mouser?

THE MACDOWELL COLONY at Peterborough, New Hampshire, is reported by Mrs. MacDowell to have suffered a loss of not less than forty thousand dollars, by the recent New England hurricane. Practically all the large trees in the six hundred acre woods were destroyed, roads were obstructed, buildings damaged, and the water and lighting systems impaired.

THE COOLIDGE QUARTET, under the auspices of the Elizabeth Sprague Coolidge Foundation, will give, between June 12th and August 7th, a series of festival performances of the world's most famous string quartets, at the Golden Gate International Exposition at San Francisco, California.

BERNHARD  
HEINZE

**BERNHARD HEINZE**, conductor of the Melbourne Symphony Orchestra, director of the University Conservatory of Melbourne, and advisor to the Australian Broadcasting Company, has been visiting the United States for the purpose of securing American compositions to take back with him.

Professor Heinze has been very friendly to American composers, whose works frequently appear on his programs. Welcome to a musical ambassador from the antipodes.

THE SEVENTY-FIVE BELL CARILLON, to be installed to mark the hours and to provide music for the visitors at the New York World's Fair, will be the largest ever built, the complete set of bells weighing twenty-five tons.

MORIZ ROSENTHAL, perhaps the most brilliant piano technician of our generation, and Mme. Hedwig Kammer Rosenthal, till lately one of the most eminent piano teachers of Vienna, are reported to have decided to make their home in America and to become teachers in New York City.

THE MOZART BOYS CHOIR, consisting of twenty voices from the Haydn Basilica of the Church of the Virgin in Vienna, where Haydn was once a chorister, is making a tour of sixty concerts in the United States, after which it will visit Hawaii, New Zealand and Australia.

THE MUSIC TEACHERS NATIONAL ASSOCIATION held the convention for its sixty-second year, on December 27th to 30th, at the Hotel Mayflower of Washington, D. C., with Edwin Hughes presiding. Among interesting events were a reception by Mrs. Roosevelt at the White House, a Vocal Forum, a Piano Forum, a symposium on "Music in the Secondary Schools and Colleges," and concerts by the Coolidge Quartet and Budapest Quartet at the Library of Congress, and by the National Symphony Orchestra at Convention Hall.

STOCKHOLM, SWEDEN, has enjoyed its annual seasons of opera for one hundred and twenty-five years. Its present opera house has been in use some forty years.

DR. HOLLIS E. DANN, eminent American music educator, passed away in New York City, on January 3rd, aged seventy-seven. Born in Canton, Pennsylvania, he was educated mostly in Boston; in 1887 became director of music in the public schools of Ithaca, New York; joined the faculty of Cornell University in 1903, where he remained till in 1921 he was appointed director of the newly formed State Department of Music, of Pennsylvania, till in 1925, he became the head of the department of music of New York University until two years ago he retired.

ANTONIO STRADIVARI is said to be the most widely forged name in all the world, as it appears in hundreds of thousands of cheap imitations of his notable instruments. And the fraud proceeds with nothing done.

AMERICAN CONCERT HALLS with the most perfect acoustics are said to be The Academy of Music in Philadelphia, Carnegie Hall of New York, The Auditorium of Chicago, Symphony Hall of Boston, Lyric Theater of Baltimore and the Tabernacle of Salt Lake City—all built more than thirty years ago when fire laws began banishing wood and slow drying plaster from the construction of buildings intended for public assemblies.

BEETHOVEN'S MATERNAL ANCESTRY is reported to have been much clarified by discoveries which have been made in the registers of the ancient St. Maria Boatmen's community in Lys Kirchen, the records of which have been preserved in the archives of the Cathedral of Bonn where they were brought to light by Prof. J. Schmidt Görg of The University of Bonn.

YVONNE GEORGI and her Netherlands Ballet is making an American tour including Philadelphia, Washington, Chicago, Detroit, Cleveland, Pittsburgh and Boston—the first Dutch Ballet ever to visit our shores.

"CAVALLERIA RUSTICANA (*cah-vahl-lër-eeäye roos'-lee-cah-nah*)" by Mascagni (*mahs-cahn'-yee*) and "I Pagliacci (*ee pahl-yah'-chee*)" by Leoncavallo (*lay'-ahn-cah-vahl'-lo—Lion-horse in English*), so long the Siamese twins of grand opera, have been separated by a major operation of the Metropolitan Opera Company, and the "Salome (*sä-lo'-may*)" of Strauss substituted for the hectic "I Pagliacci."

THE SEVENTY-FIFTH ANNIVERSARY of her most famous son, Stephen Collins Foster, was celebrated by Pittsburgh, on January 13th; when there was a special service at his grave, and throughout the day Foster melodies were heard on chimes of many churches.

"DER ROSENKAVALIER (*The Cavalier of the Rose*)" has recently been produced for the first time in London, with an English text.

SONGS FOR WHICH JEWISH POETS wrote the texts have been banned in Vienna; which means that the Viennese may not hear "The Marriage of Figaro," "Don Giovanni" and "Cosi Fan Tutte" of their most superbly gifted child, Mozart; nor the immortal "Carmen"; nor many of the greatest songs of Schubert, Schumann and Brahms.

QUEENA MARIO, for seventeen years a member of the Metropolitan Opera Company, and dear to the hearts of thousands of opera goers because of her sympathetic and appealing interpretation of the rôle of Gretel in Humperdinck's fairy opera, "Hänsel and Gretel," sang her "farewell" to that famous organization when, on the afternoon of December 26th, she appeared in a gala performance of this opera as a benefit for the Greenwich Village Health Center.

FRENCH MUSICIANS have received further recognition, when two new thoroughfares of Paris, in the twelfth arrondissement (between the Place de la Bastille and Vincennes) were named Avenue Vincent d'Indy and Avenue Maurice Ravel.

WAGNERIAN OPERAS, in a special series from May 3rd to 17th, will be offered by the Metropolitan Opera Company as a contribution to the New York World's Fair of 1939. The seven performances will open with "Die Meistersinger," to be followed by "Der Ring des Nibelungen" complete and "Tristan and Isolde."

THE PHILADELPHIA SCALA OPERA COMPANY made its initial bow to music lovers of "Penn's Towne" when, on the evening of December 10th, it presented a spirited performance of Verdi's time honored "Rigoletto," that was applauded by an enthusiastic audience. Jan Peerce as *Duke of Mantua*, Agata Borzi as *Gilda*, Robert Weede as *Rigoletto*, and Maybelle Marston as *Maddalena* had leading rôles and won an ovation for their brilliant singing of the famous *Quartette*. Edward Rhein, Philadelphia baritone, was the *Count Monterone*; William Sena and his *corps de ballet* made of the incidental dances a distinctive feature; and Fritz Mahler led the forces like a veteran, which he is not yet.

CHARLES WAKEFIELD CADMAN is reported to be temporarily leaving the United States to take up for a year his residence in the Leeward Islands. He hopes, in this favorable environment, to be able to complete a symphony and the score of an opera.

"PEER GYNT," a new opera in three acts by Werner Egk, recently had its world première at the State Opera of Berlin. The composer was his own librettist, with the net result "hardly an opera." The thirty-seven year old composer's score is said to "dwell on profusions of sounds, grotesque and bizarre."

FRANK WRIGHT, composer and a founder of the American Guild of Organists, died January 2nd, in Brooklyn, at seventy-three years of age. Born in England, he had served for forty-one years as organist and choir-master of Grace Episcopal Church in Brooklyn.

VERDI'S "FALSTAFF," after an absence of twelve years, was revived by the Metropolitan Opera Company, during the Holiday season, with Lawrence Tibbett in the title rôle. It was at a performance in the Metropolitan Opera House, on January 2, 1925, that Mr. Tibbett made his sensational appearance in the rôle of *Ford*, in this same work, an event which started him to a place among the greatest baritones of the world of to-day.

HERBERT VON KARAJAN, formerly general music director of the Opera at Aachen (Aix-la-Chapelle), has been appointed conductor of the State Opera of Berlin. A native of Salzburg and not yet thirty, he created a sensation when in October he led performances of Beethoven's "Fidelio," and Wagner's "Die Meistersinger" and "Tristan and Isolde," at the State Opera, when Berlin critics hailed him as "The greatest conductorial talent produced in Germany since Artur Nikisch."

# Musical Quirks

PROBABLY because of the fact that the tentacles of interest represented by the readers of *THE ETUDE* reach out to the far corners of the world, the number of odd quirks, superstitions and fanciful ideas that have been presented to us through many years, is as unusual as their variety has been diverting and surprising. Of course some have come from people who, unfortunately, have lost their sense of relation to the practical world in which we live. One lady wrote us that she had applied a polish, or dressing, to her piano with the thrilling result that the piano started to grow hair. What was she to do about it? We were afraid to recommend a depilatory, because then the piano would probably have commenced to grow feathers. We merely sent our sympathy and tokens of regret.

But people, who look upon themselves as sane, often have queer musical quirks. You would be amazed to learn how many people believe that music affects the growth of the hair, and that the performance of certain types of instruments has a harmful or a beneficial influence upon the hair. It was probably a musician who first observed that nearly all baldness is hereditary. There is probably about as much scientific relation between music and the hair as there is pharmaceutical value in powdered rhinoceros tusk and toad's blood, which are said to be greatly revered by orientals for their rejuvenating powers.

The superstitions that have attached themselves to voice teaching have been sometimes utterly absurd. We knew a man in a great city who taught voice by a method based upon a kind of pseudomathematical theory which concerned itself with trigonometry. He could make diagrams of the human head and thorax, that looked like the detail drawings for a subway. And, by the great tin horn, he had pupils and made money at it. The only defect of his system was that none of his pupils ever became able to sing.

There has always been a tendency of primitive peoples to attach a kind of mild demonology to music. It was really a tacit compliment to the art in an age when supposed miracles enhanced the respect that music received. We must also remember that this has extended to comparatively modern days. Paganini, who was widely believed to be in partnership with the devil, was one example. No doubt this was in his day very good publicity for the gaunt Paganini, just as the idea of the black art was suggested by Hermann, Keller, Thurston, Houdini and other magicians in their sixteen sheet billboard posters. We knew a man who did a thriving business in a spiritualistic community by selling ordinary brass bugles as "spirit trumpets"; and he solemnly assured us that, when they were properly hung in the room we might, if possessed of a suitable esoteric control, hear voices from the choir in Paradise. We did not buy a bugle. We prefer to hear our voices from the skies as we ramble in the woods, by the

shore, in our garden, or on the misty mountain heights.

We have a sympathy for anyone shackled with superstition. The "Gloomy Sunday" song which is said to have caused so many suicides in Budapest, was nothing more than a lugubrious kind of Hungarian "blues," a minor melody to which a distracted and harassed people were only too willing to attach the blame for the self-destruction which may break out in any community. All psychiatrists know that epidemics of suicide often appear during periods of the brightest and sunniest days.

A superstition is like an octopus; once it fastens itself upon an object it is hard to shake off. One of the most curious is that attached to Offenbach's very harmless opera, "Tales of Hoffman," which at one time was supposed to bring bad luck to all who had anything to do with it. Oscar Hammerstein found it one of the biggest of money makers.

We shall never forget the attitude of a snake charmer in northern Africa, which we already have recounted in *THE ETUDE*. We had promised our friend, Thurlow Lieurance, the composer, a snake charmer's flute or flageolet. Our snake charmer absolutely refused to sell his pipe at any price, assuring us that his life depended upon it and that his bag of cobras would know in an instant any substitution. "*C'est un véritable miracle, monsieur.*" Science, now tells us this is nonsense. The snakes are not charmed, they merely watch the moving pipe as they will watch any other moving object. This old superstition fades out much like the one of the bull and "red." The bull will attack any other moving color. Therefore do

not think that you are immune if you do not wear red, when you meet what the little girl called the "cow's husband."

In an article in the *American Weekly*, Victor Kolar, Conductor of the Detroit Symphony Orchestra, tells why he finally refused to conduct Tchaikowsky's "Sixth Symphony." Fifteen times, after he had conducted it, some one of his personal friends had died. He points to the fact that it was the last symphony ever conducted by the late Ossip Gabrilowitsch, but he does not make clear that for some time before Gabrilowitsch did this, he had been suffering from a slowly maturing intestinal cancer. Once, when the editor was in a hospital, Gabrilowitsch came to call upon him and anxiously described his "pain," which had persisted for a long time, saying at the time that he feared cancer. This was at least two years before his performance of the Tchaikowsky "Sixth." The connection with his death seems, therefore, chimerical.

In the days of Napoleon III the opera "Charles VI," by Halévy, was dreaded by singers, because on three successive nights the tenor, Eugene Massol, had the alarming experience of having someone in the house to drop dead after he had sung his leading *aria*—first a stage hand, then a prominent box holder, and finally the con-

PAGANINI, MUSICAL MYSTIC

*This picture is that of the great English actor, George Arliss, impersonating the great violinist.*

ductor of the orchestra. The name of the *aria* is *O God, Kill Him*. The opera was discontinued for nine years, not, however, due to Massol's superstitious fear but rather to the fact that it was feared that the subject of the opera would interfere with diplomatic relations with England.

Napoleon, laughing at superstition, and feeling that the diplomatic relations were improved, ordered its revival and that Massol should sing the title rôle. The night of the revival, January 14, 1858, came, and the house was jammed to the doors by an audience awaiting the arrival of the Emperor and Empress Eugénie. The curtain did not go up at the appointed hour. On the way to the opera house, Napoleon's coach had been bombed by the Italian anarchist, Felice Orsini, and, though Napoleon was uninjured, fifty-six people were killed. The emperor bravely attended the performance. It is reported that the opera never since has been performed.

Superstition seemed to beset poor Halévy. In 1841, he wrote "The Queen of Cypress," designed as a gorgeous theatrical spectacle. This was the opera that brought the forty-two year old Halévy so close to the twenty-eight year old Wagner, when the latter was employed as a musical hack to make the piano score of "The Queen of Cypress." During the first performance of the opera, December 22, 1841, one of the artists fixed his eyes upon a proscenium box occupied by many prominent politicians and financiers, while he sang,

"Ce mortel qu'on remarque,  
Tient-il  
Plus que nos de la parque  
Le fil."

During the run of the opera, several of the worthies died, and it was more picturesque to describe their end as due to the fatal *aria*, rather than to copious portions of langouste and champagne. Halévy was the sufferer.

All of us have, in all probability, more fetishes than we are willing to admit. Fetishes are the barnacles of experience. Teachers often acquire them without realizing it. We take pride in certain pet theories, pet methods, pet exercises, pet pieces; and they go to make up a "bag of tricks" that we carry about until the bag is worn out. Because we have owned them so long they become infallible to us. We forget that progress depends upon an open mind, a mind so open that we may find a better and finer way of doing things. This does not mean that we should forsake our ideals, that we should open the gates of the temple to the money changers. It means that we should, in all phases of music teaching, be alert for new things, new and better things. There is only one great consideration, see to it that they *are* better. Do not give up an ideal for a transitory gadget or proprietary contrivance.

Often this means an adjustment to very queer conditions and odd problems. When we were asked what was the best instrument for a boy with the tapeworm, we had to tell the parent that this was a problem for the physician and not the musical expert. THE ETUDE has always tried to be thoroughly candid in answering questions, going upon the principle that we have never lost a real friend by telling the truth. There are certain questions, however, that, because of the obvious sensitive nature of the applicants, must be answered with unusual care.

There are other questions that we hesitate to answer, for the reason that only a quack would be willing to give an opinion upon them. We do not know the local conditions or surroundings; we cannot possibly ascertain them by correspondence; and personal interviews are impracticable. Therefore the only thing to do is to inform the reader, as courteously as we can, that they cannot be helped through the mails. We like to be of assistance, wherever practicable, but we refused to prescribe love songs for the anxious swain in a New England town who wanted to know of some ditty that would have the effect of a love philtre upon the emotions of his dear one. We did tell him, however, that love philtres had died out with Salem witchcraft.

## Leopold Godowsky

WE HAVE just played "Alt-Wien," Leopold Godowsky's nostalgic picture of the old Vienna, that he loved so dearly, the old Vienna, which had honored him by making him the head of the Master School of the Imperial Conservatory, the old Vienna to which he brought nothing but distinction, beauty and many thousands of Kreutzers from students drawn to the Austrian capital by his genius. Alt-Wien!

Godowsky was one of the most individual figures in musical art. A greatly respected composer has said that his uncanny gift for interweaving melodies represents a phase of contrapuntal grasp which can be likened only to that of Bach, Chopin and Wagner. True his known works are very largely in the comparatively smaller forms, for the piano. Among these are his studies upon the *Etudes* of Chopin, which unquestionably would have delighted and perhaps dumbfounded the great Polish-French tone poet.

Born at Vilna, in Russian Poland, in 1870, he made his first tour at the age of nine. He then went to study under Rudorff at the Royal High School for Music in Berlin. In 1884 he toured America for the first time. In 1886 he studied in Paris with Saint-Saëns. His second American tour was in 1890 and 1891. Thereafter he decided to settle in America and became an American citizen. For a time he taught in Philadelphia (Combs Broad Street Conservatory) and in Chicago (Chicago Musical College), making occasional trips to Berlin and Vienna to give special teaching courses. Austria honored him with the rare distinction of "Royal Professor." He returned to this country in 1912, when he took up permanent residence. His various tours took him to many distant lands and he was especially enraptured with the life in Java.

His position as a pianist was incomparable. He was unlike any of his contemporaries. He could not be accused of being a good showman, because he was extremely modest, unassertive, and concerned only in artistic effect and in no way in the astounding technic which gave him the name "the pianists' pianist." Short of stature, his large head and magnificent forehead made him appear diminutive on the stage of the large concert hall, a kind of Napoleonic keyboard genius unlike any other. His memory was amazing. We have sat at the side of the piano for hours requesting him to play this or that rare work, and never once did he fail to know it and know it with a surety that was baffling. Probably no one played his compositions as he himself, particularly the ones influenced by the oriental gamelan orchestra of gambangs, a sort of Javanese xylophones of six to eighteen wooden or metal bars resting over boat-shaped resonating boxes, which made such a similar impression on Debussy.

Once we asked Godowsky where he ever acquired his baffling contrapuntal skill, and he replied that he was almost entirely self-taught, in what he called "advanced counterpoint." This contradicts the encyclopedic statements that he learned his counterpoint from Saint-Saëns. Certainly the French master showed no such superskill in the art which characterizes the work of Godowsky.

Godowsky's life was saddened by tragic experiences in his home. Yet he bore up under these, in fine manly fashion. His keen brain kept him interested in a vast number of subjects. He was a man of flashing wit, great honesty of purpose, and fine loyalty to his friends. Once when the writer was confined to the hospital, Godowsky made a special trip from New York to Philadelphia, to visit him. Such kindness and thoughtfulness are unforgettable. His picture has long been upon our editorial walls, with the inscription: "In old friendship, faithfully, Leopold Godowsky"; and we are extremely proud to have it there.

\* \* \* \* \*

The April "All About the Band Issue" will be a banner number in the highest sense. Please tell all of your friends and pupils about this extraordinary edition of The Etude, which you will want to retain permanently with your music books.

# Victor Herbert As I Knew Him

## Memories of The Man and His Music

By GUSTAV KLEMM

### PART I

IT WAS A WARM SUMMER'S NIGHT in Saratoga; the year was 1905. Victor Herbert and his orchestra were nearing the end of their second highly successful season at the famous summer resort. He had just returned to his hotel room, after a party with some of the members of the orchestra. He was tired, unpressed hurriedly, and tumbled into bed. At the sleep he so badly wanted would come. Between him and sleep there waited a melody that had been dancing through his mind all evening—through the concert, and later at the party. He tried to dismiss it, but the little tune stood there defiantly in the dark reaches of his mind and continued to plague him. Indicating resignation with a customary grunt, Herbert crawled out of bed, fumbled about a match, lit the gas, and on the first sheet of blank manuscript paper he could not scribbled off a rough outline of the melody that had been haunting him. Committed, Herbert threw down the pencil, turned out the hissing light and went back to bed where, free of the tantalizing tune, his mind soon found the peace of sleep.

In the morning, Herbert had forgotten the entire episode, including the pesky tune; a glance at his bedside table with the manuscript atop it, soon revived his interest; and, after a hasty bath in the fashionable tub that stood high off the floor in the adjoining room, he soon finished it. *Kiss Me Again* was completely done.

Let us follow its illustrious career. The scene now changes to the fall of the same year. Victor Herbert is at the piano. Before him is petite Fritzi Scheff, formerly prima donna of the Metropolitan Opera Company. The manuscript score of "Mlle. Modiste" is on the music rack. This is the second score Herbert has written expressly for the volatile Miss Scheff, the first having been "Babette," in 1903. He sings to *If I Were on the Stage*. Together, Herbert and Scheff go through the lengthy, three-part aria and finally come to the last section beginning "Sweet summer breeze," the refrain of the song known to-day as *Kiss Me Again*.

"But, my dear Mr. Herbert," says the sultry Miss Scheff, "that is much too low for me. It starts on the B-natural below the staff!"

"Yes, yes, my girl," says Herbert, "but you don't have to sing it 'open'; just breathe it, very softly."

"Well . . . but—but I don't really think much of the whole song. I doubt very much if it will get over."

"Same here," pipes up Henry Blossom, chor of the book and lyrics. "And why give three full accents in the accompaniment of each measure instead of one, or one, two? That's not waltz time, the way you have it, Victor. No, I don't think much of it myself."

Additional clouds are added to the already heavily overcast sky by Charles Hingham, the producer, who also finds it impossible to whip up much enthusiasm for the song.

But the stubborn Herbert, spurred on by memories of the haunting tune's persistent determination to be born, is just as determined that it shall be given its chance, and plays on, meanwhile arguing away this

and that objection. As a result, the song stayed in the score at the try-out performances. The rest is history. It is Victor Herbert's most popular melody.

Incidentally, the words were an attempt at burlesque of the saccharine love song with its lush sentiments, the lyric being compounded of all the trite verbal ingredients to which Blossom could lay his pen. But those early audiences, and subsequent ones, detected none of the intended subtlety and took the song to their bosoms, where it has lain ever since. To-day, the rest of the *aria* is forgotten; no one cares about the singer who tells how she would play, first, the "part of simple maiden" and, second, "a *prima donna*"—our interest is confined entirely to the "dreamy, sensuous waltz" she'd "sing." That same waltz will live forever.

### Willow Grove Memories

VICTOR HERBERT TOLD US the story of *Kiss Me Again* as we sat, one summer, years ago, in his room in back of the orchestra "shell" at Willow Grove Park, a short distance outside of Philadelphia. During the years we knew him, we were with him in many places, but the one spot where he seemed to find his perfect setting was at this lovely park. Next to New York, it came closer to Herbert's heart than any other location. He would come there each summer with his fifty piece orchestra, which he had rehearsed for several weeks in Manhattan. After his

three weeks at "the Grove," as Philadelphians termed the sylvan resort, he would go to his beloved summer place, Camp Joyland, on Lake Placid. Here he would come as close to relaxation as his rigorous code of existence permitted. But his fiendish, unrelenting energy would not allow him to idle for long, and he was soon up to his ears on the scores of musical works contracted for the coming season.

Willow Grove was a sort of "pause that refreshes," and what a refreshing pause it was, both for Herbert and the audiences that flocked there in droves. It was laid out shortly after the turn of the present century and operated by the Philadelphia Rapid Transit Company. They called it "The Garden Spot of the World" and claimed they presented the "Highest Class Musical Attractions of the World." They were not so far wrong. Walter Damrosch, Nahán Franko, Arthur Pryor, Victor Herbert and Sousa, to mention a few of the attractions, were names to conjure with!

Herbert often said Willow Grove was the loveliest park he had ever seen. Year after year he would return, and his admirers, who numbered legion, would go bouncing out on warm June and July nights in the clamorous street cars, for as many of his concerts as possible during his all too short stay. These same admirers shared a common desire with Andrew Carnegie, who once said, "My idea of Heaven is to be able to sit and listen to all the music

of Victor Herbert I want to." Herbert's *Whispering Willows* is dedicated to "The Patrons of Willow Grove Park."

### An Intimate Word Picture

TO KNOW THE REAL HERBERT, one had to visit him in his "holy of holies" back of the shell. A short, dark stairway led from one side of the shell up to this room. At the conclusion of each concert session, Herbert would bustle up the steps, divesting himself of various garments on the way. Arrived in the room, the discarded collar, hopelessly wilted, would be flung in one corner. The shirt, wet with perspiration, would be draped over the whirling electric fan. And then, after he had rubbed his face, head and arms with a Turkish towel, poured himself a drink compounded with the chilled soda kept ready in the icebox that formed an important feature of the room's equipment, and lit one of the special "Victor Herbert Cigars" with which he was kept supplied by an old cigar maker in New York, he was ready to talk. When he wanted to be really comfortable, he would talk with his chair tilted back against the upright piano, his heels resting on the top of the table in the center of the room, and his gaze divided between his guest and the large lake which spread out, fanlike, from one side of the music pavilion.

Herbert loved to talk. There was no one who talked just like him. His conversation was largely stenographic, the most important parts being entrusted to highly expressive gestures and grunts. There was an expansive geniality about him, a breezy cordiality that swept all before him. He made the air of any room he entered electric. He could do nothing slowly. Patience was not one of his virtues. With a ready command of four languages, he conversed glibly with various members of his orchestra in their native tongue. He always had something to say as he passed them sitting here and there about the park. To-day, we would call these remarks "wise cracks." One and all, they loved him and respected him, even if he was a peppery tyrant with a superb assortment of the purpler expletives.

### A Rigorous Regime

THE MEMBERS OF HERBERT'S ORCHESTRA were drawn from the ranks of the best symphony players in New York and he had held them together for many years (he had formed his own orchestra in 1904). When he died on the steps of his doctor's office, on May 26, 1924, he was in the midst of rehearsing for his coming season at Willow Grove. A few days later, his saddened orchestra, headed for dissolution, opened its engagement under the able direction of Herbert's good friend, the late Henry Hadley.

Four sessions were given daily—two in the afternoon, from 2:30 to 3:15 and 4:30 to 5:30, and two in the evening, from 7:45 to 8:30 and 9:45 to 10:45. Before us lies a typical day's program, the one for Tuesday, June 22, 1920, and we reprint it in its entirety.

### AFTERNOON

1st Concert, 2:30 to 3:15

1. March, "The World's Progress". Herbert
2. Overture, "Oberon" . . . . . Weber

VICTOR HERBERT

A portrait made by Bachrach in 1922

3. a. "Al Mercedita" .....Stahlberg
- b. "The Three Musketeers"...Stahlberg
4. Scherzo .....Goldmark

2nd Concert, 4:30 to 5:30

1. Overture, "Calm Sea and Prosperous Voyage".....Mendelssohn
2. Ballet Suite from "The Lady of the Slipper".....Herbert
  - a. Tableau
  - b. A la Polka
  - c. Valse Grazieuse
  - d. Finale
3. Albumen .....Sanford
4. Prelude, "Faust" .....Gounod
5. Fantasy from "Angel Face" (new) .....Herbert

3rd Concert, 7:45 to 8:30

1. Coronation March from "The Folkunger" .....Kretschmar
2. Prelude, "Lohengrin" .....Wagner
3. Violin solo .....Burleigh
  - Andante
  - Allegretto grazioso
 Mr. Fred Landau
4. Galop Chromatique .....Liszt

4th Concert, 9:45 to 10:45

1. Overture, "Festival" .....Lassen
2. Valse Pathetique, "Estellita"...Herbert
3. a. Imitation of a Music Box....Liadow
- b. Florinda .....Burgmein
4. In the South.....Kolar
5. Selections from "My Golden Girl" (new) .....Herbert

One sees immediately what a wide range of musical endeavor was covered. Herbert attempted to embrace all fields. He often included movements from symphonies. He had conducted the Pittsburgh Symphony Orchestra for six years, a post to which he had been called after years as first violoncellist and assistant to Anton Seidl, one of Herbert's gods. He had also been a guest conductor of the New York Philharmonic for two seasons.

Every Thursday was "Herbert Day," and what a gargantuan feast that was! All of his newest numbers, plus a generous helping of the older favorites. The Herbert fans turned out to a man.

### The American Composer Encouraged

AT WILLOW GROVE, he gave the American composer every opportunity. In the program listed above, you will note compositions by Harold Sanford, Cecil Burleigh and Victor Kolar, in addition to the Herbert numbers. Both Sanford and Kolar were members of his first violins, the former now an important member of the conducting staff of the National Broadcasting Company, while Kolar later achieved distinction as conductor of the Detroit Symphony Orchestra. Herbert was always glad to see new works. He played many of our original compositions as well as a number of orchestral transcriptions. Our

files contain many hasty letters, written from here and there, telling us he would be glad to program this or that number on such and such a day and to "shoot" the score and parts to him at his home in New York before he left for the Grove. After playing a new work, he would always tell us frankly what he thought of it. His knowledge of orchestration was second to no one's; and many were the profitable hours we spent with him, going through scores, his quick eye and vast knowledge suggesting various changes.

He conceived everything orchestrally. This was a "flute figure," that a "cello melody." He urged us always to "think orchestrally" and not as a pianist.

"The trouble with the writer of to-day is that he relies too much on the piano. It has been said that every composer should play this instrument fluently. A fine idea, but beware of the pernicious influence it exerts on the creator. Upon writing for orchestra, he thinks only in terms of the piano. His piano technic is evidenced in the various figures appearing here and there in the score. When a youngster shows me his score, I say, 'Where's your pedal?' The successful composer for the orchestra must think in terms of the orchestra. Then and only then will he achieve effects that impress the listener. I score directly for the orchestra. Of course, I often make sketches and develop them at the piano—which I play only fairly well—but the ideas invariably arrive already 'scored'; and it is in their orchestral guise that I constantly hear them."

He would often point to the overture to Gounod's "Faust" as an example of what he meant by forgetting piano figures. His knowledge of the orchestral literature was enormous, and he never was at a loss for a potent excerpt from the classics to pose as an example.

### Mentors, the Melodists

HIS CREATIVE GODS were Wagner (always first), Beethoven, Liszt, Mozart and Schubert, melodists all. He preferred to write, when scoring, at a tall desk; and it was at such a desk, especially constructed, in the soundproof music room on the top floor of his New York home, at 321 West 108th Street, that he did most of his work. Before him, as he wrote, was a picture of "Ludwig of Bonn," while watching over his shoulder was a bust of Wagner. They must have been proud of their gifted descendant, whose music was as expertly fashioned and finished as any their pens had ever touched to more elaborate pages.

Of Brahms, the songs appealed to him most. As for Chopin, he felt that this poet of the piano had not as yet received his just due, a statement we could never quite appreciate. Perhaps Herbert was drawing a distinction between popularity and understanding.

"Modern Music," so called, left the legitimate son of the melodic quintet men-

tioned above understandably cold. At much of it he revolted. Of Stravinsky, he could stomach only his "Petrouchka." This he called "scene painting," and he liked it very much. As for the rest, he dismissed them with an expressive upward throw of the arms. "If anyone can make a waltz out of Ravel's *La Valse*, I'll eat it," he once said. On another occasion—"The other day, some one sent me—why, I don't know—the score and parts of a string quartet in C; and, so help me, the thing started off in E-flat!" He deplored the excessive use of standard and newly designed percussion instruments, once made much of by a gifted Australian composer-pianist. He had a sort of deep-rooted dislike for pianists who seemed to impress him as dilettantes. He once said, "I'm a musician—not a pianist"; from which any one may draw the quite obvious inference.

Back in the days when Herbert was conducting the Pittsburgh Symphony Orchestra, Richard Strauss came to this country, and his tour included "The Sooty City." Arrived there, he was naturally invited to the Herbert home, where a big dinner was given in his honor. During the evening, Herbert showed Richard II some of his more important scores.

"Very fine, very fine," admitted the Bavarian, "but they are old fashioned. You should spread out."

Herbert bridled under the criticism but said nothing. Later, there flashed in his mind memories of the closing portion of Berlioz's *Treatise on Instrumentation*, as edited and revised by the same Strauss who had partaken lavishly of his hospitality earlier in the evening. In it, Strauss had written confidently of a future that would bring orchestras with hundreds of violins, armies of pianos, platoons of harps, and so on.

Before the end of the evening, Herbert mentioned the Berlioz volume to his distinguished guest.

"An excellent work," said Strauss.

"Maybe so," said Herbert, a glint in his twinkling eyes, "but where do you figure on getting the music paper on which to write your scores?"

"Why, why . . ." stuttered Richard II.

As Herbert told us this in the breeze swept room overlooking the Willow Grove lake where the colored fountain played each night at nine-thirty, we looked up and said, "Why it would take the whole side of that wall."

"Whole side of a wall?" snorted Herbert. "My boy, it would take the whole side of a house!"

### A Sylvan Shrine

MANY AND IMPORTANT were the conferences held in that sanctuary at Willow Grove. Producers came down from New York; nationally known singers, conductors, composers and instrumentalists dropped in; distinguished Irish leaders called. Mixed in with these were the

giggling "fans" with requests for autographs and the sincere lovers of his art who merely wanted to tell him how much pleasure his music had given them ever since the first time they heard him conduct his so-and-so at such-and-such a place. There were also hopeful writers, bearing lyrics and books for musical comedies and operettas. Herbert was breezily gracious to all of them, asking all the men to have a drink, and making some gracious compliment to the ladies that left them worshippers ever after. We remember being present when the music critic of the Philadelphia *Public Ledger* came out to see Herbert, bringing with him a letter from Tetrazzini, in which the famous diva asked the critic to endeavor to secure Herbert's consent to write a new *coloratura* number for her exclusive use on her coming tour.

It was at the Grove that Herbert introduced his new vocal and instrumental compositions; and we always got a big thrill out of these "first times." We heard a long and illustrious list of debuts, and they constitute a cherished memory. One that we especially remember was the premiere of *Indian Summer* with its lovely languorous melody for English horn. We never hear it that we do not think of Willow Grove. It complements the indelible association in our mind of the genial Irish-American and the Philadelphia paragon whose summer seasons he brightened for so many years. Several years later, when we had assumed the conductorship of the City Park Band of fifty men, following service as army bandmaster during the World War, we wrote to Herbert, asking permission to make transcriptions of some of his works. He suggested *Indian Summer* of blessed memory, and *Devotion*, both of which arrangements proved highly successful. The former was published, and Herbert liked it very much. This was praise indeed for Herbert had succeeded the famous Patrick S. Gilmore as conductor of the celebrated 22nd Regiment Band of New York, a post he held from 1896-1902. In this rôle, he was brought before the masses for the first time, and he started to develop the host of "Herbert fans" which later covered the broad expanse of this melodically loving country. While the orchestra was his first and lasting love, Herbert was very fond of the band and its music. He wrote many marches, during and following his band years. Perhaps it was this association that led to a permanent aversion for drummers who assailed their instruments with more than customary ardor.

Many of the memories in this first article have centered about Willow Grove. In the succeeding and final article, we shall tell of Herbert's amazing speed of composition, his advice to young composers, hints for the correct interpretation of his music, and various anecdotes drawn from a long association with "Victor the Vigorous."

## Worth While Music in the Movies

By VERA ARVEY

THE ENGAGEMENT of the Hall Johnson Choir to sing in Paramount's "St. Louis Blues," and the rumor that this choir will be the one chosen for the long heralded Selznick film, "Gone With the Wind," bring to mind the strange fact that much of the choral work in contemporary American films is done by Negro organizations. Even when other groups are shown singing on the screen, the chances are that the sound tracks were made by a Negro chorus—as in the choral sequences of "Lost Horizon."

The reason? Perhaps it is the prevailing

opinion that the voices of colored people are richer than those of others. Which is not always true. It is rather the unique, interesting and intelligent use to which individual Negro voices are put by the talented people who direct the choirs, that give them their inspired quality.

There are to-day several outstanding Negro choral groups that exist solely to make their living by singing. To that end, they practice, publicize themselves, and are ready at a moment's notice when called. On the contrary, there are few large groups of white singers with the same objective.

The splendid Paul Taylor Chorus is, however, a white group which has sung in many films and on many radio programs. Occasionally white choruses are recruited for films; voices are tried out, parts are learned, and the singers trained by a choral director engaged for that special purpose. More often the studios turn to a single man who does all this work for them: he is like an agent for singers. Some studios have been known to keep a white chorus under contract; but it is much more simple to engage a nationally known group of singers and to entrust the music to it.

Freita Shaw and her Ethiopian Chorus pioneered in Hollywood for all colored choruses. It was she who energetically insisted upon the same financial rights for her singers as were accorded other musicians—payment for rehearsals, for overtime, and so on. Without her work, the way would be hard for other similar groups. Her chorus has sung in more than three score of films, among them "Harmony Lane," "Fugitive from a Chain Gang," "The Great Ziegfeld," and "Sing Red the Rose." That its work is not limited (Continued on Page 205)

# simplicity As a Background for Art

A Conference With

GUIOMAR NOVAES

THE DISTINGUISHED BRAZILIAN PIANIST

Secured Expressly for The Etude Music Magazine

By ROSE HEYLBUT

WHILE IT IS A FACT that the ultimate results a student can accomplish in music depend upon zeal and intelligence with which he applies himself to his studies, it is, paradoxically enough, a grave mistake to suppose that study alone can do everything. The most important point in planning student and later careers, must remain the endowments of the student. It sometimes happens, of course, that a really notable talent goes to waste because of improper application; but more often we find blasted ambitions and maladjusted are the result of having overestimated natural abilities. This may sound harsh, but it is said only in the hope of saving zealous young souls from the heart-breaking experience of finding out too late that they have set themselves an end which nature's gifts have placed beyond their reach. In striving towards a musical career, a student must consult wise and experienced advisers, to convince himself that he carries within him sufficient spiritual resources to place him and keep him upon the heights of greatness. If he does not, no amount of work alone can launch him. And in such a case, it is far better to face the truth before years of working and hoping make the inevitable disappointment too great to escape. Music study should not be undertaken merely as a lever into a professional career. Only a small proportion of today's students are destined to carry the torch to greatness. The other hundreds of thousands will grow up into useful men and women, to whom music will remain a solace, a friend, a highroad into a more appreciative and more spiritual life. In this sense, then, there is no one too young to be gifted to study. If his study years bring him a finer appreciation of beauty, he will find his efforts well spent.

Music study is bound up with more than an instrument and printed notes. Everything in the young student's life—his home atmosphere, his upbringing, his interests, his amusements—should be directed to unite with music study, to stress higher, lovelier values. I look back to my own childhood, and I know that our life laid the foundation for everything we have been able to accomplish. Music was nourished by a great deal more than piano lessons.

## An Understanding Mother

MY MOTHER DEVOTED HERSELF to her home and her children; and she brought beauty and spiritual serenity into our lives exactly as an artist brings them into the music she interprets. My mother had had her own dreams of an artistic career; but, when my father would otherwise and placed her at the head of a household instead, she did not sacrifice her artistic hopes as something

that belonged to the past. She made us her instruments, and "played on" us! What she did was to surround our impressionable childhood with an appreciation of beautiful things—the kind of beautiful things that grow up with one, and that have nothing to do with an outlay of money.

When we awoke, in the mornings, our mother would take us for a walk, calling our attention to the beauty of the sunshine and the fresh young day. At breakfast she always recited some lovely poem, and so sent us about the day's tasks uplifted by fine sentiments and imaginative ideas. She read good books to us; and never did one of us hear her say a harsh or unkind word. You may say that this kind of influence has nothing to do with the problems of piano playing, yet I wonder whether it is not the finest means of acquainting the young spirit with the same inner values which piano playing is only a means of releasing. I am firmly convinced that, valuable as our music teachers are, it is the mother who must take the first steps towards arousing a sense of beauty in her children. It is a far better hobby to take one's child for a walk in the woods than to win at bridge or golf.

I know that a pianist is expected to talk about the problems of piano playing, and I am very ready to do so, as far as I am able, because no two people experience the same problems in the same way. My career has been fortunate. The abilities I possess showed themselves early, without any forcing whatever; and they were allowed to develop in the same simple, natural way. *The simpler and more natural a course of instruction can be, the better the results.*

## Stiff Backed Conservatism Stirred

I WAS ALWAYS CONSIDERED a musical child. At four I was sent to kindergarten; and, when I heard the other children singing their little songs, I would leave my place, run to the piano, and play what I heard. No one had taught me the notes, but I knew where to find them; and I played because it seemed the only natural thing to do. When I was six I was allowed to begin my studies under Maestro Chiaffarelli, one of the most thoroughly musical teachers in all Brazil; and a year later, I made my first public appearance. At nine I made my first tour; and four years later the Brazilian government sent me to Paris to study at the Conservatoire.

My entrance there was a matter of great excitement. Coming all the way from Brazil, I arrived in Paris on the very last day of registration. I carried a letter from Chiaffarelli to Isidor Philipp, with whom it was my privilege to study, and he told me what to do. Two days later, the first examination for admission took place. There were three hundred and eighty-nine candidates, and room for only two foreigners.

GUIOMAR NOVAES

After the first examination the number of candidates had been thinned to about thirty, and a second test was set for the following week. The judges included Debussy, Fauré, Moszkowski, Widor, and about a dozen other of the leading representatives of French art; and the entire ceremony was most impressive to a child of thirteen. The examination was held in the morning, and we were told to return that evening, to hear the great news. I was too frightened to go, but the friend who had made the trip with me, a middle-aged lady from Brazil, went back to the Conservatoire that night. In the historic old court, she found Moszkowski, just ready to announce the winners. When he saw her, he waved to her and called out that, by the unanimous choice of the full examination jury, the first place had been awarded to "little Novaes." I worked sincerely after that, but the work had to be based on, and limited to, the abilities which had been born within me.

A wise teacher will approach all pianistic problems from an individual point of view. Let us take, as example, the matter of technique. To many students, the mastering of technical difficulties seems to be an unpleasant feature of piano study. This ought not to be the case, and I wonder whether the unpleasantness is not due to the habit of separating the idea of the music from the technical drill. In my opinion, this should never be done. Technical facility, after all, is useful only as a means of expressing music. Thus the student should be encouraged to concentrate upon the meaning of the music first, with the technical matters in second place. This can be done. I think it helpful to work at all technical problems in a musical way; that is to say, do not plunge blindly into an hour's work at trills or arpeggios, with one's mind miles away from musical content. I recall a compatriot who also was studying with M. Philipp. After several lessons she suddenly left the master. I asked her why, and she told me that she did not like his method of teaching; while she played, he was always

at the window. When this was told to M. Philipp, he replied, "Yes, she is right. I always went to the window to see where I could find her head."

It is better to select difficulties as they normally appear in a passage and to work at the full meaning of that passage, cleaning up the trills and the arpeggios with a view towards bringing forth the clearest and best expression of the music. Always think of the tone. Even scales can be practiced musically. Never practice a scale as a series of unassociated notes. Make a mental picture of the scale as a whole—as the wind plays scales on a stormy day—and try to relate the tones to each other in evenness, in balance, and in tonal purity. Too often scales are practiced with a wandering mind, in the mistaken belief that concentrated thought is needed only for interpretation, while finger exercises can take care of themselves. The brain must direct everything one plays. Never play superficially. Always press your fingers deeply into the keys. That will bring roundness and quality into your tone.

## Technic a Normal Growth

MUCH OF GOOD TECHNIC can be traced to concentration and good memory. I am fond of saying that the fingers have a memory of their own. By this I mean that, if the difficult passages are read through correctly in the first place, and then practiced correctly, with concentrated attention and no mistakes, the fingers will fall into the habit of striking the proper keys and will thus remember where to go. I think you will find that most technical difficulties arise from having to unlearn initial errors. Passages that are consistently played without error never offer problems. The simplest scale and the most difficult double thirds require the same concentrated attention, the same earnest command of brain. Since the Americans have great quickness of perception and of action, such concentrated and brain controlled practice should be easy for them.

Touch and tone are the result of inborn qualities. They can be improved, to be sure. There is nothing in life which cannot be improved; but, fundamentally, they remain the individual expression of a naturally good ear and a natural sensitiveness of nature. The pianist's touch is as individual as his handclasp, his tone of voice. If one is sensitive to good tone, there will be found a way of producing good tone. This means that one must learn to listen to himself as he plays. It is easy to hear the effect wanted in the mind. As soon as one reads a piece through, one knows how it "ought to" sound. But it requires practice and discipline to view this mental image in perspective, while one listens faithfully to the tones one is actually producing. No one can do this for the student. He must train himself to listen to his own playing.

The best general counsel I can offer in the matter of tone is that only the natural, relaxed arm position will produce natural, free, fine tone. There should be no exaggeration in the position of the wrist; it must be held neither too low nor too high. Let the arm drop naturally, relaxedly towards the keyboard, and then leave it alone. Let the forearm find a comfortably horizontal position, and the wrist and the fingers will adjust themselves naturally in the way they must lie. Never should there be the least suspicion of tension or discom-

fort. If there is, the arm posture is an unnatural one, and the resulting tone will be harsh. As in all matters of art, the simple, natural approach is the best.

A common problem among piano students is that of sight reading. Next to the conductor, who reads full scores, the pianist has, perhaps, the most difficult adjustments to make, in reading two clefs at once, in which each hand may be called upon to play several notes. The best way to make this adjustment is to allow the young student to begin exercises in reading as early as possible. It is not wise to confine the first years of study to notes and scales, allowing the matter of reading to wait until the little performer is further advanced. As soon as he knows his notes he should be given simple, little pieces to read, purely for the sake of reading. Simple pieces, of contrapuntal construction, are the best for this purpose, because they require closer attention than mere "tune" playing, and thus provide better exercise for the mind.

### *Sight Reading a Gift*

FUNDAMENTALLY, I BELIEVE that facility at sight reading is an inborn gift. I am encouraged in this belief by the examples of two people whom I know very well. The first is a lady who has no gift whatever for music; she has no ear, no taste, and no desire to take music into her life.

And yet she can read through the most difficult piece at sight, in a way that a professional might envy. The other person is a highly gifted pianist and composer, deeply sensitive and entirely devoted to music. And he finds great difficulty in reading through the simplest song. Thus, the foundation of sight reading must depend upon quickness of eye, and not upon musical talent at all. On the other hand, however, diligent and concentrated practice in reading can help to develop that visual quickness which makes fluent reading possible. And, as one becomes more advanced, it is an invaluable drill to read chamber music, in company with other instruments.

My final counsel to our ambitious young students is, to broaden their minds and their outlooks as much as they can. One of the greatest errors a musician can make is to permit his music studies to crowd out the demands of a good general education. I have often heard students say that they intend to abandon their regular studies in favor of music, because they wish to make music their profession. I am always tempted to ask them: "Don't you wish to become a well rounded, well poised human being? Don't you desire to bring to the interpretation of your music a broad mind and a sum total of cultural knowledge which piano exercises alone never can give you?" Keep your outlook expansive.

I am again grateful to my wise mother for determining that my music study should be accompanied by a full curriculum of general study. While I was working at the Conservatoire, I also attended an excellent school on the *rue de la Pomme* where I studied all the subjects that a person who aspires to culture owes to himself to investigate. Three times a week I went to M. Philipp, at the Conservatoire and on the other days, between practice hours, I learned French, German, Italian history, geography, mathematics, composition, literature, and art. An artist must be versatile.

It goes without saying that the student must work earnestly and well his music. But, to my mind, it is even more important that he be given a chance to develop simply, normally and naturally, in a wholesome human being, who understands and appreciates the meaning of truth and of beauty. For these things, in the analysis, must sound forth from his music. If they do not, his music will be little more than a matter of finger gymnastics—a well trained machine, without a soul. Play with your fingers and your brain, but sing with your soul, and never forget *Nemo dedit quod non habet*—one can give forth nothing which one does not first possess. Music without truth is music without life.

## Radio Flashes

By PAUL GIRARD

AT SIX-THIRTY (E.S.T.) of a Wednesday evening there is a program known as Music Is My Hobby (NBC Red Network), which boasts some of the most unusual talent to be heard on the radio. The performers are not professionals but people to whom music is only a hobby, and who perform it without any ambition to exploit their talents for financial gain.

Music Is My Hobby is no amateur broadcast or similar publicity stunt, featuring untrained talent and musical curiosities, but instead a program presenting trained musicians who are simply non-professionals.

The musicians heard on this unusual broadcast are chosen from almost every walk of life, except, of course, those engaged in music as a career. Successful business executives, bankers, housewives, college professors, theologians, mechanics, and all sorts of everyday folks; but all people who have in their spare time made some study of music for their own amusement and pleasure.

The success of this program, which incidentally has been removed from the air once or twice but reinstated each time because of wide demands for its return, proves, among other things, the value of a hobby. It has been said that people who have admitted hobbies, who participate in music, for example, simply for their own amusement, are the ones who find it easiest to shut off anxieties and unessential cares. Hendrik Willem van Loon, the historian and biographer who was one of the first to broadcast on the Music Is My Hobby program, says music should be a part of our everyday life. "The only good things we do in this world," he states, "are the things we do because it is such fun to do them." If you want to know what music can mean as a hobby, tune in of a Wednesday evening; if you have been neglecting your piano or your violin lately, we dare say that you will gain a new incentive in this way to dust it off and to play again.

Ernest La Prade, director of musical research for the National Broadcasting Company, pointed out recently that radio permits anyone to play with Toscanini and

the NBC Symphony Orchestra. "Toscanini directs in New York," he said, "and the loudspeaker brings in the music and the home player of the violin, flute or any other instrument plays along with him." Mr. La Prade knows whereof he speaks, for he is the originator and director of that radio program, The Home Symphony, based on this very idea—the idea of playing in the home with the orchestra coming from the loudspeaker. More than ten thousand people have received regularly the advance programs of his Home Symphony and the parts for the instruments they play.

Recently NBC has been broadcasting a program of chamber music on Saturdays from 5:00 to 5:30 P.M., E.S.T. Some of these programs, emanating from the Library of Congress in Washington, D. C., have been played on rare old instruments. The instruments were all made by that great string instrument maker, Antonio Stradivarius (1644-1737), and the Government says you and I, among others, own them if we have paid up our taxes, for they are now the property of the Government, having been presented to the Library of Congress two years ago by Mrs. Ger-

trude Clark Whittall, noted music patron.

The forgotten man of radio, according to Roy Shield, music director of the NBC Central Division, is the fellow who writes tunes that are played twice—once at rehearsal and once on the air. "There probably has never been a time in musical history," says Mr. Shield, "when composers were so prodigal with their efforts. In the past when a composer set out to write a score he at least planned to hear his music a number of times before he passed it on. But with the fellow who writes music for the radio, those special musical continuities that radio requires to bridge scenes and the mood for dramatizations, such is not the case. For he may never hear his brainchild performed again." As short lived as these compositions may be, they frequently take as long to prepare as music destined for longer life; in fact selecting or creating perfect "mood music" may prove to be the task of a whole day and not infrequently a whole week.

Two interesting and worthy musical programs are those directed by Alfred Wallenstein on Thursdays and Fridays from 8:30 to 9:00 P.M., E.S.T., Mutual Broadcasting System. Alfred Wallenstein, musical director of Station WOR in New York, is an eminent violoncellist as well as a brilliant conductor. Before he came to radio, he was first violoncellist with the New York Philharmonic-Symphony Orchestra under Toscanini, as well as a soloist in concert. Mr. Wallenstein's Thursday program is a chamber orchestra one, and his Friday broadcast, known as Symphony Strings, brings us music for strings alone. An ingenious program maker, Mr. Wallenstein sets forth for his listeners much unusual and familiar music.

Lawrence Tibbett, the American baritone, recently signed to sing on the Kello program on Sunday nights. This makes necessary for the singer to commute regularly during the winter between Hollywood and New York, where Mr. Tibbett has frequent appearances at the Metropolitan Opera. If by any chance you hear Mr. Tibbett in New York on a Saturday afternoon (Continued on Page 210)

### MUSIC BY THE YARD

Really the giant harmonica in this picture is a yard and five inches long and has three hundred and twenty notes. They say it works all right, as long as there are no collisions. The instrument was shown at the Music Industries Trade Show in Chicago, where one observer remarked, "Oh boy! With a pretty girl a tandem harmonica ought to be more fun than a tandem bicycle."

# Lessons With Ossip Gabrilowitsch

PIANO VIRTUOSO AND CONDUCTOR

## An Apostle of Beauty in Piano Playing

By CECILE DE HORVATH

### PART IV

THOSE OF US WHO HEARD him play Schumann and Chopin will recall that he used an utterly different tone quality for Schumann than for Chopin. Also those who heard the fiery brilliance of his Liszt or his gigantic conceptions of the Brahms and Rachmaninoff concertos, never would have recognized in the same pianist who could play Bartók so exquisitely. As for his Chopin, world famous pianist remarked at one of his concerts, "It is the most uncanny thing to note the reincarnation of Chopin in Gabrilowitsch's playing." And so it was with every composer.

He was undoubtedly one of the most sensitive pianists who ever lived. As W. J. Anderson said, "He is an acknowledged authority in the performance of whatever music he chooses to expound."

How many pianists, by the way, could make a statement be truthfully applied? As Anderson said also, "His poetic interpretation is not to be outdone in the art of playing beauty of imaginative tone colors."

One time, after he had played the Mozart concerto in D minor with the Philadelphia Orchestra, I was so moved by his playing that I hesitated to go back to see when greatly was I relieved to see the famous pianist in the same tearful situation. Gabrilowitsch laughed heartily as he saw us and proceeded to bring us back to earth by all sorts of ridiculous remarks. He was always very gay and full of fun after every performance. In fact, the more inspired he had been during his playing the more matter of fact he liked to be afterwards.

I have heard silly women gush, "Oh, Gabrilowitsch, what do you dream of when you play?"

He would take perfect delight in chaffing me with, "I am wondering what I am going to have for dinner tonight." After a particular performance he took me to the Bellevue-Stratford Hotel, and the way I asked him why it is that Bartók's music moves me more deeply than that of Chopin or Wagner, where the sentiment is more obvious. He replied that the touching simplicity of Mozart, he said that the two composers who he liked most are Mozart and Schubert. After he had finished a magnificent performance of the Brahms' "Concerto in A major," in Chicago, I found him in a hilarious mood. He asked if I had played recently; and, when I told him that I had ended down in Texas, he laughed, "Oh, that's the place where they have a sign, 'Don't shoot the pianist, he's doing the best he can.'"

Of Gabrilowitsch's playing of the Brahms concerto, Philip Hale said:

"We do not forget the admirable performances of others, but there is a peculiar charm to the interpretation by Mr. Gabrilowitsch. No one within our recollection has caught the Hungarian spirit of the last movement."

#### The Rehearsal in Munich

TOOK A GREATER INTEREST in us than usual with teachers, and he showed every willingness to help us in our careers. For once, just before I was to make my first orchestral appearance in Gortitz, he wrote the following letter to Miss McElwee:

*"I have an orchestral rehearsal in Munich on Friday morning, and it just occurred to me that it would be a good thing for Cecile to play through the concerto with orchestra once before she goes to Gortitz. If she is willing to come to Munich for a day I will pay her trip."*

*"The only question is whether she can travel alone, and also who will take care of her while she is in Munich. Of course Cecile would have to stay in Munich only a day, or even a few hours, if she likes, and, I suppose, would not mind going to a hotel. Please telegraph at once whether Cecile is coming."*

Of course we telegraphed "coming," and one of the members of the class accompanied me. As soon as we arrived in Munich we went straight to the Tonhalle where the rehearsal was taking place, and arrived as Gabrilowitsch was conducting Strauss' *Tod und Verklärung*. Then came my rehearsal, after which he gave us some tickets for the concert that evening, which was magnificent, with Schumann-Heink as soloist in Schubert songs (she was then in her prime).

Afterwards, he invited us to come to his house the next day to see the new baby which had arrived only a few months before. His home was in Wittelsbach, a lovely suburb of Munich. It had formerly belonged to Max von Schillings, and was a copy of an old castle set in an exquisite garden. Gabrilowitsch had always lived amongst beautiful surroundings, but I was especially attracted to this one of his dwellings.

We rang the bell at the gate, and a white gloved butler descended the path and opened it for us. Then he ushered us into a high ceilinged hall with a huge oil painting of Mark Twain. Marble stairs led into the music room, which was as large as a small concert hall, with balconies and concert grand pianos. There were beautiful oriental rugs on the floor, and a painting of Mrs. Gabrilowitsch in a grotto, with a rose colored light above it.

He soon appeared and led us up to the top of the house, where a nurse greeted us, whilst holding a cute little black-eyed, black-haired baby. Mr. Gabrilowitsch, like most young husbands, wanted to show off the baby; and, with the usual awkwardness of that species, poked a green duck into the baby's face, thus frightening the poor child almost to death. The child let out a howl, and Gabrilowitsch turned away in disgust; but little Nina was very friendly to us at the end and waved us a very sweet goodbye.

#### His Unselfish Interest

GABRILOWITSCH WAS ON TOUR when I made my Berlin debut under the tutelage of my former master, Wassili Safonoff, who was in Berlin at the time. Imagine how touched I was to find in the green room the following telegram:

*"Heartiest wishes for a splendid success. Sorry not to be present. Ossip Gabrilowitsch."*

Gabrilowitsch wrote to Miss McElwee, asking for a program and items connected with the event; and so she sent him a telegram after my concert. Two days later she received a note from Gabrilowitsch, thanking her for the telegram and saying that he was so excited about the concert that he and Mrs. Gabrilowitsch had sat up talking all night; and he added:

*"Please send me a letter soon, telling me all about everything as I can hardly wait to hear about it."*

This incident was typical of the unselfishness of his interest.

#### A Surprise

JUST BEFORE MY NEXT BERLIN CONCERT he said:

*"I am so sorry that I shall not be able to hear your concert, as, unfortunately, I am conducting a concert in Königsberg that evening. But my thoughts will be with you, and I wish you the very best of luck."*

I was really very much relieved, as I did not mind the Berlin critics nearly so much as himself. That evening I had no feeling of nervousness at all, and after the concert I was amazed to find Ignaz Friedman back in the green room. In a minute one of the class flew in exclaiming, "Guess who has been here all evening!"

Soon Gabrilowitsch appeared, laughing at the little joke he had played on me. He had never had any intention of going to Königsberg that evening but had told me he would be away on purpose, as he thought it would give me a feeling of relief. He had paid for his ticket and had sat up in the gallery during the whole concert.

#### His Generosity

DURING MY LAST LESSON with him in Berlin, he asked me how many lessons I had had altogether, and also the name of the boat I was to sail on. Upon my arrival at the boat I was amazed to find a steamer packet from him, with a signed photograph, and the following note:

*"Enclosed you will find the photograph, also a check, the latter representing the amount which you have paid me for lessons. I have been saving this money for you, and I believe the time has now come when you may make some good use of it. A young artist at the beginning of her career always needs some extra funds and perhaps this amount will help you to give an extra concert or two in New York or Philadelphia. My heartiest wishes will always be with you and I shall hope to see you and to hear you when I come to America, if not sooner."*

*Most sincerely yours,  
Ossip Gabrilowitsch."*

Two years after that I went to Munich to visit some friends and had a most inspiring lesson from him, during which he said that he would always be willing to give me a lesson without charge whenever I asked for one; and that promise he always kept. He interested his own man-

ager, Loudon Charlton, in me that summer; and, when later in America he found that my piano was becoming worn out, he had a new grand piano shipped to my home, as well as concert grands furnished for all my concerts. Never once has this interest failed. He happened to be in Philadelphia when I played there a few years ago, and surprised the local manager by buying a lot of tickets for the concert.

The next time I saw little Nina she was six years old. Gabrilowitsch was living in a lovely place in Bryn Mawr. After a lesson he had to go out of the room, so little Nina entertained me most charmingly. When I asked her if she played, she replied, "Yes. I play, but not as loud as papa." Later he returned and the two together played *La Donna è Mobile*, from Verdi's "Rigoletto," Gabrilowitsch doing the *Ump-Ah-Ah* bass with the most beatific expression on his face.

He was as thrilling a conductor as a pianist. It was a joy to play under his baton in Detroit as, being teacher and pupil, we were in complete accord. He never drowned out the soloist, as he was a pianist himself, and his accompaniments were inspiring models of discretion and good taste.

#### Gabrilowitsch and Bauer

AMONG THE EVENTS OF THE CONCERT SEASON were the two piano recitals of Gabrilowitsch and Bauer. We shall probably never hear such a piano team again, where two Olympians exchange conversation. As Harold Bauer told me, they did not attempt to play alike, but to converse musically in their own individual way. This rendered them unique and different from any other two piano team.

A few years ago he and Bauer were guests of honor at a banquet in New York. When Bauer was called on to speak, he said:

*"It is really remarkable that Gabrilowitsch and I are such great friends, as we never agree about anything!"*

Gabrilowitsch jumped right up and said:

*"Oh, Bauer is exaggerating as usual! We never disagree except when Bauer's wrong!"*

Gabrilowitsch was all his life besieged by students and artists for piano instruction, but he was adamant in his determination not to teach. One of the leading pianists in Chicago told me that he had made repeated attempts to secure instruction from Gabrilowitsch, but to no avail. A famous woman pianist told me the last time she was in Chicago that she was so enthusiastic about Gabrilowitsch's playing that she simply was not fair to other pianists. She declared that he had always been her ideal. As Eugene Stinson, critic of the *Chicago Daily News*, wrote me, "I can easily see how Gabrilowitsch's pupils must love and revere him. I envy you!"

Those few of us who were fortunate enough to receive instruction from this truly unequalled pianist, will continue to be inspired by his genius through all the rest of our lives.

(End of the Series)

# The Adult Piano Beginner

WHAT SHOULD BE DONE TO MAKE THE HANDS SUPPLE

By the Noted Pianist and Pedagog  
ISIDOR PHILIPP

Translated from the French by FLORENCE LEONARD

IN A LETTER addressed to the Editor of THE ETUDE, a musician suggests that I should write an article about the training of an adult. "My particular problem," he writes, "is that of one who has intended since youth to make music his profession, but who was unable to have lessons until a senior in high school." He asks for my views as to "the possible attainment of one starting serious study so late in life."

If the hands are sufficiently supple, one can do much technically. Will, attention and reflective capability, all are stronger in an adult than in a child. I am positive that the worth of a pianist depends not directly on the number of hours spent at the piano, but rather on the degree of attention given to the position of the hands, the observance of fingering, and the manner of touching the keys. An adult is more capable than a child in fixing his attention, in observing himself, in listening

to himself, so that he may avoid mistakes. I am sure, therefore that one can make progress at any age.

Thoughtful playing spells progress.  
Mechanical playing means retrogression.

Progress is made in proportion to the amount of attention expended. If the thoughts are elsewhere, it is in vain that the fingers depress the keys.

The fundamental aim of study for the adult must be independence of the fingers. Every day there must be practice in independence; and this gives, at the same time, opportunity for perfecting the tone. Each hand must practice alone, for the hand which is not playing is making progress also. The more a piece is practiced slowly with each hand, the better it will be played *a tempo*. Speed must be diminished if the performance is not perfect, and also as soon as there is any sensation of fatigue.

The least irregularity in playing proves that the piece has not been practiced slowly long enough to permit that amount of velocity.

## Problems of the Adult

IT IS TRUE that certain difficulties—like playing from memory—are not perceptibly greater for an adult than for a child. If muscular reactions are slower, yet the adult possesses the reasoning and comprehending faculties to a degree which makes up for the loss of some of the faculties of youth. But it is most important for the young student, as well as for the adult, that the course of study—exercises, études, pieces—shall be wisely chosen and carefully graded. The ancient precept, "*Festina lente* Make haste slowly" must be kept in mind. Above all, one must not become discouraged. One of the greatest hindrances to progress is vacillation between great enthusiasm and deep discouragement.

From the musical point of view, there is a very important rule to follow, whether the student is young or old. The suggestions written by the composer are the guide to musical performance.

To the study of the mechanism of playing one must bring conscience, will, and serious spirit of analysis and reflection. It is necessary to work for a long time on a composition, to seek out its meaning, to analyze it. One must know how to phrase it, to punctuate it, to "breathe" it. These are abilities which are often developed more quickly in an adult than in a child.

I repeat, then, one can at any age, make progress, by working with will and intelligence in a well chosen course and without losing courage.

A last word. If you have found an intelligent and faithful teacher, do not make a change!

## The Hand and the Keyboard

By CARL W. GRIMM

YOUNG ALICE thoughtfully looked at her hands, after she had finished her scales. "See," she exclaimed, "I have just noticed that the thumb consists of three separate bones, exactly like the other fingers, only that one is embedded in the palm of the hand."

"Yes," I replied, "it looks that way; but when you thoroughly examine the structure of the hand, you will find that things are not always what they seem."

What follows now is the gist of our talks on the subject, as they occurred at different times. To arrive at the truth of anything, one must go beneath the surface. The hand is the terminal part of the arm. In popular usage the wrist, formed by the bones between the forearm and hand, is often excluded in speaking of the hand. In anatomy the bones forming the wrist are called by the old Greek word *carpus*. This wrist or *carpus* consists of eight bones arranged in two rows. Each bone has its own name and performs a particular service.

When it comes to scientific names, I often think of the humorous story of the conceited school girl, who said she understood perfectly how the astronomers measure the distances between the many stars, but she could never figure out how they ever discovered their names. The separate bones of the wrist seem to have forbidding names, yet in the original language they are very sensible words expressing their various shapes. Scaphoid—boat shaped; Semilunar—shaped like a half moon; Cuneiform—wedge shaped; Pisiform—pea form; Trapezium—irregular four sided figure of which no two are parallel; Trapezoid—four sided figure having two of its opposite sides parallel, and the other two not; Os magnum—great bone; Unciform—hook shaped.

### Many in One

THE PALM is that flat part of the human hand between the bases of the fingers and the wrist. This part of the hand proper is called the *metacarpus*, meaning beyond

the *carpus* or wrist. It comprises five bones, the first being that of the thumb, the others those of the fingers in succession. Notice that the thumb diverges outward from the rest.

The number of digits is five. Their skeleton consists of fourteen bones, named phalanges (meaning rows), of which the thumb has two, and each of the four fingers three.

The complete hand is therefore composed of twenty-seven bones, the wrist contains eight, the palm of the hand five, and the fingers proper fourteen. The bones form only the frame work of the hand, it has a marvelous system of muscles, which turn the hand or fingers in various directions. Besides them there are the arteries and veins and nerve chains. All these are enveloped by the skin, an important organ.

### The Source of Skill

YOU WILL TO MOVE a certain finger, and instantly your brain has the information that it has been done. Some persons have attempted to calculate how many keys can be manipulated in a second. This depends after all upon the skill of the individual, and what the ultimate human limit may be is merely a matter of curiosity.

There are as many different kinds of hands as there are faces. No two are exactly alike. Interesting books have been

published showing photos and X-ray pictures of the hands of famous pianists, artists and authors. The build of the hand and the intensity of the temperament account for the fact that the same piano will sound differently when played by various well trained performers. We attribute this individuality of tone to the distinctive "touch" of the player.

The metacarpal joint of the thumb, being shorter and diverging outward from the rest, enables the thumb to touch the tips and other phalanges of all the other fingers. Thus we can take hold of very small as well as of large objects. Still a boy, I suddenly realized the importance and strength of the thumb, when I heard of a common laborer bemoaning the loss of his right thumb, because he could no longer securely handle a shovel or pick.

The foot is formed on the same general principles as the hand, but the big toe does not diverge outward like the thumb, consequently it can never equal the hand in taking hold of things. But even so, uncanny dexterity with the toes can be developed. I remember my father telling of seeing a man who was born without arms and hands. This person traveled with a circus, as an armless wonder, and with his feet gave astonishing exhibitions of skill. He opened and closed doors, prepared his own meals, laid the dishes, ate and drank from

the same; and, among many other things, he even played tunes on a violin.

### The Mind in Control

THE MOVEMENTS of the fingers are directed by the brain, and we find that as man's hands develop so does his brain. Hands and brains react upon each other. The student who uses his brains performs well. Careless playing indicates that the mind is not on the work. Prof. Paul Broca of the Sorbonne of Paris claimed that there is a definite connection between the hands and the speech organs.

Many methods of piano playing have been based upon various theories of leverage and relaxation and pressure. In many instances these are very helpful. There is a background to piano playing that is unquestionably dependent upon the laws of mechanics. For instance, the naturally arched fingers are very generally endorsed by piano teachers everywhere. The reason is that the arch position is very much stronger and more stable than that in which the fingers collapse at the knuckle joints. A hard hand, that is, one in which the hand is tightened by excessive muscular contraction, never leads to fine piano playing. Dr. Mason, in seeking a condition of ideal muscular contraction, used to advocate an exercise in which the arm hanging at the side of the body was moved backward and forward with great rapidity so that the dangling hand oscillated like a tassel. This, when practiced for thirty or more seconds, seems to produce a condition of superior relaxation in the hand.

In time man, using his brains, increased the capabilities of his hands incredibly, by inventing tools and machines. Cities with their great buildings are after all but the products of the hand. So are the art works of sculpture and painting. In fact everything around you that does not grow exists by itself is the work of the hands.

Have you ever given it a thought that every master wrote with his own hands every single note of the sonata or symphony you so admire?

# William Mason—An American Master

High Lights in the World's Famous Piano Methods

By FLORENCE LEONARD

AMONG THE MOST IMPORTANT NAMES of those teachers and students who were seeking the solution of their problems in the study of the hand itself, and not in the mere repetition of the choice of exercises and the means of fingering, is that of William Mason, a name known to countless piano students and teachers of America. After early studies in Boston and then Leipzig, he had a year with Dreyschock in Prague, and then spent the season of 1864 in study with Liszt at Weimar. In 1867 he began his career as teacher, and in 1867 published a first volume of exercises and instructions. Certain original features for developing speed appeared in this, and the further expansion of these, together with the application of an exercise with Liszt, in most ingenious combination, formed the basis of his later complete system.

## A Tried Device

TWO FINGER MOTIF, on which all this is based, "is one of the oldest known devices for strengthening and individualizing the fingers." While Mason was studying with Liszt, there were only two others, Dionys Pruckner and Karl Klindworth. "One day the boys were discussing the subject of mechanical technic and wished for some little 'multum in parvo' (much in little) exercise, which should be comprehensive and far reaching in its results as to do away with a multiplicity of exercises and, acting like magic, would accomplish the whole thing instantly, and obviate the necessity of slow plodding. He finally decided to refer the matter to Liszt, and his reply was that, inasmuch as all pianoforte pieces consist of scale, arpeggio, chord and octave passages, the essence of these could never be wholly dispensed with; but, he continued, 'Of all exercises of which I have any knowledge, strengthening and limbering the fingers, this simple little exercise is most effective.'"

He then went to the piano and played a series of the two finger exercise, but without any rhythmic variations usually done. It depended upon the practice of this exercise solely, "and for two or three years he practiced it uninterrupted," whenever he felt the need of preparation for public playing, which at that time was a rare occurrence with him, as he had given up recitals.

He then, who got this exercise from Liszt, at a later period, also held it in esteem; and, according to the testimony of many of his pupils, he used it in his individual practice, more than any other form of exercise."

## Old Wine in New Bottles

As soon after Mason began to teach, in 1865, that he conceived the idea of the

varied treatment of this exercise, which thereafter became an important fundamental of his system or "method."

The general principles of his teaching, broadly stated, are examples of the change of viewpoint which was characteristic of this period. *How* to practice and to use the hand becomes as important as *what* to practice and *what* finger to use.

Success in developing good touch and technic, he says, depends on *method of practice*. Force, without elasticity, produces a hard tone. Too much elasticity produces a tone without character. The combination of the two principles, in right proportion, accomplishes the desired result.

The muscular construction of the whole arm, the combination of flexor and extensor muscles is involved in this combination of elasticity with force. "The triceps affords practically the key to the whole situation." It has "an important influence in the development of a generally relaxed muscular condition," and of a musical, resonant, singing and carrying tone. Daily practice, therefore, must be devoted not alone to acquiring strength but also largely to the use of that kind of touch which will develop the various muscles. All parts of the muscular system must be "in working condition," in order to produce the desired tone.

## Kind of Finger Action

THE FINGER should fall on the key, rather than strike it. "The finger settles upon the key with a determined and resolute pressure, which is, however, tempered by an immediate relaxation or yielding of the muscles throughout the arm." Playing must be musical, not mechanical. The player must have a consciousness of the *musical figure* and of the *necessary muscular motion*. All muscles, from the tip of the finger to the shoulder, must coöperate. Various touches are discriminated by the predominant activity of one part or another.

## Finger Touch, and Clinging Legato

IN *finger touch*, the finger appears as the main instrumentality in producing the tone. Clinging *legato* is the touch used for *cantabile*, or for melody playing in general.

*Exercise 1.*—Let the third finger of the left hand fall with hand touch (which will be explained later), on C of the bass staff; with the second finger curved and raised as high as possible over D, as in Fig. 1 a.

FIGURE 1, a.

While C is still depressed, let the second

DR. WILLIAM MASON

finger fall with full strength on D. While both keys are still depressed, as in Fig. 1 b,

FIGURE 1, b.

let the third finger slide up to D and the second finger rise instantly over E, without permitting D to rise. Thus the finger at the left clings and slides, while the finger at the right is continually rising and falling. Continue up the scale.

In descending the scale, the process is reversed—the upper finger clings and slides, and the lower finger rises and falls. This exercise is to be practiced with every pair of fingers.

## First Grade

### The Clinging Legato Touch

First slow form. Rhythm I. ♩ = 84

First Slow Form. Rhythm I. ♩ = 84.

Practice also impartially and faithfully, with each of the other pairs of fingers, viz.:

|             |             |
|-------------|-------------|
| Right Hand. | 4 5-4       |
|             | 3 4-3, etc. |
|             | 1 2-1       |
| Left Hand.  | 2 1-2       |
|             | 4 3-4       |
|             | 5 4-5       |

## Finger Touch: Finger Elastic

THE SECOND FORM of finger touch is the direct opposite of the first. The finger strikes and sweeps off the key in the moment of flexing.

For this touch Finger 3 of the Left Hand takes small C with hand touch, but finger 2 must be raised in a straight line from the hand, not curved. Shut 2 and pull it quickly inward toward the palm of the

hand so that in this movement it "wipes" but forcibly strikes the key D. The object in view is to secure the utmost possible flexion or sweeping movement of the striking

FIGURE 2, a.

FIGURE 2, b.

FIGURE 2, c.

ing finger." Finally, the hand remains stationary, as in 2 c but the wrist must be completely relaxed.

The *legato* produced by this finger touch is the standard tone for general use. In the clinging *legato* there is a pressure from the arm, but in the elastic touch the required strength comes from the finger alone.

## Second Grade

### Clinging Legato and Elastic Touches in Alternation

Second slow form. Rhythm II. ♩ = 96

Do not neglect in practice any of the pairs of fingers.

### Light Form of Movement

THE EXERTION required in the slow forms of clinging *legato* and elastic touches is too great for all forms of expression and is suitable for earnest and impassioned playing only. It would have an undesirable influence on the hand and tone if it were the only type of movement practiced. It must therefore be counterbalanced by the light and fast forms of the same movement. In these forms the fall of the hand in the hand touch is through a very small distance, the fingers are held close to the keys, instead of being lifted high, and the drawing in of the point of the finger as it plays, is made with the least possible movement. The tones of the slow forms depend on size and intensity of movement; those of the fast forms on clearness, quickness, flexibility and lightness.

### Staccato Forms

TWO FORMS OF STACCATO, one produced by almost imperceptibly flexing the finger at the tip (resulting, in rapid playing, in one of the so-called "pearling" touches) and the other, a moving of the finger in the metacarpal joint, complete the list of finger touches.

### Hand Position

THE HAND IS ROUNDED more or less according to the requirements of the finger touches and the arrangement of black and white keys. But the position should be "natural," without extremes of depression or of protrusion in the joints.

### Arm Touches

IN DEVELOPING THE ARM TOUCHES both triceps and scapular muscles are involved. The analysis and explanation of these functions of the arm as they are employed in Mason's *downarm*, *uparm*, and *devitalized* arm touches, and also in connection with his clinging *legato*, were new to his time.

### Triceps and Scapular Muscles

THE ACTION OF THESE MUSCLES is thus described. Place the left hand on the upper right arm (the little finger resting a short distance only above the elbow), while the fingers of the right hand are placed on the keys. Give a slight push with the arm (thus producing a tone) "the impulse coming from the upper arm." The contraction must be brief, and must be followed by complete relaxation. The contraction will be plainly felt by the left hand.

"The scapular muscles situated in the shoulder blades or upper back, exert an important influence in the production of a full, sonorous and musical tone." To develop them, use any group of large, detached chords, played at a moderate tempo. "Briskly close the fingers on the keys of each chord with a sudden push and a determined shrug of the shoulders, followed by immediate and complete relaxation." This exercise, if done in the right way, brings all the muscles of shoulder, arm and hand into brisk action and full cooperation."

These muscles act "in the capacity of a guide," leavening the action of the whole muscular system; the muscular movement becomes free and powerful. The exercise has great influence in developing "a temperament touch."

They should assist in the Clinging *Legato*, the Up Arm and Down Arm touches, and in the impulse from which the Hand Touch results.

In the *down arm touch*, the hand (and arm) fall on the keys, and the wrist is allowed to drop downward, below the level

of the keys, while the finger remains on the key. The arm falls, does not strike. "This form of touch is useful in many heavy effects, and the condition of arm" (limp muscles) "is indispensable preparation" for future work in finger exercises. To the fall of the arm is added a push from the triceps.

In the *up arm touch*, the finger rests upon the key, the wrist is below the keys, and an impulse from the upper arm, a sort of push, causes the wrist and forearm to spring away from the keys. This form of touch is likewise suited to chords and heavy octaves which require great power.

### Hand Touches

A FURTHER EXAMPLE of the pioneer quality in Mason's teaching is found in the hand touches. He discards the former idea of playing from the wrist only, and develops a touch based on the "flail-like" swinging of the arm. This differs from the arm touches, in that the hand at the wrist is more active, while in the arm touches the arm is more active. "The principal motion is that of the hand, but the impulse originates in the arm." "If the arm is held rigid the hand touch degenerates into the false form frequently taught."

### Push and Pull

MASON CLASSIFIES all forms of touch as being either a push or a pull, according to the manner in which the fingers attack the keys. "The orthodox finger touch is properly a 'push' touch. All forms of the elastic touch partake of the character of a 'pull' since they are made by a drawing in of the fingers toward the palm of the hand. "In them are involved all the peculiarly musical qualities of the playing." Push touch should be used to correct immaturity, lack of positive quality in the tone. All varieties should be used in practice,—the arm touches, the hand and finger elastic, and the "stabbing," a form devised by Mr. Bowman, of suddenly extending the attacking finger to a curved position, from a fist-shaped hand, and flexing swiftly back into the fist.

### Fingers in Octaves

TO THE ARM TOUCH or hand touch of octaves, may be added "strong and incisive

power in the finger points"—a "grasping power" which must take place at the instant of relaxing the wrist, after the fall of hand or arm.

### Rotary Motion

EXERCISES FOR ROTATING the hand (in the elbow joint), to loosen the wrist, and exercises in contraction and expansion, notably one used by Dreyschock, also conducive to limpness of wrist, are included in preparation for octaves and recommended for constant practice.

Chords are also to be played from the fingers alone or, in some cases, certain of the notes are to be played with fingers.

### Graded Exercises—Velocity Exercises

AS SOON as the form of touch was determined in his mind—indeed, before it was entirely fixed—Mason devised a series of exercises which varied systematically the accenting of the fingers and, moreover, increased the capacity for speed. The speed exercises also had as an object the improvement of *legato* quality. He says that he considers these forms—graded exercises, and velocity exercise—"to be of vital significance, and the principle on which they rest is the central thought, of his 'entire method of practice.'"

The features in which he claims originality are found, then, in the *manner of treatment* of the two-finger exercise: its adaptation to

1. Metrical and rhythmical forms, throughout varieties of grouping and accentuation.

2. The cultivation of strength and stability, as well as lightness and speed, in playing, by means of the "graded sequence" and "velocity" forms.

3. The development of a *musical* as well as mechanical *legato* quality of touch, through developing the muscular movements described.

In the Graded Exercises, Grade I is the clinging *legato* (as in Exercise 1). Grade II is the clinging *legato* and the elastic touch in alternation (as in Exercise 2). Grade III, *legato* and the mild *staccato* (formed by the rapid flexing of the finger) in alternation,

### Third Grade

#### Legato and Mild Staccato Touches in Alternation

For the sake of abbreviation, the exercises which follow hereafter are written out only the right hand part of the staff. The left hand plays uniformly one octave below the right. Fingering above the notes for the right hand and below for the left.

First moderate form. Rhythm I. ♩ = 138.

and

Second moderate form. Rhythm I. Acc. of 4s. ♩ = 138.

Grade IV, includes the First, Second and Third of the Fast Forms.

### Fourth Grade

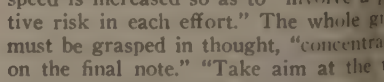

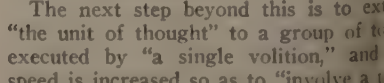

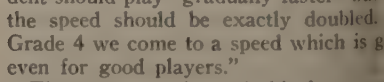

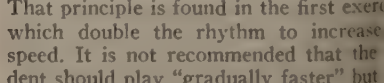

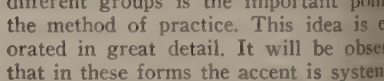

First fast form. Rhythm I. Acc. of 8s. ♩ = 96 to 120.

Second fast form. Rhythm I. Acc. of 16s. ♩ = 96 to 120.

Third fast form. Rhythm I. Acc. of 12s. ♩ = 96 to 120.

The use of the varied accenting in different groups is the important point in the method of practice. This idea is elaborated in great detail. It will be observed that in these forms the accent is systematically shifted from one finger to the other in the pairs.

### Application of the Idea of Accents

THE SAME PLAN OF FINGERING, touch accent is used in transferring these exercises to all—broken thirds, arpeggios, scales, and trills.

Velocity forms follow as the logical result of the fundamental principle of rhythm. That principle is found in the first exercise which double the rhythm to increase speed. It is not recommended that the student should play "gradually faster" but the speed should be exactly doubled. Grade 4 we come to a speed which is good for good players."

The next step beyond this is to execute "the unit of thought" to a group of touches executed by "a single volition," and speed is increased so as to "involve a positive risk in each effort." The whole group must be grasped in thought, "concentration on the final note." "Take aim at the key." Risk is involved, and many touches.

(Continued on Page 210)

### MUSIC MAKES HAPPY WORKERS

The little cut shown above is from the excellent Year Book of the well known music merchants, Rushworth & Dreaper, Ltd., of Liverpool, England, and shows the workroom of the Liverpool factory of the British American Tobacco Company. Note the sound amplifiers hanging above the workers. These are employed continually to broadcast musical programs and speeches to relieve the monotony of routine factory work. This very human device naturally leads to increased production and is thus a fine investment, from an economic standpoint. The effect of music upon industrial groups has long been recognized as a valuable means of making work more enjoyable and efficient. Many British manufacturers are using a similar means of expediting better industrial relations.

# Good Singing Must Be Natural

By BRUNA CASTAGNA

LEADING CONTRALTO OF THE METROPOLITAN OPERA COMPANY

A Conference Secured Expressly for *The Etude Music Magazine*

By ROSE HEYLBUT

WHEN ASKED to discuss the principles underlying good singing, I am tempted to say that the only correct method is the natural one. True as this statement is, I realize that it is too true to be of much help without explanation. First, let us consider what natural singing means. Perhaps we are too much inclined to think of singing, in terms of various "methods." While every vocal instructor may have his own way of arriving at the final result, this result can be but one thing—the emission of free, full, resonant tone. Thus the result is of greater importance than the method, and the first consideration must be the natural equipment of the vocal student.

The persons best equipped for singing must possess, in addition to the voice itself, robust good health and those purely physical characteristics which tend to make breath control and tonal production easy, natural matters. There are exceptions, of course; but, in general, the typical singer has the breadth of lungs, the depth of chest, the firmness of muscles, and the openness of throat which contribute naturally to the mechanics of good singing. Where these elements are not entirely natural, their effect must be acquired; and this can be acquired, by careful study and still more careful

teaching. But the person who comes by the results naturally has the greater advantage.

The vocal pupil should be allowed to sing, and to show what his strong points and weak points are, before he is bewildered by counsels and methods. Then, after he has proven what are his individual needs, his instruction should be adapted to his own particular requisites. While teaching can undoubtedly clear up many problems for him, it is also true that too many suggestions and limitations can have the harmful effect of making the pupil conscious of errors which he might never make, if left to himself. It is a fact that many abuses are the result of well meant advice. If, for example, a teacher wishes to call attention to the dangers of a nasal tone, he may cause his pupil to strive for the opposite effect with the result that the pupil's tone becomes unnecessarily throaty. The wise teacher will adapt his vocal knowledge to the individual throats and chests and problems with which he has to deal.

My own vocal teaching, for example, had to do solely with the problem of voice placing. My earliest lessons were, fortunately, not hampered by too much advice. At the beginning the only counsel my teacher gave me was to open my mouth. Indeed, he held my chin down to make

certain that my tones would have proper openness of throat. After that I was allowed to sing and to show, by my singing, what my particular difficulties would be.

## An Invaluable Background

I AM FORTUNATE in coming from a musical family. Music was in the very air of our home, and I cannot remember the time when I did not sing, for the sheer amusement of it. As a baby of two or three, I sang arias written for tenor and baritone, choral music—everything. As I grew older, my voice asserted itself as a light, high soprano, of what I believed to be *coloratura* range; and at sixteen I began to study. For three months I worked, and then something happened. My teacher noticed that, although I could easily sing notes above high G, the tones I produced verged on the falsetto; they were strong and unforced, but entirely in the head, without much body or resonance. As I was then concentrating upon the high soprano register, I did not sing many deep notes, but those that I did sing seemed richer and fuller, as if they were the notes of an entirely different voice. Thus my wise teacher determined to disregard the range of the voice, and to test it according to the indications of its natural quality and color. This, I may say, is the secret of correct voice placing. There is no set rule for the placing of voices; the experience of the teacher must serve as a safeguard against errors. The color and quality of a voice indicate its use. Range must never determine it.

To return to my own experiences, my teacher again began my work at the foundation, trying out my voice tone for tone, in a downward scale. For three weeks we worked entirely in the deeper registers, and suddenly my voice took on new body, resonance, and volume. It was three times as large as it had been, and, after all my work in the upper registers, I was really surprised that these deep, full tones should belong to me. The indications of the *falsetto* soprano tones and the fuller alto tones had led my teacher to the correct conclusion. My voice was really a true contralto. The soprano notes I had been singing meant merely a matter of extra range. Thus we set to work again, building the voice in an upward direction this time, and adding tone after tone. We worked slowly and carefully, and soon found that the higher tones, which had lacked resonance before, were now sounding forth with entirely different body and power. Through correct placing, the true voice had asserted itself. This careful working out of correctly placed tones was the only formal instruction I ever had. Six months later, in 1926, I was engaged for operatic work in Mantua. I have been actively engaged in public work ever since; but I have not ceased working and studying.

## Some Significant Fundamentals

THERE ARE A NUMBER of principles in good, natural singing which I am glad to discuss with the readers of *THE ETUDE*. First, be careful to sing always with a free, open throat. Practice vocalises on all five vowel sounds, with the throat as wide open as you can make it. Hold the chin down, if need be, to avoid constriction. To make sure the throat is well open, practice your throat position with a mirror in hand. Watch the

BRUNA CASTAGNA

little uvula at the back of the throat. When the throat is wide open, this uvula will go up. When it is up, the voice passes more readily into the chambers of resonance. If your uvula does not go up easily, practice the motion as an exercise, but be extremely careful not to tighten the throat. Normally, a relaxed dropping of the chin should aid in finding the correct, natural position. Sing the vowels with the throat well open, and it will be found that the voice sounds forth more freely.

As to breathing, the singing breath should be as natural and as normal as the breath in ordinary speaking. I have never needed special breathing exercises, because the natural build of my chest and lungs admits naturally of a sufficient breath supply. In cases where breathing exercises are necessary, the student should be careful to draw his breaths naturally, relying on the powerful abdominal muscles for support, and never forcing or constricting them. To my own personal way of thinking, the secret of the singer's breath lies in its conservation.

Again I return to the comparison of breath in singing and breath in speaking. All of us can say a long sentence, or read a paragraph aloud, without drawing extra breath. Exactly the same should be the case in singing. Young students make the mistake of drawing a full breath and then releasing it all in one phrase. Try to control the release of the breath as you do in talking. Try to release just enough to vocalize the notes of your phrase, and to release it evenly. Two errors against which to guard are:

1. Giving out the breath all at one time.
2. Giving it out unevenly.

There is a helpful little exercise to show you exactly what your habits of breath control are. Light a candle, and place it near enough to your mouth to allow your breath to pass the flame as you sing. If you are singing incorrectly, the flame will jump unevenly and then go out. If you are singing correctly, so little breath will come out that the flame will remain undisturbed. It is the principle of natural breathing that will keep the flame alive—and your voice along with it.

It is, of course, the regulated action of the diaphragm which keeps the breath even. The diaphragm must be under perfect control, especially in the case of the singer who has not the advantage of a naturally long breath, and who must learn to sing long phrases notwithstanding. Indeed, perfect control must apply to everything a singer does. While the foundation of good tone production must be entirely natural, the correct use of the voice depends upon rigid and never ceasing control. Control in

BRUNA CASTAGNA

In the rôle of Adalgisa in Bellini's "Norma"

all possible fields. The keeping of strict tempo alone is a matter of control.

### Flexibility, A Singer's Salvation

MY EARLY EXPERIENCE as a *coloratura* soprano gave a vocal discipline which I never have ceased to pursue, and which is recommended for all contraltos. That is the perfection of the *coloratura* technic. It is a profound mistake to believe that this technic is part of the soprano equipment alone. *Coloratura* technic has the effect of making the voice light and flexible, and so it is just the deeper organs which have most need of it. I practice both *legato* and *coloratura* vocalises every day. Indeed, some of the most florid *coloratura* passages in the singer's repertoire were written originally for the contralto voice. I refer, of course, to the operas of Rossini. The leading rôles of "The Barber of Seville" and "La Cenerentola," to name but two, were written especially for a contralto voice. *Coloratura* sopranos have adopted the rôle of *Rosina* in "The Barber of Seville," but only by transposition. I often sing the familiar *Una voce poco fa* in its original key, and find great use in the trills, the fleet scales, and the *piccchettato* generally associated with the soprano registers alone. But the use of these technics is not the important thing. They have distinct vocal value for their own sake, as exercises, and should be carefully included in the equipment of every contralto. Besides keeping the voice flexible and light, these vocal drills have the effect of making the passage from one vocal register to another much easier. Also, one will find it much easier to sing after fifteen minutes of pure *coloratura* vocalises.

To save it from becoming tired, keep the voice open and light, and never force the tones. Some people have the idea that if you need little breath for a short, *piano* phrase, you must push a big breath behind a long or *forte* phrase. This is not at all the case. The voice sounds forth better and fuller, and color, volume and freedom are definitely improved, by light, unforced singing. Keep the voice light, let it float. Achieve your *forte* passages by breath control but never force them. The forcing of a tone does not make it either bigger or fuller. On the contrary, it restricts volume and makes the tone harsh and of bad color. Italian singers have an amusing little saying: we say that "We spend our interest, but never our principal." That means that the fundamental vocal output must never be forced or given away; only the interest, which one earns from correct, controlled singing, may be used. It is a helpful motto to keep in mind.

The correctly used voice does not become tired. Indeed, as soon as the least suspicion of tiredness or strain shows itself, it brings with it the proof that the voice has been strained, forced, or incorrectly used in some way. Light, floating, open singing makes it possible for me to sing four or five major performances a week, to keep up with my rehearsals and private practice, and to feel fresh and ready to go on to more.

No matter how ardently the young student desires to go on to operatic work, I believe that a flexible equipment for concert singing is a necessary part of every career. Specialization is a good thing; but overspecialization carries with it the danger of becoming limited. Personally, I love both kinds of work. If I had to make a choice of a favorite, I think it would be concert work. Not that I like opera the less, but because the concert stage gives one greater freedom of expression. In an opera, one portrays only a single character. In concert, she becomes a different person with every song that is sung. One may be dramatic, the next romantic, the third one tragic, the fourth one light. At the interval of a few minutes, one has the chance of drawing on a whole palette of emotional colors. In the opera, there is concentration

on the emotions of one character alone. Thus, the versatility of the concert repertoire makes it more attractive to me. But that, of course, is only a matter of taste.

### Interpreting the Rôle

I HAVE BEEN OFTEN ASKED about the best way of interpreting operatic characters. Does the singing actress actually become the personage she portrays, submerging herself into the emotions of the character; or, does she keep a controlled distance between reality and imagination, directing her motions and actions quite as a stage-manager might direct them? I am in favor of the second method of procedure. As in all matters of art, the principle of complete control must apply. We are never anyone but ourselves. We do not become *Carmen*, or *Amneris*, or *Azucena*. If we did, we would run away emotionally; we could not sing, or remember lines, or watch the conductor's beat, or follow our entrances and our cues. We study a character so thoroughly that we know how she would act. Then we direct ourselves, very definitely, to act in this manner. We feel with her and share her emotions, and we show this in our interpretation. But always we are ourselves, controlling that interpretation. We do not say, "I am *Azucena*, I am demented." Our performance would be a pitiful thing if we were. No, we say, "I will put my best energies into showing my idea of how the poor, demented *Azucena* would behave. And the better we know *Azucena*, the more we study her, the more deeply we think about her, the more convincing will be our interpretation of her character."

In all departments of the artist's work, a foundation of natural methods must be expressed through disciplined control.

## RECENT RECORD RELEASES

By PETER HUGH REED

THE COLUMBIA BROADCASTING SYSTEM recently purchased the American Record Corporation, makers of Columbia, Brunswick and Vocalion records. William S. Paley, president of the Broadcasting concern, stated in an interview that the tremendous growth of home records during the past few years has brought about a closer association of records and radio.

In entering the record business, Mr. Paley contends, the CBS is broadening the base of its service along natural lines. "Intensive consumer studies have disclosed the fact that the use of records is supplemental to and not a substitute for radio listening," he said. "They indicate also that radio broadcasting, in itself, has widened the market for records. Our primary purpose in this new field will be to find new patterns for both serious and popular music which will give the greatest enjoyment to the public. We aim to give special attention to the field of education."

The first recording to emanate from the new company is Deems Taylor's orchestral suite, "Through the Looking Glass," played by Howard Barlow and the Columbia (Broadcasting) Symphony Orchestra (set 350). Mr. Barlow, who has featured American music in his radio programs, pursues in his first record set a course in which he has expressed himself most interested. Taylor's suite, based on Lewis Carroll's famous book, is amiable and pleasant

music; not pretentious or inflated. Its quicker movements are rhythmically alive, and its slower sections appropriately picturesque. The suite is divided into four parts: 1. *Dedication and The Garden of Living Flowers*; 2. *Jabberwocky*; 3. *Looking Glass Insects*; and 4. *The White Knight*. Barlow does justice to what must have been a difficult score to record successfully, and the reproduction is the best so far made in a radio studio.

When one poetic mind plays upon another, the results may well become cherishable. This proves true in Sir Thomas Beecham's performance of Mendelssohn's poetic *The Hebrides* or *Fingal's Cave Overture* (Columbia disc 69400-D). The composer, ever a skillful painter in music, here did himself notable justice in perpetuating his visit to the Scotch coast, and Beecham brings out all the delicate tonal nuances of the score. The recording has served the conductor well.

Toscanini, playing Rossini's overture to an early comic effusion "The Silken Ladder" (Victor disc 15191), gives a highly polished performance, which offers interesting comparison to Beecham's earlier recording of this work.

When Schumann's "Piano Concerto in A minor, Op. 54," came under the hands of that lovely English pianist Myra Hess, surely found an ideal interpreter. Miss Hess is a great poet at the keyboard, and Schumann was a great tonal poet. It is so easy to oversentimentalize much of the music in performance, but Myra Hess does not do this. The exquisite individualism of the second movement, that charmingly romantic intermezzo, is treasureably set forth by Miss Hess. The timing is rare, but this is true of the whole work. And if any readers doubt our contentions, we invite them to hear Victor set M-47, where the lady is backed by a symphony orchestra adroitly controlled by Walter Goehr.

The Czech Philharmonic Orchestra proves again that it is one of the best orchestras on record, in its performance of Smetana's symphonic poems, *Moldau* and *From Bohemia's Meadows and Forests* (Victor set M-523). Smetana, one of the most ardent of all nationalists in music, wrote six symphonic poems as a glorification of his country which bear the general head, "My Fatherland." The most popular ones of these are No. 2 and No. 4 (the ones recorded), which are pastoral in character.

Richard Strauss, in his "Sinfonia Domestica, Op. 53," turns his attentions to music to "papa, mama, and the baby"; the program of the work is concerned with family life for a day. This work is one of Strauss's most imposing scores from the standpoint of orchestration, being sonorously rich and full, but thematically less compelling. Although the material is often ingeniously developed, the themes in themselves are not among the composer's most enduring. Eugene Ormandy, conducting the Philadelphia Orchestra (Victor set M-520), interprets this work as a tremendous showpiece, making it a veritable "carnival of effects"; quite different from the more genial way in which we heard the composer conduct it. Since the reproduction is fervent and realistic, the recording will undoubtedly make many friends for its wealth of orchestral tone.

The tour of the Monte Carlo Ballet Russe has apparently created a demand for ballet music on records, for RCA Victor has brought forward an attractive brochure of the ballet, containing a treatise

(Continued on Page 210)

### AND THEY USED TO PLAY THIS IN CHURCH

Here is the serpent, and its tamer. In ancient times it was the natural bass of the cornet family and was played with a cupped mouthpiece. The wooden tube would be about eight feet long, if stretched out. Sometimes, the instrument was made of brass and copper. Because it was invented in 1590, by a religious Canon, Edmé Guillaume of Auxerre, France, it was supposed to be especially important for church services. Its use spread from France to England, where it was considered necessary in rural churches, especially where there was no organ. Its compass was seventeen diatonic notes, from low C to C. The instrument is now supplanted by the Tuba or, occasionally, by the ophicleide. Mendelssohn, Wagner and others prescribed it for use in their scores.

# The Unknown Victor Herbert

By WARREN EMMETT

## Intimate Pictures of the Life of a Widely Loved Composer

RADIO CUT its musical eyeteeth on Victor Herbert. The music of the genial Irish-American was the bridge which the toddling infant crawled the realms of popular affection. There hardly a program in those early days did not include a Herbert melody. Herbert's programs were as common as the bread of life. *Kiss Me Again* was hard to miss. If you missed the arrangement for the vocal quartet at two-fifty in the afternoon, it was only to hear an Hawaiian orchestra do battle with it at six-thirty of the same evening, not to mention the solo arrangements at seven-fifteen, eight-fifteen, and ten-thirty.

Radio was wise in clinging so closely to Herbert. His tunes were prime favorites of the public; and this fondness transcended the feeble, unfeeling performances of the works that issued from the loudspeakers of the country in the early twenties. A dotting public willingly overlooked shortcomings in the presentations, being content to marvel at this newest of arts, radio; besides, what the performance and its reception lacked, the listener's familiarity with the melodies, could make up for.

In those days, the Herbert items most heard, in addition to the famous songs already mentioned, were *When You're Away* ("The Only Girl"), *Gypsy Song* ("The Fortune Teller"), *March of the Toys* ("Babes in Toyland"), *Kiss in the Park* ("Orange Blossoms"), *Badinage* ("Pan-Americana"). Just these, and little more.

Of course, there were exceptions. There have been radio singers who occasionally sang, say, *The Only One* from "Wonderland," an operetta first produced in 1905, a program submitted for approval. But no farther than the program director. "What's this?" he would very probably ask. "Have you heard of it. Let's use *Kiss Me Again*; everyone knows that." Oh, how one knew it!

Fortunately, the same condition that existed during those static-ridden 1920's is not as regrettably true to-day. To be sure, some melodies from his lovely operetta *Marietta* have crept into popular use, due entirely to the musical ministrations of the movie adaptation and the very exploitation given the songs by Jeanette MacDonald and Nelson Eddy. A number of Herbert's songs were taken here and there; but he actually did hear "Neath the Southern Moon," an excellent song for contralto, sung by Eddy in the movie; *Tramp, Tramp*; *Ah, Sweet Mystery of Life*; and *I'm Falling in Love with Someone*. Thanks to the popular MacDonald-Eddy combination, and the host of other songs who follow their lead, the latter melodies are heard almost every hour about the radio day—or so it seems. Are there no radio singers with the voices of the pioneers from which we are comparatively few decades removed? Herbert move up from *Kiss Me Again* to *Tramp, Tramp*; *Ah, Sweet Mystery of Life*; *I'm Falling in Love with Someone*. The thought is disturbing. Is Herbert to settle down as a man of two or three compositions as have so many one-time great creators in more extensively cultivated musical fields? A glance about us encourages. Dvořák seems pretty pigeon-holed as "the composer of

VICTOR HERBERT AND HIS SECRETARY, ROBERT W. IVERSON

the 'New World' Symphony and *Humoresque*"; Rubinstein emerges occasionally from the gloom of oblivion with the *Cloister Scene* from "Kamennoi-Ostrow" and *Melody in F*; all Delius ever wrote, if we may believe what we hear, is *On Hearing the First Cuckoo in Spring*; how often do we get a substitute for Franck's "Symphony in D minor"; for every performance of Elgar's *Enigma Variations*, there are ten of his *Salut d'Amour*—but the list grows and grows, as the repertoire of each composer dwindles and dwindles.

In an effort to draw attention to the wealth of rich nuggets buried in the mine of Herbert melody, before most of this vast musical mountain is allowed to sink from sight, we have been going through our Herbert scores. They stand, forty-one strong, on a shelf before us, as we write. Along with these operettas, we have bound copies of his two operas, "Madeleine" and "Natoma" (\*); all of his piano and orchestra compositions; most of his individual songs and incidental music written prior to and concurrent with his operetta career; a number of his choral compositions, as well as his lovely cantata, "The Captive," along with works for violin and his own instrument, the violoncello. A truly staggering

array of music; and yet the greater part of it is virgin soil on which most singers have never taken a breath. We should imagine that sheer curiosity, if nothing else, would get the better of most of them. However, since it apparently has not, place a confiding hand in ours and we shall try to find some "gold" in "them there" hills of melody.

For the soprano who has sung *Kiss Me Again*, to distraction, there are many other lovely melodies, just as fine and effective. After all, the complete range of the song just misses two octaves by two notes and that is quite a spread! Not quite so widespread in its range and a truly fine song is *A Soldier's Love* from "The Prima Donna." It also was written for Fritz Scheff and is likewise a waltz—Herbert was the last of "The Grand Line" to write in three-four time, a signature that is rhythmically taboo in these days (\*\*). The verse is a gem of true simplicity; only Herbert could have written it.

And then—these have been all for soprano—we shall list the songs in groups for the various voices. There is *The Knot of Blue* from "It Happened in Nordland," an early score, but one that contains some of Herbert's best melodies. The range is an octave

and a fifth and the melody is an expansive one that yields a rich harvest to a big, well placed voice. On the second chorus, an optional obbligato gives added interest to the vocal line. Incidentally, we should like to call all singers' attention to the accent marks (-) Herbert places over various groups of notes in his songs. Observe them carefully; the marks are not merely decorative. In the fifth measure of *When You're Away* ("The Only Girl") and the third measure of *The Knot of Blue*, just mentioned, be sure to press the notes marked with accents and to slacken slightly; by which both songs immediately take on added values.

Another of Herbert's undeservedly neglected waltz songs for soprano is *To the Land of My Own Romance* from "The Enchantress," an *Opéra comique* created for and produced with Kitty Gordon, in 1911. This is Herbert at his best. An unusual modulation, midway in the refrain, gives the song a piquant touch of great charm.

If you are looking for a soprano solo of real worth and Herbertian flavor, that is not in three-four time, we would strongly recommend *Gypsy Sweetheart* from "Old Dutch." The combination may sound incongruous but the song is a gem. It has a richly warm feeling which, if properly projected, will prove definitely rewarding to the singer. It is an easy song but most effective.

Among other songs for the soprano who is yearning to find a substitute for *Kiss Me Again*, we might suggest the following: *Love Is a Story That's Old* ("The Madcap Duchess"); *Princess of Far Away* ("The Lady of the Slipper"); *Love Is Tyrant* ("The Singing Girl"); and *Someday* ("Her Regiment"). The latter is relatively simple but true Herbert. At the opposite pole are two brilliant waltz songs: *Where the Fairest Flowers Are Blooming* ("Babette") and *The Nightingale and the Star* ("Mlle. Modiste"). Both were written for Fritz Scheff.

One of our favorites is *The Only One* from "Wonderland." It presents no difficulties and shows Herbert at his tuneful best. Better known but not heard nearly often enough are *Moonbeams* ("The Red Mill"), and *Toyland* ("Babes in Toyland"), the latter being one of his finest scores.

"The Fortune Teller," his sixth produced operetta, and known chiefly for housing *Gypsy Love Song*, also contains *Romany Life*, a brilliant *tour de force* for the soprano who delights in *Italian Street Song* ("Naughty Marietta"). *Romany Life* is a shade more difficult (although it has nothing comparable to those "zizzy, zizzy, zing, zings!"); but study of it will add a worth while number to the singer's repertoire. Also from the same score is *Always Do As People Say You Should*, a simple little song of great charm. Do not take it too fast!

For the soprano who wants to tackle the real Herbert—the Herbert of quickly changing moods and tempos, of sly rubatos and vocal grace—we would suggest *In the Concert They Never Taught Us That* ("Sweethearts"). Also from the same score is the title waltz song; but since its vocal range just misses two octaves by half a tone, it does present difficulties. Besides, it

(\*) *Spring Song* ("Natoma") and *A Perfect Day* ("Madeleine"), both for soprano, are two excellent and vocally effective items for singers who are not afraid to tackle fairly difficult assignments.

(\*\*) Jerome Kern, alone of the contemporary composers of operetta, occasionally makes a foray into this highly questionable territory; but there is something just a bit shameful about these infrequent adventures.

sounds better instrumentally than vocally.

We shall leave the sopranos here, making only one more suggestion, *Out of His Heart*. This is an incidental song which Herbert wrote for "The Cinderella Man," a play produced in 1916 with Phoebe Foster in the leading rôle. The words are good and by Edward Childs Carpenter.

And now for the tenors. No one will believe us, perhaps, but Herbert did write other songs for the tenor, aside from the one about the gentleman who is falling in love with a nameless some one. As an excellent substitute, if you are looking for something pretty much of the same pattern, there is *The Love of the Lorelei* ("The Debutante"), which we are quite sure you have never heard! That is your loss, because it is a truly lovely song. As compared with *I'm Falling in Love With Some One*, the range is neither quite so great, nor is the *tessitura* at the close so brutally high and unrelenting.

If you are a bit on the Irish side, Herbert will be found to be a true bard who loved "the ould sod" from which he sprang. From the score of "Eileen," his splendid romantic comic opera (its misfortunes proved a blow to the composer to whose heart it came closer than any of his other works for the stage), we would urge you to examine *When Shall I Again See Ireland*, a broad, fervent melody, warm with Herbert's love for his native land, and *Eileen*, *Alanna Astore*, a waltz song. And while we are on songs for "Irish tenors," so called, we should like to mention *Molly*, *An Irish Love Song*. This is a separate song, that is, not from an operetta, and has a lyric by the late Rida Johnson Young. It is dedicated to Herbert's good friend and compatriot, John McCormack.

Three particularly fine songs for tenor are *Mignonette* ("Babes in Toyland"), *Goddess of Mine* ("The Madcap Duchess") and *Every Lover Must Meet His Fate* ("Sweethearts"). All three are gems; but have you ever heard either one of the first two? It is possible your loud speaker may reluctantly have unburdened itself of the last mentioned since light opera groups occasionally present "Sweethearts." A simple little song, a waltz, that will appeal to the lyric tenor, is *The Wild Rose* ("When Sweet Sixteen").

When we come to suggestions for the baritone who has shouted, more times than he cares to remember, that he wants what he wants when he wants it (bang!), not to mention the number of times he has slumbered on with his little gypsy sweetheart, we have to search a bit harder. During the first half of Herbert's operetta career, a large number of the baritone-bass arias were entrusted to *prime ministers*, *governors*, and others, who were notoriously comic gentlemen, or so they thought. Hence, their lyrics struggled feebly along allegedly humorous lines, thus making many of their songs unfit for general use. Also, the baritone was usually given to mouthing lugubrious gobs of homely philosophy, most of which sounds slightly stuffy to-day. However there are exceptions, and among them we might list the impassioned *Neapolitan Love Song* ("Princess Pat"). Subtitled *T'amor!*, it has a set of Italian lyrics for the baritone who prefers to make love in that romantic language. Four other suggestions, although a bit old fashioned in feeling, are *My Honor and My Sword* ("Babette"), *Dreaming, Dreaming* ("The Serenade"), and *My Toast to You and A Man's a Man for A' That*, both from

"When Sweet Sixteen." In these it is the words that tend to date the songs. More recent, and blessed with better lyrics are *Pretty As a Picture* ("Sweethearts") and *Will-o'-the-Wisp* ("The Debutante").

Herbert's ventures into the contralto range were infrequent and, when made, were often designed to point up a character who was more or less of a caricature. There is however, one surpassingly lovely song for the lower female voice, *If Only You Were Mine* ("The Singing Girl"), produced at Montreal in 1899). No one ever does it and yet it is one of Herbert's loveliest melodies, an enduring, haunting refrain of real contralto calibre. It will also serve, just as it stands, equally well for baritone.

For the soprano and tenor (or baritone) who are seeking duets with which to replace *Because You're You* ("The Red Mill"), surely deserving of retirement after an overly active career, we offer *Think of Me* ("The Prima Donna"), *I'll Bribe the Stars* ("Babette"), *Far Up the Hill* ("The Madcap Duchess"), *The Golden Age* ("The Debutante") and *All for You* ("Princess Pat"). A particularly lovely song for soprano and baritone is *The Isle of Our Dreams* ("The Red Mill"). Also well worth study, for soprano and alto, is *For Better or For Worse*, also from "Princess Pat." (\*\*\*)

There you are! A goodly collection of fine songs. We do hope that some radio singers will be encouraged to abandon the old and hackneyed and to substitute one or more from the many we have mentioned. While reference has been made repeatedly and exclusively to radio singers, since in these days it is "on the air" that Herbert naturally finds almost his sole outlet; our suggestions are directed to all singers of Herbert, at home or in public recital.

The salon combinations, that at one time every hotel sported, have been washed away in the successive waves of depression. These groups fattened on Herbert's graceful little concert numbers. For those pliable instrumental combinations in radio with a full string division, we would suggest, instead of constantly using overorchestrated arrangements of his songs, that substitution be made of his strictly orchestral works—such gems as *Air de Ballet*; *Forget-Me-Not*; and *Sunset*, all for string orchestra. Among his salon ventures of purest ray, let us list *Yesterthoughts*; *Love Sonnet*; *Devotion*; and *Fleurette*. His "Woodland Fancies," a suite for full orchestra has been relegated to an oblivion it in no wise deserves and from which some discerning conductor would do well to rescue it. Aside from its fine musical content, it is superbly scored, as are all the works by this master of the orchestra.

Herbert was the supreme melodist of his generation. An immensely prolific composer, he created ingratiating melodies with a dangerous ease, an ease that resulted in a heritage of almost staggering proportions. Much of his music, by its very nature, was perishable and one watches its passing with no regret. But an amazingly rich residue remains. Let us hope there are singers with sufficient curiosity to examine it!

(\*\*\*) The radio singer in search of lighter material is advised to take a look at some of the "production" numbers Victor Herbert wrote for various editions of the Ziegfeld "Follies," all of them to words by the gifted Gene Buck. It was Herbert and Buck who led the fight in the early days for the proper recognition of the composer's rights, a recognition that resulted in the formation of the powerful American Society of Composers, Authors and Publishers.

## FIFTY YEARS AGO THIS MONTH

EDWARD BAXTER PERRY, to whom our American musical students are so much indebted because of his richly pioneering spirit, offered these thoughts on freedom of sentiment in the young musician.

"Not long since, when urging upon a pupil the necessity of bringing out the deeper mood and meaning of a certain composition, the writer received this response:

"I am afraid to make it say all that, to put so much of myself into it, people will call me sentimental!"

"The reply voiced a prevailing and thoroughly American weakness. It is far too common here to find, especially among our girls, a bright, warm, impulsive nature, full of genuine sentiment and poetic fancy, choked and perverted, turned shallow and bitter, by this same paralyzing fear of ridicule: persons who take a morbid pride in concealing and repressing their better selves so effectually that even their most intimate friends shall never suspect them of being one degree less frivolous and heartless than their companions; who in their turn are doubtless vying with them in this deplorable misguided effort to belittle themselves, their lives and influence.

"It is one of the most significant and lamentable signs of the time, that any allusion to or expression of a warm, true, earnest sentiment is met in society with more or less open and bitter derision, even by those who are secretly in sympathy with it, admire the courage and sincerity of its champion, and would gladly take the

same bold stand in its defense, but not, so add their coward voices to the majority. This is the more deplorable since this tendency is at once cause and effect. The continual and systematic de- and suppression of emotion and feeling result finally in their complete extinction in most cases, or leave them defenseless and feeble, to struggle for a precarious existence in some dark, hidden recess of the soul, whose highest throne is the rightful heritage.

"George Sand says, somewhere, speaking of the French,

"We once had sentiment, but the spirit of sarcasm has scorched it from our hearts and where it grew is a desert place!"

"Alas for the people of whom this is true! Alas for the young man or woman who can say 'I have no sentiment,' and speak truth. And let me here caution a young person against a light and frequent even though purposely insincere, denial of any characteristic of value; for there is a strange and subtle sympathy between heart and the lips, which works stealthily, to bring them more and more into accord, because a lie is in every sense a violation of the laws of nature; what is first uttered as a conscious, flagrant falsehood, becomes less so with each repetition, till unawares a day will come when shall see it transformed into a glaring truth. Such a person, no matter how highly organized, or perfectly trained otherwise, is no better than a machine. He does not live, he simply runs."

### The Lazy Hand

By BLANCHE W. LATHROP

IN EARLY YEARS, having "side-stepped" to a great extent left hand practice on the piano, and having formed also the lazy habit of substituting an easy, "faked" harmony for the original, I later found myself woefully inefficient to cope with passages of ordinary difficulty in the bass. It was apparent that, if I expected to play anything, honestly and correctly, the effects of this negligence and "faking" must be overcome.

Outlining a regular routine for left hand practice, a short time each day was devoted to simple exercises, such as studies for two fingers, three fingers, and so on. Later, scales and arpeggios were used.

For some time there seemed little noticeable improvement, but I refused to become discouraged, and kept steadily on with the routine. After many months of

earnest practice, it became evident that while playing a piece in which the left hand was required to "work," the fingers were certainly doing their part smoothly.

This was encouraging, and I felt now was the time to tackle the bass passages of various measures and phrases which had formerly seemed difficult.

Enclosing these parts in brackets, I became "little studies for the left hand alone." Great benefit was derived from the practice of these little studies, for they covered a wide field and, as they trained the reluctant fingers so well, they seemed the requisite thing to play in every conceivable position.

In due time, I not only acquired a left-hand technique, but also learned less in patience and "sticktoitiveness" which have been invaluable.

### The Scrambling Pupil

By GEORGE COULTER

TEACHERS are often puzzled to know how to deal with the scrambling pupil, the unrestrainable rusher, who has no respect for accuracy, time or expression.

It is futile to tell him to take his time and to look before he leaps; one chord to him is as good as another, and it would seem he had only the vaguest notion as to what was right in sound and what was wrong.

We have cured many players of this deplorable habit by enforcing concentration on one thing at a time. This was achieved simply by taking a piece of paper or card-

board and covering from view everything of music but the one being interpreted the moment; the succeeding bar position would not be revealed until the one under notice had been satisfactorily disposed of. At times it may be necessary to reveal only a part of a bar, or even only a chord at a time.

This does make the precipitate pupil attend to detail and helps him to listen more closely to harmonic effects. It does not interrupt rhythmic flow for the time being, but this can be attended to when accuracy has been achieved.

### The Threshold of Music

Owing to the special nature of THE ETUDE for March, and of the gala "Band Issue" for April, the special serial, "The Threshold of Music" by Lawrence Abbott, is omitted from these two issues. It will be resumed in THE ETUDE for May.

# BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER  
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

## The Saxophone—Its Uses and Abuses

EARLY A CENTURY has passed since the saxophone was invented by Adolph Sax in 1840 when it made its appearance as a member of the Military Bands. As might be expected of a comparatively new instrument, there have been several improvements in construction since its introduction, the most notable being the addition of keys for alternate fingerings, improvement in key mechanism, mouthpiece, reed, and its general responsive qualities.

The history of the saxophone is rather little known—its slow acceptance as an instrumental voice, its steady growth, its amazing popularity since the beginning of the twentieth century, especially in America. That it became somewhat of an outcast is truly unfortunate and perhaps unwanted. In spite of improved structure and proofs of its freshness and vitality, the saxophone is still considered by many musicians as the "black sheep" of the woodwind family. There is ironic humor in the use of referring to the saxophone as the "woodwind that nobody blows good." Although the saxophone will soon celebrate its centennial, the antagonism and indifference with which it has been regarded is little abated. There exists a definite prejudice regarding its real value to band and symphony orchestra instrumentation. As many musicians still hold to the notion that the voice of the saxophone is suitable only so long as it is confined to beer-garden, dance hall or night club. To avoid but tolerate its use on radio and dances as a stimulant to the activities of the so-called "jitterbugs." One might find justification for these attitudes, if it is considered that the plaintive voice of the saxophone has been too thoroughly imbedded in this type of environment.

The plight of the saxophone seems peculiar in the light of the fact that other instruments have been subjected to the same treatment. Trumpet, trombone, violin and net have been called upon to mimic sounds from those of the barnyard to those of the jungle, as well as being turned into instruments that are alternately wailing, whining, crying, laughing. Can it be said, then, that in securing these effects the violinist, or trumpet is more legitimate musically effective than the saxophone? Perhaps the saxophone was born too late to have the dignity bestowed on these instruments by time. The tendency of performers to subject it to ridiculous and the heaping of indignities upon it hardly helped its cause with the more serious musician.

The saxophone is undoubtedly in the hands of a few and tied up with the efforts of a small number of inferior musicians than any other instrument; only when the efforts of competent players are directed to the fore can we truly appreciate the possibilities of the saxophone as either a solo or ensemble instrument. The contrast between mediocre and superior performance is almost incredible. In capable hands, the saxophone is revealed in its true nature, and can rightfully stand on its own as an important member of the instrumental family in the band of this day.

Some of the abuse of the saxophone arises from the popular conception of the instrument as primarily a medium for jazz, swing, or what have you. Added to this is the prevalent idea that it is the easiest of all instruments to play, and this mistaken feeling is the very reason for such inferior performance and resulting lack of appreciation of the possibilities of the saxophone.

### Not Easy to Master

GRANTING THAT FROM a mechanical and technical viewpoint the saxophone is quite simple in comparison with the other instruments of the woodwind family, the fact yet remains that the mere mastering of the rudimentary scale is in itself no mean achievement. The problems of tone production, intonation, tone quality, control and articulation are just as omnipresent and difficult to conquer as they are upon most of the other woodwinds. Since the saxophone responds so easily to the initial efforts of the student, the erroneous impression that it is easy to play takes root. With this complacent attitude, few students give sufficient attention to those elements prerequisite to a satisfying performance.

The serious student of the violin, piano, or other instrument realizes and prepares himself for the difficulties which are encountered in gaining mastery of his instrument. He has learned or has been informed of the fact that years of study and application are necessary before one can hope to be a competent performer, and he approaches the study of the instrument with the correct mental attitude. In contrast, the average beginner on saxophone expects proficiency within a very short time, and there have been instances where a performer on some other instrument has accepted an engagement for saxophone performance before that instrument was purchased!

Without a doubt, were this instrument more difficult to play from the outset—if its response to fingering were less facile, or if the C major scale, for instance, were technically as difficult to perform as on the clarinet—it is certain that we listeners would not have to bear with the abuses dealt out by incompetent players. Fortunately, all saxophonists do not play badly, and when we are privileged to hear the instrument as played by such artists as Cecil Leeson, Merle Johnson, Larry Teal and others, we immediately are aware of the beauty of the saxophone tone, of its wealth of color, and of its possibilities as an inseparable part of the modern band.

### Literature Limited

THESE ARTISTS, having been and continuing as serious students, are not content with merely producing a sound on the saxophone, but have worked on it with much the same musicianly application and in the same manner as the concert pianist or violinist. They have established a sound routine of study which is cognizant of all the factors necessary to final mastery of the instrument. It is the work of musicians such as they that helps us to realize the lack of respect and the mistreatment the

saxophone has suffered from insincere and incompetent players.

The type of literature which for years was employed in exploring the technical capacities of the saxophone, as well as the numerous "tricks" used by many players, was such as to help only to aggravate the already antagonistic attitude of many musicians. Like many of the other wind instruments, the saxophone has a rather limited repertoire. When the great mass of symphonic literature was being written, the saxophone was non-existent, and it could not be included in the works of the masters. Whether or not they would have considered it an effective orchestral voice cannot be decided, but it is significant that later great composers have given it due recognition. Within the past few years music of a serious nature has been written for the saxophone. That composers such as Glazounov and Ibert thought enough of its merits to write concertos for it leads us to believe that more worth while literature for this instrument is in the offing.

Though slightly inferior to the clarinet in compass, quality and articulation, the saxophone is of great value as an addition to the band instrumentation. Since the band lacks the string quality of the symphony orchestra, it is essential to make good use of those instruments of the band which will help to secure a variety of tonal color. The tonal quality of the saxophone, when properly played, reproduces on a magnified scale tones akin to those of the violoncello. In addition the instrument affords great sustaining power to the full choir of the brasses.

### Those Luscious Strings

IN THE SYMPHONY ORCHESTRA, where the tonal color is magnificently enhanced by the string quality, the presence of a choir of saxophones is less practical, except where it may be used as a solo voice. France, perhaps, has given more attention to the serious use of the saxophone than any other nation. It is no accident that leads composers such as Saint-Saëns, Bizet, Thomas, D'Indy and Debussy to write for the saxophone not only as an ensemble instrument, but as a solo instrument with orchestral accompaniment. A further evidence of the French recognition of this instrument is the fact that the Paris Conservatory created the post of Professor of saxophone, and this position was held by so great a teacher and soloist as Professor Mayeur.

The famous Garde Republicaine Bande of France, one of the world's finest concert bands, has for years included in its instrumentation a saxophone group which has earned the highest respect and esteem of those very musicians who would frown most upon the effects attempted by some of America's "Hot saxophonists," and give scant credit to the saxophonist of our better concert bands.

Cecil Leeson, one of America's foremost players of this instrument, is to be admired and congratulated, not only for his exceptional talent and accomplishments, but also for his courage and foresight in using a serious type of music whose quality raises

the saxophone from the "gutter," so to speak, to the recital hall. Mr. Leeson's programs contain nothing of the claptrap variety. He offers instead original saxophone concerti, as well as transcriptions of serious works written by the masters. His work is a tribute as well as an aid to the saxophone, and when it is so handled by artists, there is augury of complete acceptance by composers, musicians and those music audiences which up to this time have given it small consideration.

### Some Saxophone Problems

AS HAS BEEN PREVIOUSLY STATED, one of the most difficult problems to solve is the changing of the attitude of the great majority of players as to the latent possibilities and beauties of the saxophone. So long as the instrument is left to the devices of dance enthusiasts it is irredeemable.

Secondly, there is the necessity for higher standards of performance by the players themselves. Lastly, there is the inescapable demand for a better quality of literature, which includes original works as well as transcriptions. Of these three problems, I believe that the second is of greatest importance to the welfare of the instrument. The saxophone can come into its own only when the performer is competent, and only when his exploitation of the instrument is determined by genuine interest and high standards of performance and quality of music.

The most important element in good saxophone playing is, as in any other musical instrument, that of tone quality. Sadly enough, few players are proficient in this respect. Good tone quality arrives only with mastery of the precepts of breath control, and it is with this problem that very few saxophonists concern themselves. There must be taken into consideration several facts. As with all wind instruments, correct diaphragmatic breathing is very essential. The saxophone is quite different from the clarinet in construction; it has a more extreme conical bore, which automatically causes it to be more open and therefore offers less resistance to the air column. Due to this lack of resistance in the air column, breath control is even more essential than in instruments such as oboe, and clarinet, which, with their individual constructions set up a resistance and thus serve as an aid to breath pressure and control.

Another primary factor in the development of a satisfying saxophone tone is the embouchure. We find among our students, especially the inexperienced players, a tendency to use a clarinet-embouchure on the saxophone. This is of course a minor tragedy; it is a common fault which clearly calls for our attention. With the clarinet embouchure, we use the lower teeth as a support for the lower lip, while on the saxophone the lower lip is supported by the corner muscles of the mouth. The chin muscles are drawn up and the corner mouth muscles drawn forward. This can be achieved by the pronunciation of the syllable "du" or "doo." It will be found that this syllable serves as an aid in drawing the

(Continued on Page 205)

# MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music  
appearing in  
the Music Section  
of this Issue

## ELEPHANT'S PARADE By G. A. GRANT-SCHAEFER

The title of this opening piece for the month of March suggests at once that it is to be played in descriptive style.

Note first the *tempo* indication, *Andante con moto*, which means it is to be played slowly but with no abandonment of the feeling of motion going forward.

Let the motion be deliberately clumsy, rhythmically speaking. This effect can best be obtained by applying first very heavy accents as marked, followed by "lazy" eighths. The proper six-eight swing will suggest the swaying of the great beasts as they lumber along in parade formation.

Carefully observe the many two note slur signs, hold strictly to *tempo* once it is established, and follow all marks of dynamics.

## A SPRING GARDEN By MARGERY McHALE

The Etude sounds the first real note of spring in this number by Margery McHale. It is in waltz form, and the first theme opens with a broken chord divided between the hands. This broken chord appears at intervals throughout the first section, is essentially part of the melody, and should be so treated.

The second section, in the key of D major—dominant key—is marked to be played *animato*.

One's best singing tone should be given the sustained note of the melody and proper tonal balance established between melody and accompaniment throughout.

The pedal is simple and it is carefully marked—once to the measure.

## FELICITY By GATTY SELLARS

Chord structure, with the melody in the upper voice of the right hand, dominates this composition.

Even though the chord figures are rather extended, the treatment should decidedly not suggest heaviness of any kind to the imagination. On the contrary, play this music rather quietly and with grace as suggested by the text.

The basses are important and should be played with proper significance, using the pedal strictly as marked.

The second section, beginning with measure 17, introduces a syncopated accompaniment for the left hand, against the melody in the right.

The *tempo* is a bit slower here than in the first section.

The first theme is in E-flat major, the second in B-flat major, dominant key; and by means of the D. C. *al Fine*, the piece closes with the restatement of the first theme.

## DREAM BARQUE By FOREST M. SHUMAKER

As is so often the case, the title of this piece gives definite clue to the interpretation. It is obviously in the style of a *berceuse*, except that in place of the rocking cradle a swaying boat is indicated by the six-eight swing of the rhythm.

The text indication, *Allegretto ma non troppo*, is no doubt a warning against allowing the piece to drag. However, a feeling of drowsiness should pervade its measures except in the section marked *poco appassionato*, which probably depicts a troubled dream. Peace and serenity return, however, at measure 19 and, except

for the *accelerando* marked in measures 23 and 24, the *tempo* is again on the dreamy or drowsy side; and it continues so thus to the end where a *diminuendo* and *rallentando* fade away into nothingness.

## TORREADOR ET ANDALOUSE By A. RUBINSTEIN

In arranging this piece for piano Preston Ware Orem managed to retain the decided Spanish flavor of the original.

The rhythmical figure of the first four measures, which is repeated after each phrase of melody, is typically Spanish and places the piece definitely in the dance form.

As a dance, phrasing, accents, *tempo* and rhythm are all to the fore. The second section, beginning with measure 36 is quite vigorous in treatment. Played *fortissimo* with strong rhythmical outlines it serves as a highlight which builds up to a yet greater climax after the *glissando* passage in measure 51.

While not exactly easy, this piece has the faculty of sounding much more difficult than it really is. It should be an interesting addition to the teaching repertoire.

## THE SPINET By ERNEST HARRY ADAMS

Even as the spinet differed structurally from the piano of our day, so the music of the spinet age differed from the idiom of to-day. This piece, written in the style of an earlier musical era, is in the form of a *bourrée*.

The *bourrée* is a dance supposedly of French origin, said to have come from the province of Auvergne. However, authorities differ on the subject of its origin, and some contend that it is a Spanish dance first practiced in Biscay, where it is still danced.

The *bourrée* has certain characteristics of the *gavotte* with which it is sometimes confused. There are, however, distinctions sufficiently sharp between the two. For example, the *gavotte* begins on the third beat of the measure and is counted in fours; whereas the *bourrée* begins on the fourth quarter note, counted two to the measure—*alla breve*, usually. From which it will be readily seen that the *tempo* of the *bourrée* is faster than that of the *gavotte*.

## THE PRINCESS DANCES By JESSIE L. GAYNOR

Perhaps no one person has contributed more to the piano teaching profession by way of material and methods than Jessie L. Gaynor, the composer of this piece.

Mrs. Gaynor specialized in the teaching of little folk and many of her ideas, together with their manner of presentation, form the basis of modern piano teaching.

This little number is in *gavotte* form (compare it with the *bourrée* form in the preceding piece).

Keep an even *tempo*; make nice contrast between *legato* and *staccato* and try to create the atmosphere of the court ballroom of an earlier day.

## ST. PATRICK'S DAY IN THE MORNING By JAMES H. ROGERS

Typically Irish is this jig by James H. Rogers which should be played "briskly, but not too fast," as outlined in the text.

The repeated D in the bass gives a drone effect suggestive of the Irish bagpipes.

This effect is even more pronounced in the left hand part of the second section as the piece goes into the key of G major.

The *non legato*, shown in the very beginning of the piece, should be preserved throughout.

Perhaps a word of warning anent the rhythm might not be amiss. Very often in six-eight time, the dotted eighth followed by a sixteenth thus,

is incorrectly played and made to sound thus,

It is a trap into which it is easy to fall, hence the warning.

This piece appears at a most opportune time, coming as it does, in the March issue of THE ETUDE. It should find a place on many recital programs during the month.

## PETITE VALSE DE BALLET By FAY FOSTER

Delicacy and elegance of style characterize the interpretation of this number. It is played in slow waltz time, and the first theme calls for continual contrast between *legato* and *staccato*.

In the second section, beginning with measure 21, the melody is carried in the upper voice of the right hand. The sustained notes should be played with the best possible singing tone, using arm pressure rather than percussive attack.

The *staccato* figures between measures 37 and 43 should be played with marked crispness—a brittle wrist attack is best for the purpose.

The mood changes at measure 73 with the entrance of a new section. Here more speed and brilliancy are required and are kept in force until the *da capo* sign is reached in measure 108, after which the original treatment is resumed.

## LARGO APPASSIONATO By LUDWIG VAN BEETHOVEN

While Beethoven literally grew out of Haydn and Mozart, there were definite signs of an individual style even in his early works. In this slow movement from the "Sonata, Op. 2, No. 2," note how orchestral is the treatment. The opening measures suggest the resonance of the wind choir against an ever moving *pizzicato* of the bass viols. Again notice how measure 10 imitates (with another instrument of the orchestra) the melodic material already heard an octave higher in measure 9. And so throughout the entire movement each separate voice represents an individual instrument of the orchestra.

To play this number well assumes a certain amount of preliminary study in the sonata form generally, and in Beethoven's style in particular.

## MAZURKA IN G MINOR By FREDERIC CHOPIN

The mazurka is a Polish dance which evolved as early as the sixteenth century. It originated as a national song always accompanied by dancing.

Augustus III, King of Poland and Elector of Saxony, introduced it into Germany. Later it became popular in France and England.

Chopin gave his own characteristic treatment to the mazurka form, and by tending it and eliminating all vulgar raised it from its peasant music status to the level of sophisticated salon use, did also with the waltz form.

In addition to the one here presented which was published posthumously, Chopin composed and published fifty-two mazurkas many of which are heard frequently in recital programs.

## MY SHADOW WALKS ALONG WITH ME By BERNIECE ROSE COPELAND

Here is a short piece for the Junior readers of THE ETUDE.

The melody remains in the right hand throughout against a very simple accompaniment. The left hand is required to play in both treble and bass clefs. The phrase is carefully marked and words provided so that it may serve also as a song if desired.

## SLEEPY SONG By MARIAN W. HALL

Here is a tiny cradle song for the grader.

The rocking motion will automatically result if the first beat is slurred into the second as marked.

It should be played smoothly, not fast, and in a dreamy, lazy fashion. Words appended will act as a direct aid in the matter of expression.

## FIRST DAFFODIL OF SPRING By ADA RICHTER

Here is an easy piece in waltz time with the melody in the left hand throughout.

Until the pupil has developed confidence in "themadizing" with the left hand would be well to insist upon separate hand practice. The accompanying chords of right hand all lie within a small range and should offer but little difficulty.

## INDIAN RAIN DANCE By JOHN STOCKBRIDGE

This very characteristic Indian theme will no doubt find favor with all young pianists, as the Indian idea is perennially popular with them. Teachers should point out and help with the open fifths in the left hand—designed to suggest tom-tom and for the rest allow the child's imagination full play. The more descriptive interpretation of this piece, the better.

## ROLLING ALONG By EMILY SAUNDERS

Here is a broken chord piece to be played with a rolling motion. It is in six-eight rhythm and is written in the key of G major. The phrasing is carefully marked, and, of course, should be followed exactly as indicated.

## LITTLE MOUNTAIN BROOK By MYRA ADLER

Here is a piece of about second grade difficulty which develops the playing scale figures and trills, all woven into a piece in a clever and descriptive manner.

The middle section, with the melody in the left hand, describes a quiet, clear stream after which the brook evidently resumes its downward rush, all eager to reach the sea.

# THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

## Popular Music and Technique

1. I would like complete information as to teaching chord playing in popular music. There is a teacher here who teaches just chord playing in left hand, with popular music and I would like to know the method, if there is a method.

2. What in your opinion is the best way to start pupils? How long should they be drilled on pure technique? How many years before they begin to play much? I use the Presser books and teach my pupils technique as they advance. I am very well liked as a teacher. Some say I advance my pupils too rapidly. But the reason is, I do not spend too much time on technique. Do I do wrong? My pupils are the ones chosen after tryouts in high school to do all accompanying work for solo playing. I do teach some technique, of course.—A. F. W., Iowa.

If, as you say, you are so successful, do you want to teach popular music? Do not stick to the field in which you are successful. However, your local music dealer, the publishers of THE ETUDE, will gladly show you names of popular music methods. But I warn you now that you will find such "systems" disappointing. If you do not have the knack of playing jazz or swing, it is futile to try to develop it, unless you can spend long months in experiment and practice. Do you think it worth while? In your case, I would say, leave the popular music to others.

Those are too many questions for me to answer at one time. If your pupils read and play well enough to be selected as piano accompanists, I do not think you are doing very much, for you evidently do not have good facility and rhythm in their playing. On the other hand I am a firm believer in pure technique. Do not overdo it, of course, but give at least one such assignment at each lesson—chords, finger exercises, scales or arpeggios—and hear this out fail every week.

Remember too, that all successful persons are themselves open to sour and spiteful criticism. Some of us even flourish on it. Why worry? Just go your own sweet way, delivering still better goods to your satisfied customers. Let them do the talking.

## Plays Without Notes

I have an eight year old girl who takes piano lessons from me. She has finished John Williams' "First Book." She is quite musical, sings well, but plays by ear. She can read the notes very well, but all the reasoning on my part cannot convince her that she must play by note—not by ear. Her mother does not know the notes so she cannot help her. I never play her pieces over for her. She watches the notes fairly well the first few times she plays a piece, but then she pays little attention to them. Her mother says that she sometimes practices without her music. I know she is careless, but what can I do about it?—J. B., Missouri.

You probably are not giving her difficult enough music. Put her on something hard enough so that she will be forced to pay attention to the notes. Teachers are at fault in not letting musical children have material which challenges their minds and brains.

Try teaching her some pieces by "ear" without letting her look at the keyboard. Then afterward show her how easy it is to play these with the music. Also, give her plenty of attractive, daily sight-reading assignments from other books of grade.

You know, every child discards notes the moment he knows a piece. And almost all talented youngsters are careless. So,

I'm afraid you will just have to grin and bear it. Your little girl sounds to me quite interesting and gifted.

## Musical Journeys

I have been interested in your concerts, especially your musical journeys and your concerts for young people for a long time. I should like very much to give some similar programs for children and young people. I really do not know how to plan such a program, and would appreciate it very much if you would give me some suggestions as to your program material and how you present it to your audiences. I see that you use slides to illustrate your programs. Do you know if suitable pictures for such use are available anywhere?—L. E. N., California.

Unfortunately my other activities have temporarily crowded out the Young People's Concerts and Journeys, but I am happy to note that others have discovered the rewards (spiritual as well as financial) in this field, and are experimenting for themselves in recitals for children.

My own approach to these concerts is so individual that I hesitate to advise anyone else to follow along the same lines. This much, however, I can say with authority—any good player or singer, with exuberance, resourcefulness, youthful point of view, and clear speaking voice, can interest young people in good music, if care is taken to present the programs ingratiatingly and "humanly" enough. There must be scrupulous, thoughtful preparation which will permit last minute flexibility to fit each concert to the widely varying quality, quantity and age group of the audience.

The best place for these concerts is of course the school, during regular school hours, preferably at assembly periods early in the morning or afternoon when disciplinary problems are at a minimum. For very young children (four to eight)—which I consider by far the most important age group to reach—a twenty minute concert is long enough. No selection should run over two minutes, and the speaking continuity between numbers should be in story form. Keep to the unreal, fairy tale quality, even though it is far fetched or loosely strung together. After ten minutes let the children participate in the program by singing, tapping, or humming quietly. During the first part of the concert avoid selections that are very loud or dashing, for the children will laugh at them and get out of hand. (The only response young children know for pleasurable excitement is laughing or yelling—so watch out!) It is enough to play one or two brilliant numbers at the end of the program. Perform good music only—and especially simple pieces with direct melodic appeal. Always include one very calm piece to which you request the children to listen with left hands cupped under chins, right hands cupped under left elbows, eyes closed. Don't be annoyed by the peculiar airplane propeller noise heard during the concert, for it is only the harmless and necessary rhythmic swinging of the children's legs not long enough to reach the floor. (You'd be tempted to swing yours, too, under the same circumstances!) If restlessness becomes too apparent, announce that you need assistance in presenting the concert, or that you would like to hear the children make some music of their own; so, would the audience stand up and sing one or two songs for you (you having learned some

of their favorite songs beforehand)? Applaud them enthusiastically afterward; tell them how wonderfully they sing, and you'll have complete, happy silence for your next number, and more applause after it.

Oh, there are so many ways to make children love music! If you can hold the attention of very young audiences with good music you are not only an artist but a child psychologist as well. Tackle the problem boldly; try out a concert in a neighborhood school and persist in repeating the experiment; you will soon learn what "goes over," and you will be fascinated by the result. Through it, you will add to your prestige and also to the size of your teaching class.

For older elementary school children up to twelve years, I advise programs with titles, like "Europe in 45 Minutes"—a swift musical airplane trip from New York to six or eight countries and return; "The Magic Carpet"—a musical journey around the world; "From the Mayflower to MacDowell"—a survey of American music; "Music and Nature"—which give you a large field to choose from.

For high schools, "Great Songs of the World"; "Dances, Old and New" (or a much better title, suggested by Levin Houston, "From Sarabande to Swing"); "America's Music, from Foster to Gershwin"; "Shakespeare in Music"; "A Musical Journey to Austria and Bavaria" (selections by Schubert, Mozart, Beethoven, Brahms, Johann Strauss).

Keep your remarks to the absolute minimum—just a few short sentences between numbers. Be especially careful not to "talk down" to your audiences, and above all, cultivate a "sophisticated" attitude before high school groups. Shed the full radiance of your charm and enthusiasm on every word you say, every note you play. And, for Heaven's sake, speak distinctly, and loudly enough for everyone to hear. (How difficult this is to do, no one knows better than I.)

Arrange the piano so that as many as possible can see your hands. Become impervious to such annoyances as whispering, coughing, "spitballs" (!) and paper airplanes. Don't use printed programs, for obvious reasons. Try to be slyly humorous with your hearers, for children always like to be "kidded" along. Play light modern pieces as well as classics. I have had good success with Chadwick's *Cricket* and *Bumble Bee*, Dett's *Juba Dance*, Goossen's *Hurdy Gurdy Man* and *Punch and Judy Show*, Berner's *Funeral March for a Canary*, Philippe's *Puck*, Moskowski's *Juggling Girl*, Juon's *Berceuse* and many others.

As a contrast to the short pieces I sometimes play a ballet or "opera in a capsule" as the final number of the program. For these I have used my own shortened versions of Carpenter's "Krazy Kat" Ballet; Debussy's "Romance of the Toy Chest (*La Boite à joujoux*)"; Deems Taylor's "A Kiss in Xanadu"; De Severac's "The Little Tin Soldier (*Le Soldat de plomb*)"; Humperdinck's "Hänsel and Gretel"; and a perfectly delightful fantasy by Smith, called "Once Upon a Time."

Avoid stereotypical slides which (I found to my sorrow) only add complication and confusion to the program. They certainly do not help the music and are an everlasting nuisance. In my own years of experience with slides I have had every pos-

sible adventure—comic and tragic—except complete annihilation of audience and pianist. And if I had continued to use them, I am sure this last *dénouement* would long since have occurred!

The music and its presentation are the only things to be considered; that is why I say, cut out as much other irrelevant matter as possible. That, too, is why I am opposed to those symphony orchestra concerts for children which are clogged up with all sorts of "entertainment" impedimenta (including slides). Such events have little to do with music appreciation, and are usually associated in the children's minds with a carnival or circus. They go once for excitement, but seldom develop a growing love for music as a result. So, I say, out with everything but the music!

The importance of expanding and developing young people's concert series throughout our land cannot be overestimated. I would like to write columns about them here, but at present these few hints will have to suffice.

The Federal Music Project orchestras and bands are performing an invaluable service for hundreds of thousands of school children in their own Young People's Concerts Series. If you have one in your district try to get hold of the pamphlets which I wrote for their programs and continuities. These will give you additional, and very practical help. Unfortunately THE ETUDE cannot supply them, since only a very limited number were mimeographed by the Works Progress Administration.

## A Common Problem

I am twenty-three years of age and have been interested in the piano for the last four years. In the beginning I taught myself to read the notes and fundamentals of music and learned many chords and chord progressions and played tunes by ear. About two years ago I started taking lessons (I couldn't play any piece by note) and at first progressed fairly well. When I got to second grade music, I discovered I was playing the pieces from memory of the position on the keyboard and could not look at the notes and play. I cannot play any tune I have learned unless I look at the keyboard. I finally got discouraged and quit my lessons. The only way I can learn and play a piece is to learn the position from the notes and remember the piece and play it while looking at the keyboard. My problem is, what can I do to learn to play and look at the notes at the same time.—G. M. G., Indiana.

Let the above letter, ladies and gentlemen, be a lesson to you—that all pupils should be taught from their very first lessons to play exercises and pieces without looking at the keyboard; from the beginning they must learn to play by "feel" so that when the time comes for reading at sight, they will not need to look from the music to the keyboard. There are so many simple skipping and "sliding" exercises for beginners to play with eyes closed—which they love to practice—that there is no excuse for teachers neglecting this all important matter.

Take up your lessons again, and ask your instructor to teach you rote or "ear" melodies with chord accompaniment, not permitting you to look at the keyboard while learning them. As soon as you are sure of these, put the music on the rack and from then on, always play them with the notes. This will now be easy; and if you keep on working in the same way for several months, your "placement" trials will disappear.

# The Romance of Annie Laurie

By ROBERT JAMES GREEN

*The story behind one of the most famous of all songs*

ONE NIGHT OF 1700 A.D. a daring young Scotsman of blooded birth, with a price upon his hot, red head, for treasonable activities, rode hard from Edinburgh to the coast and the safety of a waiting sloop.

During daylight he had hidden with Stuart sympathizers and had quieted his sword arm long enough to compose a song about the beauty and charm of an eighteen year old girl he was leaving behind. The verses became one of the most famous love songs in history, repeated the world around. Mothers still sing it to their children, and British sentries on far-flung empire outposts hum it to the night air. This after more than two hundred years.

The song's heroine was Annie Laurie. The song maker was William Douglas, impoverished laird of Fingland, a small estate in the Scottish lowlands.

Douglas had just returned from the European wars, when he was introduced to Annie at a state ball in Edinburgh. Beneath great lighted chandeliers, swung from the vaulted ceilings, Annie's eyes sparkled as she whirled to the strains of violin, flute and harp playing a lively canary.

A single strand of small pearls adorned her dark brown hair, in contrast to the stiff, towering coiffures worn by most

ladies of the period. But Annie possessed the greater advantage of natural beauty and charm. Her cheeks were the color of wild roses in June.

The instant Douglas sighted her he was captivated, and he lost no time in arranging an introduction. Annie was startled at the bold gray eyes of the young man in gray coat and red-green plaid of a Stuart officer.

"William Douglas," she repeated, arching her brows and appearing indifferent. "Ah, yes—laird of Fingland."

"You seem to have heard of me!"

"Nothing more, I assure you." She maintained an aloof manner.

"I can tell you much more," he said in a low voice; "unless, mayhap, you are afraid to hear it."

"I, afraid? I'm sure there is naught to be afraid of," she retorted, "except, perchance, your red hair is a warning beacon to beware of your bold eyes!"

The music started for a branle. Douglas laughed and touched her arm. "'Tis too

fine an evening to spend dancing," he said. "Let us go out on the balcony." He opened the heavy door.

Annie glanced swiftly around but apparently no one paid any attention. With a heart beating swiftly at her indiscretion, she accompanied him out beneath the stars. They seated themselves on the base of a small statue. Douglas crossed his bare knees, looked down at his long-toed shoes with their red heels and large buckles.

"Ah, but this is peaceful. Don't you like it?"

"I've known little else." A sigh escaped her full red lips. "But peace can be monotonous. I'd like to go a-journeying and know adventure."

"Aye, there's muckle to see on the continent," he agreed, smiling. "You'd like the great shops and bazaars, stuffed with silks and satins—Dutchmen in wooden shoes and fancy gilded sleighs. You'd like Venice, too. By night all Venice rides about in boats, singing love songs."

excused himself and entered the ballroom.

Annie watched his picturesque figure stride boldly to the rear of the orchestra. She saw him place something in a musician's hand and return, carrying a mandolin.

"I'll sing to you, Annie Laurie." He seated himself at her feet and rippled the strings. Annie clasped her slender fingers together on her lap and tapped a tiny doekskin slipper with its silver buckle.

"I like old Scottish songs," he said. "They breathe of heather and a cool North Sea breeze."

*Oh, Annie ye be clad in silk  
An' pearls arc in your hair,  
Gin ye'll consent to be my bride  
Nor think o' others mair,  
Oh! Wha wad wear a silken gown  
Wi' tears blindin' their ee,  
Before I break my true love's heart  
I'll lay me down an' dee.*

*Ruins of Annie Laurie Church, at Glencairn, in Dumfriesshire, Scotland*

Annie's head was nodding in time Douglas' popular paraphrase of the popular song, when suddenly the door opened and the figure of a man bulked before the Douglas got to his feet, plainly intending to deal with the intruder.

"Father!" exclaimed Annie in a dreamy voice.

"What means this indiscretion, Annie?" Sir Robert blurted angrily.

"Father, I wish to make you acquainted with Mr. William Douglas," said Annie in a desperate effort to pacify her father.

The red faced lord glared at the young man. "A Douglas, you say? I've heard of you," Sir Robert grunted.

Taking Annie by the hand, he whisked her inside without more ado. During the rest of the evening she caught but a brief sight of Douglas.

## A Haughty Parent

THE LAURIE FAMILY returned next morning to their Maxwellton home; but Annie's thoughts remained in the Edinburgh ballroom. And, of all the music she had heard that evening, there lingered in her memory none but the song Douglas had sung, in which he had so skilfully and gallantly changed the wording in compliment to her.

Two days later Douglas appeared at Maxwellton to ask for her hand. But Annie's father, Douglas found a blustering, hard-hearted man; a local magnate and one violently opposed to a Stuart comeback.

"Ye're naught but a fortune hunting venturer!" he roared at Douglas. "A rauch wenching it in every port 'twixt Edinburgh and Paris!"

Douglas had run a sword through his hand for saying less. With a supreme effort controlled himself, but delivered a truth verbal thrust that touched Sir Robert sorely.

"I claim true Stuart blood—royal Scottish!" Douglas retorted. "Your forebears were naught but Italian shopkeepers from Dumfries, before they bought Maxwellton from the Earls of Glencairn."

This ancient history Sir Robert preferred to keep a closed book.

"Had Annie not a part in this, I'd have you gaoled!" He pounded a table with his thick fist.

"I can well believe that," Douglas answered dryly. "I doubt not 'twould serve your spite to have me brought before you at the regular assizes, like many another whose headstone now whitens the valley."

Allusion to the death penalty given Sir Robert to several free-thinking countrymen was an echo of Lowland gossip. It was ugly talk to Sir Robert's ears and there and then forbade Douglas to see Annie.

She managed to speak to Douglas, but (Continued on Page 204)

# ELEPHANTS' PARADE

This is a very excellent piece of derivative music, in that the player easily can conjure up a picture of the great pachyderms lumbering through the streets. Observe all the major accents carefully. Grade 3.

Andante con moto M.M. ♩ = 69

G.A. GRANT - SCHAEFER

The musical score for "Elephants' Parade" is presented in a standard piano format. It begins with a treble and bass clef, a key signature of one flat (B-flat), and a 6/8 time signature. The tempo is indicated as "Andante con moto" with a metronome marking of 69. The score is divided into measures, with measure numbers 10, 15, 20, 25, 30, 35, 40, 45, and 50 clearly marked. Dynamics such as *f*, *mp*, and *mf* are used to create a sense of movement and volume. The piece concludes with a final cadence in the 50th measure.

# TORÉADOR ET ANDALOUSE

Much Spanish music has been written by composers very remote from Spain and some of the results are far from Spanish. Here, however, Rubinstein seems to have caught in a remarkable manner the true flavor of Spain. This composition will at first seem difficult to many, but with practice it will readily become fluent. *Toréador et Andalouse* probably refers to the bullfighter and the Andalusian maid, suggesting a romance in Seville. Grade 5.

Arr. by Preston Ware Orem

**Allegro non troppo** M.M. ♩ = 54

*cantando*

The musical score is written for piano and voice. It begins with a piano introduction in G major, 6/8 time, marked 'Allegro non troppo' with a tempo of 54 M.M. The piano part features a rhythmic pattern of eighth notes and triplets. The vocal part enters in the fifth measure, marked 'cantando'. The score includes various musical notations such as triplets, arpeggios, and dynamic markings like *mf*, *cresc.*, *dim.*, and *rit.*. Measure numbers 5, 10, 15, 20, 25, and 30 are indicated. The piece concludes with a *rit.* marking and a final chord.

## THE SPINET (BOURÉE)

It was an old fashioned spinet  
Whose voice was once mellow,  
Time tinted its ivory keys  
A deep golden yellow.

Allegro moderato M.M. ♩ = 132

ERNEST HARRY ADAMS

This image shows a single page from a musical manuscript, likely for a piano solo. It contains ten systems of music, each consisting of a grand staff (treble and bass clefs) joined by a brace. The key signature is one sharp (F#), indicating D major or B minor. The time signature is not explicitly shown but appears to be common time based on the note values. The score includes various performance instructions: "Animato" at the top right, "Tempo I." in the third system, "soave" in the fourth system, "come da lontano" in the fifth and ninth systems, "tranquillo" in the eighth system, and "dim." (diminuendo) in the eighth system. Dynamics are marked throughout: *f* (forte), *mf* (mezzo-forte), *p* (piano), *pp* (pianissimo), and *mp* (mezzo-piano). Measure numbers 15, 20, 25, 30, 35, 40, 45, 50, and 55 are clearly visible. The notation includes many slurs, ties, and fingering numbers (1-5) above notes. A double bar line with repeat dots indicates the end of a section after measure 30. The bottom right corner of the page has the text "THE ETI".

# ETUDE'S COURSES IN CULTURE

Departments Dealing with Beauty, Health, Entertainment, Home and Studio Decoration,  
Pianos and Other Musical Instruments, Travel, Books, and General Culture.

## OPPORTUNITY!

MORE SO than with any of the other arts, the great tradition and background of music are found to-day in Europe. This fact has made American music lovers the most inveterate of European travelers. Thousands of them each year thrill to the chance of visiting such hallowed landmarks as Bonn, the birthplace of Beethoven; the workshop in Cremona, where Stradivarius, Guarnerius, and the two Amati learned their craft; Cambridge, where seven volumes of manuscripts stand as a monument to Handel's work in England.

This year in particular is going to be a boom year for transatlantic travel of all sorts. Many westerners who come to the New York World's Fair, at the greatly reduced railroad rates which will be offered to Fair visitors, will be in position to board an ocean liner after seeing the Fair, starting as it were, from the Atlantic seaboard. The average European trip itself can be surprisingly inexpensive this year. Rates of exchange in most foreign countries are highly favorable to the dollar. Moreover, Europe always has provided countless inexpensive places to stay, small hotels and boarding houses. Transatlantic crossings are slower, more moderately priced boats or in the more modest classes are increasing in popularity, especially among people to whom appearance and swank are secondary to an added week or two in their favorite continental musical centers.

ABUNDANT musical museums of the Old World—in Berlin, Bonn, Eisenach, Hamburg, Salzburg, Vienna and Weimar; in Brussels, Geneva, Paris, London and Cambridge; in Bologna, Florence, Milan, Rome and Venice—here one can find the most vivid, first-hand and exciting education in musical history.

Even in the vacation months from spring to fall, the music lover's Europe is far more than a repository of past glories. In all of the major countries there are generous schedules of musical events. In London's historic Covent Garden, between May and July, there are six weeks to two months of opera, followed by a short season of Russian ballet. Later in the summer there are very popular and inexpensive series of promenade symphony concerts. Such places as Sweden and Russia have their summer performances of opera, and all folk music presentations abound both in northern and southern countries; it has been rumored that Switzerland is planning an exceptional musical festival this year.

Paris, the National Opera conducts a complete summer season. Its most attractive feature is the Opera's ballet, which frequently presents classical and modern ballet numbers between the acts of the shorter operas. Innumerable tourists have attended the Paris opera merely for the experience of seeing the magnificent interior of the Opera House which stands in the heart of the city.

Germany has its Wagner Festival at Bayreuth, where Wagner lived from 1838 to 1883, and its general music festival at Salzburg. Less well known, but increasingly patronized in recent years, is the Vichy Festival in France. "This," says Pitts Sanborn, music critic of the "New York World Telegram," "is no longer of four to six weeks, as are most of the European festivals. This year, it began in June and ran until the middle of September, offering not only four or five attractive features in the course of the week but sometimes three a day." Vichy attempts to satisfy all musical tastes with symphony, light opera, ballet, and frequent extravagant spectacles.

### to the Fair

WHILE this department is receiving continued evidence of the intense interest of music lovers in the New York World's Fair. Requests for information are coming from every part of the country, from Canada, and even one from Guiana, from two girls who plan to spend six months in New York.

A special interest in the Fair shown by the world of music is small wonder, in view of the progress being made in the preparation of a musical schedule. Arrangements are under way to bring the Leningrad Ballet for its premier performance in this country, the Polish Ballet and the Ballet Russe. Symphony orchestras at the Fair are expected to include the New York Philharmonic-Symphony Orchestra, under John Barbiroli; the Philadelphia Orchestra with Leopold Stokowski, Eugene Ormandy and Georges Enesco; the Boston Symphony Orchestra with Serge Koussevitzky, and the Minneapolis Symphony Orchestra with Dmitri Mitropoulos. The Cincinnati May Festival Chorus and Orchestra will be invited to appear, and there will be recitals by such soloists as Flagstad, Tibbett, Heifetz, Kreisler, Rachmaninoff, Hofmann and others.

As the fascinating story of the Fair grows in scope and detail, we are piling up material to go to those who have inquired. One large travel bureau has agreed to send an attractive leaflet, describing two- to seven-day completely arranged tours, to readers of THE ETUDE who ask for information. Why not join the hordes of vacationing music lovers who will flock this year to the Fair, to Bermuda and to Latin America? Write now to THE ETUDE Travel Suite 613, 350 Madison Avenue, New York City, for the free leaflet mentioned above and other free literature on the Fair, or for information on any trip you are considering for 1939.

## HAVE A "JINX" PARTY!

"Dear Elizabeth Fairchild: I noticed as I read THE ETUDE that we might write for information about other parties. We would like some ideas for a party on Friday the 13th of this month. (E. F. thinks any other day is just as good.) The young people in church are having it, and calling it a "jinx" party. Please send me suggestions for this type party dealing with superstitions. The group will average in age about sixteen to twenty-five."

—J. E., St. Joseph, Missouri.

A superstitious "jinx" party can be lots of fun. You and your guests will have a marvelous time entering into the spirit of the thing. The invitations can be shaped like large black cat heads, with wide, open mouths and eyes marked in white ink. This will help the party to be a "yowling success." Mail them in black envelopes, addressed in white ink, backed with good luck seals.

Decorate your room with open umbrellas, hanging from walls and ceiling, and which are festooned in red and white crepe paper ruffles. Wooden cooking utensils can be hung on the walls, gold paper horseshoes over the doors, streamers on the door knobs and four leaf clovers of gold paper to hold back the draperies. A rabbit's foot could be passed to every guest as a souvenir. Invite twelve guests and have a black cat as your thirteenth guest. In any event be sure you have thirteen chairs at the table.

The hostess can masquerade as a black cat and be the thirteenth to sit down, if she wishes. All of the guests must be compelled to enter under a tall ladder. Have one at the back door too, so that those who are genuinely superstitious cannot escape passing under it.

As for games, among others, you might play "Lucky" or "Bingo." Sets are available at the five- and ten-cent stores. Give the rabbit's feet as prizes. You can also play a game with paper and pencil in which each person present is asked to list all the superstitions he or she can think of, and give horrible examples of how at least three of them came out. Or you can act out superstitions in charade form. The person listing the most or describing the best, wins the prize. Since young people love to dance, play "Knock Wood." Play different types of dance music to which the couples dance. Stop the music abruptly while each couple scrambles over to touch previously designated articles of wood. The couples not touching before the music restarts are adjudged by the referees, who are posted at the designated

articles, as "out". The lucky couple wins a prize.

Decorate your table with the crepe paper concoctions pictured herewith. Upon request, I will gladly send you directions for making these clever articles, yourself. Instead of salt cellars, you might put small heaps of salt right on the table to represent spilled salt. You could serve either of the two menus below.

### SUBSTANTIAL

Home Baked or Canned Baked Beans and Pork  
Clover Leaf Rolls and Butter  
Devil's Food Cake  
Coffee, Tea, or Cocoa

### LIGHT

Clover Leaf or Horseshoe Sandwiches (four leaf clover shaped bread spread with a mixture of cream cheese and chopped ripe olives, and stuffed olives)  
"Luckies" (finger shaped sandwiches spread with chicken, tuna or salmon salad)  
Devil's Food Cake  
Coffee, Tea, or Cocoa

This party, for twelve people, should not cost you more than five dollars for both decorations and food. It will prove one of the most enjoyable, both to give and to attend. And it will have the added advantage of uncovering and (we hope) allaying all the pet superstitions of your group.

When you are writing me for advice on parties, please allow at least two weeks for your answer, as we are literally swamped with requests for help, and we do want to do our very best for each and every one of you so that this department will be a real service. We will try to answer every request, either through the column, if the idea is one that will please a majority, or individually. Here's luck with your "jinx" party! For other party ideas, write to Elizabeth Fairchild, Room 613, 350 Madison Avenue, New York City.

## A TRUE TREASURE BOX FOR A DOLLAR

Those of you who received or who gave *Early American Old Spice Toiletries* for Christmas, or those who were disappointed because the supply of these marvelously romantic and authentic packages ran out before you bought yours, will be thrilled to know that there is now a new treasure box, pictured herewith, called *Mount Vernon*, which can be bought for \$1.00 and which will make the most exciting Easter Gift. It is a beautifully decorated, wood-fibre covered cardboard box, (grand for handkerchiefs after it is empty) with a

scene of Mount Vernon on the cover, and lined in star spangled paper. Nestling in glistening red shredded cellophane, are roses-and-spice scented toilet water, talcum, sachet and soap in very generous sizes. And to make this more of a treasure box, there is a metal mirror, decorated as in olden times with a sentimental scene, colorfully enhanced by a star spangled mat, and ready for framing. Be sure to get in your requests early for shopping information on these wonderful packages, as the supply is limited and you will surely want more than one. If you care to send \$1.00 each for whatever number you require, I will pass your order on to the manufacturer promptly.

## SHADOW STICK

Nature gave us so many beautifully delicate shadows and colors in our complexion that are, like the shy violet or modest arbutus, "blushing unseen". Not the least of these is the soft velvety coloring that lies just beneath the skin of the eyelid, and which is almost never seen. So it was with keen satisfaction, that I used *Hortense Van Raalte's Eye-Stick*. This lemon-yellow pomade comes in lipstick form, in a Wedgwood Blue enamel case. Rub it over your lids, and in a twinkling of an eye, you have brought to view the true color of shadow that gives the most attractive setting to your eyes. It is your special color, exclusive and elusive. *Eye-Stick* also comes in light blue, dark blue, light or dark green, brown and grey, if you need a greater than average accentuation. The "natural" has the added feature of smoothing your eyebrows into a gleaming line. \$1.00 each. Write me and I will tell you where to get it.

## LOVELY EYES

*Asiza* in Egyptian means "Love" and you will undoubtedly fall in love with *Asiza*, a new luxury that will add luster and sparkle, without tell-tale hardness, to your eyes. *Asiza* is the new hand-made, sun-dried French mascara, which counts, among its ten shades, one called "neutral". This can be used by one and all without the aftermath of "running". That is to say, being neutral, it just can't be seen on the skin; yet it tends to darken the lashes while grooming them impeccably. It does not harden your expression, but rather gently draws attention to your eyes. With its fat, double-row brush in its mirror cover box, it cost \$1.50. A luxury item?

## SPOTLIGHT!!!

Several weeks ago I returned to my desk to find it gaily decorated with a miniature horseshoe of flowers, bearing the legend "Success School" on a white ribbon, and conveying an invitation to hear about *Richard Hudnut's* new Beauty School, in which, during a six weeks course, the art of make-up, exercise, diet, and other beauty essentials are taught to a limited group of twenty women at two hundred dollars each! During the talks that followed mention was made of a "Spotlight Make-up" and being on the alert for new platform make-ups, I asked for and was given a consultation demonstration with one of the staff at the salon.

During this demonstration, *Richard Hudnut's "DuBarry"* cosmetics were used. They have two types of cleansing cream, one liquefying and one non-liquefying, depending on whether your skin is dry or oily. During these winter months, when we are in artificially heated rooms, the skin is apt to get dryer. I therefore recommend the non-liquefying cream, regardless, until April. Clean your face thoroughly with an upward and outward motion. Use a good cleansing tissue. It pays.

You have undoubtedly often read about using moistened cotton pads to apply skin tonic. Here is how to make them. Take squares of absorbent cotton. Soak in cold water. Take all ends and roll them in so that they do not fray as you squeeze the pads dry. Put a very small quantity of *DuBarry Skin Freshener* on one of these moistened pads and rub it all over the face. If your skin is older, use *Firming Lotion* over the face, and *Astringent* from the nostril line down to tighten the tissue of the neck.

Dry face and neck with tissue. Now pat lightly with *DuBarry Milk of Cucumbers* to form your foundation. Do this by taking a little on your finger tips, working it all over the face with light upward strokes.

*DuBarry, Paste Rouge Carmine* (this goes especially well with greens) should not be placed on the cheek bones and blended up toward the eyes. Blend rouge out to your hair line. By using a cleansing tissue, you will be able to blend the rouge and get it exactly where you want it. The consultant of this famous house recommends that the rouge end on a line with the nostrils. If you have lines under your eyes, rouge under the eyes as well.

Now powder the entire face (yes, including your eyelashes and eyebrows) heavily with *Rose Beige Powder*. Press powder well into sides of nostrils and all corners. Brush off surplus.

Take the *Carmine* lipstick and outline the mouth carefully. (Mouths are being rouged larger this season). Fill in the mouth carefully and be sure to run the lipstick well inside of the lips so that no white line will be visible when you smile. Press the tissue against the rouged lips to absorb all the excess lip rouge.

Starting at the center of the eye, work *Black* eyeshadow all the way up to the eyebrows. Blend in well with finger to the outer edge of the eyes. Do not put any shadow in toward the nose, as the effect from "out front" may be that you are cross eyed. Take a clean eyebrow brush and brush lashes and eyebrows free of powder. Be sure to brush eyebrows straight up as they are being worn that way. Smooth across top. If your eyebrows and lashes are light, use brown mascara on both. If eyebrows are light, but more visible, use eyebrow pencil to lengthen. If both brows and lashes are dark, put mascara (black) on lashes; black pencil for brows. Be sure to mascara the upper lashes heavily particularly the center ones. Brush the lower lashes lightly. Smear the eyebrow pencil, marking with your finger to give a softer

effect. Outline the upper and lower outside edges of your eyes for about one-eighth of an inch with a very sharp pencil to make the eye clearly visible through the spotlight.

This make-up looks perfectly natural, when you are in the blazing glare of a spotlight. Tone it down before you get on the platform by brushing powder over the cheeks and eyelids and taking off some of the lipstick.

I again remind you to practice this make-up several times before you plan to wear it, so that you will be letter-perfect on the night of the big concert, and not need to be ill at ease, wondering just how you look. Yes! But it's an economical luxury. It lasts and lasts and lasts. More information for the price of a post card.

## PRETTY, PLEASE!

At mid-term graduation time, I met up with a young lady, who was about to take part in some high school theatricals. Wishing to help all I could toward making the affair a success, I asked what type of make-up I could show her, so that she would look the part she was playing. Her answer was "Oh please! The ingenue make-up. Pretty, please!"

Now as the spring amateur theatrical season draws near, and those plays on which you have been working so hard all winter, learning lines, music, planning scenery, costumes, etc., are nearly ready for the big moment, it is time that you started learning to perfect your make-up, so that you will look your prettiest and best from across the footlights.

Most amateur plays, operettas and so on, are given on a miniature theatrical stage, today—a stage which has a complete battery of amber, rose, blue and white lights. A complete grease paint make-up would therefore be in order to show a peaches and cream complexion from out front.

Be sure to remember that under amber lights the complexion darkens or yellows, rouge fades out and blue shading becomes gray. Under red lights, blue will turn to black and vice versa. So will orange and yellow under red lights. Under yellow lights red will turn to pale yellow, and darken under green lights. So you must make up to match. Here's how!

After you have cleaned your face thoroughly, and spread the customary light base film over it, cover the entire face and back behind the ears with #1 (Pink) grease paint. Over this work in #2½ (Deeper Pink) soft paint. Place #2 (Light) rouge in the customary places, just as you do in your street make-up, making it of course correspondingly heavy. You can get the effect by squinting with half closed eyes into a highly lighted mirror. Shadow your eyes with #6 (Light Brown), #9 (Medium Blue) or #20 (Blue-Green).

You can use either #2 (Light Pink), #18 (Natural) or #19 (Blondette) face powder. The same rouge as you used for your cheeks will do for your lips.

Be sure you outline your eyes and eyebrows, so that they will be visible to those "out front." Mascara your eyelashes very heavily. A short line drawn at the outer edge of the eye will open the eye while a tiny red dot on the inner corner near the nose will make them seem further apart. If you still seem too pale, apply dry rouge with a rabbit's foot. Be sure your make-up extends well behind the ears and does not end with the jaw bone. Tint your arms and neck with a liquid powder the same shade as your soft grease paint.

This particular make-up is good for the leading lady, and just as good for those in the chorus. It will make you look your very best, whether you are out in the front line, or are one of those who shine almost unseen.

## SPRIGGY SPRING IS JUST AROUND THE CORNER

As I write this it is raining gallons sleeting tons from one breath to the next—and yet here at my desk I know Spring is just around the corner. For I have just revelled in the revitalizing of *Yardley's April Violets Perfume*. A tiny whiff of it and you think you are in the midst of huge beds of early violets smelling their woody odors, feeling deep-green foliage. In this day of "girl" fashions, soft sentimental ball gowns, hoops, flowers, laces and feathers, a old fashioned odor such as "grand

used from *Yardley's*, is just the thing. A package, as seen above, will genuinely grace your dressing table. A ½ ounce tin is only \$2.50, the full ounce \$5.00. The fragrance also scents soap, bath salts, tablets, dusting powder, toilet water, cum, sachet and compressed blossoms your underthings, your dresser drawer your closets. Write me for the name of your local dealer who carries "April Violets".

## LIP TONE

Both as hostess and as guest, you will doubtless been annoyed hundreds of times at the awful red smears left on white towels and napkins by so called "indecent lipsticks". They just don't wash out. I just had tested *Princess Pat's Liquid Lip Tone*, which is a boon to fastidious hostesses. Applied with a soft woolly lipstick brush applicator, pressed almost dry, this lip stays on until it is taken off with a "mover" which is included with the attractive little flacon. *Liptone* comes in enchanting shades, *English Tint*, for pronounced blondes, or women with faces framed in gray or platinum hair. *Light*, fine for girls with light brown hair, hazel or light eyes and fair skins; *True* for dark hair, brown eyes and tan complexion. This shade is fine for sun make-up. *Parisian*, on "ze ozzer" hand grand for brunettes with rich creamy skin or for the Irish type, blue eyes and dark hair. Use *Medium*, if you are dark-haired and dark-eyed with a medium complexion and *Regal* for very dark or black hair, dark eyes and olive complexion. If you don't want to be a "towel-tinter," and cannot find *Liptone* at your local cosmetic counter, write me for the nearest dealer name.

If you want shopping information on any of these fine products or additional suggestions on stage and platform make-up, write to me at 350 Madison Avenue, New York City and I will answer either through this column or directly.

Theodora Van Doo

# Music and the Child's Decorative Sense

Making the Music Room a Haven of Charm

By ANNABEL COMFORT

**M**USIC HATH CHARMS but not enough charm to cover up a poorly decorated music studio. The music teacher of today has more opportunity to make his studio an attractive work of art than those of former years ever thought could be possible. What could be of more lasting value to any child than this gift. With interesting equipment on the market, Mother may spend her time to advantage transforming a room of the home into a music room of distinction for her child.

Let us consider the piano as the first requirement of the music teacher and student. The piano manufacturers have steadily realized the ever increasing music consciousness of the nation. Apparently they have settled on a policy of restyling pianos to make them extremely decorative, adding charm to any room in which they are placed. The piano has been trimmed down to a size that will fit in almost any nook or corner. These small uprights are known by several names but the most common are "console," "vertical" and "spinnet" with the exception of one style which is really fashioned after the early spinet on which Mozart and Haydn composed their music. In the small music studio these pianos are ideal.

Consoles are made in a complete range of high period designs and in woods running from the dark mahogany to bleached finishes. Ebonized pianos are attractive in modern rooms where black table tops are combined with blond woods. The mahogany case is the usual choice for use with eighteenth-century furniture. A walnut case is preferred where there is walnut or oak furniture. And of course there are the maple spinets and consoles for maple rooms.

Those who wish their piano in personal colors may order them in any custom-made shade they like. Some are upholstered with fabric resembling a chintz, so that the piano may become a flexible article in a room's decorative scheme. Curtains, upholstering and slip covers may now be selected to match the chintz covering of the piano. Others are decorated in leather making it possible to match furniture upholstered in leather. One of the extreme designs employs zebra's skin. If one wishes to decorate a studio in white the opportunity has arrived. You can now purchase a white console.

## Placing the Piano

EARLY ALL OF THESE models have a full keyboard of 88 notes and stand about thirty-six inches high. Placing them in interiors should not present a problem. The consoles are best set against a wall with a table at one side to balance them and an easy chair gracefully placed at the other.

The piano must be placed in the studio for the greatest pleasure and convenience of the player and the listener. Whenever it is possible daylight should reach the piano from over the left shoulder. The perfect piano illumination is an adjustable floor lamp with a three way bulb and direct and indirect lighting can be adjusted to suit the conditions of the studio.

A wooden piano bench with a smooth top may be desirable for piano practice or something a little more ornamental would serve the purpose. A good looking chair, perhaps. One may cover the bench or chair with a fabric cushion that matches the window drapes and upholstered furniture.

Speaking of window drapes, a glazed chintz dotted with music notes may be released in various colors. If one wishes to be classic a chintz decorated with the design of a lyre is attractive. We must not forget that the furniture in the music studio may be upholstered with these identical materials, already adding a harmonious note to the decorative scheme.

A simple but graceful arrangement easily adapted with the new type piano. (above)

This very new piano cover matches the draperies with charming unity. (left)

A fine Colonial atmosphere with a Spinet in the modern home (left)

A definite modernistic effect with a white piano for the child's music room. (below)

The walls should not be overlooked. After a coat of paint a musical staff of five black lines may be painted around the room where the moulding is usually placed. To this may be added well known melodies, painted on the staff not forgetting the bass and treble clef. This should attract and interest the eye of any child. A decorative wallpaper is now purchasable depicting the "Gay Nineties" with tunes and scenes of this period. Again a suggested classic atmosphere is possible by using a wallpaper design of Orpheus playing the lyre.

WE MUST NOW FACE THE PROBLEM of proper wall decoration. Children show a fondness for plaques. Unbreakable plaques are wrought in many colorful designs and are inexpensive. The front covers of "THE ETUDE" beautifully framed have enhanced the charm of many studios and will continue to do so in the years to come. Black and white etchings and woodcuts of the famous composers will always remain in good taste. A large "rhythmic" oil painting or print, a wall shelf or a mirror will tend to give depth and roominess. Occasionally a decorative wall hanging is effectively used, such as a beautiful old Chinese brocade, a cherished piece of needlework, a handwoven fabric, a damask or a piece of tapestry.

The top of the piano should never be cluttered with music. Make a practice of immediately replacing your music in a container. A big bowl of flowers, a plant or some decorative object that can be lifted off easily and quickly, is all that is necessary to give interest to that part of the instrument.

A WOODEN MUSIC CONTAINER with casters, such as is used to hold magazines, is convenient when placed near the piano. It may be pulled around as one pleases. In addition, a decorative music cabinet (one that is home made will serve the purpose), should be painted with a music design and partitioned to hold portfolios of miscellaneous pieces and music albums. Where the studio has a built in book-case for music books, the lower shelves can be enclosed with panel doors for music cabinet use.

Not forgetting the child of preschool age, a word is not amiss concerning the many interesting musical toys that are now being made for the musical appreciation of the small child. For instance, the musical doll cradle and doll buggy that plays Brahms "Lullaby." A hurdy-gurdy in which a child may store records and play toys. A musical merry go round, grind organ and (Continued on Page 208)

# THE FORWARD MARCH of MUSIC

A Department Providing the Study-Basis for a Broader Musical Background

## THE MAGIC OF PIANO CHARM

WHEREIN does the permanent appeal of the piano exist? Few people are able to answer this question. Keyboard string instruments date from the fifteenth and sixteenth centuries. The first invention was that of the application on an action (or machine) so that a dulcimer or psaltery could be played by mechanical means instead of striking it with little hammers as the Hungarian cymbal (a modern form of dulcimer) is played in gypsy bands. The thing that actually struck the wires was a tangent or a little bar of metal. This caused a hard, sharp blow and the string vibrated for a very short period.

The next development was an instrument in which the strings were plucked. At first, crows' quills were used to accomplish this purpose. Here also the vibrations were short lived. Finally the Cristofori pianoforte arrived about the beginning of the eighteenth century. It was the first instrument of the keyboard type which permitted loud or soft playing. The wires were struck with felt hammers, which were immediately removed from the wires once the sound was heard. Now here is the important point, the string continued to vibrate. Improved instruments with superior sounding boards were introduced during the succeeding centuries until we now have the modern piano. With this, the art of the instrument has developed.

That is, the music that is being written for the piano to-day is wholly and totally different in its aims and its objective than the music of Bach, Haydn, and Mozart, because they had no such instruments to play upon as we now have. Bach never saw a piano. Haydn, Mozart, and Beethoven did, but if you will think of the best antique in Aunt Het's parlor, down on the farm, a piano, let us say, dating from 1820, you may realize what kind of an instrument they knew.

Chopin knew better pianos and Liszt and Rubinstein still better ones because they lived at a later period. Chopin, with his consummate genius, began to explore the mystery of the pedals, the magic of the overtones and he literally created a new art for a new instrument. The same thing has occurred with Debussy, Ravel, and others in our own century. They heard the all entrancing mixture of colors and overtones which, when liberated by the damper pedal, contributes an allure which makes the piano different from all instruments.

When you buy a new piano this is one of the things you will want to test with your own ear. Put the damper pedal down and note the volume of the overtones, the sympathetic vibration of the other strings that are not struck but which sound in a beautiful artistic affinity. If the piano sounds like an old-fashioned xylophone (without amplification) and has no continued tones or overtones it may not be an instrument that will give you lasting satisfaction. Do not buy a piano for the case alone. It is the tone that should be the first consideration.

Tone again is a matter of individual taste. The piano that may please one person may not please another. On the European continent there are pianos with a light "stringy" tone, very vibrant and very sweet, but not at all popular in England or in America. In this country we seek sonority, clarity and mellowness. It is a good plan when possible, to try over a great many different instruments even of the same make. Like automobiles every piano has a character of its own.

## MONTHLY MUSICAL EXPANDING YOUR CULTURE QUIZ CULTURAL AND MUSICAL LIFE

By Joel Anderson

After each question in parentheses will be found the number of the page in this issue upon which may be found the answer to the question. Let each question count for ten points. After you have set down your answers, correct them by referring to the pages mentioned. Then credit yourself with ten for each correct answer. Total this amount and you will have a revealing estimate of your general musical knowledge.

1. Give the names of two operas which were thought to have brought bad luck to those who sang in them? (Page 149)
2. What Singer made "Kiss Me Again" famous (Page 151)
3. Where is the oldest organ in Belgium? (Page 198)
4. Where did Annie Laurie first meet her lover? (Page 166)
5. Name a way in which to avoid looking at the keyboard when playing (Page 165)
6. In what Oriental country did Leopold Godowsky find great inspiration? (Page 150)
7. How old is the saxophone? (Page 163)
8. What is a serpent? (Page 160)
9. What English firm uses music to inspire its workers? (Page 158)
10. What famous American Liszt pupil devised a great system of technic? (Page 157)
11. What is the "Music Is My Hobby" broadcast? (Page 154)
12. Can scales be practiced musically? (Page 151)

ONE of the most original books upon art that has appeared in recent years is Alan Burroughs' "Art Criticism from a Laboratory" (Little, Brown and Company, \$6.00). The author is a fellow and x-ray specialist of the Fogg Museum at Cambridge University. By all imaginable scientific means he has been regarding the works of the great masters with a view to deciphering the materials and the technic employed by the masters. The author is a man of fine prescience and this work will unquestionably become one of the "must" books in the fine arts departments in colleges from coast to coast. All this, however, gives us a feeling that the microscopic survey of these technical channels will bring us very little of the essential intangible voices of the soul, without which any work of art becomes a mere commonplace.

One of the most fascinating and one of the least known areas for literary exploitation is that of the Aztec civilization which antedated the coming of European adventurers for thousands of years. The disappearance of this culture, save for a few archaeological remains, is one of the tragedies of history. Few young people know very much about this marvelous race or its conditions of life. Therefore we greet with pleasure "Aztec Drums" by Alice Alison Lide (Longmans, Green and Company, \$1.50) designed to carry older boys and girls to this wonderful land of the past through the means of a very candid and exciting romance in which the love of the ancient folk is told in a most effective manner. We recommend the tale heartily to teachers who are endeavoring to bring a wider general culture to their pupils.

Readers of THE ETUDE, looking for a delightful and forceful piece of fiction giving a graphic idea of that remarkable period in American history in Iowa during the pioneer days in the fifties, and sixties will find Bess Streeter Aldrich's "Song of Years" (D. Appleton and Company, \$2.50) not merely a very engaging story but an inspiring historical novel of the men and women of the Middle Border. Mrs. Aldrich has explored the romantic background of the Cedar River country from the Log Cabin days to the no-rental niche period that followed. She takes us personally to the parties, the weddings and the quilting bees of these hardy pioneers and makes her characters stand out from the pages in a manner which is in many ways very notable. It is a book that has an especially strong appeal to women, although many men will find it likewise very absorbing.

### New Views of Poetry

PERHAPS ALL OF US would lead happier lives if we lent ourselves just a little more to the rhythm of poetry. The Oxford Book of Light Verse (The Oxford Press, \$3.00) is one of those estimable anthologies which cover the best in certain phases of literature and here we have those little bits which add sunlight to the human picture and joy to life. The range is from Chaucer down to the fateful ballad of "Casey Jones." An introduction to this book by W. H. Auden, himself a gifted poet, is an excellent presentation of the values of poetry adding interest to the book as a whole.

## KEEPING FIT PHYSICALLY

Doctor Rhythm

READERS of the recent book, "The Doctor Prescribes Music," by Edward Podolsky, M. D., will expect to see the corner druggist featuring sheet music and phonograph records soon, the family doctor arriving on his next visit accompanied by a brass band.

Music, says Dr. Podolsky, has the power to increase or lower the blood pressure, to accelerate breathing, to ease pain, and to aid or to hinder digestion, according to its mood and tempo. The mental effects of music include insanity cures and the improvement of personalities warped by bad environment.

In the January issue, this department cited Jutta Bell-Ranske on the healthful effects of singing. This point of view is confirmed and elaborated in "The Doctor Prescribes Music." "Although even mere listening to music has definite physiological effects," says the author, "actual performance can be more beneficial to the health. Physically, singing 'promotes proper breathing, aids digestion and improves the circulation'; mentally, it is a highly satisfactory outlet for pent-up emotions.

From the magical incantations of the ancient Egyptian priests to the factual discoveries of modern experimental science, Dr. Podolsky's book presents a brief, practical outline of the field of musical therapy and hygiene. Of especial interest to music lovers are the author's prescriptions of specific compositions. As tonics for sluggish hearts, for example, the author recommends Liszt's "Hungarian Rhapsody No. 2" and Gershwin's "Rhapsody in Blue." A sedative for a racing pulse is the "Invitation to the Dance," of Weber. Dinner music prescriptions for better digestion include Sibelius's "Finlandia," the Haydn "Clock Symphony," and Smetana's "The Moldau." These are merely a few random selections of the many works which the author discusses and lists in what he calls his "musical pharmacopeia."

### Alphabetical Eating

FOR ALL THAT, the question of a good dinner will probably always remain more important to health than that of good dinner music. Last month we considered some of the rules for avoiding contact with colds. Once we are exposed to contagion, however, colds may be resisted—in fact, it is believed that the cold virus always is lurking in the oral cavity, waiting for the opportunity of lowered resistance. A primary factor in building resistance to colds is proper diet.

Proper diet for the normal person simply means getting three substantial and well-balanced meals a day. Breakfast should not be limited to a cup of coffee gulped in the course of a mad dash for the front door. Prepared cereals and eggs a few times a week should be included on your morning menu.

A balanced diet is one that contains all the essential vitamins. The average American table carries enough variety so that you need not spend your time worrying about such dramatic vitamin deficiency diseases as beriberi, scurvy and pellagra. Nevertheless, vitamins are important enough to growing children and to adults in preventing cold weather infections to warrant your planning meals with vitamin content in mind.

For resisting infection, vitamin A, C, and D may be noted. Vitamin A governs the (Continued on Page 205)

# GAVOTTE

## SECONDO

FRZ. JOS. GOSS

1734-1829

Allegretto M.M. ♩ = 108

The musical score is written for piano and bass. It consists of eight systems of two staves each. The key signature is one sharp (F#), and the time signature is common time (C). The tempo is marked 'Allegretto M.M. ♩ = 108'. The score includes various dynamic markings: *pp* (pianissimo), *p* (piano), *mf* (mezzo-forte), *f* (forte), and *cresc.* (crescendo). There are also articulation marks such as slurs and accents. The piece features several repeat signs and first/second endings. The notation includes chords, single notes, and some triplet markings (e.g., 3 1, 2 1 4). The overall structure is a short, lively dance piece.

PROGRESSIVE MUSIC FOR VIOLIN ENSEMBLE

POLISH DANCE

CUTHBERT HARR

Arr. by Bruno Reibo

Allegro moderato e con spirito

Piano  
ad lib.

The musical score is arranged in six systems. The first system includes staves for the 1st Violin, 2nd Violin, 3rd Violin, and Piano. The Piano part is marked 'ad lib.' and features a rhythmic accompaniment. The Violin parts are in 3/4 time, with the 1st Violin playing a melodic line and the other two violins providing harmonic support. The second system continues the Piano part and the Violin ensemble. The third system features a 3rd Violin part. The fourth system features a 1st Violin part. The fifth system features a 1st Violin, 2nd Violin, and 3rd Violin part. The sixth system continues the Violin ensemble. The score includes various musical notations such as notes, rests, and dynamic markings like *f*, *mf*, and *sfz*.

MYRA ADL

Musical score for 'Little Mountain Brook' in 4/4 time. The score is divided into several sections. It begins with a forte (*f*) dynamic and a melody in the right hand. A section marked '10' follows, with a piano (*p*) dynamic and a 'rit.' (ritardando) marking. Another section marked '15' features a forte (*f*) dynamic. The score includes various dynamics such as *p*, *f*, *cresc.*, *dim.*, and *rit.*. A section marked '20' is labeled 'Fine'. The piece then transitions to a 'Meno mosso' section with a piano (*p*) dynamic and a 'marcato il basso' marking. The final section is marked '25' and includes a 'D.C.' (Da Capo) instruction. The score is written for piano with a left-hand part indicated by '*l.h.*'.

# HOW TO BUY A NEW PIANO

Piano facts which will save the buyer money and help him  
to make a safe and satisfying selection.

By William Roberts Tilford

Prepared after extensive research conducted by  
**THE ETUDE MUSIC MAGAZINE**

THE ETUDE has conducted an extensive survey of the piano  
manufacturing field—interviewing manufacturers and tech-  
nicians of pianos of all types and has now in process of pub-  
lication a booklet which should be in the hands of every  
musical person interested in knowing what makes "good  
value" in a piano investment.

You may secure one of these booklets absolutely without  
cost by sending us your name and address, and also the names  
and addresses of at least five musical friends who might be  
interested in the purchase of a piano. You may use the fol-  
lowing coupon, or write the names and addresses on a plain  
sheet of paper. Address your envelope to

"Known for Tone"

**MATHUSHEK**

§ Distinguished in the field of  
fine piano building since 1863,  
MATHUSHEK PIANOS are ac-  
knowledgeed as being among the  
outstanding creations in the pro-  
gressive development of the piano.

The inimitable SpinetGrand is  
the newest, most epoch-making  
product of Mathushek's workmanship

§ The popularity of the Spinet  
Grand is signalized by country-  
wide commendation in the press  
and by people who are prominent  
both socially and professionally.

§ Aside from the added pleasure  
and prestige enjoyed, it is econom-  
ically sound to purchase a Quality  
Piano. The SpinetGrand satisfies  
the most exacting demands of the  
widely revived interest in the piano,  
both musically and decoratively.

## The ELECTRONOME

ABSOLUTE  
ACCURACY  
OF TEMPO  
UNDER ALL  
CONDITIONS

"The Metronome that Operates Electrically!"

Teachers, students, master-musicians, hail the  
Franz ELECTRONOME as the only aid to PER-  
FECT TEMPO that is ABSOLUTELY CORRECT  
under all conditions and in any position. It is  
controlled by one of the world's finest precision  
motors; sealed and lubricated for a lifetime of  
service, and covered by a 5-year written guarantee.  
No springs to wind, no tension to weaken; the  
electric impulse is always exactly as you set it for  
tempo, from 40 to 208 beats per minute.

**MUSIC MASTERY MADE EASY**

Ask your music dealer for a FREE trial. If, after  
testing the ELECTRONOME six days, it fails to  
give full satisfaction, your money will be instantly  
refunded. If your dealer does not have the  
ELECTRONOME, send us his name and full par-  
ticulars will be sent you; also arrangements made  
for a FREE trial without obligation.

# THE SINGER'S ETUDE

Edited for March by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

## Strengthening the Laryngeal Muscles

By GURDON FORY

THE GLOTTIS is a longitudinal opening between the inner muscular walls of the larynx or voice box. The edges of this opening are the vocal cords. They are supported by these muscular walls and adhere to them by growth just as a tendon adheres to a muscle. In fact the cords are in the nature of tendons. These muscles bring the cords into close proximity as we wish to sing or speak; and the breath passing through the opening between sets the cords in vibration. This is the beginning of tone.

The muscles mentioned not only act as supports for the cords but also adjust their length, breadth and thickness as well as their degrees of tension. They are like the lips of a horn player, and the cords are like the thin vibrating edges. And just as the trumpeter works "to get his lip up" and to keep it up, so must the singer build up these laryngeal muscles—the Crico-arytenoid muscles they are called.

A muscle is developed and strengthened not by being held in one position but by being alternately tensed and relaxed. Now we know that in taking breath the glottis is widely opened and in singing it is nearly

closed. It is this opening and closing that brings these muscles into play. In sustained tone very little of this action goes on.

In some individuals these muscles may be naturally strong and vigorous; in others, weak and undeveloped. These conditions are reflected in the voice. Ordinary singing does not give the requisite amount of exercise to strengthen these muscles as they need to be developed to endure the work of long continued singing, and to bring about the extreme positions necessary to produce the very high tones.

Here are some suggestions with exercises along that line. First, and very early in the course of training, use this study.

Ex. 1\*

Work up four degrees of the scale and back, in several keys in the lower and easy middle ranges, taking a quick breath before each note.

\* These three studies are from "Voice Training Exercises," that so practical and valuable book on vocal development by Behnke and Pearce.

Also practice this one, taking breath before each note.

Ex. 2\*

Use this in several keys in the lower and easy middle ranges.

Do these with a feeling of free and open throat and not with a closed glottis which gives a disagreeable and uncomfortable click at the attack of each tone. With an open throat feeling, one gets the true shock of the glottis, or *coup de glotte*, so valued in developing a firm and true attack. A feeling of strength and assurance is also developed.

Another excellent exercise for strengthening the laryngeal muscles is the use of

the consonant *K* fitted into an exercise like this,

Ex. 3\*

Take this also up four degrees and back in several keys in the lower and middle range. Note how the larynx works up and down. This not only strengthens and invigorates these sets of muscles but also helps, by the movements entailed, prevent rigidity of the larynx and root of the tongue. Use a very sharp and clean *K* sound, not in the least breathy, and very easily shaped *oo*, which comes and rings into the front part of the mouth.

The good results of these exercises are surprising and are quickly apparent. They are thus strengthened, are stones upon which the vocal structure rests. Their weakness may result in any number of troubles, among which is one kind of tremolo. No part of any voice can be fully energized for any length of time without pliancy of strength in these laryngeal muscles.

## On the Treatment of Registers

By WILLIAM G. ARMSTRONG

### PART II

HOW ABOUT THE TRANSITION which occurs in the low range of the female voice. We have stated that for open tone the vocal ligaments are not drawn closely together as they are for closed, pointed tone; and also that it is a sudden separation of the vocal ligaments which causes a "break" in the voice. Again, when the female reaches the interval D to B, below the staff, she opens her tone, in order to extend her low range. Therefore, as it is a sudden separation of the vocal ligaments which is the cause of the break, the register, or transition; what we have to do is to train the vocal ligaments to hold their close approximation.

If the reader has had occasion to visit a throat specialist, he will remember the physician's instruction to "say E\*." The physician's object in this was to learn as to whether or not the muscles which draw the vocal ligaments together were performing their function; and, knowing that the effort one makes to form and sustain any other vowel, or sound, he was enabled through the use of E to note their full, or partial approximation. It is because of this known influence of E that for the past century it has been used to overcome the break in the low range of the female voice.

Note: The reader would do well to observe that the physician did not instruct him to approximate his vocal ligaments; but simply to "say E\*."

"But," the reader queries, "as the vowel E is only one of thirty-six or more vowel sounds, how can the use of 'E' overcome the break which may accompany any one of the other thirty-five vowel sounds?"

To which we would reply, "Through the contractive influence, and the focal point of 'E'."

### Molding the Tone

ACCOMPANYING THE SEPARATION of the vocal ligaments, and really the cause of that separation, is a great dilation of the throat and a lowering of the larynx. Then occurs what, for simplicity, may be likened to a sudden dropping of the tone from the upper front teeth, nose bridge, and eyes, to the lower throat and chest; and as the effort made to form, and sustain E contracts the throat, lifts the larynx, and holds the tone focused on the upper front teeth, the use of E prevents the sudden dilation of the throat, the lowering of the larynx, and the abrupt dropping of the tone from the upper front teeth, nose bridge, and eyes, to the lower throat and chest. The whole effort centers in holding the tone focused on the upper front teeth; for, if thus focused, the throat cannot be unduly dilated, or the larynx excessively lowered. Therefore the effort should be that of holding all vowel sounds focused on the point of E, for, in addition to preventing a sudden dilation of the throat, holding all vowel sounds focused on the point of E causes all other vowel sounds which do not influence a close approximation of

the vocal ligaments, to come under the influence of E which fully approximates them.

Another, and the greatest of all essentials, is dependence upon breath. As so often pointed out, where breath pressure is lacking, the effort to emit, and sustain sound is thrown upon the muscles of the throat generally. This, like everything else, has its relative psychology. It is the most natural of things to center the mind on, to go directly to, and to demand of something that which we think that something can give. This is precisely what many do when they go after low tones. The mind is centered on low notes, and the something which can give the low notes is in the throat; hence, as the thought is downward, and the thing which gives the low notes is in the throat, the natural and subconscious tendency is to drive that something, the larynx, downward; and as the only way of sending the larynx downward is through dilation of the throat, as in yawning, this is what the novice does when she reaches the interval D to B, below the staff, where her tone becomes weak, and she demands that it become stronger. But, there is a great mistake here, for the larynx would be utterly useless, as an organ of voice, without breath pressure. So again we say, "Breath, breath, and more breath!" But, this sudden dilation of the throat is only the effect of a cause; so that, to complete our analysis, we must find the cause.

All of us know that the female voice is

an octave higher than the male voice; as such is the case, one may view the female voice as the downward continuation of male voice. Therefore the question "What is it that makes this difference?" Both can sing the same notes, so where lies the difference? The common answer is, "Tessitura," or "texture"; but the writer prefers "resonance," or "sex resonance": born of sex construction: the larynx being smaller, the vocal ligaments shorter and thinner, and resonance smaller in the female, than in the male. Then, as the female voice is an octave higher than the male voice, and the effect of sex resonance, the male voice reaches the end of male sex resonance in the high range, where it breaks into *falsetto*; and the female voice will reach the end of female sex resonance in the low range, where it breaks into the masculine-like resonance in the interval D to B below the staff.

### Masculine and Feminine Resonance Areas

NOW WHEN THE MALE VOICE BREAKS into *falsetto*, the throat is greatly contracted, the larynx greatly elevated, and the vocal ligaments only partially approximated; when the female voice breaks into masculine-like resonance in her low range, the throat is greatly dilated, the larynx greatly lowered, and the vocal ligaments, again only partially approximated. Now, carefully, please—When the male changes from masculine tone to *falsetto*, he

consciously contract his throat, elevate larynx, and separate his vocal ligaments to produce the *falsetto* tone; he simply uses the effeminate quality of the voice, and his effort so to do contracts throat, elevates his larynx, and separates his vocal ligaments; and, when the voice changes to or encroaches upon the low range, she contracts throat, not, consciously, dilate her throat, her larynx, and separate her vocal ligaments; she simply darkens her tone, to do dilates her throat, lowers her larynx, and separates her vocal ligaments. At we really have to do toward the break, register, or transition, the low range of the female voice, is to prevent this throat dilating, larynx low-vocal ligament separating, and ex-actly sombre tone. Now please note we do not say *sombre* tone, but *ex-actly sombre* tone. A certain dilation of throat, and a lowering of the larynx necessary to low tones, because low require larger resonance space than higher tones; and the only way of en-creasing resonance space is by dilating the throat and lowering the larynx. Therefore it is necessary at the point of change, to prevent a sudden and excessively coloring of the tone, and the only way to this end is an effort to hold all directed to the upper front teeth, bridge, and eyes, while darkening the tone of the vowels.

Cases where there is a pronounced break—due to a sudden separation of the vocal ligaments—all vowels be focused on the point of E for a period of practice long enough for the active influence of E to have exerted influence on the muscles which draw, hold the vocal ligaments together, and, allowed time for the vocal ligaments to return this “new trick,” and then to the point of focus to the nose bridge; being sure that nasal resonance is its part; and that it may play a part; see to it that the nasal passages are normal.

exercises, we have found the following to be most effective:

The consonant, Y, acts as a connecting link between E and Ah. Drop the jaw for Ah while holding the focal point of E. Sing the exercise slowly, and smoothly; the intervals closely connected.

Ex. 7

The sounds of these vowels are as in the words *eye, aid, end, at, on, ode, use, aid*. Open the mouth more for each sound up to O; closing it somewhat for O and OO.

In singing these exercises, we shall not drive excessively darkened vowels downward to the chest cavity; but shall breathe or sigh slightly darkened vowels upward to the upper front teeth, nose bridge, and eyes; depending wholly on the power of a sigh for our strength of tone. We shall not, at the point of change, lose the sensation of vibration on the upper front teeth. We shall not protrude the lips, because nervous and muscular freedom are essential to carrying the voice over the bridge from nature into artifice; and protrusion of the lips impedes muscular freedom through its influence on the trifacial nerve. So, to the contrary, we shall adopt the smiling position of the lips; the upper lip raised, pressed gently against and exposing the teeth; the jaw relaxed, and receding rather than protruding; the head lifted as if directing the voice to the gallery instead of to the front row. We shall give no thought to open throat, or low larynx. The mind is fixed on low, and lower notes; hence any necessary opening of the throat, or lowering of the larynx, will take place automatically. We repeat—“we shall, at the point of change, direct slightly darkened vowels to the upper front teeth, nose bridge, and eyes—as advocated by the famous teacher, Sbriglia—depending wholly upon the power of a sigh for our power of tone; and not upon forced expiration.

### Notes and Notes

IN THE EARLY PART of this investigation, we stated that the female alters vowel character to extend her low range. We have, in our instructions, avoided dependence upon a deliberate change of vowel in this low interval, D to B, below the staff; such as advised in the higher interval C-sharp to F-sharp, and for the reason that a deliberate change of vowel would

(Continued on Page 216)

## A Dozen Foundation Stones of Good Singing

By MRS. HARRY S. MILLER

### Sound Singing Apparatus

the nose, throat, and chest should be in excellent health.

### Good Ear for Music

be able to sing what you hear, not made below or above.

### Fine Memory

memorize easily, and to be able to sing with accompaniment only.

### Ability for Studying Music and Foreign Languages

willingness and ability to sit down and study theory of music, to be able to learn correct pronunciation, and to understand the meaning of words in songs and foreign languages.

### Teamanship

be able to put the song over. Plan to practice an attractive beginning, interesting climax, and such an end—as will “bring down the house.”

### Intelligence for Interpreting Music

be able to make the audience understand just what the composer or poet wished to express, and to put it your own personality of voice

and meaning.

### 7. An Inner Feeling for Rhythm

The body, brain, and voice should, at all times, unconsciously feel rhythm in all music.

### 8. A Sense of Relaxation, Always

The voice is natural and beautiful when relaxed. Remember the audience will always detect forcing.

### 9. A Sense of Joy in Every Note

“As your mind thinketh, so you are.” Enjoy the sound of every note as you do the flight of a bird, and your singing will be a joy to yourself and to your listeners.

### 10. Ambition

You must thrill with the desire to sing.

### 11. Concentration

You must burn with the ambition to sing well; and so you will concentrate on study.

### 12. Intelligence

As much a gift as singing. The singer must be able to discover his own faults, and to avoid or correct them.

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## Making the Organ an Expressive Instrument

By WILLIAM ROBERT CRAWFORD

IN AN ARTICLE published in THE ETUDE for March, 1935, was discussed the creating of expression on the organ, through a simple chord; and a short voluntary or eight measures was developed, in which the same chord was played eight times, in whole notes, one chord to the measure. In the present article, without moving the stops, we will develop this expression still further; but we shall use the swell pedal and do some of our playing an octave above or an octave below what is written. A good combination of stops, for what we are going to do, probably will be Great, two or three soft stops; Swell, Violin Diapason, with two or three soft stops; and one 4' stop added; but no Pedal speaking stops drawn.

We will use *Nearer, My God, to Thee* (*Bethany*), in the key of G, which is made up of all familiar chords, easy to play in any position. First: We will play the entire tune, as thought best. Second: Playing it, only using the tonic triad of G and B in the treble and G in the Pedal, playing it forty-two times, in the same time—the time in which it is written—and using the swell pedal to add to the expression.

Third: Repeat this in the same way, using the same chord in a different position, with D in the soprano. Fourth: Play the tonic chord of G, in the position (on the Swell) thought best—repeating the same chord, only eight times, the first of each line, in the same position and number of notes, while playing on the Great a solo *obbligato*, in the same time in which the hymn is written, and using the notes G, B, D, G, with B and G repeated on the same lines—and with this formula repeated eight times. This is the first line for the right hand, as it might be played on the piano.

Ex. 1

Fifth: This is more complicated. Couple Great to Pedal; play the hymn tune through with both hands on the Swell; and use as many notes to a chord as thought best to give the proper expression. Play on the pedal an *obbligato*, using the same notes as were used in the previous *obbligato* on the Great. This is the first line of the Pedal.

Ex. 2

After these five ways of playing, this hymn is rather thoroughly learned, so that it may be made into an organ solo, by first playing it on the Swell—the second, third

"The  
Organ  
Peals  
An  
Easter  
Strain,

ANCIENT ORGAN OF TIRLEMONT, BELGIUM

The famous organ in the Church Saint-Germain, Tirlemont, Belgium. Poised in a frail balcony hanging high under the Gothic ceiling of the west end of the church, the oak case, so greatly admired for its graceful lines, dates from about 1520 and is thought to be the oldest in Belgium.

and fourth way each employing more organ, and the fifth one using the full organ. This will make an organ solo, *Nearer, My God, to Thee*, as a theme and variations, and with a grand *crescendo* from full Swell to Full Organ.

If the congregation are to sing *Holy, Holy, Holy, Lord God Almighty*, play it through with a tone rich and not too soft. The full Swell is suggested, with some stops on the Great, with the swell pedal used to add to the expression.

Play the notes of these six words, with a different number of notes to each chord, and with a slight rest of different length after each word, and, with the assistance of the swell pedal, these words may be made to speak. Do the same with the remainder of the hymn. By this method it will be found that everyone in the audience will sing it with expression and not too loud, so that the musical effect will be greatly enhanced.

This idea should be put into practice in the "giving out" of any hymn; and the final impression on the visitor in the pews should be that he is surrounded by a trained chorus of several hundred singers. Some of the hymns, sung softly, and led with a soft organ, and with congregation singing almost in a whisper, create a wonderfully beautiful effect. It may take some months

to get the idea to begin to work somewhat satisfactorily; but the efforts will be repaid in increased interest in the congregational singing and in attendance at services.

### We Learn to Create

LET US NOW IMPROVISE a soft voluntary by using as its theme the first five notes of the beautiful *Vesper Hymn* which is found in most hymnals. For this we will draw on the Great, the Dulciana; on the Swell, the Aeolina; and the couplers, Swell to Great and Swell to Pedal; with the Tremulant and the Swell Pedal used with discretion.

### Our Best-Loved Easter Hymns

By LENA M. SPOOR

EASTER, next to Christmas, is a time when the whole world expresses its joy in song.

Many hymns, which Christian people of different denominations sing, have come down through the centuries, and not a few of them are translations from the Latin or the Greek.

Some very old tunes, too, have come down to us, but many of those which are most familiar were written by a group of composers of the eighteenth and nine-

teenth centuries, who devoted their talent to the writing of church music.

Several of the great composers—Mendelssohn, Beethoven, Haydn, Schumann, Rossini and others—whose melodies have been used as hymn tunes, are better known for their larger compositions.

The names given to hymn tunes do not always seem suitable, but nothing could have been more appropriate than *Tranquillo* for the Easter hymn beginning "Angels, Join the Glad Refrain."

Beautiful work can be done with *Tell Me the Old Story*, in the Key of C. The words of the first line have two melodies. We will take the first line of the chorale, which is composed of four notes of the scale, which start with the third, repeat the third and fifth, and, after playing the six, return to the fifth.

These seven syllables we will arrange seven measures of four counts each, with the eighth measure as a rest; and thus we shall make a voluntary of eight measures with one chord repeated seven times, as described in our former article. Make the fourth count of the second and fourth measures as rests, and also the third and fourth counts of the third measure. When this interprets the words, *Tell Me the Old Story*, one does not hear the rest of the eighth measure and the line closes too soon musically. So we will give one of the syllables of the word "Story" eight counts or two measures instead of the rest previously mentioned, and thus all is musically correct. After this, make other experiments with this beautiful hymn, to find what original adaptations you can make.

By such practice of the inventive capabilities, an organist may greatly increase his own powers of musical expression and his interest and usefulness as a leader and performer in the church service.

roll the rock away." We are told that it was the new tomb of Joseph of Arimathea in which the body of our Lord was laid, and from which the stone had been rolled away when the angels came to the tomb "very early in the morning" of the first Easter. C. F. Roper, composer of *Arimathea*, wrote also *Blessed Morn* to which one of the beautiful Christmas hymns is sung.

John of Damascus, who died in 780, was among the leaders of the Greek church. He was one of the greatest of the Greek poets, and also a teacher and a musician. His hymn beginning, "Come, ye faithful, raise the strain, of triumphant gladness," is perhaps as universally sung as any of the Easter hymns. The translation is by Dr. John Mason Neale, and the tune, *St. Kevin*, by Sir Arthur Sullivan. Although he is best known for his twenty or more light operas, Sullivan left us a number of our best known hymn tunes. Beside the one just named, two other Easter hymns are sung to his music—"Welcome happy morning, age to age shall say" (an old Latin hymn translated by Ellerton), and "Christ is risen, Christ is risen! He hath burst His bonds in twain." The tune for this last is most appropriately named *Resurrexit*.

Four well known hymns are sung to the tune *St. George's, Windsor* by Sir George J. Elvey. Two of these are hymns for special seasons. At Thanksgiving we sing, "Come, ye thankful people, come," and at Easter, "At the Lamb's high feast we sing."

*Victory* is a most suitable name for the tune of the beautiful old Latin hymn, "The strife is o'er, the battle done," with its grand opening threefold "Alleluia." This music has come to us from Palestrina, who lived in the sixteenth century. Just at that time the standard of church music was very low; and, by his many and beautiful compositions for the service, Palestrina raised the standard and earned for himself the title of "Father of Church Music." This grand old hymn belongs to the whole world, for it is found in the hymnals of many denominations and is sung everywhere at Easter.

Cecile Frances Alexander, wife of a clergyman who later became a bishop, wrote several hundred hymns. Many of Mrs. Alexander's hymns were written especially for the children of the Sunday School; but her Easter hymn, "He is risen, He is risen, tell it out with joyful voice," appeals to old as well as young. Its tune, *Paran*, is the music of Joachim Neander who lived in the seventeenth century. Another tune of the same century bears the name of its composer, *Worgan*, and is the inspiring music to which we sing "Jesus Christ is risen today, Alleluia." The hymn is translated from the Latin.

Music which Berthold Tours wrote in 1875 is the best known setting for "The day of resurrection, earth tell it out abroad," another of the old Greek hymns of John of Damascus. The translation was made by Dr. Neale, who called it the "glorious old Hymn of Victory," and who gave also the following word picture of Easter in Athens:

"As midnight approached the archbishop and priests, accompanied by the king and queen, left the church and stationed themselves upon a platform where they could be seen by the assembled crowds of people. Each person in the crowd carried an unlighted taper. The report of a single cannon announced the midnight hour, and the beginning of Easter.

"Then the archbishop, elevating the cross, exclaimed in a loud voice, 'Christ is risen.' The crowd took up the cry, 'Christ is risen,' and the darkness was succeeded by a blaze of light, as, throughout the vast throng, one taper was lighted from another. Bands played, drums rolled, rockets blazed, and cannons roared, announcing far and near 'the tidings of great joy.'"

"We're a much more musical family since the HAMMOND ORGAN came into our lives"

In homes all over the country the Hammond Organ is stimulating a vital new interest in music. Find out how easy it is to own and enjoy this fascinating instrument

SO UNIVERSAL is the charm of the Hammond Organ, with all its exciting and varied tones, that it fills almost everyone with an immediate urge to sit right down and play. And if you have even a slight knowledge of the piano keyboard, you can create lovely, interesting music, right from the start.

With a Hammond in the living room, hundreds of families are finding how much more satisfying it is to make music than just to listen to it on the radio or records. "Except perhaps for the family car, I can't remember any investment I've made in years which has brought so much pleasure to my whole family," says one Hammond owner.

As practical for your living room as a Piano—compact and portable, it creates beautiful tones by electrical impulses. The Hammond is easy to play, easy to install, easy to move, easy to own!

The beautiful tones of the Hammond are famous all over the world. Yet the instrument takes little space, and is so inexpensive that it can be enjoyed by families in moderate circumstances. Your nearest dealer is always delighted to demonstrate the Hammond; or write Hammond Instrument Co., 2929 N. Western Ave., Chicago. In Canada address Northern Electric Company, Ltd., Montreal.

## ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I am using two different reed organs, one in church and one at home, and would like suggestions as to what stops I should use to get different effects. I am enclosing list of stops of the two instruments.—L. N.

A. We suggest that you experiment with different stops and note the effects. For soft passages use soft 8' stops, such as Dulcet Pipe, Dulciana and Dulciana Bass. For somewhat brighter effects add 4' stops. 8' stops are of normal pitch (same as piano); 4' stops speak one octave higher; and 2' stops, two octaves higher. 16' stops speak one octave lower than normal pitch. Couplers usually affect keys one octave higher or one octave lower than those being played. The Vox Humana in a reed organ is usually a tremulant.

Q. I have access to a two manual organ containing stops on enclosed list. Will you please give me a good combination for vocal solos, instrumental solos and choir accompaniment? Also, if this organ is capable of producing chimes, will you give me the correct registration to obtain this effect? This organ has three pistons under the lower manual, three under the soft or upper manual, three above the Swell and three above the Great Organ. Please explain their use to me. Also give me the proper names for the two pedals and their proper use.—O. E. W.

A. The stops to be used for the various purposes you name depend so much on the character of the passages, amount of tone required, and so on, that we cannot give you definite instruction as to what stops to use. For some general information we might suggest that Open Diapason, Violin Diapason, Dulciana and Dolce produce organ tone of varying power at 8' pitch, while the Octave produces organ tone at 4' pitch, one octave higher than normal (8') pitch. Melodia, Doppel Flute, Flute Traverso, Concert Flute, Stopped Flute and Flute 4' are of the flute family. The Oboe can be used both as a solo stop and in ensemble effects, if not too strident in tone. The Viol d'Orchestre is classed with the string family, and the Viol Celeste is a set of pipes purposely out of tune with the Viol d'Orchestre, to produce an undulating effect. You have no stops for reproducing chimes. You might approximate the effects by playing certain chords which you can find in the following books: "Trinity Chimes" and "Vesper Chimes," both by Becker, and both obtainable from the publishers of THE ETUDE. The pistons you mention are used to affect combinations of stops. They probably control the Great, Swell and Pedal respectively, with one set controlling the stops of the entire organ, including couplers. We cannot tell you the combinations for which they are set, but you can gain such information by trying them out. We presume the two pedals to which you refer are the Expression Pedal and the Crescendo Pedal, the former making a crescendo or diminuendo on stops included in the Swell box, that are drawn, and the latter making a crescendo or diminuendo by the addition or taking off of stops.

Q. Our church organ is a two manual instrument with the following stops for the upper manual: Flute Harmonic 4', Stopped Diapason 8', Stopped Diapason Bass 8', Viola 8', Acolina 8', Swell to Pedal, Great to Pedal and Swell to Great, and the following stops for the lower manual: Dulciana 8', Open Diapason 8', Principal 4', Melodia 8', Unison Bass 8', Swell to Great 8' Pedal Bourdon 16'. We have had difficulty in working out a combination of stops that will give proper volume for our services. The use of the Open Diapason gives too much volume, and the use of the Principal gives a shrill effect. To use the stops of the upper manual coupled to the Dulciana and Melodia of the lower manual proves to be too soft for music such as the Gloria in Excelsis. Can you suggest any combination of stops for different kinds of music? For accompanying a choir of twelve voices? For playing for a Sunday School of about one hundred voices? About how much does it cost to add stops to an organ? What would you suggest adding to the organ described? What combination of stops should be used when the pedals are not used?—A. K.

A. We see no way to solve your problem. The only stops available to increase the power of the combination you mention apparently do not prove satisfactory. Of course the Unison Bass 8' should be included. It might be possible to have a softer Diapason to replace your present one, but care should be taken to preserve a proper balance among the stops. Your specification shows Swell to Great and Swell to Great 8', which indicates duplicates. If one of these is a coupler at 4' it might be used to increase brightness in combinations. The stops to be used depend on the character of the music to be played. For accompanying a choir of twelve voices use whatever you have available that will produce a proper balance with the voices. We should think you could use the full organ for accompanying a Sunday School of one hundred voices. To add stops to your present organ would undoubtedly necessitate increased wind capacity, and as the specification indicates an old instrument we would not advise additions. You do not have any manual stops to be used to reproduce the Pedal

Bourdon. You might play the bass notes in octaves to get the 16' effect, playing tenor notes with the right hand in addition to soprano and alto, but as this is not always possible it is best to use pedals when "pedal" effect is desired. The cost of any additions should be supplied by an organ builder or an expert on organ work.

Q. In the October 1937 ETUDE "Organ Question Department" you sent B. H. information on second hand pipe organs (companies that sell them). Will you please send me the same information?—D. M.

A. The Answer to B. H. referred to used pipes and chests. We suggest that you address your nearest organ builder in reference to the matter. Some used pipes are available and may be secured from the party whose address we are sending you by mail. Nearly all builders have second hand instruments available from time to time.

Q. Is the firm Mason and Reisch, makers of the "Vocalion" still in existence? If so, what is their present address? Was the "Vocalion" a good organ? If the firm is out of business, where can parts be obtained? Our church has an opportunity to buy one at a low price, and I am trying to secure some information about it. Kindly send me the addresses of firms who make good toned reed organs, also addresses of firms who make fine pipe organs. Would you suggest a reed or a pipe organ for mellowness of tone and so forth?—S. M.

A. We think the firm you mention is no longer active. We cannot give you an opinion on any particular instrument in these columns. You might address the firm whose address we are sending you by mail, asking whether they can give you information as to whether parts for the instrument are available. If reeds need replacing, we advise you to satisfy yourself that they can be secured. Our recollection is that the Vocalion organ was built on the basis of wind being blown through the reeds, while the average reed organ is built on the "suction" principle. We are sending you names and addresses of makers of pipe and reed organs. Personally we prefer a pipe organ to a reed organ.

Q. Enclosed find list of stops included in our church organ. Will you please suggest registrations for accompanying congregational singing, as well as for the choir anthems and for solos? In playing the Hymn of the Nuns, how can I vary the registrations and still have the parts well balanced, such as flutes on one manual and strings on the other?—Long Meter.

A. For congregational singing we should think you could use all of the Swell, Great and Pedal stops, with Swell to Pedal, Great to Pedal and Swell to Great. Add Swell to Great 4' coupler if more brilliance is desired. The registration for anthems and solos depends on the amount of tone needed and the character of the passage to be played. Our suggestion for registration of the Hymn of the Nuns would be left hand—Swell Salicional and Tremolo and right hand on Great Melodia. The alternative registration would be left hand on Great Dulciana and left hand on Swell Stopped Diapason (or Flute Harmonic 4')—played one octave lower than written.

Q. The church of which I am organist was burned recently, with the result that a new organ will have to be installed. There has been considerable discussion as to the installation of a \_\_\_\_\_ organ and I am writing to ask your opinion of the same? Do you consider that this type of organ will stand up; does the cold weather affect the tone and do they need much repair?—H. O. B.

A. As you will see by the note at the head of this department, we cannot give an opinion on any particular type of instrument in these columns. We can only suggest that you investigate all the different types of instruments and decide on that which best suits your needs.

Q. Our church organ is being rebuilt and during the months required for the work we have to get along with the use of a piano for the services. Can you furnish me with the names of some piano compositions which I might find useful?—H. Z.

A. You might examine for your use the following books: "Church and Chapel Voluntaries" by Drosbach; "Piano Voluntaries" (Presser); "Sabbath Day Music"; "Sacred Music for Piano Solo" (John Church Co.). You might find some reed organ music available for your purpose, and we suggest investigation of "Organ Selections" (Ditson); and "59 Original Pieces for Harmonium" by Franck.

Q. I would appreciate receiving information as to the means available to organ students for pedal practice. I would not care to spend too much for an instrument. Perhaps there are inexpensive instruments for the purpose?—J. O.

A. Organ students may secure pedal practice through the use of pedals attached to the piano; by use of a regular pedal piano; by use of a two manual and pedal reed organ. We are sending you information relative to used instruments available, by mail.

## Inspirational Service Playing

By Parvin Titus

IT IS OFTEN A REAL TRIBUTE to an organist's ability when a member of his congregation confesses that he or she has sung the service heartily in spite of a customary attitude of indifference. It may be that the minister has read a fine lesson unusually well, or has made a particularly moving prayer, or preached an excellent sermon of moderate length. Perhaps, too, the organist may have given some extra thought and preparation to his hymns, anthems and solos with a resultant enthusiasm and imagination which have irresistibly carried the choir and congregation with him.

The organist who accomplishes this result is sure to be one whose idea of service playing is considerably more than that of a routine duty to be finished as quickly and as effortlessly as possible, and whose sympathy for his church, minister and choir is real. Such an organist, being interested in creating service music that is fresh and artistic, will practice improvisation. He will extemporize frequently on a theme taken from the first hymn or on an original theme, instead of playing a selected composition as his service prelude. During the time the choir and clergy will have taken their places, and all be in readiness for hymn to be sung by the congregation.

The hymns, responses, chants and anthems in certain parts of the service will be played in closely related keys, by means of transposition if necessary. Each section of such a well planned service will gain added continuity if the organist avoids awkward pauses or breaks by interesting but unobtrusive improvisations while the minister moves from one part of the service to another or while late comers are being seated. However he will not overlook the importance of occasional periods of silence, perhaps after prayers or during the Communion.

Anthems and vocal and organ solos should not be vehicles for technical or musical display, but should be selected and performed for the sake of their particular functions in the service. The organist, choirmaster or singer, who cannot, or will not, submerge his personality in favor of a sincere participation in the service, should be on the concert platform or in the radio studio, not in church. An unquestioned musical ability and sympathy with the ideals of the service, coupled with a dignity of bearing and a minimum of visible direction in the service, will go far to make the organist, choirmaster or singer an invaluable aid to his church and minister.

## Do You Know?

That in the latter part of Liszt's life he wrote little except music for the church? That immediately after the American Revolution Oliver Holden wrote a melody in 1793, that never has lost its hold and is known throughout the world as Coronation, or the more recognizable All Hail the Power of Jesus Name?

That the String Quartet began with Haydn and has progressed but little since?

That Fifty-seventh Street, from Sixth to Seventh Avenue, New York City, is more vitally identified with the musical life of America than any other similar district in our country?

That "We are perhaps the only generation in the world that accepts uncritically its literary standards from a country (England) thousands of miles away"; and that this attitude is perhaps still too prevalent in our musical standards?

# THE ACCORDION DEPARTMENT

## Sight Reading

By PIETRO DEIRO

As told to Elvera Collins

### PART I

THE STATEMENT that any accordionist can become a good sight reader may seem a broad one, but it is nevertheless, a true one. The degree of attainable depends upon the natural characteristics of the individual.

Sight reading will be easy for accordionists who are naturally quick of vision, quick of memory and action. Those, who are inclined to be more deliberate in thought and slow in action, will have to work a little harder to develop speed in sight reading.

Let us analyze sight reading and find out what requirements are necessary to become efficient at it. It is not a special gift nor does it require a talent bestowed upon a few. The secret of sight reading lies partly in preparedness and partly in technique.

If you are anxious to become a rapid sight reader, why not stop for a moment and take stock of your preparedness. How much have you built the foundation of a thorough musical education? For instance, do you know your technique? If a dependable, rapid technique has not been developed in regular practice and playing, you cannot expect to make a selection at sight and by legermain. A surprising technique which has not previously existed. You will, instead, stumble through every technical passage.

Let us observe that the term "dependence" was used. By that is meant a technique which has been so systematically taught that it never fails. Some accordionists are technicians when they can play a difficult technical passage rapidly and get it correct one time out of every five. This technique seems to be closely allied to the secret of correct fingering. It is, in fact, dependent upon it. Your study material, no doubt, has been carefully marked for fingerings. Close observance to such marking

eventually will train the fingers so that they automatically function correctly. If you have ignored such marking and have fingered haphazardly, you will be handicapped in the attempt to sight read because the fingers are untrained and occasionally will seem to get in each other's way. With an advancement in music there will be occasions when it is more convenient to deviate from orthodox fingering, but such deviation should follow and not precede learning correct fingering.

### Time and Rhythm—Important Factors

THE NEXT REQUISITE concerns time and rhythm. In the regular practice is there a careful observance of the time as it is written, or do you play a selection with little attention to the time value of the notes and rests and depend upon getting the time by ear from having heard it played? Is there care in projecting the rhythm of everything played? Remember that it is possible to play in perfect time and still not play rhythmically. If this important part of the playing has been neglected you should not expect to read the correct time of notes and play rhythmically at sight.

Accordionists who are weak in their knowledge of chords will be benefited by writing them in various inversions and then breaking them up in arpeggio form ascending and descending.

Are you one of those players who has formed the bad habit of watching the keyboard while playing? One cannot read music at sight and watch the keyboard at the same time, so it would be best to break that habit immediately. As a beginning, all memorized pieces, and scales and arpeggios should be practiced while blindfolded.

Let us study the excerpt of my late novelette *Quick Silver* which appears here.

### Quick Silver

(Continued on Page 208)

## EASY TO LEARN EASY TO TEACH

THIS NEW PETITE **Soprani**

AMPLIPHONIC--

SO *Light*  
SO *Easy to Play*

● This new Petite Soprani Ampliphonic Accordion, so light and small, assures fastest, easiest learning. Piano keyboard, volume control, one-third less bellowsing, smart new design. Transfer your piano playing almost directly to this modern instrument. Easy to teach.

TRIAL—EASY TERMS—Your music dealer will demonstrate this new accordion. Or send postal direct for illustrated book and complete details. This is the instrument you want for complete musical enjoyment. Teachers in great demand. Mail postal today sure.

**SOPRANI, INC.** Dept. 337, 630 So. Wabash Ave., Chicago, Ill.

**SOPRANI, INC.**, Dept. 337, 630 S. Wabash Ave., Chicago, Ill.  
Without obligating me in any way please send complete information and illustrated literature describing the Soprani Petite Accordion.

## Let's Face the FACTS about Music

● Do you agree, as a parent, that it is part of your responsibility to impart to your children a genuine appreciation of music? Then ask yourself these questions: What instrument is more appealing to young and old than a fine accordion? What single instrument gives richer expression to every type of melody? What instrument provides greater opportunity for real musical pleasure? . . . The BRINDISI is a fine instrument available at popular prices. The coupon will bring you interesting particulars.

**BEFORE YOU BUY ANY ACCORDION Investigate**

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## The Hand Position Basis of Violoncello Technic

By LELAND R. LONG

PART II

**T**HIS, THE BEGINNING, is probably the most critical time in learning to play the violoncello, since carelessness in any detail may mean the loss of hours later on. The habit of maintaining the stretch constantly is the fundamental of all rapid playing. Compare this position of the left hand with the position adopted by the flutist or clarinetist with both hands. The fingers are poised directly above the notes which they must cover. All motion of the fingers, except where a necessary change of key is required is directly up and down. If this is any advantage to players of the most rapid wood winds, why not to the violoncellist, who must cover far greater distances between chromatic intervals?

### Two Methods of Attaining Open Position

FROM THE CLOSED POSITION there are two ways of changing to open position. The first, and the easiest to acquire, consists of straightening the first finger and sliding it one half step closer to the nut. Again apply the fingers to the G string as explained in the first paragraph on the closed position. With the second, third, and fourth fingers still maintaining firm pressure on the string, raise the first finger, extend it toward the nut until nearly straight, and apply the tip to the string. By rounding the finger, it again returns naturally to closed position. Obviously, to be acquired this must be repeated many times.

After the extension of the first finger becomes natural to the beginner, exercises like the following will serve to establish its use beyond question.

Ex. 3

The second method of attaining open position is the more difficult, and combines several movements. Here a rule already noted will help verify the correctness of

the hand position at all times; namely, *the thumb should be directly beneath the second finger*. As the second finger is advanced toward the position formerly occupied by the third on the string, the thumb slides on the under side of the neck in adherence to this rule. At the same time, the first finger must pivot and straighten into the same position it occupied when applied to the string in the extension described previously.

Several steps should be taken in preparing a student for this extension. First, the pivot with the first finger should be practiced. The hand should turn as far as possible in each direction so that the finger pivots on the string without altering either the pitch or point of contact with the string. For example, first finger A, on the G string, should be played with the thumb free of the neck, straightening and pivoting the finger as far to the right as possible on the down bow. On the up bow, return slowly to the normal position, arching the finger gradually as it returns to the starting point. This should be done at first without regard to the position of the other fingers, concentrating particularly on sustaining the tone in exact pitch.

As soon as the pivot is mastered attention may be devoted to the other fingers and the sliding thumb. Keeping the second and third knuckles as wide apart as possible and all the fingers arched and tense, let the thumb slide in contact with the neck just opposite the second finger. Except for straightening the first finger as it pivots, the conformation of the hand remains exactly as in closed position. On the G string, third finger should be directly above C natural, fourth finger above C sharp.

The following exercises are suggested to apply this method of attaining open position. They should be played on all of the strings in first position. Later, as other positions are studied, they may be applied to all the neck positions of the violoncello.

Ex. 4

As the student progresses to the study of the other positions, the open and closed hand formations remain the same, except that the stretch of the fingers is increased in half position and decreased progressively with each higher position. A slight modification is required in fourth position, where the curve of the neck prevents the thumb from retaining its position exactly opposite the second finger. Since there is considerable variation in the thickness of this part of the neck on different instruments, the position of the thumb must be determined by the intonation. This adjustment is not difficult, as the thumb stops the hand in ascending to fourth position, and its relation to the other fingers once having been determined, intonation soon becomes more secure here than in any of the other positions.

### Intonation

HAVING ASSIMILATED the mechanical details of the left hand position, the student will need to know how this knowledge will serve to make his intonation more secure. First, he must grant that a note obtained by a stretch of the hand is much more likely to be in tune than one obtained by a jump or a slide involving a change of position. The hand is constant. Its size and stretch remain the same. The means of attaining open position herein described places reliance on a known quantity, mainly a stretch between first and second fingers. By pivoting on the first finger, F-sharp on the C string, C-sharp on the G, G-sharp on the D, and D-sharp on the A, all are brought within the reach of the hand. If the hand is "jumped" to reach these notes, there is a far greater chance of error.

Now examine the following chromatic progression, and play it in two ways: first, extend by pivoting on the first finger as the hand advances to each new position; then, play without regard to an extension.

Ex. 5

The advantages of the first finger pivot in ascending and the first finger extension in descending are obvious.

In scales the intonation of the first finger may depend upon the fourth, or the fourth on the first. This is obvious in such places as those checked in the C major and minor scales here shown.

Ex. 6

It would be possible to elaborate on possibilities of the two hand positions perfecting intonation, but the student will find applications in practically every place he is called upon to play. Advanced players resort to the stretch of an additional half step, particularly in the playing of octaves in the higher positions where it is desirable to avoid the use of the thumb. Even:

Ex. 7

The examples above merely carry open position one step further, and are difficult for a large hand. A mastery of normal extensions leads to these with difficulty.

In teaching a beginner from the basis of the hand positions which have been described, the instructor is laying the foundation in the mechanical manipulation of the instrument which necessarily must precede its mastery from a musical standpoint. A few of the faults in this regard could be detected and remedied by the teachers of these prospective players in our schools. Better violoncello sections should result and more attention would be attracted to this remarkable instrument.

## Why Not Try Experiment in Practice?

By BURRELL STEER

**C**ERTAIN PSYCHOLOGICAL LAWS govern practice, as any intelligent violin student must have observed; and a careful use of this knowledge should lead to the building of a strong general technic.

Unfortunately, older violinists seldom reveal to younger ones their actual response to various possible ways of practicing; though some do make veiled disclosures of having discovered wonderful panaceas for the development of such desirable accomplishments as the liquid trill, the mellow

vibrato, and the scintillating *martele*. Perhaps their knowledge of these possessions has led to a taint of jealous desire to retain them for personal use; so that the student is left to make many discoveries for himself, or must remain indefinitely in the dark.

### How to Concentrate

PERHAPS the teacher has said, "Concentrate! Practice, without concentration, is useless."

Well, without some careful leading in

this type of practice, the average student is as well directed in his scheme of work as the automobilist daring a night road in an impenetrable fog. What he needs is the helping hand of one familiar with the way; and so we humbly offer our services.

If the teacher were to say, "Practice, without concentration, is useless. Until definitely difficult passages have been mastered, let your study, your piece, or your movement of a concerto have a rest. Pick it to pieces," then he might be making himself of some practical benefit. Or he may

become more specific and practice such a scheme of work as "Take the first measure, the one measure, or perhaps half of a measure, where lies the group notes which trip up the fingers. Take it one-fourth speed; that is, giving the sixteenth note the time of a whole beat quarter-note, to the eighth note two whole beats but demanding that in attack of tone, its sustained beauty of quality, and in release, there shall be at no time less than the very nearest to perfection of which you are capable. Play it an indefinite number

times in this way, till not the slightest y is discernible. Then double the time, ing to the sixteenth note a half beat, so on, while at the same time there the same demands of perfection as in longer tones. Till it seems that there no way in which it might be done better, k to this process, and when the point satisfaction has been reached, then allow rself to try it once at something like per concert speed. By some such process will learn truly to center the mind irely upon the task at hand, with no e for furtive wandering thoughts; and r study or piece will gradually be sub- d entirely to your will. You shall have stered it."

### Definitely Directed Leadership

TEACHER MUST DEFINE and define He should be always specific. When student picks up his instrument he uld know what he is to do, how he is o it and (probably) for how long. This will vary individually, but the student t carefully record the time needed for ults in hours and minutes. The varia- is not as large as might be thought. dent A may have greater facility than lent B. What is within A's grasp is far ond B's; but A may take as long to ain something quite beyond his grasp B something beyond his.

Practice is a process designed to make able a passage at present unplayable, one imperfectly playable less so; or s intended to effect a cumulative, even- l general improvement.

Practice may be from the particular to general or from the general to the ticular. We may practice, for instance, opening of the Beethoven "Concerto" perfect the passage, which work will ntentially improve our octaves; or you may rk at octaves in order better to play opening of the Beethoven "Concerto." e in the later stages.

h schemes are good and necessary, and persist throughout the violinist's life, a preponderance usually of the induc- e must not be led to adopt a scheme practice because it is "interesting." The ef recommendation of the panaceas rtrcuts to glory, discovered and pro- mised from time to time, is usually their etic charm, not their practical utility. h a system appeals to the intellect as viating the tedium of practice; but, if thereby foregoes the benefits, it must ctantly but ruthlessly be condemned. e must not quarrel with nature. If it is nd by experiment that the playing of passage improves best by dint of simple etition, then repetition it must be.

### Empiric Facts

ETITION is the mainstay of left hand rovement in specific passages. Right d improvement seems to obey other s, much more in harmony with the "in- esting," intellectualized schemes of which has been mention.

Left hand general improvement is slow oming, but can be relied upon to appear

eventually, given a certain amount of work.

Right hand general improvement often will not come at all, except when specially urged to come, but is then astonishingly quick in appearing and quite certain. Huge improvements are possible in days—not years—which if not intelligently sought will never appear at all. Thus most violinists have waiting for them, 'round the corner, treasures which they never gather. This right hand improvement is to be attained by the deductive scheme.

Inductive work should be confined to short sections; how short to be determined partly by the problem involved, largely by experience and experiment. A good portion is usually but a fraction of a page; and even this must be subjected to subdivisions as already mentioned. The section must on no account be left until it "moves." This does not mean until it is perfect; it never will be that. But there must have been a definite and noticeable improvement.

Skirting panaceas and magic formula, it will be found that sure progress is founded on dogged yet thoughtful repetition of a section at a steady tempo ("steady" meaning between half and the eventual tempo). After a certain amount of this plodding, quite suddenly a change is noticed. This is not arrived at gradually. It comes all at once and is unmistakable. If it happens, say at the one hundredth repetition of a passage, it will not have come halfway at the fiftieth. The change, then, seems to have taken place between the ninety-ninth and one hundredth repetition. This is like the intermittent movement of the hand of a public clock that moves in pauses and jolts. Suddenly the passage, so to speak, plays itself—the action seems now mechanical, subconscious and definitely better. Do not try to perfect it further. You will be very happy to proceed to the next section.

The "move" always comes. The time needed may be from thirty to fifty minutes; it may be as much as three hours—not at a stretch of course. The temptation to leave a section prematurely, expecting to find it improved later, is great. Don't! The next "jolt" may be imminent just when you cease work. Much of your effort is then wasted, but the moral loss is great too. You lose that encouraging knowledge that something, small but positive, has been done.

A fifty-minute session of practice as advocated by Carl Flesch is a good portion. The student must find whether he can profitably work more than two such sessions in a day (unlikely), devoting his remaining practice time to deductive work, such as scales and exercises.

Another unmistakable sensation is that of overpractice. Perhaps without consciousness of fatigue, the technic becomes sluggish and clumsy. This is the cue to rest the left hand and practice bowing on solitary notes—a Spartan proceeding, but a most profitable one.

That the right hand possibilities, so easily accessible, are so seldom exploited can be only because they are not realized and consequently not sought.

### The Surface Tone

By GORDON McCORKLE

IS POSSIBLE to produce a very beautiful et on the violin by drawing the bow ully but rather quickly over the string a point just about over the end of the ter board. With a very flexible wrist, playing, for example, the note *d* on the string, using first finger in the third ition. Play this in the usual manner h a somewhat broad bow to each note. w play the same note, at a little faster o and with the bow just over the end he finger board. Use very little pressure

and keep the wrist as flexible as possible. If done properly, it will produce a most unusual tone, giving one the impression of merely skimming over the top of the note and producing what, for want of a better name, may be called a surface tone.

This requires considerable control, and, like everything connected with violin playing, it cannot be mastered without careful, patient practicing. Even though playing softly, there must be a certain gentle "bite" as the bow begins each new stroke.

\* \* \* \* \*

"Art, religion and science—these three should be one."—Elisabeth Rethberg.

## Earn A Teacher's Diploma or A Bachelor's Degree

Are you satisfied with your present position? Do you feel that you could demand a larger salary and do better work with further training?

Professional musicians who are using our Extension Courses as a means of going higher in their profession are making a great gain financially.

You are invited to send for lessons and catalog. It may be the means of starting you upon a career that will pay dividends in increased cash earnings—dividends that couldn't possibly come to you under your present position.

**HAVE YOU STUDIED HARMONY?** Business players are always interested in improving their own knowledge and those who are best equipped receive the largest pay checks. It is up to you to make your services more valuable. Openings in the music field are growing very rapidly.

## The Romance of Annie Laurie

(Continued from Page 166)

ever, as he left the house. Disregarding the threat of parental wrath, they hurriedly arranged a rendezvous for the next day. This meeting, safely managed, led to others.

Undoubtedly Douglas was genuinely and deeply in love with Annie; for in contrast to his reputation he courted her gently, tenderly and with great respect. Had he harbored any ulterior motives, it is unlikely that he would have hesitated to carry her off to some Stuart stronghold, let come what may.

One night they met in the "wee kirk o' the heather" near Maxwellton. In the ancient stone chapel, surrounded by moss-encrusted headstones of early Scottish chieftains, Douglas pleaded with Annie to elope. Annie hesitated, and in hesitation was lost to Douglas, for their nocturnal tryst was seen and reported. For this disobedience, Annie was forbidden to leave even Maxwellton's courtyard.

Nearly a week of nervous suspense elapsed. Then, on a day set for a guest dinner, an old groom approached Annie. "Annie, m'lady," he lowered his voice. "A horseman just stopped me i' the woods, coverin' me wi' a pistol. He made me swear to gie ye a message. 'Twas Douglas, laird o' Fingland, Annie. He's fleein' the country wi' the constables hard on his heels. He bids ye be in your window at eight o'clock this night."

### A Clandestine Tete-a-Tete

ANNIE WAS IN NO MOOD to entertain dinner guests. When the massive hall clock chimed the hour of eight, she pleaded a headache and went upstairs. From her window she leaned, watching the starlit braes for her lover. Then Douglas came riding through the dusk. Under her casement he drew rein.

"Annie!" he called softly.

"William! Must you go?" The question was forced. She knew the answer.

"The odds are against me, Annie," he replied doggedly. "I'll return when I get the King's pardon."

"My dear one! I'm so afraid for you!" she whispered. "Take this with you." She dropped a tiny painted miniature of herself, threaded on a golden chain.

Douglas caught it deftly, kissed it, and put it in his pocket.

Turning in the saddle, Douglas sang the memorable song in a hushed voice. Tender passion and devotion flowed in every word.

"Maxwellton's braes are bonnie. . . ."

As he finished two verses, a restless dog bayed. Douglas stood in his stirrups and kissed his hand to the figure in white. Then he drove spurs to his horse and disappeared into the night.

Romance contends that Douglas returned to the Flemish wars carrying Annie's miniature, only to die with a bullet through his aching heart.

Another version says that the miniature, worn over his heart, deflected a bullet and saved Douglas' life.

Despite the song and popular opinion, Annie's eyes were not blue, but hazel. Tiny feet, Grecian features and full red lips; all crowned by a wealth of dark brown hair, which Annie never powdered, regardless of fashion's decree.

"Her promise true" was less truth than poetry, for in reality Annie was somewhat romantically inclined and possessed a "rolling eye" for one of her tender years. Indeed, when after six years Douglas obtained the King's pardon and returned home, he found Annie had married a childhood playmate, three years her junior. This was

Alexander Fergusson, whose family dated back to William the Lion and the Crusades. His estate, Craigdarroch House, stood five miles up the glen from Maxwellton. This union brought two sons and two daughters.

Douglas promptly eloped with a Betty Clerk. They had a family of four sons and two daughters. *A History of Douglas Family of Morton*, by Percy W. L. Adams, F. S. A., whose wife is a direct descendant of William Douglas of Fingland, says the author of "Annie Laurie" died about 1760, at Tweeddale, and was buried at Newlands, in the burying grounds of his cousin, Adam Kennedy of Auchtyfardle and Romano. *The Scot's Magazine* contains one entry in the year 1753 that might refer to the romantic "laird of Fingland":

"Died, Dec. 26, at Edinburgh, Capt. Wm. Douglas, conductor of waggons in the late war."

"Annie Laurie" was first published in 1824. Charles Kirkpatrick Sharpe received it from his relative, Margaret Laurie, grandniece of the heroine. He included it in *A Ballad Book*. Only thirty copies were issued. Now even the British Museum has only a reprint.

In Alfred Moffatt's, *Minstrelsy of Scotland*, it is stated that Allan Cunningham, a Scotch poet, composed the original verses. But this is unproven. We have the authority of Annie's brother, Sir Emilius Laurie, that Douglas composed the original two stanzas.

On authority of Allan Cunningham's *"Songs of Scotland,"* Lady John Douglas Scott found the old verses and altered them. Lady Scott was a relative of C. K. Sharpe, and he was related to Annie Laurie.

The modern music to "Annie Laurie," according to Paterson & Roy's *Vocal Melodies of Scotland*, was composed about 1810, by Lady Scott. The present third stanza is of even later date than the melody.

The second stanza read this way, in 1824:

"She's backit like a peacock,  
She's breastit like a swan,  
She's jimp about the middle,  
Her waist ye weill may span;  
An' she has a rollin' ee  
An' for bonnie Annie Laurie  
I'd lay down my head an' dee."

Urbani's *Scot's Songs*, Book II, 1794, gives what may have been a theme model for "Annie Laurie"; the song that Douglas is supposed to have sung to Annie on the balcony the night they met.

Several versions of the song exist, but the deep and tender feeling survives. Annie's son, Alex Fergusson, Jr., was the hero of Robert Burns' song, *The Whistle*; and Douglas of Fingland was the hero of *Il'licie was a Wanton Wag*.

In 1854 one of Douglas' granddaughters heard the song. Immediately the old lady vowed the words were not those of her grandfather. She recalled hearing her father tell how her grandfather had been in love with Annie Laurie, but declared the original song ran:

*Maxwellton's bracs are bonnie,  
They're a' clad owre wi' dew  
Where I an' Annie Laurie  
Made up the bargain true.  
Made up the bargain true  
Which ne'er forgot s'all be,  
An' for bonnie Annie Laurie  
I'd lay me down an' dee.*

(Continued on Page 208)

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

### Playing Mozart at Nine

E. L. P.—In regard to your doubt that the violin prodigy about whom you wrote was able to play one of Mozart's Violin Concerti at the age of nine, at a concert in this country during the past year, I would say that there are many instances where young violinists have been able to play some of the standard concerti, as early as the age of nine. If you will read Lahee's work, "Famous Violinists," you will learn of some of the wonderful feats of very young prodigies.

### Selecting a Violin

G. W. B.—I have made it a rule never to pass on the merits of a violin without seeing it, no matter who made it. It is also the policy of THE ETUDE, in justice to its advertisers, not to recommend certain makes of musical instruments, as being superior to others. Besides, violins cannot be recommended on trade marks, or the maker's name, since, out of a dozen violins made by the same maker, and from the same materials, some will be much superior to others. It is a very different proposition from electric refrigerators, washing machines, radios, plows, corn cutters, and so on. Such things, if made by good manufacturers, are usually fairly standard in quality and value. With violin making it is quite different, for even the greatest makers make violins differing in quality. Maybe you have a friend who is a good judge of instruments, who could help you to pick out a good violin made by the maker you prefer.

### Address Unknown

H. K.—The publishers of the "Violin Maker's Bulletin" in Chicago, as mentioned in the November, 1938, issue of THE ETUDE, have not yet sent me information of this publication, and where it can be obtained. When received, I will give a notice of it in this department.

### Price of Old Violas

A. P. T.—I do not know of any price list of old violas. Possibly you could obtain the information by writing to dealers in old violins, violas, violoncellos, and so on. The viola makers you name are not listed in any of the works on old instruments, I have consulted. I will notify you if I can obtain the information.

### A Broken Bow Tip

J. H.—It is quite a calamity when the tip of the bow breaks, through some accident, especially if the bow is a valuable one. A skillful repairer can repair the damage; but if the bow is a cheap one, it is better to buy a new bow. There are two methods of replacing a broken bow tip. A new wooden tip can be spliced on the stick where the break occurred, making the bow as good as new; or an aluminum tip can be used. This tip matches the old wooden one, and the opposite end is made in tubular form, which fits down over the bow stick. Aluminum is a very light metal, so the weight of the bow stick is not increased. I would advise you to have the work done by a first rate repairer, as the operation requires great skill. I once had a valuable bow, valued at one hundred dollars, repaired with a matching wooden tip. The bow was used for many years, with not the slightest weakening in the stick, and for all practical purposes it was as good as new. I bought the broken stick for five dollars from a violinist who thought it could not be repaired, and, even if it could, he said it would make him nervous if he used it in public performances, fearing it would break.

### Keep the Bridge Upright

X. U. I.—1. Your bridge broke, no doubt, because you failed to keep it in a perpendicular position. If you watch a good violinist tune his violin, you will note that he first turns his violin sideways, and looks at the bridge to see that it is in a perpendicular position, and not bent over towards the finger board. If it is, he sits down, places the violin between his knees, grasps the bridge between the thumb and first and second fingers of each hand, and carefully works the bridge backwards with a twisting motion until it is perpendicular to the top. He then proceeds to tune the violin. 2. Some people have the idea that the bridge is glued to the top of the violin or fastened to it in some manner. Needless to say, this is a mistake. The bridge fits with its feet on the top, with nothing holding it but the pressure of the strings. The bridge must be constantly watched. In order that it keeps its upright position. Otherwise there will be many breakages, and fallen sound posts, for when the bridge falls with a violent jar, it usually causes the sound post also to fall.

### Tune to A 440

H. E. T.—The violin student should, at all times, keep his violin tuned with the A at 440 (double) vibrations per second. This is known as Universal Pitch and is used by musicians, orchestras and opera companies, all over the United States. The violin pupil can procure a tuning fork, or pitch pipe, tuned to this pitch, for use in tuning his violin. It

is of the greatest importance for the student and musician at all times to play at the correct pitch.

### Pay No Attention

S. W. E.—It is certainly discouraging to a musical student or professional to have brother musicians to make slighting remarks about his playing and teaching; but then, you know as the saying is, "it goes with the business." The best thing you can do, is to ignore the remarks, if they are not true. If they are true, you should constantly seek to improve your work, and become a better musician.

If you will read the lives of the great musicians, you will find that they made slighting remarks about each other. Many interesting anecdotes are told of this tendency of even great musicians to "run each other down." The story of this kind is told in Lahee's "Famous Violinists," of Spohr and Ole Bull, both great violinists. When Ole Bull was a young man he was anxious to play for Spohr, then a famous violinist; and he set out for the purpose for Cassel. Reaching that city he went to Spohr, who accorded him a cold reception. "Have come more than five hundred miles to hear you," said Ole Bull, wishing to be polite. "Very well," was the reply, "you can now go to Nordhausen; I am to attend a musical festival there." Bull therefore went to Nordhausen, where he heard a quartet by Mauro of which Spohr played the first violin part. He was so overwhelmed with disappointment at the manner in which the quartet was played that he came to the conclusion that he had true calling for music.

Spohr was a most methodical man, and had no appreciation for wild genius. He saw on the many faults of the self-taught youth (Ole Bull) and coldly advised him to give up the idea of a musical career, declining to accept him as a pupil. Bull refused to heed this advice, and some five years later Spohr heard him play and wrote thus of him, "His wonderful playing and sureness of his left hand is worthy of the highest admiration, but unfortunately, like Paganini, he sacrifices what is artistic to something that is not quite suitable to the noble instrument. His tone, too, is bad, and since he prefers a bridge that is quite plain, he can use the A and D strings only in the lower positions and then *piu mosso*." This renders his playing (when he does not let himself loose with some of his own piece) monotonous in the extreme. We noticed particularly in two Mozart quartets he played at my house. Otherwise he plays with a good deal of feeling, but without refined taste."

So, we see that the great European musicians "roasted" each other in the good old American style.

### Violin by Szarbi

B. S.—I cannot find the violins made by Giuseppe Szarbi quoted in any work on violin or violin making. Nor do they list the value of his violins, or give any information concerning his reputation. As you live in Washington, D. C., which is a large city, I would advise you to take your violin and show it to a leading dealer in old violins. He may supply the needed information. You can obtain the name and address of such a dealer from one of the violinists of the National Symphony Orchestra. The dealer can also refer you to a violin repairer who can advise you concerning the defects in the varnish of the instrument.

### Selecting an Instrument

G. W. B.—It is contrary to the policy of THE ETUDE to discuss the value and quality of violins offered for sale by the various music stores of the United States; this is in justice to the advertisers of instruments in THE ETUDE. Unless you are an expert judge of violins, and can pick one out for yourself, rely on your teacher, if you are studying with a violin teacher, or on a musical friend, if you have one competent to pick out a good instrument.

### A Sufferer from Arthritis

H. K. R.—From the description of your trouble, I should judge that it came from *Arthritis Deformans*, a disease which causes swelling and pain in the joints. This is prevalent, that some doctors call it the "grip" American disease. A common slang term "ball fingers," has been coined for this condition, since the fingers look as if they had been repeatedly struck with a baseball. Many physicians claim that there is no cure for arthritis, but heat seems to do some good, also massage and exercise. I have heard of cures which have been obtained by going to Florida or Texas and lying on the beach in the hot sand, covering the affected parts of the body with the sand. Just how true this is I cannot say. I would advise you to consult a good doctor and get his opinion on the subject. Many violinists have been obliged to give up violin playing altogether, as the result of the swelling, deformity, and pain in the joints of the finger wrists and arms, caused by arthritis. As a result of this disease it often happens that the middle joints of the fingers cannot be bent at all, but are stiff as an iron rod.

**EASY to play**

With an easy playing Conn band instrument, you can be ready for band or orchestra in 4 to 6 weeks. A sure road to popularity if you start on a Conn. Choice of the world's greatest artists. Magnificent tone. Many exclusive features—yet they cost no more.

## Keeping Fit Physically

(Continued from Page 182)

tion of the lining of the nose, throat, es, and lungs. Good sources are yellow vegetables and fruits, green leafy vegetables, liver, egg yolk, butter, cream, cheese, cod liver oil. Vitamin C, being easily soluble, is liable to be lost in cooking vegetables, except tomatoes. Fruit lose their vitamin C content if stored long in advance of serving. This vitamin may be obtained in citrus fruits, vegetables, and cooked, canned or raw totes.

Vitamin D is the only one of the three found in a great variety of foods. In summer, this important vitamin is absorbed from the ultra-violet rays of the sun. During the winter, when your supply of sunshine is limited, it is available in cod liver oil, butter, liver, oysters, and irradiated food products. For growing children and those usually susceptible to colds, a special treatment—sun lamp bath—cod liver oil, or vitamin concentrates—can be advised. Cod liver oil, by the way, has been condensed into small squares of tablet, easy to take. Vitamin D and other vitamins also are prepared in concentrated capsule form.

### Be Weather Wise

FICKLE DAYS of early spring are perhaps the most treacherous of all for colds. If taken care to avoid contagion, and if you fortified your interior with vitamins, you could heed the common sense rules of common wisdom, varying your dress with fluctuations of temperature outdoors, keeping the temperature in the house at seventy degrees. Nothing lowers the temperature so quickly as careless exposure to sudden weather changes of March and April. The late season of concerts and plays will be small pleasure, if it is going to be interrupted by sieges of colds and

## Bands and Orchestras

(Continued from Page 163)

corners of the mouth forward. If we conclude this action by pronouncing the letter "m" as: "du-m", the chin muscles and lower lip are properly drawn up.

The saxophone embouchure provides for all the necessary pressure around the mouthpiece, creates a "cushion" in the center of the lower lip, and while permitting the lower jaw to relax, it insures firmness with flexibility. The most prevalent fault of saxophone embouchures is that of using the lips in a broad smiling position, and usually with too much lower lip over the teeth. Many students while using the "smiling" embouchure not only draw the lips tightly across the teeth but also bite with considerable pressure on the upper teeth and lower jaw. This action, naturally, causes the tone to be thin, sharp and inflexible. The condition is doubly acute in the upper register. Players who transfer from clarinet to saxophone are usually afflicted with this embouchure ailment, and need closest attention.

Intonation is another point of gross neglect on the part of many saxophonists. In all likelihood the saxophone is more often played out of tune than any other of the woodwinds. This is due partially to a lack of pitch consciousness on the part of the student, partly to the construction of the instrument, and to the inattention of players and teachers to this all-important phase of musical perfection. Relaxation of the embouchure muscles will aid in overcoming the common fault of playing sharp, while adequate breath support will prevent the tendency toward flattening. A considerable amount of slow practice on scales, interval studies, and chords will pay big dividends in improving intonation.

Another salient problem affecting the correct playing of the saxophone is the abuse of the vibrato. It is difficult to find a player who does not overdo the use of vibrato. In fact, so accustomed are a great majority of players to its usage, that they can scarcely play without the vibrato. When properly employed, the vibrato is just as much of an asset to the saxophonist as to the string player. If it is unduly abused, however, it were far better that it be dispensed with entirely. The method and development of a good vibrato requires a

great deal of intelligent practice, time, and patience.

The correct vibrato is produced by a steady upward and downward motion of the lower jaw. This movement must be made in a steady, rhythmical manner. It is advisable at first to produce the rhythmical pulses in regular four-four meter, at a tempo of sixty or seventy, with one motion of the jaw to each beat. Special attention must be given to the matter of relaxation, control and evenness of motion. As the motion is mastered, the tempo may be increased, with stress being given the necessity for reducing the distance of jaw motion in proportion to the rapidity of the tempo.

Properly employed, the vibrato should be even, neither too slow nor too fast. Accentuation with the breath should be avoided, and the more nearly the saxophone vibrato approaches the good string vibrato, the more perfect it will be. Under no circumstances should the hand or throat vibrato be tolerated, since this method of producing the vibrato eventually spoils the quality of tone and technical control of the player.

Correct articulation is another indispensable factor. Many players acquire the pernicious habit of striking the reed too heavily and too near the middle. This habit results in a slapping of the tongue against the reed which is usually inappropriately audible. Slap-tonguing is one of the saxophonists' most dreadful diseases. Its cure can be effected by practice of a soft, legato stroke of the tongue. Pronouncing the syllable "du" will aid in the elimination of the heavy, rough tongue. Sufficient breath pressure must be maintained and supported by the muscles of the diaphragm, ribs, and abdomen before the tongue begins the articulation of the tone.

As one who has great interest and faith in the saxophone, I believe that a conscious and steady attack on these prejudices and problems will bring about its redemption. Its popularity should hardly depend on the facility with which it can be played and the uniqueness of its effects. It has a worth and a dignity of its own; it has a voice that must no longer be squeezed and maligned, but be allowed to stand forth as a distinct and vital part of the chorus of instruments.

## Worth While Music in the Movies

(Continued from Page 152)

ited to films is evidenced by the fact that it was also featured in Hollywood Bowl concerts, in the Los Angeles and San Francisco productions of "Show Boat," and that it supported Lawrence Tibbett in the Los Angeles production of "Emperor Jones."

Carlyle Scott, whose colored choruses are now entering the concert field in Southern California, also has headed groups which have been signally successful in films.

It is Eva Jessye's choir that takes credit for having sung in the very first talking "short" for Warner Brothers Films, as well as having sung in "Porgy and Bess" and "Four Saints in Three Acts," in New York. Eva Jessye herself was the musical director of "Hallelujah," the first Negro talking picture. Her "All-American Ensemble" is not on the West Coast at present. The only Hollywood record of the Fisk Jubilee Singers seems to be their appearance in concert at the Hollywood Bowl in 1929, singing spirituals.

Freita Shaw's Ethiopian Chorus and Carlyle Scott's groups are still in Hollywood, as are the colored choruses of Minnie Albritton and George Garner. But, of late, Hollywood's interest has centered on the Hall Johnson Choir, brought to the West Coast to sing in "Green Pastures," Marc Connelly's Pulitzer Prize winning play, and kept in Hollywood for such films as "Rainbow on the River," "Banjo on My Knee" (more than ten films in all, to date), and for short subjects featuring the choir itself, one on a scenario by Jester Hairston, assistant choral director. This Choir's ability to step easily from the realm of song to that of the spoken word has given it an adaptability not found in other groups. Witness its excellent work in Hall Johnson's own stage play, "Run, Little Chillun!" To-day this choir is so popular that two organizations bearing the same name are needed—one to stay in Hollywood and the other to tour in the East. Its radio services are much demanded.

"An artist plays on an audience while a musician plays—notes!"—Leopold Stokowski.

Announces the engagement of

## ALFRED MIROVITCH

Eminent Pianist and Master Teacher

For a Six Week  
Summer Master Class  
July 3rd to August 12th

In addition to private lessons in piano Mr. Mirovitch will offer his popular class for teachers and professional musicians exclusively at the Chicago Musical College this summer. During the past fifteen years, Mr. Mirovitch has offered this class during the summer season in such centers as New York, Los Angeles, Minneapolis, San Francisco and many other cities.

His engagement by the Chicago Musical College for a six week session provides an opportunity to profit by instruction, both in class and private lessons, for which college credit is given.

## FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

## Fundamental Guitar Technic

ONE OF THE MOST serious mistakes made by many guitar students especially those trying to master the instrument without the benefit of a teacher, is to attempt to play a composition that is far in advance of their technical ability. In a recent letter the writer complains that after several months hard practice he is still unable to play the *Recuerdos de la Alhambra* by Tarrega, at the same time stating that he has been playing the guitar for almost two years.

Buenos Aires, the beautiful capital city of Argentina, boasts of a large number of guitar schools, where no other instrument but the classic guitar is taught. The most renowned is that presided over by the distinguished guitarist, composer and teacher, Domingo Prat. The course for guitar in this school covers a period of seven years; and the above mentioned Tarrega number is listed in its year book as one of the compositions to be studied towards the end of the fourth year. Pupils are pledged to a minimum daily practice period of two hours. Similar to that is the course for guitar at the State Conservatory in Vienna with an average yearly enrollment of fifty students under the direction of Professor Jakob Ortner.

These courses are carefully and intelligently outlined so the students progress gradually and surely, skipping nothing, leading up to the time when they are ready for public appearance.

After all, there are no short cuts in learning to play any instrument and any one wishing to become an outstanding player must pay the price by hard work for a number of years.

### Practice and More Practice

ANDRES SEGOVIA devoted six hours daily for almost ten years to the development of his incomparable technic and yet we have known of players of one or two years experience attempting to play the difficult compositions performed by this virtuoso. To do this without sufficient preparation is nothing but folly and eventually leads to discouragement and failure. The foundation of good guitar technic is primarily daily practice of scales and arpeggios. Scales in all keys in two and three octaves should be practiced with alternating first and second fingers of the right hand, slowly at first with a firm decisive movement of the fingers and later with gradually increased speed and a lighter touch. Arpeggios are beautiful and effective on the guitar and should be practiced in all keys and positions. The third finger of the right hand, being the weakest, requires special attention and should be used whenever possible. It is utterly impossible to play a tremolo movement similar to that in *Recuerdos de la Alhambra* satisfactorily unless the control over the third finger is absolute. The first two "Preludes Op. 83" of Mauro Giuliani, the *Etude, Op. 6, No. 11*, by Ferdinand Sor and "Six caprices, Op. 26," by Carcassi are excellent for this purpose.

While the guitar, as far as volume of tone is concerned, cannot be compared with the piano, guitarists will do well to experiment with their instruments and try to bring out all the tone there is in them, putting much energy into their finger action, while practicing scales, chords or arpeggios in a slow deliberate manner. For an audience to appreciate the guitar, it must be

able to hear it and it is surprising how tone volume can be improved by intelligent and systematic practice.

Using at the start a complete "Guitar Method," such as that by Foden, Carcassi or Albert, this should be supplemented by the exercises and etudes by the classic composers Giuliani, Sor, Carcassi, Legnani, Coste, Aquado and the modern etudes and preludes by Albert and Tarrega. Along with these a repertoire of concert numbers must be taken up for study, carefully graded to fit in with the technical proficiency of student. The literature for classic guitar is so extensive, that a student can find right material, which, if properly selected and intelligently studied for a number of years, will help him to reach his goal.

### Luigi Boccherini

IN DRAWING ATTENTION, in one of our recent articles, to the chamber music of Luigi Boccherini, we invited several inquiries regarding the life and career of this highly gifted violoncellist, guitarist and composer. Born in Lucca, Italy in 1743 he received instruction in the rudiments of music, violin, cello and guitar from his father. Later from the Abbe Vannecci. Recognizing his musical ability, they sent him to Rome where in a comparatively short time he became famous as a performer and composer. A concert tour through Italy and France brought him to Paris, where his concert proved highly successful and publishers vied with each other for the privilege of publishing his quartets and trios. At the suggestion of the Spanish ambassador in Paris Boccherini now visited Madrid and after time was appointed composer and virtuoso to the Infante Don Luis, brother of the King. In 1797 ill health compelled him to give up public performances and, having met a generous patron in the person of Marquis de Benavente, a talented performer on the guitar, he began to devote more time to this instrument. The Marquis commissioned him to write guitar parts for his orchestral compositions and these were performed with Boccherini and his partner playing the guitar score.

Other members of the aristocracy became interested in him and from then on he kept quite busy writing guitar solos, guitar parts for his symphonies, quartets and accompaniments to songs. At this period he wrote a "Symphony Concertante" for guitar, violin, oboe, violoncello and bass and two quintettes for two violins, viola, violoncello and guitar. His facility in composition was so great, that he has been described as a fountain whose stream never ceased. Over three hundred compositions from his pen were published but it is to be regretted that many of his guitar works were lost in manuscript and in time disappeared.

The "First Quintett in D major," "Second in C major" and the "Third in minor" were recently published by Zimmernann, of Leipzig, and they call for two violins, viola, violoncello and guitar.

His celebrated *Minuet* is known to every music lover and this beautiful composition has made the name of Luigi Boccherini known throughout the world.

Towards the end of his career Boccherini suffered many financial reverses brought about through the unfortunate conditions existing in Spain at that period and he was reduced to abject poverty, when death overtook him May 28, 1805.

\* \* \* \* \*

A prudent person profits from personal experience; a wise one, from the experience of others.—Dr. Joseph Collins.

# QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in *THE ETUDE* unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

## ing Popular Songs.

I have recently become interested in lyrics for popular songs and am interested in learning what steps are necessary in marketing such a product. (1) Is it necessary to secure a copyright in order to be paid before submitting a song to a publisher? (2) Do publishers accept lyrics without a suggested score? (3) How are lyrics purchased? (4) Do publishers pay a flat amount or are accepted on a royalty basis? (5) What is average profit to the writer on a popular song?—T. W. L.

I have asked Mr. J. T. Roach, a veteran music publishing business, to give me answers to your questions and he has kindly supplied me with the following information:

Copyright subsists in the composition. The person who writes a work owns that work. It is a common law right. In order to protect right from infringement, the government requires registration in the copyright office. Registration may be made by the composer in form of a manuscript or by the publisher by deposit of two copies after publication. However, since a composer is always in a position to prove that he wrote the composition through the testimony of those who saw him play, there is no particular advantage in registering his copyright before publication.

Most publishers of any standing will not accept anything but a completed work for publication. As a general rule, firms that will accept lyrics and set them to music do not get into much trouble. Several of them, as you know, have been prosecuted by the postal authorities. However, if an author has an exceptionally good lyric and can contact someone in a publishing house, it might be that the firm will have one of their staff writers set the music. However, a better arrangement would be to submit the lyric to one of the nationally known dance band leaders.

Publishers seldom purchase lyrics without music. What I have said in answer to question No. 2 applies. Popular songs are almost always published on a royalty basis. I think, though I am not sure, that the royalty averages about three cents per copy for words and plus twenty-five per cent of the mechanicals.

I doubt if anyone in the world can answer question No. 1. If you mean what we call "a hit" in the popular field, the sale will run from 100,000 to 300,000 copies. *Heigh Ho!* from *White* reached almost a half million. I hear that *Alexander's Ragtime Band* is really a revival may go even bigger. Apply these figures by three cents, and you have an idea of what a hit will produce. Hits are almost as scarce as hens' teeth.

## Trills.

1. Please write out the trills in the following: Hungarian Rhapsody, No. 8, Liszt—measures 1, 7-8, 25, 33. Hungarian Rhapsody, No. 14, Liszt—measure 2 in vivace assai. Op. 40 No. 1, Chopin—measures 41, Invitation to the Dance, Weber—measures 16th from end. Variations in F Minor, Beethoven—measures 5, 6, 11, in Trio of Var. 1. How is the time counted in the following? The beginning of the composition is indicated in common time and there is no time signature indicated for this section.

Which, in your opinion, is the most melodic paraphrase for piano of "Die Fledermaus" and who publishes it?—J. W.

1. Measure 1 has no time signature and is played *ad libitum*. It may start on C or G-sharp.

Trills in measures 7 and 25 are identical. Sixteen notes to the eighth note, placing accent on A or G-sharp as you like. (Rhapsody No. 8)

Measure 2, Vivace assai (Liszt Rhapsody, No. 14)

Measure 41, Polonaise, Op. 40, No. 1, Chopin

ARCH. 1939

Measure 48, Polonaise, Op. 40, No. 1, Chopin

Invitation to the Dance

Variations in F minor, Haydn. A well known edition of these variations has these trills written out thus

2. From the one-measure example that you send I should say the sixteenth notes should be thirty-second notes.

3. Questions like this cannot very well be answered in this column.

## How to Play a Large Chord.

Q. I would like to know how the following notes, from Rachmaninoff's Prelude Op. 3, No. 2, are to be played together with one hand. If they are not to be played exactly together, then why is not the upper chord written after the octave, and a sixteenth rest placed above this octave?—Miss L. W.

A. This passage has made a lot of trouble for students. Mr. Rachmaninoff could have simplified it by tying grace notes to the octave C-sharp, like this:

## How to Cure a Sore Lip.

Q. I have been playing the clarinet for about seven years. For the last three months my lower lip has become cut after playing two or three days, not more than two hours a day. Have you any suggestions?—H. C.

A. My friend, George Waln, gives me the following information: "A certain amount of soreness is common from excessive practice and playing, but more than likely the trouble is caused by a sharpness or unevenness on the front lower teeth where the lip is stretched. I have the same trouble. The solution is to acquire a piece of very thin flexible leather—kid glove or very thin shoe leather—and cut a piece about one inch by three quarters of an inch in size; wash thoroughly in warm soapy water (never boil); and, when wet with saliva, this will cleave over the lower front teeth and will form a cushion on the teeth for the lip to rest upon. It will not seriously affect the tone quality or the action of the tongue. Many players use this device. Leather can usually be secured at a shoe repair shop. I like to use white leather which will not be so conspicuous."

# COME TO CHICAGO —and SHERWOOD— This Summer

As President of Sherwood Music School I invite you to come to Sherwood in Chicago for a happy, worthwhile summer of study and recreation. Lakeside Chicago is usually delightfully cool, and offers many opportunities for interesting, leisure-time activities. I know your summer here will be one of accomplishment and pleasure!

GEORGIA KOBER

Sherwood's special low-cost summer courses include: private instruction in piano, voice, violin, organ, cello, wind instruments, theory, composition, dramatic art, dancing. Special short-term classes in 50 subjects, including piano normal class, teaching repertoire, class piano,

master classes in violin and voice, public school music, conducting theory, composition, microphone technique, etc. Faculty of 75. Certificates, diplomas, degrees awarded.

Write today for catalog and all-expense estimate. 410 S. Michigan Avenue, Chicago, Illinois.

## Music and the Child's Decorative Sense

(Continued from Page 181)

banjo that play folk songs. A wooly white lamb that sings the song entitled, "Mary had a little lamb." A tiny electric victrola and last but not least a musical bed lamp that plays "Now I lay me down to sleep." A little girl complained to her Mother that she was lonesome when the lamp was turned out because then, "it did not play music."

In planning the arrangement of your music room let it be one of complete ease. Finally, be sure that there are plenty of comfortable chairs so that everyone can relax in enjoyment of the merry or serious musical cadences which are sure to be forthcoming.

## Introducing the Minor Scales

By ALICE M. STEEDE

BEFORE TEACHING A PUPIL to play a minor scale it is well to give him some idea of the part it always has in actual music. Let him play the tune of *America*, for instance, with one finger if needs be, in the key of C major. Then play it for him in the key of C minor and make him hear the melancholy effect of the minor third, both as an interval, and also as it occurs in the last measure of this ancient song.

Of course, it is assumed that the pupil has some familiarity with the major scales and with their tonic triads; he should then be shown the formation of the minor triad, and learn to distinguish it by ear from the major triad. As soon as he can do this with some degree of certainty, he is ready to learn to play a minor scale. Perhaps it is better to begin with D minor, with the natural, or pure form first.

First, let him play the D minor triad; then ask him, "What is the middle note of the chord?" And the answer is "F." "Now, think of the scale of F; what black key do we play in it?" "B-flat." "Now we are going to play the scale of F, only instead of beginning and ending on F, we shall begin and end on D. You see, this minor scale is rather like F major; it has the same notes, and yet it sounds different. We say it is a relative of F major, a kind of cousin, you know".

When the pupil can play this natural form of the minor scale with some ease and certainty, in one octave, let him listen more to the D minor triad and notice the middle note of the triad is also the middle note of the minor scale, and also the note that makes the essential difference between a minor scale and its tonic major. This middle note of the triad is played with the third finger, and he will discover later on that the middle note of all the minor scales which begin on white keys is invariably played by the third finger. By filling the two vacant places of the triad, the second and fourth notes of the scale, he will find, probably much later, on that these five notes form the first notes of every minor scale natural, harmonic or melodic.

When the pupil is familiar with the natural form of the scale it is an easy matter to transform it into the harmonic form by raising the seventh note a semitone. In the D minor scale this interval of the augmented second is striking to the eye as well as to the ear, and is more easily played than the same interval occurring between two white notes, or between a black and a white note.

Even fairly advanced pupils will find it easier to avoid faulty scales, if they play the tonic triad, whether major or minor, before beginning the scale itself.

## Accordion Department

(Continued from Page 201)

Some teachers are using this as lesson material for sight reading. The first glance of the player should observe that the accompaniment is written in the bass clef, the selection is in the key of G and it is to be played *alla breve* as indicated by C. The tempo is *allegro* and the dynamic sign is *forte*. These five signs are grouped closely together before the beginning of the notes. Another sign appears which must be observed for later reference. It is the *Dal Segno* sign. The accordion register switch ♯ and ® also must be noticed. Our total

number of important things to notice on a glance has now grown to seven. In all selections have the last three meanings but sight readers should be trained to grasp them when they appear. Still another sign appears over the chord in the first measure for the right hand. This indicates an accent.

If all of these signs have been ignored in practice it will naturally take time to train one's self to grasp them all at a glance when sight reading.

(Continued in the April Etude)

## The Romance of Annie Laurie

(Continued from Page 204)

She wrote down the verse from memory and signed it,

"Clerk Douglas."

There can be little doubt that whatever the original lines, they have been altered and Anglicized almost beyond recognition. Reliable authorities state the modern music of "Annie Laurie" is by Lady Scott.

Maxwelton still stands firmly on its braes. It is painted white and built around three sides of a court. Ivy covers the old tower with Annie's second floor bedroom.

Alexander Fergusson attended St. Andrew's University, became a barrister, and later represented his borough in Scottish parliament.

In *Scot's Magazine*, April 1764, is this brief obituary:

"Died—May 5—at Carse, Dumfriesshire, Mrs. Annie Laurie, relict of Alexander Fergusson of Craigdarroch, Esq., and daughter of Sir Robert Laurie of Maxwelton."

The real Annie Laurie was listed Burke's Peerage. She was the youngest daughter by Sir Robert's second wife, Jane, daughter of Walter Riddell of Minto.

For Annie, Douglas created an enduring memorial, enshrining her in all hearts all time.

The heart stirring romance of Annie Laurie continues down through the years. In Glendale, California, an exact replica of the "wee kirk o' the heather" stands in Forest Lawn Memorial-Park, and this tiny stone chapel, dedicated to romance, over ten thousand couples have been married.

Throughout the wedding service a hidden pipe organ plays the sweetly solemn music of *Annie Laurie*. From her portrait Annie looks down upon the happy couple as they sign the marriage register. Whether her silent benediction carries with it mystic influence, is not for us to say. The fact remains that more enduring marriages are made in Annie's "wee kirk" than in any other place in the world.

\* \* \* \* \*

"Schubert's great 'Symphony in C major' did not bring him a penny in his lifetime, and was sold with his old trousers, waistcoats and other junk, for a few florins, after his death."—Time and Tide.

## VOICE QUESTIONS

Answered

By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

**Books Versus Singing Teachers**  
In your "Voice Questions" you have several singers to secure "Guide for the voice" by Frederick W. Root and "On the use and singing" by J. B. Kennedy. These books elementary enough for a person knows practically nothing about music kind? If not, can you advise me about which are and where they can be obtained? My range of voice is

Ex. 1

Twenty-one and I am financially unable to take lessons at present. Is twenty-one too young to start studying?—R. A. M.

No book can take the place of a good teacher. Among other things, he can in his own words and exemplify with a voice. He can point out your mistakes in production and indicate the quality of what you should make. He can correct errors and peculiarities of vowel and intonation. No book can do these as well as a living human being. The one you mention is very good. If you will write to the publishers of THE ETUDE and let them know you desire it, I am sure they will send it to you. You might also look for a very simple, small book, "What the Student should know." You need the best teaching of a good instructor. Twenty-one is not too old to commence study of singing, but do not delay any

**Baritone with a Short Range**

I am a Bass-baritone twenty-one years old. I have been studying three years. My range is from F on the first space below the staff to G (Middle C) above it; and it is for me to sing even a half tone higher, which at times I sing E-flat on the second line above the bass staff, but never really well. My voice is deep and powerful, but it has a quality, especially suited to Negro and those of a rollicking type. Is there any chance of increasing my range; and, if not, is there a chance for a singer with this short range?—B. McD.

The range you mention is quite limited. I scarcely hope for much success until you have added a tone or two to the upper part of your voice. The fact that your tone is that of a baritone rather than that of a bass suggests that you should be able to sing E or even F above the bass staff without effort. It is quite likely that you are inhibiting your words with a stiff tongue root. Is your speech clear and distinct? Is your guttural and throaty? It is of the importance that you correct any faulty actions, before you can hope to improve your tones. Try these exercises.

Stand erect, with shoulders well back and the chin is at right angles to the neck and not bent downwards. Take a deep breath before you start singing.

Suppose these exercises chromatically up as far as they can be done comfortably. Exercises, A, B, C, as given, use the "Ah, aye, ee, and oh, in the order given. Do rapid scales to the ninth and back. Use the obtainable books on singing.

**Very Hard Questions**

1. What is the proper position in singing?  
2. What is resonance?  
3. What is the use of the soft palate in singing?  
4. Should the tip of the tongue lightly touch the roof of the mouth when singing? If not, in what position is it held to prevent its slipping back and obstructing the opening of the throat?  
5. What does the expression open throat mean?  
6. What does the expression open throat mean?

Ex. 1

changed teachers, and now it is practically impossible for me to reach the highest notes myself. I appeal to you for help. Keep me from losing my voice. An eminent specialist found my throat and in perfect condition, but said I was not singing. Please tell me some books and about singing.—M. J.

1. Stand erect, with the feet a little apart and the shoulders well back, yet without

stiffening any of the muscles of the legs, the back or the entire torso.

2. The dictionary defines resonance as "A prolongation or a reinforcement of sound by means of sympathetic vibration." You might read Fillebrown's book, "Resonance in Singing and Speaking," or the chapter upon Resonance in my small book, "What the Vocal Student Should Know," or any other book which explains the function of resonance in singing and suggests exercises to develop it. 3. The soft palate and the uvula form the movable ceiling at the top and back of the mouth. Theoretically, at least, they move automatically with every changing pitch, tuning the cavities of the mouth, nose and head so that they may resonate in unison. Do not try to control these parts with your will. They should move freely and automatically.

4. The tongue must move freely and comfortably in the mouth in order to form each individual vowel and consonant sound. To attempt to hold it stiffly in any one position, is fatal both to good tone and to clear enunciation. Under no circumstances dare it rise in the back, or, as you point out, it will obstruct the opening between the throat and the mouth.

5. The expression "open throat" means, that position of the throat in which there is no muscular contraction from either the external or the internal muscles. The throat is simply a canal through which the vibrating air issues into the cavities of the mouth, nose and head, during singing.

6. The range of voice you mention is quite exceptional as to high tones, but lacking in low ones. Perhaps you have been singing too high, beyond the normal, natural range of your voice. I answered a question similar to this last one, in THE ETUDE about two months ago. Please read it. You must learn neither to strain the high notes by too much throat action nor to squeeze them out by contracting the tongue and the palatal muscles. They must be comfortably and easily produced or you will do yourself much harm. Read Shakespeare's book, "Plain Words on Singing," and practice the exercises in Horatio Connell's "Master Exercises."

**Another Bagful of Difficult Questions**

Q. Is the Queen of the Night aria from Mozart's "The Magic Flute" the highest of all written songs? Some say that there are ten others equally high and still more difficult. Please give me the names of a few.

2. In your opinion is Love's Old Sweet Song the greatest love song?

3. What is the most famous lullaby excepting Rock-a-bye Baby?

4. Our teacher and a coloratura soprano are at war. The girl is surrounded by shouting dramatic sopranos, so Helen does not stand much chance. Her range is Middle C to A on the fifth space above the treble staff; and she has perfect placement. She sings The Bell Song from "Lakme" and other songs of that type. She is discouraged because our teacher decided to make her yell too. Could she not specialize in some individual type of song?

5. What is a true contralto.—A. F. D.

A. 1. There are many songs with a higher range than the Queen of the Night aria from Mozart's "Magic Flute." The aria Non comprendo i mali miei from Mozart's "Popoli di Tessaglia" rises to G on the fourth added line above the treble staff and is still more difficult than the aria you mention. The coloratura rôle in Mozart's comic opera, "The Impresario," is also extremely high, florid and difficult, which may be the reason why the opera is given so seldom. Mozart's rondo, *Mia speranza Adorata*, reaches the high F, and is terribly taxing. The highest and most difficult coloratura rôle that has come under my observation is that of Zerbinetta, in Richard Strauss's "Ariadne auf Naxos," which goes higher than any of the Mozart arias that I have mentioned and is almost impossibly difficult so far as intonation is concerned. There are other songs of this type, but these will be enough to prove your point.

2. Love's Old Sweet Song is a pleasant and popular love song. Before you make up your mind that it is the greatest, study thoroughly Schumann's *Widmung*, Beethoven's *Adelaide*, Brahms' *Wie bist du meine Königin*, Grieg's *Ich liebe Dich*, and then form your own opinion.

3. Rock-a-bye Baby is all right if you like it. Look at Brahms' Lullaby, Strauss's *Wiegenlied*, the Lullaby from "Jocelyn" of Godard, and Rhené-Baton's *Berceuse*, and it may be you will change your mind.

4. Certainly a coloratura soprano should not yell. If she does she will soon lose her highest tones, and will acquire a thin, tight, metallic voice. The coloratura is indeed a specialist, and she should sing only those songs which fit her individual voice. The range you mention is a remarkable one; and, if your friend can sing every note of this extended scale with a tone sweet, clear and steady, she is to be congratulated. It is a rare type of voice.

5. By the expression "true contralto" I suppose you mean that type of voice which does not verge upon the mezzo in quality, but which is full and round throughout its entire range, without being either too thick or throaty. Melis and Matzenauer are fine examples.

## Recent Record Releases

(Continued from Page 160)

on this ancient art and the development of its blending, color and movement. If a reader cannot procure one of the brochures from his dealer, drop us a card and we will tell him how he can get one. Both Victor and Columbia have been augmenting their record lists with many items of the ballet. Among the latest issues of Victor are Bizet's melodious *Jeux d'enfants*, played by Dorati, and the London Philharmonic Orchestra (set M-510); the particularly attractive and vivacious Scarlatti-Tommasini score, *The Good-humored Ladies*, played by Goossens and the London Philharmonic Orchestra (set M-512); and excerpts from Delibes' "Coppelia," played by Fiedler and Boston 'Pops' Orchestra (disc 12527). Among Columbia's latest issues are Tchaikowsky's familiar *The Swan Lake* (set 349) and Chabrier's *Cotillon* (set X-113), both played by the London Philharmonic Orchestra under Antal Dorati. The Chabrier work, arranged from piano pieces, is refreshing, vivacious and colorful.

One of the foremost interpreters of early keyboard and chamber music is the American musician, Ralph Kirkpatrick. Mr. Kirkpatrick plays a group of tone pictures by Couperin and Rameau; a group of pieces by Gibbons, Morley and Purcell; Bach's "Chromatic Fantasy and Fugue"; and two brilliant sonatas by Scarlatti.

Another interesting harpsichord recording is that of Mozart's "First Clavier Concerto" (K. 37), played by Marguerite

Roesgen-Champion (Columbia set X-113). The work is a pleasant one, with two and lively outer movements and a peppy inner movement.

In the realm of chamber music Victor brings forward a recording of Hindemith's atonal "Quartet No. 3," played by the American ensemble, The Columbia Quartet (set M-524). The work, from 1921, when its composer was a radical minded than he is to-day. Although dissonant in its structure this quartet is nonetheless interesting with its varied rhythms and the skillful treatment of its various motives.

It has been said that the lyric quality of Schubert is as clearly stamped on piano sonatas as on any others of his works. Many people regard his "G major Op. 78," as his best; certainly it is an imposing work replete with many ending inspirations of the typically Schubertian variety. In a newly recorded performance of this work, Kurt A. Baum, the German pianist, gives a so-called although somewhat overconscientiously forth reading. This recording is issued by Musicraft—their set 26.

Recommended: Flagstad's glorious performance of *Occan, thou mighty mother* from Weber's "Oberon" (Victor 15245); Cortot's fine performance of Liszt's *Le No. 2—St. Francis Walking on the Water* (Victor disc 15245); Heifetz's unmat performance of Sarasate's *Zigeunerweisen* (Victor disc 15246).

## Radio Flashes

(Continued from Page 154)

then hear him from Hollywood the following night, do not think you are "hearing things"; just remember he is a long distance commuter who has made the 6:15 plane. An artist's life to-day is certainly a full one.

On NBC's networks during the first eleven months of 1938, thirty-two American orchestras broadcast three hundred twenty-four individual programs, with eighteen European orchestras contributing twenty-four programs, including two memorable broadcasts by Maestro Toscanini from the Villa Tribschen, in Switzerland. Altogether, NBC broadcast three hundred forty-eight symphonic programs practically "a symphony a day."

In addition to twenty-five complete Metropolitan Opera matinees, NBC brought its audiences four opera broadcasts from San Francisco's notable season, five from Chicago and seven from Cincinnati's summer season. Also of stellar importance were the three operatic broadcasts from the Salzburg Music Festival in Austria, one from Bayreuth and two from the Verdi Anniversary Festival in Turin, Italy.

Heading the NBC list of chamber music offerings are those by the Elizabeth Sprague Coolidge and Gertrude Whipple Foundations from the Library of Congress in Washington, D. C., and elsewhere, by the New Friends of Music, from Town Hall in New York.

## High Lights in Famous Piano Methods

(Continued from Page 158)

must be anticipated before satisfactory results can be expected.

Velocity forms, like the grades, are applied to broken thirds, arpeggios, trills, and octaves—all the figurations which are characteristic of piano music.

The influence of these principles of touch on phrasing, and thus on interpretation, is naturally of the first importance.

Further, the application of the principles themselves is clearly set forth in detail, with definite instructions as to rhythm, speed, and the order in which the exercises are to be taken.

Thus in the Mason technic are to be found original and valuable ideas as to the use of the arm and the hand, as well as the fingers, cultivation of rhythmic sense and of strength and flexibility, and the "group" idea of thinking and acquiring great velocity.

### Test Questions on Miss Leonora Article

1. What important idea for developing rhythm was the principle of Mass first publications?
2. What important technical exercise he learn from Liszt?
3. In what new way did he use it?
4. To what musical figures did he apply it?
5. What exercise develops legato?
6. What one is used for strengthening flexor muscles?
7. How is accent made important?
8. What was his theory using the arm?
9. How does his teaching of hand movement differ from the older schools?
10. What condition of the arm did he consider essential?
11. What quality of tone did he teach?

"Scores and scores still think that foreign language singing proves superiority; scores still repeat the fallacy of the older foreign teachers that 'Italian is more singable.' Study will show that all of this is built upon wrong suggestion; but, even if you are still firmly convinced that it is not, you should yet take up the cudgels for English language on the scores (1) of nationalism and (2) for business reasons."—C. E. Watt.

## The Cover for This Month

March, with its St. Patrick's association, has a very suitable cover for THE ETUDE MUSIC MAGAZINE to put on its front a photograph of Victor Herbert and, in the magazine, an excellent article by Ray Klemm on the famous composer, who was born in Dublin, Ireland, February 1, 1859. Since THE ETUDE numbers among its readers great numbers who have been loyal subscribers for a long period of years, there will be many who will recall another Victor Herbert portrait on the March 1935 issue. Victor Herbert, besides being a well trained pianist, a successful cello soloist, a redoubtable conductor, and a composer who achieved world fame for larger works in operatic forms, as well as for tremendously popular hits in the field of light opera, was a great personality and even during his lifetime the story of various acts demonstrating his big-hearted geniality made him seem like a traditional figure in the music world.

Victor Herbert was the grandson of Samuel Johnson, the great Irish novelist, poet, and song writer. The musical genius of Victor Herbert was evident at an early age and he was only twelve when he was sent to Germany to complete his musical education. After he married Theresa Foerster, 1886, she came to New York, joining the Metropolitan Opera Company and Victor Herbert followed her to New York that year, taking a job as first cellist in the Metropolitan orchestra. In 1891 his opera, *The Captive*, was done at the Worcester Festival where he was associate conductor. From 1898 to 1904 he served as conductor of the Pittsburgh Symphony Orchestra.

From then on, more and more, composition was coming to his attention and thereafter, although he had an orchestra of his own at various times and served as guest conductor of larger symphony orchestras, he produced a large number of the works by which he is known.

Victor Herbert became a naturalized citizen of the United States and one great American institution in which he had a large part as a founder and worker is the American Society of Composers, Authors and Publishers, which is the agency for all of its members.

## THE ETUDE FAMILY

• Over and over again for decades, we have been immensely honored by friends in all parts of the world, stating: "I'm a member of The Etude family." Frankly, we of the Theodore Presser Co. have always tried to cultivate this family spirit by the only way in which it can be cultivated, by meriting it. We often wonder how many other publications have such an intimate family relationship with thousands of readers. In evidence of this rare relationship, here is a simple, heartfelt Christmas letter we received, which has touched us very deeply. We are sure that all members of The Etude family in all parts of the world, extend their deep sympathy to Mrs. Jones, and we mourn the loss of our good friend Dr. J. Arthur Jones:

Dr. J. Arthur Jones

### To THE ETUDE:

Your old subscriber for many years, Dr. J. Arthur Jones has left for higher music in his Heavenly home. I wish to say for him that you had no more appreciating subscriber than was he. He read from cover to cover until the January number came, when he was unable to apply himself. He smoothed it very carefully and put it in the music case, and on the last day of the same month he went from us to his Father above. You will remember perhaps that for years he was a subscriber to THE ETUDE while in Cleveland, Ohio. My husband was an exception in his love for music for its own sake. I have never known another like him. He knew all of the old masters, their places of abode, their habits, and visited some of their resting places. He sang well and, tears coursing down his face, last Christmas Sunday in the Bible class of his organizing, when he tried to speak his voice, too, was full of tears of appreciation of the songs of praise. We one time visited your place in Philadelphia. A graduate of Jefferson College and a prefect in Girard College for four years, he was at home there. May God grant him a place in the celestial choir this Christmas Day. I thought that perhaps a word of one's appreciation of your good work would be in tune with the season just upon us. I, his wife, have not as yet recovered from the parting, nor do I expect ever fully to do so, since we both were seventy-five years past. Wishing THE ETUDE family a joyous Christmas and a Happy and Prosperous New Year, I am,

Sincerely yours, Mrs. J. Arthur Jones, Springfield, Ohio.

Dr. Jones and a chorus he directed, the average age being 73.

members in collecting performance fees from radio stations, theatres, dance halls and others, who use the works of composers and writers in public performance for profit. There are many living today who were among the fortunate ones who could count themselves as close friends of Victor Herbert and in their memories they cherish fond thoughts of the man whose passing in New York City, May 26, 1924, was a great sorrow to them and a great loss to American music.

### Music's Part in the Exercises at Graduation Time

Those who have not heretofore considered the subject, perhaps would be amazed were they to review the orders and communications received by the Theodore Presser Co. during the next several months and note the wide variety of music publications wanted by the various individuals responsible for the musical touches on commencement programs or other closing-of-the-school-year exercises.

There are choruses and cantatas for singing groups of all ages from the grammar

school through to the best trained college choir groups; there are solos for the stellar students of singing in the vocal department; there are all the various piano ensemble combinations; there are various chamber music groups; there are orchestra and band selections from entertaining little pieces to works of symphonic proportions; there are solos for piano, violin, cello, harp, trumpet players and other individual instruments; and there are, beyond these, publications covering possible and sometimes impossible special combinations of vocalists or instrumentalists, in the calls for music for such programs.

Thus, you will see, that whatever may be your particular desires for the end-of-the-school, or college, year program under your direction, you need not hesitate to put it before us, asking us to send a selection of suitable numbers on approval. This will give you the opportunity of examining these numbers in the convenience of your own studio, make it possible for you to choose and pay for only such items as you find acceptable; then, permitting you to return for credit the on approval material you do not use and do not wish to purchase.

## Easter Music

For Choir and Sunday School

When this issue reaches readers of THE ETUDE it is quite probable that Easter Programs will have been planned and are well along in course of preparation. Should circumstances have prevented the completion of the program, however, a most cordial invitation is extended choirmasters, organists and soloists to utilize the facilities of Presser Service in securing needed material. The *Easter Folder P-1* gives comprehensive lists of anthems, vocal solos and duets, organ numbers and descriptions of cantatas. A copy is yours for the asking.

There is a new cantata published this year that should prove interesting, especially to choirs with little time for rehearsing. It is entitled *Hail, King of Glory* by Lawrence Keating. The choruses are easy and arranged for mixed voices and there are solos for soprano, alto, tenor and bass which may be sung in unison, if desired. Price, 60 cents.

It might be appropriate, at this time, to mention a unique publication that beautifully provides for the little ones' participation in the church Easter Program. It is a playlet, *The Easter Lily*, written and composed by Loretta Wilson, and it tells, in song and story, how the lily came to be the Easter flower. The vocal score, including dialog and complete directions for staging and making the costumes, is priced at 40 cents.

If you have delayed too long in securing material for your Easter Program, send an Air Mail letter to Theodore Presser Co., describing as fully as possible the type of music desired. You will be agreeably surprised with the service.

## Fifth Year at the Piano

By John M. Williams

To complete the "year by year" series of piano instruction books by this distinguished teacher and educator, we are pleased to announce the publication of *Fifth Year at the Piano* by John M. Williams.

The amount of literature available to the student of piano music in the fifth grade is enormous. All the great masters of piano music have written selections that are not too difficult for this grade. A large part of this literature has been edited and re-edited for the benefit of students; hence, the author has wisely included in this book the more modern composers.

For each study or piece selected, Mr. Williams has prepared a "master lesson," showing in detail both practice procedure and harmonic analysis. This feature—the manner of studying—will be found invaluable. The author urges that technic be derived from the piece itself. As one of the greatest masters of the piano has said: "If there is any technic which is not in some piece, why learn it?"

Choice selections presented in this volume include *Butterfly* by Grieg, *Valse Excentrique* by Eggeling, *Evening Prayer* from "Hansel and Gretel" by Humperdinck, *Humoreske* by Dvořák, *Valse Arabesque* and *Esquisse* by Lack. Etudes are chosen from the works of Czerny, Nollé, Lack, and Bilbro.

This book will be ready for delivery during March. Those desiring to take advantage of the low advance of publication cash price of 50 cents, postpaid, may send their orders with the assurance that copies will be sent immediately upon publication. The sale is limited to the U. S. A. and Its Possessions.

(Continued on Page 212)

## Organist's Resource

A New Collection of Organ Music  
Selected from the Compositions and  
Arrangements of I. V. Flagler

For practical purposes much of the church organist's repertory should be included in books, and publishers always have found this the most profitable method of publishing organ music. Music in book form is more readily accessible and there is a considerable saving in being able to purchase a large collection for the regular price that would be paid for two or three numbers.

The late I. V. Flagler was known for his organ compositions and for his excellent editing and arranging of the compositions of the masters. Among the most admired works that he published was a five-volume collection of original compositions, transcriptions and arrangements. From this work the contents of *Organist's Resource* have been selected. These include arrangements and editings of compositions by Dubois, Le-maigre, Bizet, Guilmant, Beethoven, Widor, Meyer-Helmund, Massenet and Rubinstein.

This new volume will be published in the convenient oblong size, 12 x 9 inches. In advance of publication copies may be ordered at the special price, 60 cents, postpaid. The sale of this book will be restricted to the U. S. A. and Its Possessions.

## Play and Sing

Favorite Songs in Easy Arrangements  
for Piano  
By Ada Richter

Playing and singing are two of the earliest musical accomplishments of childhood. Perhaps singing comes first; some children can hum or carry melodies of some kind almost as soon as they can talk. The keyboard of a piano, however, always has a fascination for children; they soon learn that my making the keys sound in a certain order and rhythm they can produce melodies similar to their own vocal efforts. Thus is born the desire to play and sing together, almost universal in young children.

A knowledge of this fact enabled Mrs. Richter to prepare *My First Song Book*, which has already become a standard publication of its kind. As this included only songs and melodies of the very easiest grade, it gave rise to a growing demand for another collection which should consist of material about a grade higher both as to melody and accompaniment. Hence the preparation of *Play and Sing* by the same author.

The contents of this new book have been logically and conveniently subdivided into the following five heads: School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas, and Songs My Grandparents Sang Long Ago. Under these groupings will be found forty selections of a large variety and interest, yet none will be above second grade in difficulty as arranged.

While the songs in this book are essentially for children, they should have an interest also for many an older person in whose younger days they were known and loved. All of the melodies have stood the test of time and many are in frequent use over the radio. The book is certain to have an intimate appeal, and should become of permanent value as an addition to the home's collection of musical literature.

Customers who want to keep posted on the latest musical publications can do no better than take advantage of our special advance of publication cash price of 25 cents for single copies, postpaid, copies to be sent as soon as published. On account of copy-right restrictions on certain of the selections, the sale of this book will be necessarily confined to the U. S. A. and Its Possessions.

## The Youthful Baritone

An Album of Songs for Studio  
and Recital

The literature of song has been pretty thoroughly examined for material to make up the contents of this book, it being the purpose of the editors to make it a work of real value to the class of singer for whom it primarily is intended. This is the baritone student whose voice has changed only recently, the young man of high school or college age who is studying for solo work. Nat-

urally, a limited voice range was the first thing to be considered, but the editors felt that suitable texts were of almost equal importance and hence the songs selected will be especially appealing to young men of these ages.

Another consideration, and this, we feel, will make the volume of interest to more experienced singers as well, was the character of the music in the songs selected—the songs are such as sound particularly effective when sung by a baritone voice.

There has been an exceptionally fine response to the special offer on this collection and it will be continued for the present. A single copy may be ordered now at the low advance of publication cash price, 35 cents, postpaid. Delivery will be made when the book is published.

## The Youthful Tenor

An Album of Songs for Studio  
and Recital

When the changing voice of a young man gives indications of becoming tenor in quality, ambition frequently is aroused for study. There are so many opportunities for tenors in all professional singing activities—the radio, opera or church work—in solo appearances or with small ensembles.

Probably the greatest danger for the youthful tenor lies in attempting to sing beyond the natural range of his partly developed voice. Songs with too high tones, or too low ones, are equally dangerous. Therefore, we believe that experienced voice teachers will appreciate this fine collection of tenor solos. The pupils will appreciate it, too, because the songs selected for the contents have all those qualities that young men of this age enjoy in a song—lively and tuneful melodies, texts that make them appropriate for any public appearances the youthful tenor is called upon to make in the role of a soloist.

A single copy of this volume may be ordered now at the most advantageous pre-publication price, 35 cents, postpaid.

## Out of the Sea

An Operetta for Children  
In One Act

Book and Lyrics by Ethel Watts Mumford  
Music by Lily Strickland

Is there anything in school activities more enjoyable than the presentation of an operetta? Proud parents and fond relatives enjoy watching these spectacles and, as for the kiddies themselves, they certainly thrill at the opportunity to be a real "actor" or "actress."

The necessity for keeping in mind the histrionic limitations of the young participants, and of exercising care not to include music beyond their voice range, makes the writing of a juvenile operetta a task which only an expert should undertake. That we are able to offer a new operetta by the celebrated American composer, Lily Strickland, is a source of real pride to the publishers. We believe *Out of the Sea* will win many friends among teachers and others who have in charge the education and the leisure time activities of young children.

The setting can be made very attractive and colorful at comparatively small expense. Full directions for staging, costuming and the dancing numbers are given in the book. The cast of characters includes King Neptune, Undina, The Sea Serpent, The Oyster, The Hermit Crab, The Fiddler Crab, and Davy Jones among the sea people, and The Aviator, Mr. Beebe and two youngsters in bathing suits, Jacky and Jilly.

The dialog is interesting and the plot replete with humorous situations. The solos are easy to sing and the choruses are either in unison or simple two-part work.

In advance of publication a single copy of this operetta may be ordered at the special introductory price, 35 cents, postpaid.

## 16 Modern Etudes

For the Advanced Trumpet Player  
By John Huber

There is an ever-increasing demand, even in radio and dance orchestra organizations, for proficient performers on this instrument. These studies should prove most helpful to the ambitious student, especially to "first chair" players in school orchestras and bands who plan to utilize their proficiency in playing this instrument after they leave school.

Properly used, under the direction of a competent teacher, these studies will enable the student to improve his technic, especially in the coveted ability to play the brilliant passages in various compositions requiring triple-tonguing.

Orders for copies of 16 *Modern Etudes* may be placed now at the special advance of publication cash price, 40 cents, postpaid.

## Reward Cards for Music Pupils (Second Series)

|           |             |                 |
|-----------|-------------|-----------------|
| Bizet     | Gluck       | Rimsky-Korsakov |
| Chaminade | Grieg       | Rossini         |
| Debussy   | MacDowell   | Rubinstein      |
| Dvorák    | Massenet    | Saint-Saëns     |
| Elgar     | Moszkowski  | Sibelius        |
|           | Moussorgsky |                 |

Progress is being made in the final preparations for the publication of these cards and the publishers hope soon to be able to announce that sets of them are available. This, of course, will be a companion, or supplementary, set to the *Reward Cards* (First Series) which presents Bach, Beethoven, Brahms, Chopin, Gounod, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Tchaikowsky, Verdi, Wagner and Weber. The price of this set is 50 cents.

On the one side shown in the illustration these cards have a picture of the composer and his birthplace, or some other scene of interest, lithographed in the style of a water-color painting, and on the reverse a condensed biography of the composer, a facsimile of his manuscript and a reproduction of his signature. Each set will include a beautiful *Prize Card* with space for pupil's name and teacher's signature, usually given after the entire set of 16 *Reward Cards* has been earned.

There is still time this month to order a set of the Second Series at the special advance of publication price, 35 cents, postpaid.

## All-Classic Band Book

Arranged by Erik W. G. Leidzén

School music educators and directors of young community concert bands are enthusiastically endorsing the forthcoming publication of this collection by ordering copies for the instrumentation of their organization at the special advance of publication price now obtainable.

The publishers have realized, for some time, that the need for a work of this type existed. Therefore, it was with much satisfaction that the initial announcement was made of Mr. Leidzén's new book. No better thematic material is available than the inspirations of the great music masters of the classic period. The quality of Mr. Leidzén's work is well known to band men and music lovers from his arrangements for the celebrated Goldman Band and others.

While this band book is intended for first year bands, and none of the parts presents any difficulties for the player of limited experience, the work should in no way be construed as a study book. These pieces have a definite program value, which will continue to exist long after an organization has mastered them, and which will even tempt more experienced bands to place a full instrumentation of the collection in their libraries.

*All-Classic Band Book* will contain 16 selections from the compositions of Bach, Haydn, Schumann, Schubert, Martini, Beethoven, Mendelssohn, Mozart, Verdi, Handel and Gluck. The instrumentation will cover all parts found in the modern school band:

C Flute and Piccolo, D-flat Piccolo, E-flat Clarinet, Solo and 1st B-flat Clarinet, 2nd B-flat Clarinet, 3rd B-flat Clarinet, E-flat Alto Clarinet, B-flat Bass Clarinet, Oboe, Bassoon, 1st-E-flat Alto Saxophone, 2nd E-flat Alto Saxophone, B-flat Tenor Saxophone, E-flat Baritone Saxophone, Solo and

1st B-flat Cornet (B-flat Soprano Saxophones), 2nd B-flat Cornet, 3rd B-flat Cornet, 1st Horn in F, 2nd Horn in F, E-flat Horn (Alto), 2nd E-flat Horn (Alto), 1st Trombone, 2nd Trombone, 3rd Trombone, 1st and 2nd Trombone (Treble Clef), 3rd Trombone (Treble Clef) (B-flat Bass Saxophone or B-flat Bass), Baritone (Bass Clef) (Euphonium), Baritone (Treble Clef), Basses, Tympani, Drums, Conductor's Score (Piano).

In advance of publication copies of the parts may be ordered at 15 cents each; or more, 10 cents each; Conductor's Score (Piano) 25 cents, postpaid. Delivery will be made when the work is published.

## Fragments from Famous Symphonies

Compiled and Arranged for Piano  
By William Baines

In all the literature of music there are probably no themes so noble, so grand, haunting in their melodic beauty as those upon which the master symphonies have been built. How the musician thrills to the *Andante* from Beethoven's immortal Fifth Symphony, to the oft-heard *Largo* of Dvořák's New World Symphony to the gorgeous themes from the popular symphony of Tchaikowsky and Brahms.

There was a time in this country when only folks living in or near the great metropolitan centers could boast of an acquaintance with symphonic works. Few, with the exception of professional musicians who had studied in the large cities of this country, abroad, had even heard these masterpieces played. Today, the radio and the phonograph bring the symphonies into our homes, in the school room, and few there are who have not enjoyed performances of at least the famous symphonies.

Naturally, these modern facilities for hearing good music are creating a taste for it in the younger generation, and an appreciation of its beauties in the parents and adult natives of these young folk. The teacher who now sends a young pupil home to practice a piano piece based on a symphonic theme will arouse as much interest in that home as the teacher who, years ago, assigned, occasionally, simplified operatic selections, or arrangements of popular ballads and hymn tunes.

These *Fragments from Famous Symphonies*, arranged for pupils in the early grade of piano study will be welcomed in the American home, they will encourage the young student to greater effort. Teachers can insure a first off-the-press copy of the book for their own reference libraries by ordering now at the special pre-publication price, 35 cents, postpaid.

## Manual of Fugue

By Preston Ware Orem, Mus. Doc.

After reading over the first chapters of the above work one's first impression is that of astonishment that such a supposedly intricate subject should have been handled in such a simple and understandable manner. Coupled with this is an increased admiration for the late Dr. Orem, who, with this new work, finished the following progressive chain of invaluable text books: *Harmony Book for Beginners*, (1.25) *Theory and Composition of Music*, (1.25) *Manual of Modulation*, 60c and *Art of Interweaving Melodies*, (1.25). Any one who conscientiously studies and masters these subjects will have a solid foundation in musical theory hard to beat, and should find the study of Fugue comparatively easy.

Hitherto, the subjects of Canon, Imitation, Double Counterpoint, etc. may have had rather a forbidding aspect. As handled by Dr. Orem they soon lose their strangeness, become more friendly, and in time reveal unsuspected shades and depths of musical beauty, proving beyond all question that music is one of the really great arts.

To those who ask the question, "What good is a knowledge of Fugue?" we answer, it makes it easier for us to understand the intricate part-writing in many high class choruses, the complex polyphony of Bach, Handel, Beethoven, etc. In other words, no other knowledge so broadens our general culture and increases our appreciation of the higher forms of music, whether vocal, instrumental, or orchestral.

## Manual of Fugue (Continued)

Those wishing to secure a copy of this fine at the earliest possible date may order copies by taking advantage of our special advance of publication cash price of 40 postpaid, copies to be forwarded immediately upon publication.

## Studies in Black and White

For the Piano  
By Mana-Zucca

Any piano teacher who knows the vivacious, pleasant and personable Mana-Zucca, or any piano teacher knowing of her musical life beginning as a child piano soloist with large symphony orchestras, some experience as a professional light opera singer, and then becoming the composer of world renown, will find that such a writer of music would be able to create the type of study material as is appealing and helpful to a piano student.

These *Ten Studies in Black and White* Mana-Zucca has provided for the practical needs of advancing piano students, yet, with melody and inspired musicianship as so presented these studies as to make each more like a piano solo that the student wants to play than a study which would master. Each study bears a title which covers some special technical problem such as: melody and accompaniment in style, octave study in crisp staccato, attack, left hand arpeggio study with hand melody, double notes, study in, study in quick attacks, study in ve- and the stretch of the hand.

These studies are for the student progressing in the upper intermediate stage, about grade and beyond. The work will be found out under the cover of the *Music Series* and the advance of publication price for single copies is 20 cents, and.

## Advance of Publication Offer Withdrawn

Hundreds of patrons who announced interest in the work by ordering copies in advance of publication, will be glad to see their copies of the book that our Music Dept. is releasing this month. Violinists now will have really attractive material, such as young pianists. This work—both volumes—may be ordered from your music dealer in any city, or single copies may be had for information by writing to the publishers.

*String Violin Solos*, for Violin Begun by Kate LaRue Harper fills a real need in the study of this instrument, easily with young pupils, either in classes or under a private teacher. With the entire played on one string, using only three strings at first, the youngster should find real fun, and no difficulty in mastering it. In the violin part, there are cute little things that appeal to the child, and clever suggestions to attract his attention and his interest. Of course, the well-hardened piano accompaniment makes the in this collection sound real well. Price, Part, 40 cents; Piano Part, 40 cents.

## Roll Off the Tongue Easily

As thinkers through the ages have found forth many sayings, mottoes, epigrams, maxims, axioms, adages, proverbs, sayings, dicta, aphorisms, etc. and while they are well deserving of the preservation in them in various published forms, there is a comparative few that roll off the tongue easily, such as: "A penny saved is a penny earned," "Waste not, want not," "Buy while the sun shines," "Penny saved and pound foolish," "Honesty is the best policy," and so on.

A great number of musical creations, by contemporary composers and the master composers, are well worth preserving in print, but out of thousands and hundreds of such, there are but hundreds that seem to "roll off the tongue easily" the experienced musician calls for music that he knows will meet satisfactorily a need. It is for those who like to keep their minds with such numbers that we are presenting some of the compositions and books from the publisher's printing orders of the last thirty days.

The liberal examination privileges of the Theodore Presser Co. will be extended to any reputable musician who wishes to see a complete copy of any of these numbers.

## The Etude Historical Musical Portrait Series

Music educators and students, lovers of the symphony and the opera, concert-goers and the "great unseen radio audience"—all enjoy knowing something about the creators and interpreters of the music that they hear. How often, when listening to a beautiful composition, hasn't the thought flashed through your mind: "How I would like to know the individual who can write such wonderful music?"

In *The Etude Historical Musical Portrait Series* you come to know by sight those noted in music and you learn important facts about them. Each month there appears a page in this journal showing 44 portraits, with brief biographies, of men and women who have made a notable contribution to the art of music—composers, text-book authors, pianists, singers, organists, violinists, orchestra and band conductors, etc.

The series is published in alphabetical order and was started in February, 1932. After 7 years the listings have reached those whose family name begins with the letter T. It still has several years to run and, when the regular alphabetical listings are completed, the names of many that have been omitted, and of those that have attained prominence since the series was begun, will be presented.

Many readers are saving each copy of *THE ETUDE* to have this series as a permanent reference library. For music lovers who are not so fortunate as to possess a complete file, the publishers have printed an additional quantity of each page as it appeared. These pages are obtainable at the nominal price of 5 cents each. It is not necessary for you to know the month in which appeared the por-

trait and biography of the composer or musical celebrity in whom you are interested. In requesting copies of these pages, the name of the composer is all that is necessary.

## Fine Merchandise Given In Exchange for Etude Subscriptions

Many music lovers, teachers and students obtain standard merchandise in return for securing subscriptions to *THE ETUDE MUSIC MAGAZINE*. Each premium in our catalog is carefully selected and is guaranteed by the manufacturer. The following is a list of premiums selected at random. Remember each subscription counts as one point toward a gift. These gifts are given for securing subscriptions from others and are not given on your own subscription:

**KITCHEN SHEARS:** These sturdy shears are made of fine steel, with the blades nickel-plated and the handles finished in baked enamel. The design is such that the shears can be used to open bottles, pry off lids, extract fruit juices, etc. Awarded for securing one subscription.

**BON BON DISH:** Few Bon Bon Dishes are as attractive as this one, made in the shape of a heart. It is 6 3/4" x 5", and has a convenient little handle for serving. And it has a bright, chromium finish which requires no polishing and will not tarnish. Your reward for securing one subscription.

**SIX-PIECE DESK SET:** Here is a splendid Desk Set—6 pieces, covered with genuine leather, your choice of red, green, brown. Pad size 12" x 19". Your reward for securing four subscriptions.

**SUGAR AND CREAMER SET:** This simply, yet smartly designed three-piece set makes a fine gift and award. The oval Tray is 10 1/4" x 6 1/4" with the Sugar and Creamer in proportionate size. All three pieces have a chromium finish so that they will not dull or require polishing. Your reward for securing four subscriptions.

**AU GRATIN CASSEROLE:** This 1 1/2 quart Casserole is adaptable to many uses. The cover is glass and can be used separately as a Pie Plate. The chromium-plated platter can be used separately for cake or sandwiches. Awarded for securing four subscriptions.

**SANDWICH TRAY:** Has a swinging handle and a fine lace doily center encased in glass. The Tray is chromium plated, diameter 10 1/2". Your reward for securing five subscriptions.

Send post card for complete catalog of gifts.

## Caution! Beware of Swindlers

It is again necessary to warn all music lovers and buyers of magazines to exercise extreme care in paying money to strangers soliciting subscriptions. Daily receipt of complaint from our musical friends that copies are not being received although the order was placed and paid for, makes this notice imperative. Direct representatives of *THE ETUDE* carry the official receipt of the Theodore Presser Co.

Agencies employing canvassers provide a contract and receipt for the protection of the purchaser. Read any receipt offered you before paying any money. Do not permit any canvasser to change the reading on a receipt or contract. Assure yourself of the responsibility of the representative. If you are in the least doubt, pay no cash whatever. Take the name and address of the canvasser and send remittance directly to this office. We will give credit to the representative where credit is due.

## Changes of Address

We should be advised at least four weeks in advance where an address is changed. Please give us both old and new addresses. This is important to insure against copies of *THE ETUDE* going astray.

Diplomas, Certificates of Awards, Medals and Other Requisites for Awarding Pupils

Completing Courses in Music

THEODORE PRESSER CO.

Phila., Pa.

## World of Music

(Continued from Page 148) \*

DOUGLAS KENNEDY, director of the English Folk Dance and Song Society, is touring American colleges under the auspices of the English Folk Dance and Song Society of America with headquarters at 15 East 40th Street, New York City.

"BEAUTY AND THE BEAST," a radio opera with its musical score by Vittorio Giannini, was heard for the first time when on November 24th it was done over the Columbia Broadcasting System. The text is by Robert Simon; the work was written for the Columbia Composers Commission; and Helen van Loon sustained the leading feminine rôle, with Charles Kullmann, tenor, as *The Beast* and *The Prince*.

ALBERT CARRE, for fourteen years director of the Opéra-Comique, and since 1919 of the Comédie Française, died in Paris on December 12th, at the age of eighty-six.

A LONG LOST HAYDN SYMPHONY has been found by Dr. Hans Gal, famous Austrian composer and former professor of the University of Vienna, while cataloging the Reid Music Library of the University of Edinburgh. It was written between 1765 and 1770, and research disclosed it to be cataloged by Breitkopf as Op. 10, No. 2. The rediscovered work was heard for the first time on the opening concert of the season of the Reid Orchestra.

A MONUMENT TO PUCCINI, as a special tribute to his opera "Madame Butterfly" is reported to be planned for Nagasaki, Japan.

SIX AMERICAN COMPOSERS had works performed during December, by the National Symphony Orchestra of Washington, under the baton of Hans Kindler. Four of these were world premières—a symphony by Roy Harris; a concerto for piano and orchestra by Paul Nordoff; a suite, "Miniatures," by Isidore Freed; and a tone poem, "Seven Visions," by La Salle Spier. Other works by American musicians were "Scenes of Poverty and Toil" by Robert Sanders and a "Suite Variée" by Ernest Schelling.

DARIUS MILHAUD is reported to have completed a new one act opera, "Medea," a state commissioned work. It is in the form of the "Elektra" of Strauss and takes about an hour and a quarter in the performance of its five scenes. The world première will probably occur at the Grand Opéra of Paris.

## COMPETITIONS

A PRIZE OF FIVE HUNDRED DOLLARS is offered by the Henry Hadley Foundation for the best composition in any of the major forms to be submitted within the autumn months. Full particulars may be had from the Henry Hadley Foundation, 633 West 155th Street, New York City.

A ONE THOUSAND DOLLAR HONORARIUM towards one year of piano study with Tobias Matthay in London, is offered by the American Matthay Association, Inc. The Contest will be held in May, in New York City; and candidates will take a preliminary examination in theoretical subjects, and play a *Prelude and Fugue* from "The Well Tempered Clavichord" of Bach, the *First Movement* from Beethoven's "Sonata Appassionata," and a composition of not more than six minutes in length, of their own selection. Further particulars from Miss Margaret Littell, 2600 West 17th Street, Wilmington, Delaware.

AMERICAN COMPOSERS are asked to submit works to Howard Barlow, Columbia Broadcasting Company, 485 Madison Avenue, New York City, to be considered for performance on the Everybody's Music orchestral series over CBS. Having begun with July 24th, each program now includes one American composition—a fine recognition and opportunity for our creative musicians.

## Ned Does Some Planting

By HERMIA HARRIS FRASER

"NED, WILL YOU COME OUT and help me to do some things in the garden?" called Mattie to her brother Ned; "it is getting to be almost planting time and I need some help. I will make you some fudge after supper if you help me," she promised, as she pulled on her sweater.

Ned, two years younger than she, glanced at the pile of school books as he laid them on the table; then followed her into the garden, calling after her, "O.K. But don't forget the fudge."

"No, I won't. It is time to get the spring garden ready now, and you know the more we work on it now in the way of preparation, the better will be the flowers when they come."

The borders were Mattie's special pride and joy, and her garden had been the subject of much favorable comment the

previous year; and she intended to have it even better this year. "Begin early," some one had told her, "the earlier the better."

"What do you want me to do?" asked Ned, watching her as she laid her tools on the ground. Ned had never taken much interest in Mattie's garden and Mattie had never taken much interest in Ned's music; but now that he was getting older she found him useful, even though he did have to be told what to do.

"You must prepare the ground first by hoeing, or turning up with a spade if it is hard; then throw in some of this mixture and rake it smooth and fine. And that is all we will do to-day."

After bending and stretching and stooping and digging for a while, Ned complained of a sore back. "Say, what do you get out of this, anyway, Sis?" he demanded.

"You just wait and see," answered Mattie. "Here, I'll show you something pretty," she said, rising from her border bed and pulling a worn and thumbed catalog from her pocket. "See this," she said, pointing to a colored illustration of a beautiful garden in full bloom.

"Will our garden look like that?" asked Ned.

"Yes, and like this, too," she answered,

finding another picture. "And now we will put some string around the beds so the dogs can not scratch them up before we get the seeds in, and then we will stop for to-day. That was fine help, Ned. Many thanks."

As they entered the house Ned said "And now I want to show you something as soon as I wash the garden off my hands."

In a few moments he was on the piano stool; his strong fingers drew a gay, dancing tune from the keys.

"How lovely, Ned," cried Mattie, "I never heard you play like that before. What is it?"

"It is a *Minuet* by Beethoven. Don't you just love it? Listen while I play it again."

Mattie stood fascinated as Ned repeated the *Minuet*. She had never heard him play so musically, so smoothly. The other members of the family came to the music room door to listen. "Not bad," remarked his father.

"Not bad, why it's marvelous!" exclaimed Mattie, "I never heard him do so well before."

Ned smiled. "It's not marvelous at all, Mat. It's no more marvelous than planting a garden. You expect to get what you plant, you know, not sweet peas from petunia seeds."

"Oh, I think I understand," said Mattie. "You mean you did to your music what we did in the garden by careful preparation?"

"Sure," answered Ned. "Prepared the soil with exercises, divided the seeds and gave individual attention to each one; dug in every day and hoed and raked and weeded; planted seeds and built up smoothness, rhythm, expression; watered it, raked it again, weeded it again—that is what PRACTICE means, Mat. Try some time yourself."

Mattie looked at him thoughtfully. "See. And now your planting has developed into a beautiful garden of melody. I'll think of that the next time I practice and maybe I'll catch up to you in time yet if I become a better music gardener."

SCHUMANN said: "He who sets his own limits will always be expected to stay within them."

MENDELSSOHN said: "Think more of your own progress than of the opinion of others."

## Listening Lessons

By E. A. G.

*The Joyous Peasant, By Schumann*

PLEASE play this piece well or else do not play it at all!

The poor *Joyous Peasant*, or *Der Bauer*, or whatever you wish to call it is usually banged most distressingly. It

even been heard played in waltz rhythm once upon a time, and played that way by a Junior who should have known better.

But this piece is really charming and can be played beautifully. LISTEN to it carefully.

Which hand should sound more important, the left with the melody or the right with the accompaniment of chords?

Most people make them sound about equal, the chords banging out just as loudly as the melody, with no thought whatever of real music.

Did you ever hear a carpenter pound nails into something? That is just the effect most players get with these chords.

And be sure to play the chords *staccato* as well as softly. They are in pairs, the second chords of each pair always should be *staccato*, too; it is often hurried down so hard it stays down! really the sound is distressing, and not all the way Schumann intended it to sound.

Then, in the ninth measure, you should hold the B-flat down. That note is not to be held, but it usually jumps up!

LISTEN to this piece the next time you have a chance, and see if it is played beautifully, or if it could be improved upon.

## Marching Fingers

By Eugenie Gluckert

My fingers are like soldiers brave  
A-marching o'er the keys;  
They run and skip and hop and jump  
And sometimes stand at ease.

Each day I put them through their drills  
When practice time comes 'round  
The music book and piano keys—  
Make their parading ground.

Arpeggios and Triads all—  
Chromatic Scales—each one  
And Chords and Exercises, too,  
Before the drill is done.

And once a week we have Review  
My jolly soldiers ten  
That's when my teacher comes to see  
How well I've drilled my men.

## The Fun Book

By Mrs. Paul Rhodes

HAVE YOU EVER compiled a "fun-book"? Make one for club meetings, if you have not yet done so.

It should include all sorts of musical games, some of which you may take from the *Junior Etude* and others you may invent.

It should also contain puzzles and enigmas, and conundrums.

It should have some humorous verses.

And it should contain some ideas for place cards, favors, and prizes for special occasions.

All of these things should relate to music, of course; and for musical parties or special club meetings you will find it very jolly to have a fun-book.

## The Fence Post Boys and Their Choir

By JOSEPHINE JENNINGS SMITH

OH, DO YOU KNOW the Fence Post boys, who live on many farms? They hold each other very tight with long, outstretching arms. Five lines they have, and spaces four, that always are *between*; this makes for them a violin, which plainly can be *seen*.

The wind does well the fiddler's part, his tones are low and *sweet*; the birds in flocks come flying there to share his splendid *treat*. They listen first and then they sing, and every measure *beat* with gaily flapping, happy wings and toes on happy *feet*.

The wind plays in and out through space; the birds trill on the *line*; And music runs a rhythmic race through willow tree and *pine*. And when the concert gaily

ends, off Johnny's hat will *blow*, for on his head, like all the rest, he wears a cap of *snow*.

In summer warm or winter cold, the choir sings on the *same*; they gather with the Fence Post boys, the wild birds and the *tame*; their tuneful songs we like to hear, much joy to us they *bring* because they practice every day; their songs just right they *sing*.

And you will see, when you can go to visit on a *farm*, that Johnny Fence Post stands there yet, still holding out his *arm*. And never mind if grown folks say it's wind along the *wire*, for you will know as well as I, it's music from the *choir*.

# JUNIOR ETUDE—(Continued)

## Famous Marches

By ALETHA M. BONNER

THE BEGINNING OF TIME, musical of the human family have ever rhythmic expression in the tread of marching feet, and other concerted body of music. Because of the broadness of its scope in giving free expression, composers of all nations and periods have found the march one of the most satisfactory forms of musical writing, and there are many splendid specimens to testify to its value. As, for example, the joyous wedding march, the gay festival march, the solemn funeral march, the dignified national, or military types.

Two most familiar nuptial marches are Mendelssohn's *Wedding March* and the *Chorus* from Wagner's "Lohengrin." The former, which commonly bears the name of its composer, is part of the musical music to the Shakespearean play, "A Midsummer Night's Dream," and was written by Mendelssohn in 1843. The "Lohengrin" number is taken from Act I of Wagner's opera, and appears in the musical plot as a chorus sung on the occasion of Elsa's marriage to *The Knight of the Grail*.

In the realm of the festival marches, many colorful examples are to be found, especially those taken from musical drama. The *Coronation March* from Meyerbeer's "The Prophet," is one of the most popular of its kind, and appears in the musical scene of the fourth act. Another imposing instrumentation is the *March* from "The Queen of Sheba," by Elgar; while Sir Edward Elgar's *And Circumstances* march also belongs in this list. This effective number was written for the coronation of King George VII, who later knighted Elgar for distinguished musical services.

## Musical Art Gallery

(Fun for Club Parties)

By ALICE THORNBURG SMITH

Draw the following objects on a large sheet of paper. Each object represents a musical instrument and the guests, supplied with paper and pencil must write the terms on paper. The one with the most correct list wins. 1. chord (a piece of string); 2. tie (a knot); 3. run (a stocking with a run); 4. beat (a vegetable beet); 5. staff (a piece of paper); 6. bar (a candy bar); 7. key (a key); 8. dot (a piece of material with a dot in it); 9. march (a March leaf

An atmosphere of gloom envelopes the funeral form, as found in *The Dead March* from "Saul"; and Chopin's poignant *Funeral March*, from "Sonata in B-flat minor." The first named appears in Part 3, Scene 3 of Handel's finely constructed oratorio as named, and the Chopin march is based on a Polish narrative and represents the solemn tread of a funeral procession bearing a young bride to her last resting place.

The military march with its blaring fanfare of trumpets and roll of drums, is often inspired by the spirit of nationalism. Outstanding examples from a legion include *March of the Men of Harlech* (national air of Wales), said to be "the earliest instance of the march form in regular rhythmic phrasing," and to have been originated during the siege of Harlech Castle in 1468. Schubert's stimulating *March Militaire*, and Tchaikovsky's *March Slav*, the latter composed in 1876, the year of the Turkish-Servian war, are further well known examples. Like the proverbial "path of glory," the military march oftentimes "leads but to the grave," and in many cases they have been literally proven to be funeral marches!

Two other world favored contributions to the literature of famous marches are to be found in 1. Sir Arthur Sullivan's inspired musical setting to Baring-Gould's *Onward Christian Soldiers*, which has stirred countless thousands of souls; and 2. a composition by America's own John Philip Sousa (1854-1932), this being the *Stars and Stripes Forever*—a march which has been described as becoming "permanent in the affection of the people, being indeed a national anthem . . . eloquent in Americanism."

Can you play some of these famous marches? And how many more have you heard that you could add to this list?

from a calendar); 10. measure (a quart measure); 11. sharp (a sharp knife); 12. scale (a weighing scale); 13. signature (a name written in poor penmanship); 14. etude (a copy of THE ETUDE); 15. treble (a paper with "3 x 3" written on it); 16. note (a short letter on writing paper); 17. pause (a picture of a cat with a circle drawn around the paws); 18. rest (a picture of a person resting); 19. time (a clock or watch).

## Answer to December Instrument Puzzle:

1. Fife; 2. Harmonium; 3. Harp; 4. Accordion; 5. Lyre; 6. Oboe; 7. Ocarina.

## Prize Winners for December Puzzle:

Class A, Virginia Carlson (Age 14), Kansas.  
Class B, J. Raymond Barrett (Age 12), Kentucky.  
Class C, Jeanne Newson (Age 9), New Mexico.

GOLDEN HOUR MUSIC CLUB  
Indiana

## Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

### RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not

Subject for story or essay this month, "What Music Does for Me."

Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by March Eighteenth. Names of prize winners and their contributions will appear in the June issue. The thirty next best contributors will receive honorable mention.

have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

## Religious Music (Prize Winner)

Anyone with a sense of musical appreciation can not put aside religious music. All through the beginning of music to today religion has played an important rôle in music. In the early centuries music was used for ritual purposes only in the church. The music was used for the chanting of prayer, therefore one can readily see that this music took on a somewhat monotonous form, until later when harmony was developed.

If one looks into the lives of the great composers he will find that not only were the masters religious, but that their music took on a religious trend. For instance, Bach has written many cantatas for the church. Cesar Franck was very religious and one can hear tendencies of influence in his great D minor Symphony. Therefore, religion plays a large part in the art of music.

HARRIET TALMAGE (Age 15), Class A, Illinois.

## Religious Music (Prize Winner)

Hymns such as we sing in church are soft, sweet and harmonious music. Music in the church is used to accompany the singing of hymns and lift our thoughts to heavenly things and keep distractions from us. When we play religious music we feel a warm glow, especially Christmas Carols, which create a kindly feeling every where.

No paragraph on religious music would be complete without mentioning the oratorio, which is a highly developed form of religious music; a large performance resembling opera, without the assistance of scenery or action. The most famous of these is Handel's "Messiah."

MARIE STOCK (Age 11), Class B, New York.

## Diagonal Puzzle

By Mrs. H. C. Higgins

- |    |   |   |   |   |   |   |
|----|---|---|---|---|---|---|
| 1. | * | . | . | . | . | . |
| 2. | . | * | . | . | . | . |
| 3. | . | . | * | . | . | . |
| 4. | . | . | . | * | . | . |
| 5. | . | . | . | . | * | . |
| 6. | . | . | . | . | . | * |

1. One who serves customers in restaurants
2. A device for climbing
3. Dropped
4. A flag
5. Tasks
6. A stretchable substance.

Reading diagonally from upper left to lower right will give the name of a composer.

## Honorable Mention for December Essays:

Nancye Curran, J. Raymond Barrett, Janice Laney, Katherine Meehan, Elfrida Hoerath, Margaret Appel, Frances Carawan, Barbara Anne O'Brien, Dorothy Jane Adams, Mary C. McGinley, Irene Mass, Charles Lucas, Mildred Mitchell, Anne Douglas, Lydia Patterson, Emily Houghton, Effie Elman, Rose Grishell, Bobby Hickman, Pearl Bellows, Louis Anderson, Marian McCartney, Jane Keef, Kitty Dawson, Sydney Brockberg, Ethel Mock, Carol Gray, Della Peters, Eleanor Snow, Hilda Beniers.

## Answers to Who Knows

1. Go back to the beginning (play from the beginning); 2. Aida; 3. Wolfgang Amadeus; 4. Hänsel and Gretel, by Humperdinck; 5. Woodwind, similar in appearance to a clarinet, but with a different shaped open end; 6. C, two octaves below middle C, G, first line in bass clef, D, third line in bass clef and A, top line in bass clef; 7. Six; 8. Three sharps (key of A major); 9. 1908; 10. Stephen Foster.

### DEAR JUNIOR ETUDE:

As president of our Young Pianists' Club I am writing to tell you about our activities. We meet once a month at each others' houses. Our dues are twenty-five cents and go toward the purchase of concert tickets; and the most outstanding event of the year were our attendance at the Children's Concerts of the orchestra and at the particularly good musical films.

At our regular meetings we have a business session, then a study hour in which we play for each other and analyze the music. Its performance, interpretation and give suggestions as to rendition, stage deportment, and so on. Each member contributes one question to our Question Box, which we take home and prepare to answer at the next meeting. Sometimes our teacher plays for us and asks us leading questions about the music, and thus we are learning to judge the worth of what we hear.

Our club pin, a tiny grand piano, creates interest among our friends, and we have all gained much inspiration from our club.

From your friend,  
DOROTHY E. MOITON, Massachusetts.

## Honorable Mention for December Puzzles:

Betty Jordan, Lucille Oswald, Thomas Petrick, Paula Singer, Rachel MacDonald, Forrest Hicks, Teddy Wolfe, Maurine Kumke, Nancy Dawson, Betty Madigan, Jacqueline F. Noryks, Gloria Rath, Betty Jean Cooper, Rita Elaine Seagun, Loula Bonelli, Marie Lester, Andrew Nelson, Iba Condon, Ruth West, Ella Meekle, Dorothy Shadway, Katherine Buckman, John Miller, Hilson Brown, Emma May Eudors, Grant Gibson, Mary Jennings, Dorothea Schwartz, Anne Palmer, Jane Abrams, Caryl Ehrenstrom.

## On the Treatment of Registers

(Continued from Page 197)

serve only to aggravate the register, or transition. So, instead, we have said, darken vowels slightly, knowing that such will cause all necessary vowel alteration.

Our whole aim is to leave low notes to construction of the unfinished individual vocal apparatus: coaxing its submission to artifice, instead of forcing it to do something entirely foreign to its nature—Mezzo-sopranos of contralto persuasion note carefully.

Now it is anything but pleasant to have to mention grave consequences; but such is the feeling of responsibility born of "burning the candle at both ends," that to remain silent in face of present day horrible examples of vocal abuse, would be equal to becoming a party to the objectionable.

At different degrees of the ascending scale, segmentation, or a division of the vibrating length of the vocal ligaments occurs. Therefore, as this division is a normal occurrence, any influence which will prevent it will cause injury to the vocal ligaments. To put it simply, the vocal ligaments want to shorten their vibrating length for higher, and higher notes, and if prevented from so doing, congestion sets up at the point on the vocal ligament where the shortening should take place, and, in time, a tiny, tumorlike projection forms on the edge of one, or both vocal ligaments; which projections are known to the medical profession as singer's nodes.

Dr. Frank E. Miller observed the occurrence of nodes where the vocal ligaments shortened their vibrating length for the C-sharp, G-sharp, F-sharp, and B-flat of the ascending scale; and in each case a break in the voice occurred within these different intervals. The writer, himself, has met many cases of node formation, one of which occurred with a true contralto voice which had been trained as soprano; and in this case the voice broke at C-sharp, second: the deep, full contralto tone changing with the break to a weak, superficial tone resembling the male falsetto.

In accordance with the only possible procedure, an indefinite rest of the voice, to allow time for nature to absorb the node, was prescribed.

The direct cause of this node formation, was the carrying upward, by breath force, of the heavy quality of the low range, which resulted in the vocal ligaments being held adjusted for notes of low pitch, thereby preventing segmentation, or the shortening of their vibrating length for higher, and higher notes. Had the lofty, sex quality of the upper tones of this voice been brought downward over the heavier quality of the low range, no such injury could have happened. But, the reader questions, would not doing so have weakened tone in the low range? Ernestine Schumann-Heink, and Anna Lankow were girlhood friends and students, and we have it from the latter that the voice of the former had been trained in this way; while Anna Lankow, who adhered strictly to this procedure, produced a number of fine contralto voices.

Therefore, whether soprano or contralto, bring the lofty quality of female sex resonance downward; and do not make an encroachment upon male sex resonance upward. Depend wholly on the power of a sigh for power of tone; and, as the power of a sigh depends upon breath capacity, give more, and more attention to breath development. To this end, see to it that, whether standing, sitting, or walking, the chest is elevated, and the abdomen flattened.

OTHER ARTICLES OF INTEREST

FRIEDA HEMPEL

One of the most brilliant and engaging prima donnas ever to appear at the "Met," gives a practical article, "Sing With All Your Heart," a real lesson to young singers.

RICHARD BURMEISTER

Liszt's famous pupil, Richard Burmeister, long a foremost teacher at the Peabody Conservatory in Baltimore, sends us from abroad a splendid revision master lesson on the *March of the Grail Knights*, from Wagner's "Parsifal," as originally transcribed for the piano by Franz Liszt. It is called also *The Cathedral Bells of Monsalvat*. Professor Burmeister tells just how Liszt taught this composition to him.

## Three Principles of Sight-Reading

Music as taught before this in our public schools has destroyed the very end it was working for, that of creating a love of good music in the child. We have destroyed the love of music by cramming unnecessary technicalities down the children's throats. The plan of teaching now is to do it from the point of view of the whole student group, not merely for those few who are going to make music their life work. There are only three things the child needs to be taught in order to be able to sing any piece of music that was ever written. These are: The ability to find the keynote, or "do"; a knowledge of rhythms; and a knowledge of chromatics.—Prof. Percy Graham, College of Music, Boston University.

## MUSICAL BOOKS REVIEWED

### The Macmillan Encyclopedia Music and Musicians

By ALBERT E. WIER

What is unquestionably the largest encyclopedia of music ever issued in one volume, has just lately published by The Macmillan Company. The volume measures eight and half inches by eleven inches and contains thousand eighty-nine pages. It is finely bound, and excellently bound. The spacing and type are particularly good for easy reading. There are over two million words and thousand reference subjects, including per organizations, musical terms (over four hundred), and also many other odd matter of interest, such as musical stamps, music of Isle of Ball, and an essay on modern phonograph recording. Over ten pages are devoted to a chronological survey of radio, broadcast, and television. Eleven pages are given to a very comprehensive list of useful music literature. The author has endeavored to in as many topics as possible; but, even a volume of this huge size, there are omissions. The work is right down to the minute instance being over a column devoted to Hammond Electric Organ and another to latest Metropolitan Opera tenor, Justus Bing.

The appendix to the book is devoted to sixteen page chronology of notable composers from the tenth century to the present. One usual feature is that of the opera plots, ancient and modern, whereby one may, for instance, find the plots of such rare operas as "Hassan" by von Weber, "Aleko" by Rachinoff, "The Apothecary" by Haydn, "Cris de la Comare" by the Ricci brothers, and "Dame Blanche" by Boieldieu.

In order to make the work all inclusive, its thousands of biographical references has been necessary for the author to omit non-essential details. The low price of the makes it available to many unable to purchase the larger Grove's Dictionary of Music and Musicians.

Pages: 2089.

Price: \$10.00

Publisher: The Macmillan Company.

### Music and Society

By ELIE SIEGMEISTER

The influence of music upon society, and the influence of society upon music, are sketched in a recent paper covered pamphlet published under the title "Music and Society." The is well developed and carefully constructed. It is designed to interest those, very familiar with the history of the art, who wish to re-open this particular phase of musical progress. The reader is continually made conscious of an underlying spirit of protest motivating the author, who is a well trained musician present engaged in the New School for Social Research.

Pages: 64.

Price: 25 cents.

Publisher: Critics Group Press.

### The Music Quiz

By GLADYS BURCH and HELMUT RIPPERGER

Surely this is Quiz time in the U. S. A., one of the first of the quiz books in music to reach us is "The Music Quiz" by Gladys Burch and Helmut Ripperger. Many years ago in Germany, your reviewer studied musical theory with Professor Dr. Hermann Ritter, who wrote a six volume history of music, all questions (Musikalische Geschichte in Fragen). Every question had to be definitely answered in typically meticulous German style, and student was marked accordingly. The quiz questionably has educational value, since it introduces the element of rivalry and making game of music study.

The book under discussion consists of a series of forty Quiz Questions. A glance indicates that they are all very interesting.

Sample question:  
"One of the signers of the Declaration of Independence was America's first native composer; a friend of George Washington, and name was: 1. Robert Morris 2. Thomas Paine 3. Francis Hopkinson 4. Richard Henry Lee 5. Arthur Lee."

With America going I.Q. mad, this book should be of great present interest.

Pages: 166.

Price: \$1.25.

Publisher: Stackpole Sons.

### Deep Flowing Brook

By MADELEINE GOSK

"Deep Flowing Brook" is an attractive for a musical book. Musically informed people know at once that this is a book about music (German for brook). The book is a popular storylike presentation of the biography of great Cantor of Leipzig. It is presented in a gaging fashion. Without a critical review, assume that it is historically authentic. Two illustrations by Ellmore Blaisdell, printed in sepia, are excellent.

Pages: 239.

Price: \$2.50.

Publisher: Henry Holt and Company.

# LEARN COMPOSING AND ARRANGING

RIGHT IN YOUR OWN HOME

## DOUBLE YOUR INCOME NOW!!

Your earnings today are the result of the training you have given your natural ability. Are you still making rapid progress—each year seeing you occupying a more important position and making more money, or are you standing still? If you have exhausted the possibilities of your present musical training, then you owe it to yourself to give the future careful consideration. There are endless higher positions in music—easily within your reach—to which you can aspire. Double up on another instrument, it will enable you to command more money. A knowledge of HARMONY and ADVANCED COMPOSITION will open important, highly-paid opportunities to you—leadership, the ability to arrange music, to make orchestrations, to transpose, and the many other HIGHLY PAID functions of the trained musician. Such training will take you out of the ranks—it will qualify you for leadership—for recognition in your community, and perhaps fame as a composer. Why not? We will help you to do it. Send for our catalogue and sample lessons today. Use the coupon below.

## WHERE SHALL I GO TO STUDY?

### PRIVATE TEACHERS (Western)

Mr. and Mrs. Abby De Avirett

Teachers of Piano  
Telephone Whitney 7340  
Residence Studios, 267 South Arden Boulevard  
(Corner Third Street) Los Angeles, Calif.

FREDRIK E. BLICKFELT

Voice Specialist

Four years with Vincenzo Sabatini, Milan, teacher  
of John McCormack, and Antonio Cotogni, Rome,  
teacher of Battistini.  
3224 Marmont Lane Just off Sunset Blvd.  
(opposite Chateau Marmont)  
Hollywood, Calif.  
Phone: Gladstone 7755

EDNA GUNNAR PETERSON

Concert Pianist—Artist Teacher

229 So. Harvard Blvd. Los Angeles, Calif.  
FE. 2597

LAZAR S. SAMOILOFF

Voice teacher of famous singers

From rudiments to professional engagements  
Beginners accepted. Special teachers' courses  
610 So. Van Ness Ave., Los Angeles, Cal.

ELIZABETH SIMPSON

Author "Basic Pianoforte Technique"  
MacMillan Co.

Teacher of Teachers. Coach of Young Artists.  
609 Sutter Street, San Francisco, California.

### PRIVATE TEACHERS (Mid-West)

NINA BOLMAR

Teacher of voice

Endorsed by L. S. Samoiloff  
612 Fine Arts Bldg. Chicago, Ill.  
Phone: Web. 4937

ROY DAVID BROWN

Pianist and Teacher

assistant and successor to Emil Liebling  
612 Fine Arts Building, Chicago, Illinois  
Telephone Webster 4937

HILDA VON TAUBE

CONCERT PIANIST

Pupil Doctor Malvine Brée & Theo. Leschetizky  
3632 Homewood Ave., Toledo, Ohio

### PRIVATE TEACHERS (Eastern)

BARBARA BLATHERWICK

Recital - Coloratura Soprano - Opera

Teacher of Voice  
The Italian bel canto, founded on the  
principles of Manuel Garcia  
43 Fifth Avenue  
New York Tel.: GRamercy 5-6392

KATE S. CHITTENDEN

Pianoforte — Repertory — Appreciation  
THE WYOMING, 853 7th AVE.,  
NEW YORK

### PRIVATE TEACHERS (Eastern)

(Louis) (Betsy)  
DORNAY — CULP

Only teachers of Lucille Manners  
Cities Service Radio Star  
344 West 72 St. New York  
Tel.: Trafalgar 7-4999

EVERETT ALBERT ENGSTROM

Voice Consultant—Teacher of Singing

New York City  
Private instruction—Illustrated Lectures—  
Steinway Hall

Member: N. Y. Singing Teachers Assoc. Editor  
Voice Dept. Music Teachers Review. President: Assoc.  
Music Teachers League.

## The World of Music

Interesting and Important Items Gleaned in a Constant Watch on  
Happenings and Activities Pertaining to Things Musical Everywhere

CARL  
HEIN

CARL HEIN celebrated, on February second, his seventy-fifth birthday and at the same time his thirty-fifth anniversary as director of the New York College of Music, the oldest music school in New York City, founded and incorporated on October 6, 1878. Mr. Hein was born in Rendsberg, Germany, February 2, 1864, was educated in music at the Hamburg Conservatory, came to America in 1890, and devoted his life to the teaching of singing and conducting of choruses.

MOZART'S "THE MARRIAGE OF FIGARO" recently had a performance by the Wagner Society of Amsterdam, Holland, under the direction of Bruno Walter.

THE THREE CHOIRS FESTIVAL will meet this year at Hereford, England, for its two hundred and nineteenth annual event, under the direction of Dr. Percy Hill, with the London Symphony Orchestra under W. H. Reed. Among the chief offerings will be Mendelssohn's "Elijah," Haydn's "Creation," Elgar's "The Dream of Gerontius," and Bach's "Mass in B minor."

WILLEM VAN HOOGBSTRATEN, widely known Dutch-American conductor, has been honored by being made an Officer of the Order of Orange and Nassau. The decoration was conferred by Queen Wilhelmina in recognition of his services to the musical art of both his native land and his adopted America.

THE TWO HUNDRED SIXTIETH ANNIVERSARY of the Hamburg (Germany) Opera has been celebrated with a festival week including performances of Beethoven's "Fidelio"; Mozart's "Die Entführung aus dem Serail"; Weber's "Der Freischütz"; Handel's "Julius Caesar"; Gluck's "Iphigenia"; Lortzing's "Czar and Zimmermann"; Wagner's "Tannhäuser"; and Pfitzner's "Palestrina."

CHARLES MAGNANTE and the Magnante Accordion Quartette, consisting of Mr. Magnante, Abe Goldman, Joe Biviano, and Gene Von Hallberg, presented an All-Accordion Concert on April 18, in Carnegie Hall, New York. This is the accordion quartette organized to be heard over the radio on one of the most widely known "hours," and the program created unusual enthusiasm in the large audience drawn by its novelty that proved to be really high class art.

ALFREDO  
LUIZZI

ALFREDO LUIZZI, young Australian baritone, has been awarded the Melbourne Sun's prize of two hundred and thirty guineas (about eleven hundred and fifty dollars) in its Grand Opera Aria Contest. Adjudicators opined that he possesses all the requirements of voice, temperament and stage presence

to carry him to a fine operatic future.

IGNACE JAN PADEREWSKI, premier of the world's pianists, even as he was once of the native Poland he saved subsequent to the World War, has been touring the United States for his twentieth time. His last visit was in 1933. Hail! and may we hope that it shall be not farewell to our first loved master of the keyboard.

THE FIFTH ANNUAL FOLK FESTIVAL will be held at Constitution Hall, Washington, D. C., from May 6th to 8th. The programs will give especial attention to the music of the American Indians and to such songs of labor as those of the lumberjacks of the great northwest.

ALBERT CARRE, librettist of many French operas, including the "Pelléas et Mélisande" of Debussy, died in Paris, on December 11, 1938, aged seventy-six. He was a native of Strasburg, where he was born in 1852.

THE ANN ARBOR MAY MUSICAL FESTIVAL for 1939 will be held from May 10th to 13th. Among noted singers to appear will be Marian Anderson, Richard Bonelli, Norman Cordon, Helen Jepson, Giovanni Martinelli, Jan Pearce, Ezio Pinza, Elizabeth Wyszor and Gladys Swarthout; while instrumentalists will be led by Georges Enesco and Rudolf Serkin. The Philadelphia Orchestra, the University Choral Union, and the Young People's Festival Chorus, will unite in the choral and instrumental foundation of the event.

DOUGLAS BEATTIE, a young California basso who has appeared with the Chicago City Opera Company and the San Francisco Opera Company, was called to fill rôles left vacant for the latter part of the season of the Metropolitan Opera Company, when Nicola Moscona decided to return to Italy.

THE DAUGHTERS OF THE AMERICAN REVOLUTION of Washington have raised a small tornado in musical circles by denying Marian Anderson, America's greatest singer of our generation, the use of Constitution Hall for a recital. What makes an American musician?

LAJOS SERLY, Hungarian born composer, conductor and author, died on February first, in New York City, aged eighty-four. He was the composer of fifteen operettas, five hundred songs, and one grand opera, "Marcia." He was one of the few last surviving pupils of Liszt.

LISZT'S "FAUST SYMPHONY" had its first hearing in Montreal, Canada, when on January 20th it was on the program of *Les Concerts Symphoniques*, in Plateau Hall, with Paul Stassevitch conducting.

THE TWENTY-FIRST BIENNIAL CONVENTION of the National Federation of Music Clubs will be held this year in Baltimore, on May 16th to 23rd. The programs offered will be a sufficient reward for anyone making the journey to "The Monumental City" for this important event in America's musical life.

BEETHOVEN'S "FIDELIO" was restored to the repertoire of the Metropolitan Opera Company, after an absence of two years, when it was produced on December thirty-first, with Kirsten Flagstad as *Leonore* and René Maison as *Florestan*.

THE FLUTE PLAYERS CLUB of Boston had on a recent program the "Brazilian Trio" of Oscar Lorenzi Fernandez; born in Rio de Janeiro in 1897; since 1930 the conductor of many symphonic concerts throughout Brazil; and since 1936 the director of the Brazilian Conservatory of Music in Rio de Janeiro

ALEXANDER VON ZEMLINSKY, teacher of Schönberg, Bodanzky, and other musicians who have served the cause of better music for America, arrived late in December to make New York City his home.

THE BAYREUTH FESTIVAL will open with a performance of "The Flying Dutchman" in a new arrangement, on July 25th, and will close with "Parsifal" on August 28th. In all, there will be twenty-four performances, three more than in any previous festival. Victor de Sabata, from the La Scala of Milan, will conduct the performances of "Tristan and Isolde," his first experience at Bayreuth. An imposing roster of other conductors and of singers is announced.

DAVID VAN VACTOR, who won the 1938 American Composers' Contest sponsored by the Philharmonic-Symphony Society of New York, led this organization, on January 19th and 20th, in the first performances of his prize winning work, a "Symphony in D major" in four movements.

THE AMERICAN GUILD of Banjoists, Mandolinists, and Guitarists will hold its Annual Convention for 1939 from July 5th to 8th, at Providence, Rhode Island. For further information, address Hank Karch, 121 East Fourth Street, Cincinnati, Ohio.

THE CENTENARY of the birth of Modeste Petrovitch Moussorgsky fell on March 21st. Forty years after his death Moussorgsky was still unknown outside his own land and probably would have remained so had not the masterful Chaliapin made world fame as the hero of "Boris Godounoff."

ERICH KLEIBER, eminent German conductor, has cancelled his contract with La Scala of Milan, where he was to have conducted "Fidelio" and other works. He gave as a reason that he "cannot collaborate, either as a Christian or an artist" with an institution which has recently barred Jews from booking season subscriptions.

THE ORIGINAL MANUSCRIPT of Brahms' "Concerto for Violin and Orchestra" is now owned by Fritz Kreisler who secured it some years ago at a sale in Vienna. It bears all the composer's original notations intended as guides to the interpretation of this masterpiece among literature for the violin.

MME. MAGDA TAGLIAFERO, perhaps the most eminent of feminine French pianists, has been promoted to the order of Officer of the Légion of Honor. Widely known throughout Europe as a favorite recitalist, Mme. Tagliafero also appeared with many of the leading orchestras of the Continent and had a brilliant success on her last appearance with the Philharmonic Orchestra of Warsaw with Sir Hamilton Ha conducting.

ROSSINI'S "BARBER OF SEVILLE," a revised stage version, with beautiful scenery and costumes, and with Robt Heger conducting, is reported to have won but a mild success when recently presented at the State Opera of Berlin. Erna Berger was the *Rosina*; but, in spite of her art efforts, the new music written by Wolfgang Egk for the *Lesson Scene*, is said not to have won favor with the audience.

PABLO CASALS has been making a tour of Egypt. The perhaps most famous of living violoncellists played to "packed houses, with frenzied excitement," at both Alexandria and Cairo.

THE PHILHARMONIC ORCHESTRA OF HAVANA, under its regular leader, Gonzalo Roig, devoted its second concert of the season to works of Tchaikowsky. The program included the "Fifth Symphony"; and Emile Baume, French pianist, was the soloist in the colorful and exciting "Concerto in B-flat minor, for piano and orchestra."

REV. LUDWIG BONVIN, S. J., internationally known as a musical educator, writer, and as composer of sacred music, died on February 18th, at Buffalo, New York. A friend of Liszt, Rubinstein and the Strausses, he wrote more than four hundred and fifty compositions. In 1923 the University of Würzburg conferred upon Father Bonvin the degree of Doctor of Theology Honoris Causa.

YVETTE GUILBERT, French *désenchantée* reigning favorite of the close of the "Gilded Nineties," is announced for a "farewell" tour of the United States and Canada.

JACQUES ABRAMS, young American pianist, made his New York debut when in December he played on the program of the Philadelphia Orchestra. He won first place in 1937, in the pianists' contest of the National Federation of Music Clubs, at Indianapolis; and later was successful in the Schubert Memorial competition, which furnishes a first appearance in New York and two in Philadelphia, as soloist with the Philadelphia Orchestra.

LIEUTENANT-COMMANDER JOHN PHILIP SOUSA,  
U. S. N. R. F.

*From an oil portrait, by Harry F. Waltman, A.N.A.,  
in possession of the Sousa family*

## "Sound the Trumpet, Beat the Drums!"

(From Handel's "Judas Maccabeus")

EDWARD VII and his son the Prince of Wales (later George V) were, according to the Court Calendar, to appear in a military ceremony to take place before St. James' Palace in the heart of London. As an American youth studying abroad, we stood for hours in the "kerbstone" crowd, awaiting the royal party. Finally the portly, bearded king-emperor appeared, wearing the gay scarlet uniform of the guards. He was mounted upon a huge white horse. His tall bearskin hat was at an unintentionally rakish angle. He wore a tired, Oh! so tired expression, which made us realize that his calling was not altogether a joyous matter.

The band which preceded King Edward, with the solid tread of the British Tommy, likewise wore red tunics. It was composed of "wood winds and brasses." An old Londoner, seeing the clarinets and flutes, blurted out in disgust, "Thet ahn't a band. Look at them black sticks they're tryin' to play on. My word, there ahn't no proper band, fit for His Majesty, but a brass band!" Thousands of others in the past thought likewise—a band, to be a real band, should be a brass band, one composed exclusively of horns, trumpets and trombones. In some places there are still brass bands. Now that flutes, clarinets, and other instruments formerly made exclusively of wood, are being constructed of metal, bands of to-day are almost entirely metal.

The wide adoption and development of instruments of the wood wind family in the modern concert band is due largely to John Philip Sousa. When Sousa first took his wonderful concert band to Europe, serious musicians were amazed at its flexibility. Here was a band that could play not only the great band repertoire but also that usually

heard through the symphony orchestra, including such an accompaniment as that which it played when the much loved Maud Powell, as soloist for the band, performed the chaste and delicate parts of the Mendelssohn "Concerto for Violin."

Recognizing to the fullest extent the great industry and effectiveness of the work of Patrick S. Gilmore, who in his day was called "the unsurpassable," it was, however, not until the arrival of John Philip Sousa that the concert band came into its own. Sousa, although born in 1856, did not begin to exhibit these remarkable possibilities of the band until about 1892, when he resigned as conductor of the United States Marine Band and organized what became one of the greatest of all bands in musical history. His was the first high class American musical organization to tour the world and the first large musical group from this country to command universal interest. This was due to three considerations:

First—To the irresistible personality of Sousa himself, as a human being rich in understanding, humor and sympathy.

Second—To his highly organized musical knowledge and the distinctive character of his instrumentation.

Third—To his very remarkable and original gifts as a composer.

There are many who feel that from the standpoint of originality, dynamic power and highly individual effects, Sousa's compositions still outrank those of all other American composers, even including our notable symphonic writers. His was an inimitable genius. He was a most patriotic American, a sincere example of the fine Christian

gentleman. Born in Washington, D. C., almost under the shadow of the dome of the Capitol, he was trained in the public schools of that city, during and just after the civil war. His father was Antonio Sousa, and his mother, Elisabeth Trinkhaus. The elder Sousa had been born in Spain, of Portuguese ancestry, and had served as a musician in the United States Marine Band. Two honorable discharges from the U. S. Marines indicate that, when he first came to America, he spelled his name *Suacca* (possibly a Spanish or colloquial spelling of the Portuguese *Sousa*). His second discharge bears his name properly as *Sousa*. This evidence, which is at present in THE ETUDE Office files, should put to rout forever the absurd rumor that the name was originally *John Philipso* (or *So*, or *Siegfried Ochs*, or *Sam Oaks*), to which he has been alleged to have added *U.S.A.* (S.O.U.S.A.). The name Sousa is a very frequent one in Portugal. Many members of the old Portuguese nobility bear this as a family name.

With the success of the Sousa Band, the type of American concert band was established, and the fine professional bands of Conway, Goldman, Pryor, Herbert Clarke, and Simon were instituted. All of these leaders hailed the genius of Sousa in establishing a type—a type which has served as a model for an unlimited number of bands in schools and universities. Mr. William D. Revelli, in his Band Department in this issue, has been fortunate in securing statements from the directors of many municipal bands. The weekly, *Life*, in December estimated that there are some one hundred and fifty-six thousand bands in America. If that is the case, we can safely conclude that for the equipment of all kinds, including instruments, music, uniforms, and other items, there must be at least one hundred million dollars invested in American bands.

New influences commenced to invade the band field before the end of the last century. Just as the waltz influenced the Strausses in Vienna, the dance began to affect music in America. Negro jazz, emanating from the South and spreading to Western honkey-tonks, grew from the ground up and finally began to make an extraordinary impression upon music throughout the world. Irving Berlin (Irving Baline) singing waiter in a slum Chinese restaurant in New York, wrote "Alexander's Rag Time Band," and set continents prancing to it. Europe then imported Negro jazz bands galore. German and French pedants and pundits began to philosophize upon the aesthetics of jazz. The serious old Stuttgart Conservatory actually started a course in Jazz. The leader of one of the famous American Negro bands, that "played Europe" for eight years, was Sam Wooding, a really worth while musician, now conducting the admirable Negro spiritual choir, "Woodland Echoes," who tells in this issue some of the unusual experiences of his group while abroad as "The Chocolate Kiddies."

Rhythms, as near to the heart of the jungle as possible, started veritable musical riots everywhere. The whole world seemed bent upon a rhythm "jag." In California a young man named Whiteman, with a symphony orchestra training, began to recognize jazz as a force, both financial and musical, and set out to capture it. In this issue of THE ETUDE he tells how he did it. His bands are neither orchestras nor bands, but rather a kind of musical hybrid—half band and half orchestra.

After Whiteman came "name bands," unless you want to date them from the days of Rolfe and Laskey. The bands are named for their conductors, the success of each of whom depends upon his individual and distinctive appeal to the public. The whole dance world started in to emulate this American merry musical warfare, and at this writing there are in New York, London, Chicago, Paris, San Francisco, Rome, Havana, Madrid, Buenos Aires, Cape Town, Warsaw, Tokio, Stockholm, Rio de Janeiro, Berlin, Toronto, Dublin, Constantinople, Nome, Shanghai, Brussels, Athens, and in a thousand other spots, literally armies of men and women rehearsing and performing American jazz. These

dance provoking "name bands" are too numerous in America to be mentioned—they include such names as Louis Armstrong, Blue Baron, Cab Calloway, Leo Dellys, Al Donahue, Tommy Dorsey, Eddy Duchin, Benny Goodman, Kay Kyser, Hal Kemp, Wayne King, Ted Lewis, Guy Lombardo, Jimmy Lunceford, Phil Spitalny, Rudy Vallee, Fred Waring, Chick Webb and Paul Whiteman.

The natural law of competition in a lucrative field set them to securing finer and finer musicians and arrangements. The radio sponsors, knowing the interest of the public, paid the bill, until some of the "streamline" name bands presented notably beautiful performances, such as those of Kostelanetz, Vallee and Wilson. They have become the classic organizations of their type. Their directors and players commenced to earn unheard of salaries, clarinet and saxophone performers earning many times as much as most bank presidents.

We do not attribute all this advance to Paul Whiteman, but we do desire to give him credit for sublimating jazz, for directing it to higher levels, and for thus making available new tonal possibilities. This he has done at great personal expense of time, money and effort. His ten "Experiments in Modern American Music" have been really nothing more nor less than ambitious concerts, demanding a much larger group of players and a huge auditorium such as Carnegie Hall. This year Carnegie Hall was sold out for the Whiteman Christmas Concerts at three dollar "tops"; and yet the cost of the "experiment" was such that Mr. Whiteman's expenses exceeded his receipts by six thousand dollars. His first experiment, in 1924, brought out the George Gershwin-Ferde Grofé *Rhapsody in Blue*. Victor Herbert (not quite in the idiom) wrote three of his finest numbers for the Whiteman group, for that concert. Subsequent experiments made way for the now famous suites of Ferde Grofé—"The Grand Canyon Suite" and the "Mississippi Suite." This year's concert was made notable by brilliant new works from Nathan Van Cleave, Roy Bargy, Morton Gould, Ferde Grofé (a thrilling vision of New York's World's Fair called *Pylon and Perisphere*), and a notable posthumous *Cuban Overture* by George Gershwin.

### What Is Your Radio Worth?

WHAT is your radio set worth? Nothing at all, without broadcasting. Like a fish out of water, you would want to get rid of it at once, or to turn it into a book case or a refrigerator.

Your radio, in America, is worth, therefore, much more than it would be if you moved it to Europe; because broadcasting facilities are better. Listen to this statement of David Sarnoff, President of RCA, in an address to the Radio Corporation of America:

"The national services of the American system of broadcasting, however, depend upon more ambitious programs, nationally distributed. In the broadcasting systems of other countries there is nothing comparable to the great trans-continental networks across the United States. These are voluntary associations of independent stations, each an important economic and social factor in its own community. During a portion of the time, each station broadcasts national instead of local programs. During the remaining time, stations associated with the National Broadcasting Company, for example, may choose whether they will broadcast national or local programs.

"Without this linking of broadcasting facilities there would be no national service of broadcasting. Without networks the vast majority of the American people would never have the opportunity to hear the voice of their President, or the music of Toscanini, or the debates of the Town Meeting of the Air. Tapping the talent sources of the world, American network broadcasters have made a radio receiving set infinitely more valuable in the United States than it is anywhere else in the world."

# The Renaissance of the Band

From an Interview with the Noted Bandmaster

## Edwin Franko Goldman

Interviewed Expressly for THE ETUDE Music Magazine

By ALLAN J. EASTMAN

FIFTY YEARS AGO the great reign of the doughty Patrick Sarsfield Gilmore was coming to an end. Gilmore was always a wonderful showman, had made a magnificent contribution to the profession of interest in the band and band concerts were profitable affairs. Fortunately, after the passing of Sarsfield, a still greater star was to arise in the person of John Philip Sousa, who, in addition to being a wonderful conductor, was also an enormously successful composer and he soon eclipsed everyone in the field both here and abroad. His splendid innovations in his band and his instrumentations, and raised the standard of bands to new heights.

During the latter part of Commander Sousa's life two new factors commenced to command American attention—the automobile and the radio. Time was when the fathers of families, seeking a pleasant

evening excursion, would hop on a trolley car and run out to an amusement park and listen to a fine band. After the automobile came, the owners were not content to stop at amusement parks when they could roam around the country. Those, who did not have autos, had radios and were content to stay at home and listen to them. But, all things go in cycles; people again have begun to long to hear bands "in person"; and now, to my joy, I have the pleasure in the summer of playing nightly to audiences of from fifteen to fifty thousand and even sixty thousand people. When I see these huge crowds there can be no disputing that there is now an amazing renaissance of the band.

*And So We "Forward, March!"*

"THE BAND HAS COME BACK to a new audience and it is built upon lines which command far greater respect. The band itself was largely to blame for its own downfall. The musicians felt that they

were secure in their positions; and their chief interest, and in many cases also their only interest, was in the pay envelope. The result was that many of the bands were terrible. In the case of some of the traveling bands, they were badly dressed and likewise badly behaved. No wonder that the band got a "black eye." Many of the bands were composed almost exclusively of

a low type of foreign immigrant musician. They could hardly speak our language and turned up their noses at almost everything American.

"Many of the American bands were assembled only on the Fourth of July, Decoration Day, Labor Day, and other high days and holidays. Their harvest was during political campaigns, when they

often marched both day and night. Their repertoire consisted of *Onward Christian Soldiers*; *Adeste Fideles*; a few hackneyed marches; the *Star Spangled Banner*; or *America*. Usually they played from memory, each player employing his own version of the national airs. The leader would often announce, 'America in E-Flat, boys'; and then things broke loose. Who knows, this may have been the origin of swing; for unquestionably every fellow went his own precious way.

"Bands in those days rarely had any libraries of worth while music. They played the pieces given away by publishers as advertising matter, and these were rarely worth the paper they were printed upon. There were no dignity, no finished effects, no fine tonal quality. How fortunate it is that this type of band is now practically extinct. Better still is the fact that it can never, never return. The fine training, received everywhere, by youngsters in our public schools, has raised the standards so greatly that we need have no fear that such bands as we have described will ever again afflict our country.

"What moved me to go into the band field? First I saw new and greater opportunities for a superior organization. In addition to this, the opera season at the Metropolitan was only seventeen weeks long, and it was necessary to make a living in the summer. Accordingly I joined some of the park bands. Most of the players reported for work like hands at a factory. There were no rehearsals. In fact, the men resented the time spent at rehearsals. They showed an appalling lack of interest which was most discouraging to a player

who had spent years under the batons of such conductors as Mahler, Damrosch, Mottl, Hertz, Toscanini and Mancinelli. I spent many hours of disheartening and discouraging unrest with the mercenary bands of the day. It was most painful to play under such conditions. The only bands that could be excepted were the Sousa band, and the Gilmore band, which was then conducted by Victor Herbert. My contracts with the Metropolitan Opera Company prevented my joining these organizations. Accordingly I started my own band and struggled with it for six years before I began to receive the fine support which has since made it possible to play for an aggregate of many millions of people.

### The Better Band Musician

"IN THE MEANTIME the whole band situation has changed entirely. A new type of American player has arisen second to none in the world. These are players with a new technic and a new virtuosity, and they had their beginnings in our own public schools. Therefore I say that there are greater opportunities for professional bands than ever before; because, for everyone who a few years ago gave attention to bands, there are now hundreds of people intelligently interested in them. Unquestionably there will be opportunities for traveling bands; but, to be superior to the splendid high school and college bands, they will have to be super-bands.

"It should, however, be remembered that fine players alone do not make a fine band. They must be trained, coördinated, and drilled, drilled, drilled, by an able and inspired conductor; and all this cannot be done in a few weeks or a few months. Success can be bought only through interminable, careful rehearsals.

"Band instruments have been vastly improved in every way, and American manufacturers have made an invaluable contribution to this advance. In fact, foreign made brass instruments have virtually disappeared from American bands. It is amazing to note how the technic of every instrument has gone ahead. This is confined not merely to tone, rapidity and tonal control. The actual range of players has been, in some instances, extended several notes. Most of the trumpets in Gilmore's day did well when they went safely above the treble staff without painful blasts. Now they soar to extraordinary peaks of tone. We no longer marvel at high E-flat. Imagine what a difference this makes in orchestrations. In the days of Mozart and Beethoven, the orchestra trumpets could not play a chromatic scale. If the old masters could hear a fine modern concert band, it would both delight and astound them. The technic of writing for the orchestra of to-day, even shows an advance over Berlioz, which some musicians feel is as marked as that between a one horse shay and the latest Sikorsky air-liner.

"One hundred years ago practically all bands were military. They were as much a part of the army as muskets and sabers. Even the instruments were made with a military purpose in view. In the Civil War the bells of many of the horns were turned backward with some idea that the music would be shot backward to inspire the troops.

"The modern concert band began with Gilmore and came to its own with Sousa. Even now there is no such thing as a standard band orchestration. The bands of almost every country differ in instrumentation. When Sousa took his band abroad it was to thousands an entirely new kind of a musical organization. Americans, on the whole, are nearer in instrumentation to the fine British bands than to those of any other nation. The bands of France, Italy, Spain, Germany and Russia are notably different. The French bands for instance, are marked by a very large saxophone section. Whether one band of one

nation is better than another depends largely upon your taste; and *de gustibus non est disputandum* (of tastes there is no disputing).

### And the Outlook Expands

"IT TAKES LITTLE IMAGINATION for the reader to see how great is this handicap to all band literature. The orchestra is practically the same in its general personnel, the world over. It is, therefore, possible for the composer to write a composition that could be played in Los Angeles, Toronto, Stockholm, Rome or Tokio, and thus maintain a permanent position in

part of the symphony orchestra. Indeed the works of some of the masters seem to lend themselves more to the band than to the orchestra. Many critics have a strong feeling that the Gothic churchlike works of Bach, sound better with the band, a human church organ, than with the orchestra. In work with students the discipline in playing Bach's works is almost priceless. Consider the gorgeous beauty of a great Bach contrapuntal fabric, as rich in tones as any Gobelin tapestry. It is really a kind of temporal design woven on a canvas of moments of eternity. When it is done it has vanished like a dream

Dr. Goldman discussing a score with his son, Richard Franko Goldman

the art world. The publishers would have a secure international market for their catalogs. As it is now, it has been only after a long struggle that the associated band interests have been able to make a standard instrumentation for American school bands. How long this will last in this fickle age, no one knows. The popular dance orchestras have introduced all sorts of new tone colors and sound effects, and the whole band literature seems persistent in keeping in a state of flux. However, we are all praying for standardization, so that more and more leading composers will be inspired to write original music for the band.

"It must be remembered that it is possible for American bands to take European instrumentations and play from them by adjusting the parts, but the original orchestrator's ideas are distorted. The same condition would apply to American instrumentations played by a foreign band. In some of the German bands, for instance, there are no oboes or bassoons; while there are more trumpets, and also other instruments such as Flugel horns.

"To my mind the instrumentation of the American concert band is nearer to an ideally comprehensive group for the performance of the works of great masters than that of any other nation. It is better balanced and more a kind of wind counter-

until it is played again. But every performance brings out new colors and shades. Every thread of this marvelous design must come exactly in its right place, with the right tonal effect at the right time. Think what a wonderful training in precision and coördination this is to every young person who takes part in it. Surely the young people who are going through these musical experiences will have more responsive minds and better nerve control than the "jitterbugs" who abandon themselves to license in a frenzied riot of noise.

"Verdi and Wagner favored making arrangements for band. Some orchestral works are, to my mind, very badly adapted to the band and should never be arranged for it. Some of the works of Debussy, Ravel, Beethoven, Mozart and Chopin do not sound well with the band. Some are like pastels and are too delicate to be translated to the rich pigments of the band. With very few exceptions the piano works of Chopin do not lend themselves to the band. They call for the peculiar sonority and sympathetic overtones achieved through the use of the piano pedal. Percy Grainger and I have often discussed this matter, and we are agreed that certain compositions written for orchestra sound much better with the band, Sibelius' choral-like 'Finlandia,' for instance.

"Band contests have been very helpful

in stimulating interest in school band work I have heard and judged at hundreds of them. One judges of course, for tone, interpretation, intonation, technic, articulation, phrasing, and so on. From what I have observed I have come to the conclusion that the average musical intelligence of groups of boys and girls in different parts of the country is singularly uniform. The conductor who counts. If he is an intelligent, well trained man, who has labored long and fully and with good judgment with his group, the results will be correspondingly good.

"The school bands in the West and particularly the Middle West are astonishing. European musicians visiting America have been dumfounded by what these young men and young women do. In fact I am sure that this is having an effect upon European school bands; but it will take years for them to equal the great strides that have been made in America.

### Westward the Musical Empire

"IN THE MIDDLE WEST the school bands are a part of the regular school schedule and the educational results may be estimated by the fact that the students are going in for this work more enthusiastically than ever before. They receive credits for this work, as they properly should. In most places in the East the boys have to practice after school hours and the students receive no credit.

"The midwestern school bands are exceedingly fine that in many instances they have passed the professional bands. At first the professional band players and the unions resented this as an invasion upon their rights; but, since the school bands cannot play for money, they cannot take business away from the professional bands. The only solution for the career professional musician of other days is to forget his past and get down to work. He must not expect results without copious rehearsals and hard home practice. For conductors, a broad progressive spirit, hard work, work, work, should result in a superb band; and, with the new interest in everything pertaining to the band, he will have a new field. The days of the old toothy "umpah" band are done, and the school professional musician finds this the better.

"For open air events the band is supreme, notwithstanding modern amplification as applied to the orchestra. At the Golden Gate International Exposition where my band will play from March to July, the wonderful California climate will enable immense numbers of people to attend the concerts; and I am looking forward to this engagement, with great joy. I am sure that they are ready for just as fine programs as it has been possible to give in New York. Last year for instance, in our open air programs, we gave three Wagner programs, four Russian programs, three Italian programs, one French program, two Bach programs, two grand opera programs, two Schubert programs, two Beethoven programs, two symphonic programs, one Schumann program, one Verdi program, one Czech program, one Slovak program, one Johann Strauss program, one Gilbert and Sullivan program, one English program, one Victor Herbert program, one Polish program, two German programs, one comic opera program, one original band music program, and 'old music' programs. Notwithstanding the fact that this large array of special programs was devoted principally to what the public calls 'classical music,' the popular response, both in numbers and in enthusiasm, was described by the papers as immense. Popular taste has changed marvelously in the last two decades; and, despite all that we hear about the lure of 'jazz' and 'swing' music, the appeal for finer music is growing stronger and stronger every hour."

THE ETUDE has previously presented several articles from Dr. Goldman, accompanied by his biography, which we shall not repeat here in detail. A member of the distinguished musical family of which Nahan Franko and Sam Franko are members, he has been in music all his life. Before Dr. Goldman became a band conductor he for many years played the trumpet in the orchestra of the Metropolitan Opera House. He left the opera, determined to employ his experience as an operatic and symphonic performer in the organization of a "symphonic" band. Dr. Goldman has written many successful marches, the best known of which is On the Mall.—Editor's Note.

FRED A. HOLTZ

# What Do Bands Mean to America?

From a Conference with FRED A. HOLTZ

PRESIDENT OF THE NATIONAL ASSOCIATION OF BAND INSTRUMENT MANUFACTURERS, 1933-1939

Secured Expressly for The Etude Music Magazine

By WILLIAM ROBERTS TILFORD

ING THE FOREMOST POSITION in the instrument manufacturing industry in America, Fred A. Holtz takes pride in the fact that he is just one of the many who, like a horn displayed in a music store, are ambitious to master that horn and lead a band. As he recounts, it was while carrying a price tag of five dollars a week at that time (he was then just two dollars, he finally made a deal to buy the horn for a one dollar down payment and \$4.00 per week. Four years later, after becoming eighteen, he was marching in the front rank of the Military Academy Band at West Point among the other trombonists in that organization. Then followed two years with an Army Band in the Philippine Islands and several years with circus bands, "house" orchestras, dance bands, and until in 1912 he joined the sales department of one of the largest time companies in the United States. In 1915 he entered the sales department of Martin Band Instrument Company, as Sales Manager, and later, in 1931, he was elected President of the company, and as President of each of the two companies, The Pedler Company (manufacturers of clarinets and other reed instruments) and The Indiana Band Instrument Company. In 1933 he was elected President of the National Association of Band Instrument Manufacturers, Inc.; and, at the last Music Trades Convention, held in August, he was re-elected to

that office for the sixth term.—Editor's Note.

## A Mighty Musical Phalanx

"THAT INSTRUMENTAL MUSIC, and particularly band music, is a tremendous and powerful force for individual benefit to young Americans, girls as well as boys, can no longer be denied by anyone. On every side we see and hear marching and concert bands, which perform classical as well as martial music with all the assurance and all the technical proficiency which characterize the performance of professional organizations; and, during the winter concert season, we hear school symphony orchestras whose performance is almost unbelievably excellent, considering the youthfulness of the members. There must be somewhere between eighty and one hundred thousand musical organizations, not considering vocal groups, in the schools of America, ranging all the way from twenty to one hundred or more pieces. If we consider the average membership as forty or fifty, quick computation will indicate that from four to five million youngsters in all parts of America are blowing cornets, clarinets, saxophones, trombones, and so on, or playing the various string or percussion instruments.

This rapid development during the past fifteen years, of musical organizations in our schools, and particularly bands, which we have described, has been due to the indisputable fact that the movement had everything to recommend its development with

nothing that any opponent of the program (should there be any) could offer in objection to more music in the schools. There have been parents who, misunderstanding the proposition and considering it vocational rather than cultural, have objected to the participation of their youngsters, because they did not want their children to become professional musicians. The prime purpose of the movement, apart from the physical, mental and moral benefits which the young musicians derive, is to make it so that the merchants and manufacturers, doctors and lawyers, engineers, and so forth, as well as the wives and mothers of the next generation, will, because of their own participation in band and orchestra work during their school years, be devotees of music, interested and active promoters of more and better music in the lives of their children and their children's children.

## The Band Appeal

"THE GREATER POPULARITY of school bands over school orchestras is obviously due to the greater opportunities for outdoor performance, thereby "selling" the band to citizens of each town who seldom, if ever, hear their school orchestras. No high school or college football game would have its present glamour, were it not for the marching, maneuvering and playing of the bands with the strutting drum majors, gay uniforms and carefully conceived and perfected band exhibitions which delight the eyes as well as please the ears. Therefore, the school band goes hand in hand with school athletics; and, in many schools, such as Elk-

hart (Indiana) High School, for instance, when there is a home game, we not only see and hear our fine concert band of one hundred pieces but also an almost equally fine "Regimental" or Marching Band, made up of reserve players who step into the first, or concert, band as vacancies are created through graduations.

"The first 'national' high school band contest was held in Chicago just sixteen years ago, in 1923. There were no preliminary elimination contests, and any band with the desire and means wherewith to get to Chicago and participate was welcome. Gradually the country was organized into districts and divisions, with only state winners eligible to participate in national contests; but these national contests became so large that we now have the United States divided into ten regions, each of which has its own 'national' contests or tournaments, the organizations and soloists taking part in these 'regional-national' tournaments having qualified by previous performance in district and state tournaments. The 1938 tournament in Region 3, comprising the states of Ohio, Michigan, Illinois and Indiana, was held in Elkhart, and we had some seventy bands and several hundred unattached musicians who took part in the solo, quartet, sextet and similar events. Considerable management was required to handle properly the affair; but the Elkhart Chamber of Commerce did an outstanding job, to the satisfaction of all visitors as well as to the considerable pecuniary benefit of the downtown merchants.

## And the Band Won!

*Miss Maelda Austin, regular staff teacher, instructs a bassoon player*

**T**HINGS WERE BAD in Lenoir, North Carolina, as they were everywhere during the depression. The state legislature cut out all extracurricular subjects, including school music. More than this, there were to be no tax levies for such purposes, unless the communities voted the taxes on themselves. The problem was put up to Lenoir. Was school music worth while? The vote was a unanimous "yea."

The main reason was the Lenoir High School band of one hundred and thirty members. The High School had a student body of four hundred and fifty; and two hundred of these were on the waiting list for the band. That is, over half of the student body wanted "to play in that band." No wonder, the band had become one of the most animating things in the town and a real business advertising asset for the community. Membership in the band became a thrill to every boy and girl who was admitted.

The band has a three story music building, which cost forty thousand dollars. It has sound proof practice rooms, an assembly room, a glee club room, a two-way audio system, a substantial library, a repair shop, a "make up" room and a locker

room. It is debt free, and everything has been paid for by Lenoir citizens. The building is frequently visited by many envious university music directors.

The band has its own trade mark, duly registered. It has two large busses and an instrument truck for transportation to music festivals and football games. It has a wardrobe and property department. Thirty-five volumes in its scrap book library tell of the value of the band as a means of publicity.

The director of the band is one of the former business men of the town, Mr. James C. Harper. He has a librarian, a secretary and two instructors, whose salaries are paid by private subscription.

When asked for an opinion, one of the town's citizens replied with warm emphasis, "Give up our Band? I guess not. Why that band has done more to put Lenoir on the map than anything else we own."

Reports of the disciplinary influence of the band on the young folks of the town have been excellent. Lenoir has less than seven thousand residents. It is in western North Carolina, north of Asheville.

Let us have more and better bands, everywhere!

# New Concepts In Present Day Music

From a Conference with  
PAUL WHITEMAN

Secured Expressly for The Etude Music Magazine

By JAMES FRANCIS COOKE

PAUL WHITEMAN was born in 1891, in Denver, Colorado. His father, as Superintendent of Music in the Public Schools, was one of the first to champion orchestras and bands in high schools. Paul started his career by playing the violin in one of these high school groups. Then he became the first viola player in the Denver Symphony Orchestra. At twenty-two he went to San Francisco, where in 1915 he played in the World's Fair Orchestra. Later Alfred Hertz engaged him for the San Francisco Symphony Orchestra. In the following article he tells many interesting facts about the remainder of his career.—Editor's Note.

OUND IS WHAT I AM AFTER—sound and rhythm, for these are the materials that all composers must have in some form, to create the designs by which they must express their thoughts and their inspirations. Music is a language of the ears. True, one can imagine music without sound, just as a trained musician can take a score and read it silently. Even Smetana had to do that, for in their later years they were all deaf; but to most people music is meaningless unless it is heard. For years, it seems to have to go upon the fact that music could sound only in one way and that only certain sounds were permissible. In fact, the musical tastes in the past were like the general opinion in Congress who sit up nights talking about how many restrictions they can place upon life, rather than trying to make life more prosperous, abundant and free. Nobody will ever know how much music has been held back by the men and boys who are far more interested in what not to do than in making music worth while music themselves. I was brought up to believe, for instance, that the fifths were a venomous species of musical mayhem or assault and battery. Others have shown that, if you know how to use fifths, they may be just as effective. The same obstruction applied to the introduction of new instruments. The saxophone had a fearful start at the start; and when we introduced pianos and guitars in our group, because there were no other instruments, we could etch in the rhythm quite so much as some of the older musicians looked

## On a Sound Base

ONLY MY OWN ORTHODOX BRINGING UP much to do with the direction of the work. You see, my father, who was Jewish and Scotch extraction, was a very strict, a school music superintendent, rather severe and unrelenting one. He was in the San Francisco Symphony Orchestra and was a strong believer in union. He got me into the union as a child and I played the viola in the San Francisco Symphony Orchestra (later in the New York Symphony Orchestra) and became acquainted with the symphonic repertoire from Bach to Debussy. The union was a union rule that, when opportunities to play turned up, the members of the union should be given the first

chance. In this way I played with visiting opera companies and thus added to my experience. The year round income from this however, was not enough to support me. My pay stopped when the symphony and orchestra season ended; and I realized that if I did not want to "go broke" I had to find some other source of income.

"Jazz was just beginning to be popular and I made the surprising discovery that, while I was able to earn only forty dollars a week in the symphony orchestra, I could get ninety dollars a week playing what was then called "jazz" fiddle. I received work in Tait's Cafe Orchestra in San Francisco, and after a short time I was fired. I was not good enough, I who had played the classic symphony and opera repertoire. This made me mad, and I determined to find out why. The great war came on and I enlisted in the navy. Then I played all manner of vaudeville programs. Equipped with this unique experience, I faced a new problem. Of course, what there was of jazz in those days was lamentable. The music was often of a very cheap type, the arrangements inexpert, and a great deal was left to the improvisations

of the player, as it is with the so-called swing music of to-day. I began to wonder if it were not possible to combine these appealing themes with something of the technic of the symphony orchestra. Was there not some way to take this music, however humble its origin, and make it acceptable to the great public and at the same time musically worth while?

## In Lighter Vein

"IN OTHER WORDS, I was convinced that lighter music with spontaneity could be written in a way which could be played from notes by expert players, with the same accuracy and precision demanded in the symphony orchestra. Would such music lose whatever flavor might come from the jazz improvisations that were derived from what is now called a swing "jam" session, in which the players extemporize upon their parts. My reply to this is that my orchestra still has "jam sessions," and, if any of the players invents anything particularly clever in the way of a variation, this is carefully noted down and preserved so that it may be put in notes for future use. Now, it must be stated that there is a vast differ-

ence between the type of highly trained and educated musician in my band, who does this, and an absolutely untutored person who indulges in all kinds of musical extravagances which might destroy the whole harmonic structure of the work.

"What has been the result of all this? It has, in the first place, developed a new type of musical virtuosity from the standpoint of versatility, tone and technic. Our boys have to think very fast in these days, far faster than in the regular symphony orchestra. I have been obliged continually to reject symphonic players, because they do not think quickly enough for our programs. Such a player as Bix Biederbecke, is one of the most marvelous performers upon the trumpet ever known. Benny Goodman has a terrific technic. If he developed his *legato* and some other things, there would be no finer symphony clarinetist in the United States.

"All this has made a new field for musical arrangers. Special arrangements have had to be made; and my bill for arrangements has run at times as high as forty-two hundred to six thousand dollars a week. Ferde Grofé played the piano in my group and had new and fresh ideas upon arranging which have since made him famous. It was Grofé who advised with George Gershwin in constructing the famous *Rhapsody in Blue*; and then he (Grofé) made one of the most famous orchestrations in recent musical history. This does not reflect in any way upon the obvious genius of Gershwin. Grofé supplied what Gershwin did not have.

## We Invade the Classics

"ONE OF OUR FIRST ATTEMPTS was Rimsky-Korsakoff's "Song of India," which has essentially a dance rhythm and lent itself marvelously to the new style. There was a great hue and cry about "jazzing" the classics. We were ruining musical taste. What was the result? Mme. Alda and Fritz Kreisler had made records of this, for the Victor Talking Machine Company. After the popularity of our records the sales of the Alda and Kreisler records increased three hundred percent. Surely no injury was done to the classics by our widely heard version.

"The great music of the past is a storehouse of musical thematic material. I refer particularly to Bach. Bach is a mint of themes of great value from a dance music standpoint. There are literally thousands

## A HISTORIC MEETING

This group came together to discuss the famous *Rhapsody in Blue* by George Gershwin. From left to right the individuals are Ferde Grofé, who made the memorable orchestration of the composition; Deems Taylor, composer; Paul Whiteman; Blossom Seeley, and George Gershwin, the composer

THE ALLENTOWN BAND

# America's Oldest Civic Band

## One Hundred and Ten Years of Activity; and Still Flourishing

By HATTIE C. FLECK

TO THOSE WHO ARE INTERESTED in band music, a span of one hundred and ten years of unbroken activity of any band must hint a tale of fascinating history. It is they who urge the musicians of home bands to bigger and better things. To such probably should go the credit of keeping an organization alive for such a period as one hundred and ten years, which is the boast of The Allentown Band, of Allentown, Pennsylvania.

Up till a short time ago it was believed that America's oldest band is a small but vigorous organization in New Hampshire, consisting of thirteen men, including the venerable leader, E. E. Wiggin, who has been the director for fifty-eight years, and who is only the third in line since its organization. In the language of this grand old director, two years ago, "The Band blew hard for one hundred and three years." It was a great experience to stand face to face with an all American organization so old; for at the time of that meeting it was the oldest known band in the country, and it was often historically referred to as such. There was no available data to the contrary, in spite of the intense research demanded by the publisher before the acceptance of an interesting article on that organization.

### New Claimants to Fame

SINCE THAT TIME, and because of the interest that the article aroused in band-minded

persons, and musicians generally, excerpts of old newspapers were offered in evidence that the title of "The Oldest Band in America" should be conceded to The Allentown Band, which enjoys a five year seniority over its sister band in East Barrington, New Hampshire. A new interest was awakened, and satisfactory investigation confirming the claim was done. To all appearances, the distinction of being America's oldest town band, belongs to The Allentown Band, of Allentown, Pennsylvania, which has authentic record that it was organized in 1828, one hundred and ten years ago. It is to-day a thriving organization consisting of seventy-five fine musicians; and its able conductor, Albertus L. Meyers, before taking up the leadership of this organization, was a member of the famous Sousa Band.

There is this fact to be considered, however, that The United States Marine Band dates its origin back to 1800. But this musical body is part of the unit known as The United States Marines. To the minds of people interested in bands, it can not be classified with bands generally; for it was voted by Congress that "a band of about thirty drummers and fifers" was to be given to the newly organized unit of Marines, about the year 1800 or a bit earlier, and that it was to have two majors—a drum major and a fife major. This would make The United States Marine Band the oldest American musical institution of

its type\*; but its rank as a part of a military body still does not tear the laurels from the venerable head of The Allentown Band, as a civic institution, belonging to the common people, which is the high point in view.

Interesting American historical events of The Allentown Band includes the fact that it played at "the celebration in honor of General Lafayette, who had recently died, held on July 31, 1834, marching in the centre of the troops, leading the white horse draped in mourning, to the rumbling of the drums."

### The Human Urge for Culture

IT IS TO BE READILY IMAGINED that one of the earliest requirements of a community, composed of the stable folks who founded the lovely city of Allentown, must be a band. Named for its leading founder, Chief Justice Allen, the city nevertheless was composed of emigrants, from the German Palatinate and Switzerland, later to be identified as Pennsylvania Dutch—in reality, Deutsch. These people brought a deep-seated love of music from their homeland, many having been skilled players who not only handed down their talents to the younger generation, but who also insisted upon keeping alive the work they had begun. To-day the Allentown Band stands as

\* The Stoughton Musical Society, a singing organization of Stoughton, Massachusetts, founded in 1786, and so one hundred fifty-three years of age, is the oldest American musical group with an authenticated continuous existence.—Ed.

a monument to the early energies and sight of its forebears, as a great all-American musical institution composed of musicians to whom the conductor gives day full credit for the high standard organization as it performs under his leadership. It is said that a band is as good as its leader, but the leader of The Allentown Band would reverse this statement, for he feels that a band is as good as its every member.

Realizing that a player does not live to himself, but to the community in which he is privileged to live, the real musician feels somewhat like the missionary who is guided by the urge to "teach all nations." From such heroic beginnings are laid down through the ages great reminders of the struggling past. Such a fair monument must belong to The Allentown Band, standing down to these days in an unbroken line, and standing before us as perhaps the most fitting monument and tribute to the perseverance of a few performers who boasted of primitive instruments and a great love of music. When we recall that a community is to be judged largely by the standards of its musical tastes, we understand that the charm of Allentown's must have been blessed with good music from the beginning. And with this, to possess "The Oldest Band in America" is another and most outstanding distinction, such as might inspire a thrill of pride in any community.

## FIFTY YEARS AGO THIS MONTH

S. W. VAN DEMAN, a popular pianist and teacher of his time, gave this succinct expression of the qualifications of the competent teacher of music.

"As to the special culture necessary for a teacher, I will simply quote the last part of the popular saying, that we should know 'everything of something.'"

"Imagine a teacher of music, in conversa-

tion with an intelligent merchant, farmer or any well read person not a musician, being asked, 'Do you teach counterpoint?' and the stammering 'No,' accompanied by a blank look which says plainly 'never heard of it.' Would this raise the individual or the profession in the estimation of the questioner? And yet such a query is not unheard of from a person who reads nothing

better than the popular magazines. The teacher who talks about "Beth-ov-en and Back," and tells about practicing seventeen hours a day, for a week, on two measures of music, to impress his wonderful musical abilities upon a lady of education and refinement, will certainly miss his aim.

"However, in our efforts to elevate the public ideas for the art and profession, we

must muse more wisdom than the man of whom Talmage tells. After struggling for some time with no success, he finally takes his tackle into the water with the exclamation 'Bite or be damned.' Communities like individuals, subject to prejudice and human weaknesses, but, like individuals, may be wonderfully changed for the better by patience, perseverance and wisdom.

# Sing with Your Heart!

By

FRIEDA HEMPEL

Internationally Renowned Prima Donna

A Conference Secured Expressly for The Etude Music Magazine

By ROSE HEYLBUT

I WERE ASKED to define the singer's art, I should not explain it in terms of vocal technic. I should say it lies in the ability to move an audience in a worthy manner. That, to me, is the summing up of the meaning of art. To go to a concert and hear great songs sung by a great voice—and it may happen that you come away bowed by all your own troubles. You go to another concert, and hear the very same songs sung by a different voice, and you are away so buoyed in mood and lifted in spirit that your troubles cease to exist. You can move mountains, sheerly on the strength of that concert has provided. The difference between those two reactions is not a quality of voice, but the power of the singer's art. The singer who performs alone is merely a technician. The singer who can face a hall full of people—of different ages, races, and temperaments—and lift them all to the same emotional release, such a singer is an artist.

Then, shall the young singer set out to make herself an artist? The first step can be neither by taught nor learned. It must be inborn. We know that a person who lacks a talent for drawing, never can become a great painter. In the matter of singing, we are less reasonable. Everybody has a voice; therefore, everybody ought to be able to sing, if only he is lucky enough to find the right teacher to show him the "tricks." Which, of course, is a promise. Everyone has a voice, true, but it can be taught to make that voice more agreeable. But a singing career is not a great and unusual voice. Thus, the study in which the ambitious young singer should engage is the all important analysis which alone can indicate the path of future work. Make sure your gifts do not fall too far behind the ambitions. Then assure yourself that there are no "tricks." Only conscientious work can build an art.

We have said that the measure of art is never to move; and many qualities become necessary to project that movement. Regardless of vocal discipline, the singer must build a picture in her own mind and send it out, into the minds and hearts of her hearers. At once, a great variety of activities come into play. She must in her own mind the exact image she wants to project. She must feel it enough to make it convincing. She must express it clearly enough for others to understand. In this sense, she sings not with her voice, but also with her heart—with her whole body.

## Art Is Simplicity

TALK MUCH of specialization, of shortcuts to fluency. We

Frieda Hempel in her famous impersonation of Jenny Lind

crowd our pupils' minds with technical sounding problems, and lose sight of the fact that all this talk about singing leads us farther and farther away from singing itself. It is always a pity to let the trees block out one's view of the forest. We need a return to simple, natural, fundamental singing.

The young singer should be given as little confusing theory about singing as possible. She should be permitted to sing. Only in this way will her personal problems reveal themselves—and no two singers have exactly the same problems to solve. The young singer should be trained to draw a perfectly natural breath and to release it naturally. Does that sound too simple? It is the best foundation upon which to build. Let the problems be solved after they

made certain. The separate tones must be combined into a smooth scale which encompasses the entire range evenly, passing from low tones to the middle register, and thence to the upper tones, and all this without the least suspicion of a break. Nothing can take the place of full, even scales. Next, these tones must be taken in different values—staccato, sustained, spun out, in trills, in arpeggios. The perfection of these various values is the work of a lifetime. A single year, in the formative stage, is hardly too much to spend in concentration upon them. Complete songs should never be attempted before the second year of study; and then only the simplest songs! Not until the third year, when the tones are sure and "settled" enough to be carried over into songs and vocalises, should the student begin to work

On January 6, 1939, Frieda Hempel gave her first American song recital in four years. The New York critics were unanimous in lauding this distinguished artist's flawless technical resources, as well as her singular power of projecting the essential mood and meaning of her songs. The unanimous verdict was that there are to-day regrettably few artists before the public who can take rank beside Miss Hempel, as both singer and musician. THE ETUDE has asked Miss Hempel to "tell how" such consummate art is achieved.—Editorial Note.

FRIEDA HEMPEL

have asserted themselves: do not anticipate them. A singer need not be troubled with complicated theories of breath support until it is shown that she needs special development along those lines.

The first year of study should be devoted entirely and exclusively to tone building. I cannot express that too emphatically. Tone building, and nothing else, is quite enough for that important first year. Each tone of the voice must be explored and

on arias. The first arias to study are the Italian ones. They are easier for the voice, and lay the foundations for greater finesse.

## No Excellence Without Labor

TIME IS PERHAPS THE CHIEF INGREDIENT of artistry. Studies must be not only acquired; they must be allowed to ripen, within one's mind and within one's throat. The saddest mistake a young singer can make is to try to work quickly. Indeed, it cannot be done! Let us make no mistake about this matter of learning. One can manage to sing a scale or an exercise inside of a week. But it has not been *learned* until it lies in the voice easily and naturally. The one who has studied a foreign language will appreciate the difference between mastering the individual words and putting them together in a full, spontaneous sentence. At the beginning, one must stop and think out each word, and he may utter those words quite correctly. But such a halting process is a very different matter from speaking the language. It is the same in singing. To know how to combine eight tones into a correct scale is a very different matter from having learned to sing scales. The tones must sit naturally in the voice. The technical disciplines must fall naturally into the tones. Only then can one speak of singing.

My own vocal production was always easy and natural. I had no special problems to trouble me, and I could have gone ahead very quickly—but I was not allowed to do so. For three long years I was kept at the study of tone building and technical drill. At sixteen, I was offered a part in opera; but it was necessary to refuse it while I was getting a reliable foundation in singing. At the time I regretted what seemed a crushing waste of years. To-day I am thankful for the discipline which built my voice into a sound organ, and which has kept it so. Even now I am as careful in my

work as I was in my earliest student days. I love my songs and learn them easily. After scanning a page of music for five minutes, I know it by heart. But I never sing a song in public until I have spent at least six months living with it, working at it, polishing it—taking it into my system until it becomes a natural part of me. On one occasion, this finishing process had interesting results. The late Roland Farley sent me his alluring *Night Wind*; and, after months of study, it seemed that the song could be improved by some slight changes, both in the accompaniment and the melody. I made my suggestions to Mr. Farley, and he kindly accepted them, saying that henceforth, *Night Wind* was my song.

The soundest advice I can offer the student of singing is, *do not hurry!* Be patient. Allow yourself time to take your art seriously. The student who accepts engagements within twenty months of study, will be finished and forgotten years before the careful artist is beginning to assert herself.

The life of the voice depends upon the thoroughness of early training, and upon constant exercise. There is no such thing as tiring a voice through singing, provided its production is natural and sound. The very fact that the voice becomes tired is an indication of incorrect singing methods. The well used voice is not only able to continue singing—it needs to sing. Imagine how your hair would look if you gave the scalp muscles a "little rest" from brushing. The voice fares no better. Every day, at all times and seasons, the singer should spend two hours working at scales, arpeggios, leaps, trills, sustained tones, spun tones. Practice may never cease. I spend two hours every day at my work, in half hour intervals exactly as I did during my first year at the Conservatory. It is my law. And my voice is the fresher for it.

### The Soul of Song

BUT VOCAL ABILITY alone is only one of the requirements of art. It is important as a means of expression. Equally important is the emotional value to be expressed. We call this "interpretation." Actually, it is more than interpretation. It is the creation of a mood which lifts and moves one's hearers. This must be an eminently personal thing. One can imitate "effects" (though it is an unwise procedure); but she cannot imitate emotional conviction. That is why great, warmth giving artists are rare. It is also why interpretation is so difficult to teach. When artists come to me for advice and study, I can tell in the first moment of their singing whether they actually feel the song deeply and sincerely enough to convince others. If their powers of conviction are not very strong, I never attempt to tell them what to do. Instead, I try, by examples, to stimulate a warmer feeling within them. Is it a lullaby that a young girl wishes to sing? I take her away from the music and the business of singing, and ask her if she has ever held a little child in her arms. Did she enjoy the experience? How did the baby look? What did it do? At once, the girl drops her "audition" self and becomes natural, telling me of some little sister, or niece, or friend.

"Now, don't tell me any more," I say. "Take everything you have in mind, and put it into your song."

And immediately, the lullaby becomes warm and real and convincing. It ceases to be a "concert number"; it becomes a reality, a part of human life.

Again, take Schubert's lovely *"Ihr Bild."* Let the student get away from singing problems, and concentrate on the text. Has she ever looked long and yearningly at some picture—a picture, perhaps, of some loved one who has died? As she looks at this picture, has she never felt the sudden conviction that the beloved face has come to life and smiles in affection and encouragement? Let that personal experience, with its personal reactions, be the keynote for the mood of the song. When she plans

her effects according to what they "ought to be," they become artificial and cold. Only sincere emotion can reach the hearts of her hearers.

There must be an eminently personal bridge between the singer's heart and the hearts of her audience. The notes of the music are merely the messengers who cross the bridge. Be as natural in your effects as you can. Do not stand stiffly on the stage, because someone has told you it is undignified to move your hands at a concert. Spend much time studying the inner, personal meaning of your songs, and then express it in the way that you think it should be expressed. There is no one right way! Each artist will express the same song differently—and that is why art remains alive. After one of my recitals, a friend who was ill and could not go, told me she had heard that, in one song, I had made a pretty effect with my hands. She wanted to know just what I had done. I was quite unable to tell her what I had done. I do not remember using my hands while singing, any more than I remember what I did with them when someone wished me "A Merry Christmas." In each case, I did what came naturally, as the only spontaneous thing to do. Planned "effects" never move.

### The Imponderable Lied

LIEDER SINGING is an art quite by itself. It is difficult because it depends entirely upon the projection powers of the singer. There are no stage settings, no costumes, no buoying orchestra. One comes out upon the stage, and the entire effect to be made rests solely upon what one has to give. Further, *lieder* singing is intimate in style. Most of the songs are brief, and center around a mood or a feeling; and each requires the most sensitive kind of interpretation. We often find singers whose style and nature are too robust to lend themselves gracefully to this essentially sensitive type of music.

The first requisite for artistic *lieder* singing is imagination. Nearly every great *lieder* either paints a picture or describes some personal emotion. The art of the singer lies in visualizing the picture, reliving the mood, and in sending both out across the footlights so convincingly that the listener in the farthest row will feel himself personally and intimately included. This is no slight task. One must have a thorough mastery of the mood and remain deeply imbued with it, in order to project so evanescent a thing through the length and breadth of a large public hall. Imagination must therefore be part of the singer's inborn equipment; also, it must constantly be stimulated and refreshed, in the way that has been suggested.

### The Approach to Study

ALWAYS BEGIN THE STUDY of a song away from the music, working entirely from the text. Let the meaning and the beauty of the poem sink into your mind. Recite it, as a poem. You will be surprised, in working at a new song, to find that the natural lilt and emphasis of the words suggest the line of the melody. In Schumann's *Du bist wie eine Blume*, the climax of adjectives, "so hold und schoen und rein," suggests a natural upswing of the voice, which is exactly provided in the music. Paint a picture with the words, and express it through the music. When the opening notes of the accompaniment are sounded, they should serve as the frame into which your picture mood must fit.

I see no harm in learning by imitation, provided that the models are worth imitating, and that the imitation does not become mechanical or slavish. Where could one find a better standard for the singing of the *Caro nome* than the record by Nellie Melba? But—do not try to be Melba! Use her interpretation as the basis upon which you may superimpose your own ideas. Naturally, you will not do as well as

(Continued on Page 288)

## RECENT RECORD RELEASES

By PETER HUGH REED

IT BECOMES INCREASINGLY EVIDENT with each new recording made by Walter Gieseking that he is one of the most extraordinarily gifted of keyboard artists. Mr. Gieseking's technic is prodigious (his hands have the unbelievable spread of a thirteenth), and his touch is uncanny for its almost imperceptible nuance. No one on records has achieved finer tonal subtleties nor more delicate shades than this gifted pianist does in his recorded performances of the Debussy "Preludes" which comprise Book One (Columbia set 352). Gieseking makes Debussy's music completely his own.

Equally remarkable are the pianistic performances of the *Toccata in C minor* and the *Toccata in D major*, by Bach, as played by Artur Schnabel (Victor set M-532). There are both profundity and sentient fervor in his approach to the classical lines of two of Bach's most notable show pieces. Yet, despite this fact, one feels these pieces are essentially for the harpsichord, a fact that is further borne out by Wanda Landowska's superb interpretation of the *Toccata in D major* on Victor record 15171-2.

For playing of rare refinement and sensitivity in a familiar work, Menuhin's performance of Mendelssohn's "Violin Concerto in E minor" could hardly be excelled (Victor set M-531). But there is more to this music than the poetic qualities that Mr. Menuhin proceeds to exploit; the first movement can stand bolder treatment and the *finale* more brilliancy and fire. Both Kreisler and Szigeti, in their recorded versions of this music, make these achievements. However, there is much to say for Menuhin's artistry. It is all a matter of what qualities one likes emphasized in Mendelssohn. Georges Enesco, Menuhin's famous teacher, is the excellent orchestral director in this set.

Because an unfamiliar Haydn symphony is always a welcome musical treat, one laments the inequalities of the recording of "Symphony No. 102, in B-flat major," as performed by the Boston Symphony Orchestra under Koussevitzky's direction (Victor set M-529). Recorded at least two years ago, this set was held for release until recently, with the result that the remarkable recordings from the Boston Symphony Orchestra in the past year make the lack of tonal richness and balance in the present set all the more apparent.

Once again in Victor set M-530, Stokowski proves that he is one of the greatest present day interpreters of Wagner's music. Ten years ago this conductor gave us his inimitable performance of the famous Paris version of Wagner's *Tannhäuser Overture* and *Venusberg Music*; and now under more ideal recording circumstances he repeats that performance. To this he adds the *Prelude to the Third Act*, which Wagner subtitled *Tannhäuser's Pilgrimage*. This latter has been aptly termed a tone poem. In revising the *Overture* and *Venusberg Music* for a special Paris performance, fifteen years after completing the opera, Wagner had the experience of "Tristan and Isolde" behind him; hence this revision is conceived in the ripened style of the latter opera.

Weingartner, in his recorded performance of Brahms' "Fourth Symphony," received the unequalled acclaim of critics and music lovers alike. More recently Columbia issued this venerable Dalmatian conductor's equally compelling performance of Brahms' "Third Symphony" (set 353). There are in his reading of Brahms' most elaborately contrapuntal symphony both clarity and light that are particularly welcome. The sentiment of this music speaks for itself,

and so he is careful not to overstress.

Among ballet scores that have been recorded recently there is none more brilliant performed on records than "Gaité Parisienne" (Columbia set X-115). Efreim Kurtz, the chief conductor of the Ballet Russe de Monte Carlo, directing the London Philharmonic Orchestra, does notable justice to this ebullient music. "Gaité Parisienne" made up of various pieces by Offenbach, arranged and orchestrated by Manuel Rose. Beginning with an exuberant prelude followed by an equally intriguing *Torture* the music carries on with a delightful humorous *Galop*. At the end we hear the vigorously rousing *Can Can* music, a naughty souvenir of the Gay Nineties.

Bruno Walter, since discontinuing performance his fine work with the Vienna Philharmonic Orchestra, has been dividing his time between Paris and London. Recently to his great joy, the French Government presented him with full citizenship. It is good to know that Walter, who in the past two years has been making so many fine recordings with the Vienna Orchestra, is now similarly engaged with both the London Symphony Orchestra and the Paris Symphony Orchestra. Recently Victor released two of Walter's most treasured contributions to the phonograph, his performances of the *Ballet Music* (Nos. 1 and 2) from Schubert's "Rosamunde" (disc 12534) and Beethoven's *Coriolan Overture* (disc 12535).

The greatest musician in France during the reign of the Sun-King, Louis XIV. was an Italian, Giambattista Lully. There has been too little of Lully's operatic work on records; hence Columbia's recent release of four arias, originally recorded by Paul in Paris, is genuinely welcome, not alone for their historical importance but also for their musical worth. On disc 9153M, M. Villabella (tenor) of the Paris Opéra heard to advantage in the aria *Bois d'Amadis* from "Amadis" and *Plus j'observe ces lieux* from "Armide et Renaud"; and on disc 9154M, Mme. Solange Renaux (soprano) assisted by a women's chorus, is heard in particularly graceful aria, *Par les secours* from "Roland," and alone in the dramatic aria *O Mort!* from "Persée."

Haydn wrote some twenty concerti for clavier and orchestra, but only two of them have been printed, and only one of the two seems to hold the pianist's interest—*Concerto in D major, Op. 21*. Marguerite Roesgen-Champagnon, more widely known on records as a harpsichordist, turns to the piano in her performance of this work, giving it a good not outstanding performance.

Ossy Renardy, the violinist, was born in Vienna in 1920. At five his talent was discovered by Prof. Theodor Paschke, under whom he has studied ever since. Renardy has an unusually beautiful violin tone and a rare musical poise for one so young. In Columbia set X-116, his particular talents are advantageously set forth in Schubert's "Sonata in D major."

Gabriel Fauré has been called the poet of all French song composers. His art is distinctly fastidious one, and for this reason is not immediately obvious. Heard and heard, his music has an inexhaustible charm. Charles Panzera, the French baritone, Victor set M-478, records sixteen of his songs, including the "La Bonne Chanson" and "L'Horizon chimérique" cycles. In Columbia set 354, we have Fauré's biggest work so far on records, his introspective setting of the "Requiem Mass," sung by Mme. Dupont (soprano), M. Didier (bass) and Les Chanteurs de Lyon.

"This is Father"

A. B. ROLFE'S INDEPENDENT BAND, IN 1885

"I am the little fellow with the big horn, fourteenth from the left. Chic Phillips, the player who could keep time with his ears, is number nine from the left."

"Here I am at the Age of Eleven!"

# Tooting a Horn for Fifty Years

A Conference With the Well-Known Radio Conductor, Manager and Motion Picture Producer

B. A. ROLFE

Secured Expressly for The Etude Music Magazine

By JAY MEDIA

A. (BENJAMIN ALBERT) ROLFE, known to all his friends as "B. A.," has played for years millions of people, "over the air." He is distinctly a self-made musician, in every sense of the word. Literally brought up in childhood in a circus band, his progress to Broadway, and his large variety of enterprises, make this one of the most interesting articles THE ETUDE has ever printed. "B. A." was born in Brasher Falls, Lawrence County, New York, and— we had better let him tell his own "Alger" story.—*Editor's Note.*

\*\*\*\*\*

## The "First Person" Musician

COURSE YOU KNOW the old saw about a man who bragged that he was a self-made man, and how his neighbors all said it must be true, as no one else could have made such a bad job of it. I have been bumping through life for over fifty years, and I have come to the conclusion that the only men worth while (particularly in music) are self-made men; and this includes Wagner and Elgar, as well as dozens of fine folks who did not let lack of opportunities bother them very much. If colleges and conservatories could produce superlatively fine musicians in every town there wouldn't be room enough for them in life. Even if the student has had the advantage of the top notch instruction in the finest schools with the so-called best teachers to be had, it just will not get him anywhere, unless he starts out to make himself according to his own individual pattern, in his own way, with his hands, mind, heart and soul, counting on it, that he will turn out as a dud. We have been hearing a lot of fun lately at the rugged individualist and his probable extinction. Take it from me, there is no room at the top in art for anybody but the rugged individualist. Unless you are that, you are just a cog, and in the end you are doomed to play second fiddle for ever and ever. One of the things that appealed to me in modern 'stream lined' jazz, in the earliest Paul Whiteman period, was that the players are not expected to spend their days tooting out notes on a horn or sawing out *la la's* on the fiddle, but each fellow is expected to be himself and to play with individuality. My difference there is between the 'then' and 'now' in music. Now thousands

and thousands of students in public school bands and orchestras have study advantages that were almost unknown in conservatories when I was a lad; and these kids just take this as a matter of course. They have no idea of the value of the gems that are literally hung around their necks. And how is this all going to work out? I have an idea that the things we have to work our heads off to get mean a whole lot more to us. If every boy and girl could be made to see that it is only the 'plus' work that they do that matters, the situation would not affect them. But, if they accept what is laid before them without putting in their utmost efforts, they cannot

expect to get very far in any endeavor.

## And so "Excelsior!"

"NOW WHAT DOES ALL THIS MEAN? It means that the general average of musical ability among young people has rocketed up enormously. This, in turn, means that for every capable youngster of forty years ago, there now are probably a thousand. This feeling is but natural to me, because I was considered a prodigy at six years of age. Thus the median line of ability is vastly higher than it was forty years ago. But if all the students stay on the median line, we will have thousands who will be mediocre and nothing more. The success-

ful student must rise above the level of all of his fellows, if he expects to amount to anything.

"Both my father, who played the violin and the cornet, and my mother, who played the clarinet, were amateur musicians. Father was foreman in the saw mill of the Chippewa Lumber and Boon Company, at Chippewa Falls, Wisconsin. There he organized Rolfe's Independent Band. Remember, entertainment in those days was limited, and the town band was as important to the community as the soldiers' monument and the iron deer on the lawn in front of the City Hall. There must have been a thousand such bands in America, in towns of five hundred to ten thousand people. They were often dignified with the name of "The Silver Cornet Band"; the word *silver* seeming to have connoted sweetness of tone, although the material out of which an instrument is made has little bearing upon the tone quality. The highly polished horns looked luxuriant, however; and, when the Silver Cornet Band marched down Main Street, the town was thrilled to a new sense of civic prosperity and importance comparable only to that when the Fire Company turned out. Many of the town's leading lights took a great pride in belonging to the band. One such instance was President Warren G. Harding, who was always thrilled by his musical beginnings in the Marion (Ohio) Silver Cornet Band. The bands were usually supported by the members and by private contributions.

"It was about this period that a very unusual enterprise swept the country and that was roller skating. Every town of ten thousand or so suddenly found itself in possession of a humpbacked building which looked like a huge Saratoga trunk. The interior was bare, save for the polished floors and a mammoth cylindrical stove in each of the four corners.

"In the center of the building, hanging from the ceiling, was the bandstand. In order to get to it one had to climb a ladder, which was drawn up after him. The band played waltzes, which seemed to lend themselves to skating; and no one will ever know how much this regular support to players may have then contributed to the development of bands in the United States. The craze was just as widespread as the "jitterbug" madness of to-day. There was no mechanical music in those days,

THOMAS A. EDISON AND B. A. ROLFE

and, with the rumble of the skates, a band was the ideal music. It seemed as though the whole country was on wheels, and the rink proprietors discovered one important thing. Music was absolutely necessary. If there was no music, people would not skate. They liked the rhythm, and thousands forgot their inhibitions as they rolled around the rink to the tunes of Strauss and Waldteufel.

### And Then to the West

"DURING THIS CRAZE my family moved to the West, and one of my first recollections in life is that of having a piccolo placed in my little hands and being told by my parents how to play it. This, to a six year old boy, was a great thrill; and before I realized it I was actually playing in the band. The next summer I was put in possession of an alto trombone, which delighted me still more. Readers of *THE ETUDE* will certainly find a picture of this band interesting. The uniform consisted of ordinary clothes, plus a 'plug' hat. That was all that was necessary. The plug hat gave a touch of municipal dignity and social éclat to the group. The plug hat on a bandsman gave him much the same distinction that it conferred upon a cannibal king. The one outstanding uniform, however, was the drum major, who may be seen at the extreme left of the picture. No Balkan potentate was ever more resplendent. In the picture you will also discover a very small boy with a horn, and I was that boy. The band was my life. It had among its members many interesting characters, particularly Chick Phillips, who played the circular alto (Helicon) horn. In the first place, he had to put on the horn like a kind of sash, which was always a fascinating operation; and then Chick had one gift which distinguished him among artists. He could wiggle his ears up and down in time with the music. Sometimes I got so interested in him that I could hardly look at the music.

### An Insatiable Paterfamilias

"FATHER, HAVING TASTED THE JOYS OF ART, and having the trouper's arrogant outlook upon trade and work in general, decided to devote himself to music. He was a character that could have been created only by his age. Like Micawber, he was an unrelenting optimist. Hard luck and failure were merely the overtures to great triumphs which were at all times awaiting us, and might come at any time. In appearance he resembled W. C. Fields (minus the vermillion proboscis), but with Field's long cloak and inevitable top hat worn at a rakish angle. He wanted to be conspicuous, because he knew that in those days the public looked upon show people with a kind of awe and mystery which are a part of the showman's stock in trade. Therefore he took a pride in his bombastic self-assurance and his charlatanlike flair. It meant business for us.

"After playing in the band for three years, father returned to our home in New York, where he joined a traveling wagon show (Lewis and Wardrobe). It was a very poor affair, with a few acrobats, a clown and some monkeys, performing bears, ponies and dogs. We aimed for the head waters of the Ottawa, in the French speaking section in far northern Canada. The band was as much of a sensation as the circus. Our trip was through a wild country and one very intriguing to a growing boy. The season finally closed, the circus broke up and, as usual, we were likewise broke. But nothing daunted father; and we were merely released from an inappreciative and unremunerative public to go on to greater heights.

"Our next expedition was with a Concert Company, so-called. It was really a kind of traveling vaudeville show, with a comedian whose daughter was the ingénue. Her mother played straight parts. My father played the violin and the cornet,

and my mother the melodeon and the clarinet. As a 'boy wonder,' I played the cornet. These, together with a string bass, a trapeze performer, and an Indian club swinger, made up our company. But it was 'art music and drama'; and father was happy. Forty dollars at the box office was tops, and really very fine for eight people in those days. When we landed in town and made our way to the 'op'ry' house, we were objects of great curiosity to the town folks, who looked upon us as a people from the outside world, much as we would regard a man from Mars. Father reveled in this and made the most of its publicity value.

### The Picturesque Circus Period

"IN 1888, WHEN I WAS TEN, father signed as bandmaster of the John H. Sparke's Show. We were coming up in the world. The first year we 'Tomed' it. That is, we played 'Uncle Tom's Cabin' under canvas. The next year we became real circus folks. The show wintered in Punxsutawney, Pennsylvania, and started out with eight full sized railroad cars. Count 'em! Those were the days! Many a 'Hey, rube' fight have I witnessed from a vantage point underneath a band wagon seat. In a mining town, for instance, the miners would come down with lamps in their hats and announce that they had no idea of paying for seats. Someone would cry, 'Hey, rube,' and thereupon the circus performers automatically tied handkerchiefs on their left arms, for identification purposes, and started battle. They laid hold of tent stakes which, from much hammering, were mushroomed on top and made deadly weapons. Father seemed to rejoice in these fights and earned many a black eye. The circus folk were organized, trained and armed warriors; and the townsmen had little chance with such a crew.

"What the circus did for me was to furnish a chance to play an instrument four hours every day of the week; and somehow I got the idea that, by playing very well at every performance, I would go ahead. My ambition was to become another famous cornet soloist, like Jules Levy, Pat Gilmore or Arbuckle. I heard the great Levy once, and I learned his much played polka, *Leviathan*, which in its day was a famous 'war horse' for cornetists.

"The foregoing is a fair sample of most of my life up to my twentieth year. The shows were on the road in the summer, and this permitted me to get a schooling in the winter. We played with Indian Wild

West melodramas and other artistic organizations. Back at home again, I 'picked up' the organ and soon found myself conducting a Catholic choir. I was not afraid to tackle anything, and there was no one to stop me. My great ambition, however, was to become another John Philip Sousa, a real bandmaster. In order to progress, I felt that my next objective should be Broadway, the heaven of all show interests. I was conscious of my own shortcomings and realized that, at the age of twenty-one, everyone thought that I knew more than I actually did. Furthermore, it was clear that I needed more study and experience.

"It took four years to make my way to the Great White Way. In this time I was a band conductor and then a theater conductor 'on my own,' and in such callings I just had to learn things. For a time I was at the head of the wind instrument department of Louis Lombard's famous conservatory in Utica, New York; and there it was discovered that one of the best ways to learn a thing is to teach it. Finally I went to New York and formed a partnership with Jesse L. Laskey. Our idea was to improve the musical acts in vaudeville, then at its height, by making these acts musically better, dressing them in smart costumes and securing handsome and efficient young women and young men to play in them. The scheme made an immense hit. We had as many as six acts a season continuously booked. The acts would bring from eight hundred to fifteen hundred dollars a week, and the profits were excellent.

### And Other Worlds We Conquer

"IN 1913 I BEGAN TO LOOK AROUND for different fields and decided to go into the production of motion pictures with Metro-Goldwyn-Mayer. We produced one hundred and ten features, five to seven reels in length. In 1918 I became an independent producer, under the name of B. A. Rolfe and Columbia Pictures Corporation. After producing thirty-six pictures the venture failed, and in 1920 I found myself broke. That is, all but my cornet and my ability to play it. Always, when on the rocks, I have gone back to my cornet. There was little trouble in getting engagements; but soon it was realized that a great change had come over popular music. This was largely due to the genius of Paul Whiteman, who gathered around him a group of players of astonishing ability; and also to the talent of composers and arrangers

of great skill, such as Ferde Grofé, and George Gershwin. Whiteman's style 'caught on' immediately, and he had many followers. Here was a kind of music I did not know, and which must be learned. Consequently a job was accepted in the band of Vincent Lopez, at the Hotel Pennsylvania of New York City. By 1927 I had my own band and secured a fine engagement at the Palais d'Or in New York. This was a great advantage, because the café had a radio wire seven times a week, and we played to millions. Commercial broadcasting was just coming into vogue, and we were engaged for the 'Lucky Strike' hour. This obliged me to create a fine, strong organization. There were fifty-five men in the band, but that was only part of the group.

The public has a very scant appreciation of the amount of labor, in the way of preparation and rehearsals, required for radio hours. We played several times a week and, in order to secure enough of the right kind of music, it was necessary to have twenty-three arrangers and copyists. We played on an average of sixty-seven numbers a week—many entirely new and very 'tricky.' In order to get material, I had to ransack the files for fine old tunes of other days and to dress them up in new clothes. The tremendous value of advertising in connection with the promotion of sales, may be demonstrated by the fact that the dividends of the cigarettes sponsoring our program rose from twenty-six million dollars in 1928, to sixty-four million dollars in 1931, and much of this was due to radio advertising.

"Modern musical tendencies in popular music are, in a large measure, due to the change in the general attitude toward dancing; and this in turn is due to youth, insatiable youth, in its fling for vivacious and hilarious expression. The old traditional dances have been discarded, temporarily at least. The beautiful waltz, in its proper form, is almost as archaic as the minuet. Our present day dances are not founded upon tradition but upon unrestrained bodily expression, let the chips fall where they may. Hence, the 'jitterbug.' The uncontrolled rush and urge of the age has kidnapped youth; and the musical result is like a cork popping out of a bottle. I am not railing against it, as it would do little good if I did. I am merely chronicling the situation, as everyone with sense must see it.

"The main ideas of the modern radio band are orchestral tone color and rhythm, with always rhythm predominating. For this reason the composition of the band has changed very materially. The instruments I now employ for a representative group are two oboes, four clarinets, a bass clarinet, two horns, two flutes, two bassoons, two pianos, two string basses, two banjos (for marking rhythm), four trumpets, three trombones, one tuba, six saxophones, and percussions. Such a band is not designed to play the classics. It is a dominating, effective and direct group, designed to command and hold attention every second. It must present a great variety of tone color, and must be exceptionally flexible at all times. The modern radio band is by no means a fixed organization. It will keep changing until the public determines just what it wants, if that point ever arrives."

\* \* \* \* \*

It is entirely true that musical notation is a very imperfect thing and that a composer is frequently surprised at the things his notes have come to mean when performed; thus "A. K. H." in the "Liverpool Post." We would observe that if the composer is surprised sometimes at what he hears, no wonder the critics get "snorty"—as for the audience, this is a new thought for them, and now they know what is to blame when their ears are offended.—The Musical Standard (London).

### SOUSA MEMORIAL PLANNED

Plans for a Sousa Memorial Monument in Washington, D. C., are under way. This picture shows, left to right and seated, B. A. Rolfe, Mrs. John Philip Sousa, and Arthur Pryor; standing, Priscilla and Helen, daughters of Commander and Mrs. Sousa; as they discuss the Memorial.

THE WOODING SOUTHLAND SPIRITUAL CHOIR

## Eight Years Abroad with a Jazz Band

By SAMUEL WOODING

CONDUCTOR OF "WOODING'S SOUTHLAND SPIRITUAL CHOIR"

*A Romance of the Remarkable Journey of "The Chocolate Kiddies" Band, through Germany, France, Italy, Spain, Roumania, Austria, Jugoslavia, Czechoslovakia, Lithuania, Scandinavia, Tunisia, South America, and parts unknown*

ST WHY PEOPLE ARE EXPECTED to tell when and where they were born, I do not know, because that is one thing with which they have the least to do. I was born in Philadelphia. My father was a butler, and a good butler at that. He worked for the famous Biddle Family, on Walnut Street, and was very proud of his job. My mother was a housewife; but in the summer she took in washing. They had great ideas about the future of my two brothers, one of them a doctor and myself. One of my brothers is a doctor and is now chief Physician of the Frederick Douglass Hospital in Philadelphia. The other one entered the service. My sister studied to be a nurse, and I became a musician. My parents wanted me to become a dentist; but one of the Williams and Walker shows and decided to enter that

After graduation from the South Philadelphia High School for Boys, I studied for five years under W. L. Layton, a teacher at the University of Pennsylvania. Then I have studied piano with Professor William Butler who had a Negro conservatory in Harlem, New York; and in Philadelphia, I had advanced piano theory under Prof. Franklin E. Crest. Then the Hyperion School of Musical Art and then at the Temple University School of Music directed by Dr. Thaddeus. Finally, after my eight years' roving through twenty countries in Europe and South America, I studied for three years under Miss Minerva Bennett and Nancy Campbell of the Division of Music of Teachers College, Temple University. When the United States entered the war I went to France with the 807th Pioneers in which I played a tenor horn. I went into service for a year under age, by telling

**This is the simple and ingenuous story of an ambitious colored youth who spent many years of his life conducting a remarkable jazz band over a good part of the world, in order that he might carry out his ideal of organizing a spiritual choir of high character. On these extensive tours he had opportunities to hear repeatedly the great orchestras and opera companies of many nations. The narrative of this grandson of a slave, and son of a butler, who elevated himself until he commanded the attention of crowned heads, is one of the most human and striking ever presented by The Etude.**

a little white lie about it; but I did not think that Uncle Sam would mind that if he got another patriotic doughboy. When I was mustered out I went back to playing at night clubs, in Atlantic City. I knew the classical repertoire and had played through tomes of Bach, Beethoven, Chopin, Schumann and other masters; and they had an exalted appeal to me, but the need for earning my bread and butter was paramount. Therefore I had to spend hours and hours at jazz with my higher ambitions subdued while I waited to attain loftier ultimate aims, which I am now realizing with my "Southland Spiritual Choir."

### *An Interesting Birth*

JUST HOW THE "CHOCOLATE KIDDIES" band evolved is a curious story in itself. I started the group with the piano, which I played myself. To this I added a drummer, who beat out the rhythms—a terrific musical combination, but a necessary step. We had to play from nine at night until—? The wild craze for jazz of the "Dixie Land Five" and the Jo Oliver "Creole" type was submerging the country. Prohibition came along with its poisonous bootleg liquor. Many people were afraid to drink. Consequently the night club proprietors sought to

entertain their patrons with orgies of "hot" music. The players started by standing on chairs, blowing into sand buckets, milk bottles, or Derby hats. Any kind of buncombe went. Then came the era of the plungers that were inserted in the ends of horns to produce what is so aptly called "Wa-wa" music. The more a player could make his instrument do anything it was never intended to do, the greater musician he was. This seemed all wrong to me. Every instrument has a natural, normal function; and this business of making a freak of it produces effects that are musically ridiculous. An automobile is all right on the road, but all wrong when you try to make it climb trees.

Johnny Dunn, who is credited with the adoption of the plunger, told me how he discovered its weird virtues. He was playing in the West with Mamie Smith, the original woman "blues" singer. One night he found a plunger, used to force out a stoppage in a drain pipe. Having lost the regular mute for his trumpet, he tried the plunger. The effect was astonishing. It was like an old colored parson trying to talk with a mouthful of tobacco. Audiences broke down with laughter, and, behold, a new instrumental effect was born. This

had a marvelous influence upon the careers of many colored musicians and their bands, particularly Duke Ellington. Bubba Miley, Ellington's cornet player, used it; and Ellington built his arrangements around it. It gave a kind of jungle effect that "caught on like wild fire."

Baron Wilkins at that time owned the most famous night club in Harlem. He engaged my band, after hearing it in Atlantic City. Wilkins was a kind of unthroned emperor of Harlem. He was head man everywhere. Everything he said "went." Playing at his club meant that we were "tops" in jazz in the jazz heaven of Harlem. Soon my band became the attraction at the "Club Alabam" in Nora Bayes Theater in Times Square, just off Broadway. While there, a Russian impresario came to America looking for a Negro jazz band to take to Berlin. The band at that time numbered eleven—three saxophones, three trumpets, a trombone, bass horn, piano, tenor banjo and the percussion section. Most of the players "doubled" on other instruments.

### *A Campaign of Europe Begins*

WE SAILED ON JUNE 22ND, 1924, and opened in "Admirals Palast" in Berlin. The Germans "ate it up." In the roars of applause the audiences on the first night started shouting, "Noch'mal," "Bis," "Hoch," and "Bravo." My boys were actually scared. Most of them had been in the war; and they thought that the "Heinies" were coming over the top again. In High School I had had two and a half years in the study of German; but somehow my German didn't seem to register in Germany. They just do not speak high school German over there. For over two weeks I ate nothing but Wiener Schnitzel, because I did not know how to order anything else in German. All of the other men were in

the same difficulty. While they were over-awed by the fine, clean city, with its beautiful Allees, its Tiergarten, its Lustgarten, and the beauties of Potsdam and other centers, they were baffled most of the time by the problems of new and strange food and drink.

Most of the boys did not drink, but the banjo player, from Baltimore, found what he thought was a bottle of deliciously flavored gin. It was really the highly intoxicating liquor, Kümmel. He drank about a quart. When the doctors got through with him he was just about the sickest banjo picker in the world, and he had no use for Germany or the Germans. At that time the Germans had seen comparatively few colored people except their own colonials. If any of us got separated, all that we had to do was to look down the street for a crowd of curious spectators. This was all before the Germans discovered what an Aryan is. What would happen to us now in Germany, it is hard to tell. We liked the Germans and they liked us. They certainly gave us a warm welcome, which we heartily appreciated; and we seem to have been successful in giving them a hilarious time. They paid finely for this. I paid my boys one hundred dollars a week, and I received three hundred dollars a week. We played Hamburg, Magdeburg, Hanover, Leipzig, Breslau, Königsburg, Nuremberg, Cologne, Düsseldorf, Essen, Würzburg, Darmstadt, Frankfurt-am-Main, Wiesbaden, and other cities, remaining in Germany, in all, about three and a half years. Every time we had a chance, I insisted that my men attend as many symphony concerts and operatic performances as possible. I saw twenty-five operas, from Mozart to Puccini.

Ours was the first jazz band ever to appear in Berlin; although many local orchestras played music which came from America. We were surprised at the serious interest in our playing taken by the famous musicians. Even the noted composer, Max von Schillings, was excited about our rhythms and tonal effects, and he wrote us up in a leading paper. We found that the Germans were, for the most part, laughably provincial in their knowledge of the New World, which to many of them seemed bounded by the city limits of New York. For instance, when they found that I was capable of playing the works of their masters they were inclined to look upon me with suspicion and surprise, just as if a Comanche Indian in blanket and war bonnet were to start reciting Goethe or Schiller. I could not be the real thing; there must be some trick to it.

### We Near the Orient

FROM GERMANY WE WENT DOWN through the middle European states from Prague, ultimately reaching Constantinople after giving concerts at Vienna, Budapest, and Zagreb. I was very much amazed at the modernity of Constantinople. Kemal Attaturk was in full power. Save for the Muezzin's calling to prayer from the minaret towers, and groups of men in modern costume telling their beads on the street corners, the city was pretty much like many other European cities. The men of the orchestra did not like Constantinople, largely because of a famine of pork, which the Turks, like the Jews, taboo. Going two whole weeks without any pork chops was enough to take all the pep and inspiration out of the "Chocolate Kiddies."

As usual, I endeavored to hear as much native music as possible. It was so wholly unlike western music that it seemed not to make sense. The constant monotonous repetitions, and the use of the augmented seconds in the melodies, all grew very tiresome, even to one who had been the leader of a jazz band. In the Mocha houses the singing and music seemed just a meaningless jumble that went on and on without any beginning or end. We tried to arrange

the tunes of the countries with our instrumentalizations. One of our trombone players was also a vocal soloist. He had a remarkable gift for mimicking the languages of the countries we visited. He learned them phonetically, like a parrot; and his native accent in every case startled the audiences, especially when they found that he could not speak the language. He seemed to be a sort of linguistic chameleon.

After Turkey we toured Italy, including visits to Milan, Rome, Florence, Pisa, and other cities; and the Italians were more enthusiastic than the Germans. They shouted, "Bravo!" at our performances, just as they did at the opera at La Scala. It so happened that, at La Scala, Caterina Jarboro (real name Catherine Yarbrough), a colored young soprano from the South, was making her debut as *Aida*. She made a great triumph in the rôle. What are the good folks of Italy and Germany going to do about "Aida" now? Are they going to put a blonde wig on the African princess to make her look Aryan like *Elizabeth* in "Tannhäuser"? What about *Madame Butterfly* and *Lakmé*. They are not Aryans. It seems as though those nations are making plans to do without some mighty beautiful music.

### Again Our Native Land

FOLLOWING ITALY we went to Marseilles and thence to Tunisia. This was the first time anyone in our company, then numbering thirty-five players, actors, singers and dancers, had ever been upon the continent on which our race originated. We all looked forward to it with great expectations. The Orient, which we had hoped to find in Constantinople, is really in Tunis. There one meets a curious *mélange* of all races—Berbers, Moors, Arabs, Jews, Negroes, all apparently yelling their heads off in the market place. When night falls, however, the little closetlike shops, or "suks," are boarded up and the city becomes outwardly as quiet and dead as a cemetery. There is something very mysterious about muffled figures moving silently

past. A few beggars lie around the doors of the shops and act as burglar alarms, arising to shriek for the police when thieves are about. However, behind the scenes is a gay and happy night life that one would hardly suspect. We played in a large theater, which was thronged, mostly however by Europeans. The natives seemed to be buried in reserve, and showed no interest in jazz. It apparently meant no more to them than their music meant to me.

From Tunis we went to Spain, and played at Barcelona and Madrid. Strange to say, the Spaniards were so undemonstrative that our reception there was not at all good. Our manager was approached by the leader of a *claque*. The manager refused the blackmailer, not knowing the countrywide use and power of the *claque*. Thus our appearances were greeted with frigid silence or with hostile demonstrations. This dismayed our company immensely. It should be remembered that in all performances in which colored players are concerned the attitude of the audience plays a great part. No warmth, no show. If the audience is enthusiastic, the players catch the spirit and will go to all limits to give their best. Their emotional nature is, however, such that an apathetic audience is like turning a fire hose on a flame. It puts out the enthusiasm and the audience gets nothing in return.

The government of Spain was at that time very loose. Our boys were alarmed when they saw the police walking around with rifles slung over their shoulders. The whole show interest in Spain centers around the bull fight. On the other hand, we were entranced by the Spanish music and the Spanish rhythms. The boys could not seem to get enough of them, and I found them imitating these with delight. That month in Spain, despite our unresponsive audiences (which did warm up after a while), was an education to all of us. In Catalonia I was very much interested by a peculiar band composed of families of double reed instruments, which seemed a sort of cross between a Sarrusophone

and a Saxophone. The effects were extraordinary, very wild, very Mo- and, to my mind, more African than ish.

The Spanish dancers amazed our One female dancer, with unusual slapping out the rhythms with castanets her heels, entranced them. In her boleros and jotás, she actually seemed talking with her heels. The boys named her "Miss Bill Robinson of Spain." No higher tribute could have been paid her by a group of American Negroes to liken her to our colored terspich hero of the stage and film.

### In the Shadows of Tsars

IN MADRID our "white" Russian impresario sold his interests to another European. He had a wonderful contract offered by Russia. Our boys had read all about U.S.S.R., in the *New York Journal* would have none of it. They were: that if they went to the land of the shevists they would come back, if they back at all, minus their ears. We were being very well paid, as it was, and did not want to go to Russia. Consequently I kept on raising and raising the figures, and they kept on meeting our terms, the United States Consul at Madrid, was our adviser, thought that it would be ridiculous not to accept such enormous figures. Still the boys were scared to death and in Paris I had to hunt up a drummer, as my regular man was frightened that he took the next boat home. We left our families in Paris in Berlin, and opened up in Moscow in February, 1926. Much to our amazement our Russian engagements were the best of all Europe. The Bolsheviks looked just like ordinary people; and, if we had not seen tragic groups here and there, chains and on their way to Siberia, we were as well off as if we had been in Berlin. The boys did not like that idea. The unfortunate convicts looked much like the chain gangs down south.

There were no disturbances, and everywhere our music seemed to please immensely. On our rest days in Moscow we attended the concerts of an orchestra of a hundred and ten pieces, which played without a conductor. We enjoyed Tchaikovsky, Rimsky-Korsakoff and Stravinsky immensely—particularly Stravinsky, because of the tricky rhythms. The orchestra was seated in a circle; and soloists played or sang seemed to do the conducting of their numbers.

Over and over again, I watched the natural reactions of my players when they heard the great music of the world. I questionably the composer they liked best was Wagner. The fluent chromatic harmonies and the strong emotional appeal of his works impressed them very greatly. Bach seemed too mathematical. The phonic style makes more of a mental appeal, and much of Bach left them unmoved. Debussy, on the other hand, interested them immensely, as did the works of Stravinsky with the dissonances and clashes to which they were rightly accustomed. Stravinsky himself, took a great interest in jazz, became very friendly with members of our band. The orchestra they liked best, and they heard almost all of them, was the Vienna Philharmonic; the opera they liked best was Wagner's "Lohengrin." Some of the longer later Wagner works bored them.

### Easter Bells, Enchanting Chords

WE WERE IN RUSSIA three months; we liked Leningrad better than Moscow. The great art galleries, particularly the Hermitage, delighted our boys as did the marvelous ringing of the bells at the dawn in Moscow. The Russian choir gave a deep impression upon me. Their singing was so wonderful that they seemed to be one in. Their sonority, together with

(Continued on Page 282)

THE WHITE HOUSE GETS A NEW PIANO

One of the finest pianos in the new world has been lately installed in the White house and accepted by the President. It is a gift to the nation by Steinway and Sons; and, in a way, it commemorates the great present increase in interest in the piano throughout the nation. It is a full sized concert grand. The case is made of the choicest Honduras mahogany. The decorations, painted in gold leaf by Mr. Dunbar Beck of New York City, represent the Virginia reel, a ceremonial dance of the American Indian, the New England barn dance, the Negro worker singing in the Southern cotton fields, and the cowboy on the western plains singing after the day's work.

The eagles supporting the instrument are carved from solid blocks of mahogany and covered with gold leaf. These in turn were modeled by the well known sculptor, Mr. Albert Stewart of New York. The general coördination of the design, in which many arts and crafts were employed, was under the general direction of the distinguished New York architect, Mr. Eric Gugler. It has been the desire of the artists to create an instrument which, with its qualities of artistic appearance, impeccable taste, and tonal excellence would make a distinct and original state piano, with no counterpart in the country.

**T**HE QUALITY OF AN ORGANIZATION or movement is undeniably dependent upon its leadership; without it there is no life and no progress. The leaders of a cause are those who zealously maintain its ideals, who give unstintingly of their energy and loyalty, who foresee its better pathways and unhesitatingly strive to follow them. In this respect, the band movement in America has been and is distinguished by the superb quality of its bandmasters.

For this month's issue of the Band and Orchestra Department, it was felt that no more fitting tribute to the American Band could be made than to have several of our outstanding band conductors to give expression to their outlook on the band cause or some phase of its work. It can be well understood that there scarcely would be room in these pages for contributions from all of our top notch bandmasters; indeed, it is with a sense of deep appreciation that we present this group of comments from several of our well known bandsmen.

Of necessity, the remarks of these gentlemen are strictly limited, and it is a particularly difficult task for each to condense his subject into so few words. Undoubtedly each could draw from a wealth of knowledge and experience in the band field, and their acceptance of the limitations placed upon them attests to their graciousness. It is with a great deal of pleasure and

gratitude that we offer this symposium; and it is felt that these comments are an interesting expression of the spirit that motivates the band movement in America.

## The Great Opportunity for Our Bands

By DR. FRANK SIMON

Conductor of the famous *ARMCO* Band

BAND MUSIC IS GOOD MUSIC presented in its most democratic form. For this reason I firmly believe that the band has done and still is doing a tremendous pioneering job in the cause of good music.

The people who attend the great symphony concerts in our larger cities might well be placed into two distinctly related groups. First, there are those of us who have a sincere love of good music, and secondly, those others who attend musical gatherings with the feeling that "it is the thing to do." Fortunately, the first group is growing steadily, but the fact remains that there are still not enough people who share in our musical events solely for the genuine inspiration and love of good music.

In this problem the band can continue to be of great service. The millions of Americans who yearly attend the band concerts held outdoors, or tune in band music on their radios, do so mainly out of the wish to be entertained. Let us not permit our own personal prejudices and high ideals

to blind us to this fact. However, herein lies our great opportunity in the cause of good music. To these great audiences, thousands of whom have yet to pass through the portals of our symphony halls, the music of our bands can create and stimulate the desire for and better understanding of good music.

There is every reason to believe that today many thousands of ardent symphony and opera goers owe their taste for the better music to some band which first introduced them to good music. This might hark back to the city park, the town square, the school band, or to a visiting concert band at the fair grounds.

John Philip Sousa proved the democracy of band music. It was his band, playing well diversified programs of good music that gave him the distinction he so richly deserves. His was the only large musical unit ever to tour the world successfully without subsidy; and, while some might attribute this amazing fact to his superb showmanship, we cannot overlook the merit of his programs. They always contained much of the world's finest musical literature—good music introduced for the first time to many of the thousands who flocked to his popular concerts.

With all the opportunity for service, the responsibility of those heading our bands becomes greater. The band need not be secondary to any other musical group; when composed of players comparable in ability and musicianship to those of the symphony orchestra, it can be just as artistic. The fact that its instrumentation gives it a different color does not mean that the band is incapable of attaining the highest degree of musical performance. Those of us who have spent our lives in band music know that it can do so.

We have some fine bands in America—we need many more. The band can take pride in its ambassadorship, for it serves the "man on the street." The more bands we have to spread a gospel of good music, the more genuinely music loving our people will become.

# MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music  
appearing in  
the Music Section  
of this Issue

## MOON MIST

By JAMES FRANCIS COOKE

To determine the proper interpretation of any piece of music, there are three factors to be considered at the very outset. They are, namely, form, mood and style.

Very often the title gives a clue to all three—as is the case with *Moon Mist*, a recent composition of James Francis Cooke.

The form is obviously that of an improvisation; the mood, one of dreamylike thoughtfulness; not too carefree and not too serious. And the style is quite characteristic of the composer.

The piano pieces of Dr. Cooke are already well known to many pianists and teachers—so well known in fact, that they need no additional comment here.

The *tempi*, nuances, phrasing, use of the pedal, and so on, all are so clearly indicated that it is impossible to go astray—unless it is done willfully. So follow the marks of the text and give free rein to the imagination.

## THE HAPPY RANGER

By CHARLES E. OVERHOLT

The original purpose of a march, whether it be a military march or a funeral march, is that of moving a group of people from one point to another in orderly progression. Therefore absolutely strict *tempo* is demanded. The actual *tempo* is established according to the type of march to be played. In this case, the title again gives the clue, and suggests a rather brisk pace.

Observe all natural accents and make sharp contrasts between *staccato* and *legato*. Use the pedal sparingly.

## LITTLE GONDOLIER

By LILY STRICKLAND

In this number the swaying of the gondola is established in the very first measures. While the serenade is sung by the right hand part, be sure to preserve the swaying rhythm in the left hand and pay particular attention to the sustained basses.

In the second section in A major, the parts are reversed. This time the left hand carries the theme against the right hand accompanying chords. Try to produce the best possible singing tone and give due attention to the phrasing.

## MEDITATION

By FREDERICK K. LOGAN

This piece is obviously in the song form and calls for careful themadizing with the upper fingers of the right hand.

The syncopated accompaniment adds a nice background for the melody and should be clearly marked without being at any time obtrusive.

The second section—last two lines—should be played like a duet.

The alto and soprano parts should blend together with proper tonal balance. While the *tempo* is marked *Lento*, the piece should not be allowed to drag. Keep a feeling of motion at all times—taking note of the fact that the *tempo* changes pace frequently—*accelerando*, *ritardando*, and so on.

The pedal may be used rather freely, guarding of course against blurring.

## WHIRLING LEAVES

By FRANCES TERRY

Here is a descriptive piece that needs careful preparation in the early stages of development.

It should be practiced first at slow *tempo*

with well articulated finger *legato*, keeping the fingers close to the keys as speed develops.

Since the final rendition requires the right hand to move with the freedom and spontaneity of perpetual motion, it will be wise to do a bit of left hand alone practice so as to remove as far as possible the effort involved in finding accompaniment chords and low bass notes.

A shallow touch with lots of sparkle will impart the descriptive effect needed for the right hand.

To insure clarity, the pedal must be used with the greatest care.

## BY TRANQUIL WATERS

By ELLA KETTERER

Teachers will welcome this new piece from the pen of Ella Ketterer who has already given so many fine things to the piano educational literature.

Establish a gentle six-eight swing for the opening theme and let the left hand pass over and back quietly and gracefully.

The second section is played at somewhat faster *tempo*; and the melody lies in the left hand part, against repeated chords in the right which add a feeling of excitement, especially if the marks of dynamics are followed as indicated.

The pedal plays an important part and should be used exactly as marked.

## DEEP RIVER

Arranged by PRESTON WARE OREM

This beautiful negro spiritual is always popular and deservedly so. It is deep in emotional content and rich in both rhythmic and melodic outline.

In this particular version—for left hand alone—it becomes also a very fine etude in tonal control.

A splendid preparatory exercise for this type of music is to play first the melody alone with the same fingers that will be used in the final performance. This will train the melody fingers to carry the weight of the arm under all conditions and will simplify later on the problem of playing both melody and accompaniment with the same hand.

The pedal is a necessity in most left hand pieces—but its use should offer no difficulty in this instance as it is so clearly marked.

## SPRING FLOWERS

By L. LESLIE LOTH

Here is a very graceful waltz that contains all the freshness of its title and it offers at once an interesting salon piece and an excellent etude in style.

The first theme is in A-flat major. It should be played gracefully and with a certain amount of *rubato*.

The second theme is in D-flat major, subdominant key, and continues uninterruptedly the rhythmic flow of the first section.

The piece ends on a two lined *Coda* which contains some interesting interlocking passages.

The pedal is left to the performer—rather wisely since no two people would use the pedal in quite the same way in a number of this sort.

## WITCHING MOONLIGHT

By LEO OEHLER

This number in dance form calls for sharp rhythmical outlines and freedom of style. The arpeggio passages divided between the hands must be made to sound as though played with one hand.

The second section should be played with plenty of sentiment; and it needs careful handling of nuances in the melody line.

The first theme is in D major and the second in G major, the key of the subdominant. Later a return is made to the first theme and the piece ends on a short *Coda* played in tranquil manner. Be sure to give the utmost sonority to the final chords as indicated.

## MARCH OF THE GRAIL KNIGHTS

By RICHARD WAGNER

As is the case with all opera transcriptions, especially those of Liszt, one should contrive to hear the entire opera, or at least know the story, before attempting to play any piano version of it.

In this modern age, if it is impossible to attend the opera, we still have very satisfying substitutes in the radio or phonograph versions, and every serious minded music student should take full advantage of these opportunities which were denied those who lived and studied but comparatively few years ago.

Since this issue of THE ETUDE will reach

most readers around Easter time, the conclusion of the *March of the Grail Knights* is most opportune.

It needs very little imagination to realize the Cathedral Beils of Monsalva in the left hand part. Play the march in stately and dignified manner and make as characteristic as possible. The *March of the Grail Knights* Lesson by Richard Burmeister in this issue tells just how Liszt played this composition. Its performance assumes an advanced technical equipment. However, those who are playing their favorite bits from the opera and who lack the pianism necessary to the entire work, will find the first page too difficult and quite satisfying in itself.

## TATTLE TALE

By BERNIECE R. COPELAND

This little number bears a title that is quite apropos since practically everything heard in the right hand is repeated in the left. It should be played in a capricious manner at a fairly brisk *tempo*. Be sure to observe the many two note slurs and the change in dynamics as indicated.

## HYMN TO THE SUN

By EMORY PELHAM

Here is a piece to be played in swaying motion which abounds in two note slurs in the right hand and broken chords in the left. The *tempo* is rather lively at 152 quarter notes to the minute.

The second section, where both hands play in the bass clef, calls for more motion and is played somewhat louder.

The success of this number depends on strict observance of all slur signs.

## A LITTLE GOSSIP

By NATHANIEL T. HYATT

The composer of this little piece has made clever use of simple broken chords. Be sure to observe all sustained notes (dotted halves) and give to them equal resonance to sing throughout the measures without pedal.

It is suggested that this piece be played without pedal.

## TRIPPING THROUGH THE MOUNTAINS

By E. K. BRETT

Aside from its interest as a recital piece, this little number has distinct piano value. It develops the playing of sharp arpeggio groups divided between the hands and graceful phrasing. Note that some of the phrases end with a sharp release shown by the *staccato* mark on the note under the slur sign.

## WOO, BLOWS THE WIND

By EDNA F. PIETSCH

One for the first grader, with the melody in the left hand while the right hand supplies as accompaniment a series of note slurs, which develop the drop touch.

Words are supplied to help suggest proper atmosphere.

## DANCE OF THE DAFFODILS

By MILDRED ADAIR

The name of Mildred Adair is familiar to most piano teachers. She has written many worth while things for young pianists, all of which contain something of pianistic value.

This little waltz will make an interesting addition to the recital repertoire while it is being studied, will serve as a valuable etude in style.

## THE KING'S BAND

When King George VI and his Queen visit Canada and the United States they will be accompanied by the Band of the Royal Marines, Portsmouth Division. This band will escort the Royal Party and will provide music for ceremonial occasions

# THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

## Masculine Fingers

Before getting on to my questions, should like to express my appreciation of your column, with its fine use of humor and common sense points of view.

1. How would adult men students be advised to handle fingers which are so wide to go between the black keys? I teach many adults, including several men, and the problem frequently arises. I have never seen it mentioned elsewhere. Such hands usually turn the fingers slightly sidewise, with disastrous effect on ease of playing, or else turn the first joint under, making playing of the piano possible under such circumstances, or should such students be advised that the physical handicap is such that they had better divert their musical aspirations into other channels?

2. Have you any suggestions as to the basic cause of the common habit of striking one hand before the other in playing chords? The left hand is always struck first, never the reverse, in my experience. There must be some reason for this, but I have sought it in vain during many years of teaching.

3. What type of exercise do you suggest for double-jointed thumbs and fingers? Perhaps you have discussed this problem in some previous issue and can refer me to it.—A. H. C., Ohio.

Another list of challenging, stimulating questions, the kind I like!

You are right; I have never met anyone who has asked for an answer to this one before. . . . It would be unwise to give up their piano playing ambitions, simply because many gifted men then have to turn to other fields. Most of them cannot "squeeze" their fingers between G-sharp and A-sharp, flat and E-flat. (The problem resolves to these third fingers). In the following examples:

Hands with thick fingers must curve all excessively, so that they may be held in almost a straight line; that is, close to the line at the edge of the keys which divide the white keys into two parts. It is never necessary for the finger to go far in between the black keys. It is well to move the arm (elbow) freely, sidewise; but never let the point of the third finger cave in.

I am like the lucky doctor who can cure one hundred cases out of one hundred if he does not know the cause of an ailment! For the life of me, I don't know if the left hand strikes before the right in these irritating lame duck chords in G major by all bad (and many good) players; but I am sure the habit is caused by an inactive, uncertain, uncontrolled "touch" approach, against which I usually rail. To cure it, simply use the touch frequently discussed in these columns. In up-bow, properly applied, both hands mutually balanced, make an active, conscious approach to the tones from the right hand. Result, it is about impossible to play one hand after the other.

Double "jointers" almost never learn to play the piano brilliantly, and should be discouraged from trying to be professionals. Control is not possible if the fingers are double jointed, but there is still hope when only the thumbs are in this condition. Since the thumb depends largely on a free moving double jointed thumbs must rely even more than normal ones on this lightly float-

ing elbow tip. In fact it is often necessary to substitute the forearm as a playing lever for the second thumb joint. Here is an example: depress E silently with the third finger; then play C and G with the thumb, very softly and *staccato*, first slowly, then swiftly, using the *elbow* to play the thumb:

### Ex. 2

Also the following, practiced both slowly and rapidly, with the minimum of thumb movement, the whole hand and arm *rolling over* the thumb:

### Ex. 3

It is well not to try to curve the thumb, but to play it flatly—all in one piece—as though the first joint were missing.

Although double jointers cannot expect to play with virtuosic smoothness of speed, they can yet give pleasure with rich, beautiful tones and exquisite phrasing—for which the thumb is scarcely needed. Indeed, it is better for everybody to avoid the thumb whenever possible in lyric playing—for thumb bumps often blemish the melodic line or the curve of a phrase.

## A Limping Pupil

I have a pupil eleven years of age who persists in "limping" or striking her left hand before the right. When I call her attention to it, she gets a little better, but soon plays as badly as before, if not worse. I have given her parallel scales in octaves, concentrating on both hands striking together, yet when she plays pieces, the "old" Adam creeps in. What shall I do?—J. A., Minnesota.

All the two-hand scales or arpeggios in the world will not help. The only solution is the "up" touch—practiced in single tones or chords—often described on this page. Please look up your back numbers of THE ETUDE—for I already have answered your question several times.

## Blind Flying

Thank you for your advice about practicing without looking at the keyboard. I have found it of great help to myself and my students. Frankly, I was surprised when the pupils took to it like ducks to water. They really love their "no looking" assignments of simple exercises which I devise from week to week. It is also one of the best sight-reading helps, because it quite painlessly gets rid of the bad habit of looking down at the hands after reading the notes.—D. A. D., Minnesota.

I told you so! If you calculate how many old practice buzzards are killed by "blind flying" you will be truly astounded. Your letter is a specimen of many I have received on the playing without looking plan. I am sure teachers get as much kick from making up the exercises as the children do in working them out. The ones I assign start with finding groups of two or three black keys with each hand (2, 3, 4) and skipping outward and back in contrary motion. Then change to parallel motion; next, slide from the two black keys to C, E and from the three black keys to F, B. The exercises

gradually become more complicated, such as quickly picking out all the C's, or all F's on the piano, playing simple octave, skip chords, and so on.

Another weekly assignment from the very first lesson consists of playing a short "rote" piece without looking at the keyboard; even the first tones of the piece must be played blindly. The simple composition is then played in different octaves.

How I wish some one had forced me to do this years ago—or better still, that I had had the intelligence to find it out for myself then, instead of now. The older I grow the more I practice "blind flying"; for example, if, the first thing in the morning, I play through a new piece (which I have just memorized) without looking at the keyboard, very slowly and carefully, it focuses my attention, relaxes me, and puts me in the mood for serious work much more quickly than any other routine. And, we all know how hard it is to pull our poor, resisting minds together in the cold, grey dawn—summer or winter.

Just remember in piano practice, that looking prevents listening—or if you prefer, seeing obstructs hearing.

So, unlike the railroad crossing signal, our motto must be, "Stop and Listen, Don't Look!"

## A Left-Hand Problem

I would be very pleased if you could kindly give me some information on some points in music. I happen to be a left-handed person and find some trouble is arising from being so. When I play I am told that I have a very nice touch only that my left hand is much stronger and therefore causes my right hand not to be heard at all. Being left-handed I am told that I should have more speed in that hand, but really I have more speed in my right hand, which causes a lot of trouble. Also when I try to get any speed at all in my work, my left hand begins to drag. I would like to know what to do about this and would also like to know if you have any special exercises that I could do for it.—L. McL., British Columbia.

Here is my prescription for your left hand: Start every day's practice with some rich, full, slow diminished seventh chords, bringing out the right hand so loudly that the left is almost inaudible; exaggerate this effect, and don't worry if occasionally the left hand does not sound at all. Then play the *Prelude in C minor*, by Chopin and the first page of Rachmaninoff's *Prelude in C-sharp minor* in the same way. If you have trouble, play the right hand with wide swinging up-arm touch, keeping the left hand and arm quiet. Then play some slow scales (two octaves apart), the right hand *F*, very *legato*, the left hand *PP*, with light finger *staccato*.

Now, to develop speed in your left hand: practice some scales with metronome, thus (> = each metronome tap)

### Ex. 1

Say aloud the name of each accented note as it is played, thus: "C, G, D, A, E, B, F, C," and so on; at each held (accented)

note think quickly of the entire next group before the "tick" commands you to play. Start very slowly at  $J=60$  and work up to  $J=160$ , adhering strictly to the regular scale fingering; then if you can play faster, all the better!

Now double up the groups in this manner:

### Ex. 2

Again, start slowly, and gradually increase the metronomic speed to the limit of your ability. Then play the scale up and down without pauses, but *with* the accents. If you are an "advanced" student you should be able to do this last at  $J=100$ , or even higher. When your left hand tires, try the right; I am sure it needs the drill, too.

This method of practicing scales, single handed and hands together, is one of the best all-round speed developers I know. I warn you in advance that it is very difficult, demanding close concentration and much persistence. But, as you see, it utilizes almost every possible scale group and pattern, and as an "evening-up" has no equal.

## Reviving Study

I studied the piano for a period of four and one-half years. When I ceased taking lessons I was by no means an accomplished pianist. Now, after a lapse of five years, I again have the desire to continue my playing; however, I find that my fingers are no longer as flexible as they were when I studied the piano. Also, I consider my playing to be grade two work. I cannot afford professional lessons, but I am working now on simple piano selections, such as: *The Maiden's Prayer*, and *Valse in E-flat*, in order to reacquaint myself with the notes, and to make my fingers more flexible. I can spend only a half hour daily at the piano, due to other activities and duties. Perhaps you are able to suggest to me what music books and pieces I should study and how much time I should devote to each.—L. H., New Jersey.

Your letter sounds so serious and so sincere that I cannot help wishing you might get in more practice daily. Can't you squeeze in a full hour on Sunday, and make it at least forty-five minutes on other days? For an adult, who really wants to play the piano acceptably, half an hour daily is not enough. Furthermore, I strictly maintain, in spite of "correspondence schools" and other quack methods, that you cannot learn to play properly without a good teacher. So, get the best guide you can find, and bring your problem to him. Lay your cards on the table—tell him exactly how much or how little you can pay, and I am sure he will make every effort to meet you the whole way.

Long distance advice is very dangerous, therefore, I can only make some "take them or leave them" suggestions; for technical problems you might try Florence Goodrich's "Preludes" or the Heller-Philipp "Studies in Musicianship," Vol. 1 or 2. For pieces, choose from: *Beside the River*, Risher; *The Masked Ball*, White; *Dream River*, Kern; *Slavic Dance*, Peery; *Night Witchery*, Renton; *Carnival Dancers*, Chauncey and *In Days of Long Ago*, Copeland.

THE TEMPLE OF THE KNIGHTS OF THE HOLY GRAIL

# The March of the Grail Knights

From Richard Wagner's "Parsifal" as Transcribed by Franz Liszt  
A Master Lesson and Revised Edition

By RICHARD BURMEISTER  
A FAMOUS PUPIL OF LISZT

IN THE YEAR of 1871, when, after the victorious war against France, The Iron Chancellor of Germany, Otto von Bismarck, founded the German Empire under Emperor Wilhelm I, Richard Wagner settled in Bayreuth, the former illustrious residence of Margraf Friedrich, the brother-in-law of Frederick the Great. After a life of everlasting unrest and fighting for the recognition of his music dramas, Wagner found there, in his fifty-eighth year, at last a home in the Villa Wahnfried, and began at once to carry out his plan to build a theater in which, at regular intervals, his works should be performed in matchless presentations. At Pentecost, 1872, the foundation stone of the theater was laid and celebrated with a performance of Beethoven's "Ninth Symphony," under Wagner's leadership, the orchestra consisting of none but artists—the famous conductor, Hans Richter even beating the drums. In 1876, the "Festspielhaus" was inaugurated with the first complete representation of "The Ring of the Nibelungs," in the presence of Wilhelm I. King Ludwig II, of Bavaria, the ardent admirer and protector, did not fail to come, too, in spite of the unpleasant happenings caused by the previous stay of Wagner in Munich. In 1877, the libretto of "Parsifal" was finished, and in 1881, the composition, which was performed for the first time in Bayreuth, under the leadership of Hermann Levi, in 1882.

In the summer of that year, I was studying with the greatest master of piano playing in Weimar, the old Thuringian town

of Schiller and Goethe fame, and remember well when Liszt left for Bayreuth to assist in the "Parsifal" performances, when his striking appearance proved to be even a greater attraction to the international public than emperors and kings. Liszt was deeply impressed by Wagner's last creation and wrote about it to his old friend, the Princess Wittgenstein: "Parsifal is more than a revelation—after the most intense song of *earthly love* in Tristan and Isolde, the most sublime song of *celestial love* in Parsifal. It is the wonder work of the century."

In the following winter Liszt spent two months in Venice as guest of Wagner and his wife, Cosima, Liszt's daughter, in the Palazzo Vendramin. It was a very happy—and last—joining of the two old friends about which Liszt wrote: "I live here a beautiful, quiet life, as father and grandfather. Wagner is quite youthful and lively, and he is busy with literary works and preparations for the Parsifal performances of next summer." But Wagner was not to hear again his swan song; he died in Venice, in February, 1883.

## The Terriers Bait the Great Dane

IN THE SAME YEAR, Liszt wrote his piano transcription, *The Solemn March to the Holy Grail from "Parsifal,"* and I was the first of his pupils who played it at one of the lessons in Weimar. During his whole life, Liszt was criticized severely by musical puritans, about his piano transcriptions of works of other composers, especially about his "Fantasies" on themes and scenes of

operas by Verdi, Bellini, Rossini, Donizetti, Auber, Meyerbeer, Gounod and Mozart. Nevertheless, Saint-Saëns refuted these critics, calling them pedantic and prejudiced; Berlioz declared these "Fantasies" even as improvements on the originals; and Mr. Henry T. Finck, the New York critic, asserted that Liszt "scattered his own pearls and diamonds among them lavishly."

In my edition of the *March to the Holy Grail*, published in this number of THE ETUDE under the title *The Bells from "Parsifal,"* I cut out some lengthy phrases. Before commenting on it, a few words may be said about the four bells which play quite a rôle in the orchestral score.

At first it was intended to execute the four low tones

Ex. 1

by real bells, but no bell founder succeeded in casting them. Then the piano maker, Steingraber, in Bayreuth, constructed a huge instrument in the form of a clavichord with the tail end turned upward, and with only four very broad keys which were struck by the fists of the player. Each of the corresponding four hammers would then strike six bass strings of an enormous length, all tuned alike, but then substituted by four tuned steel pipes, which were struck by metal sticks and produced to perfection the demanded low tones. They are still in use. These pipes remind me of a winter I spent in Rome, and of the visits I paid to Signor Boni, the director of the excava-

tions of the Palatine. He lived there in the most romantic villa overlooking the ruins of the Forum Romanum and having immediate access, way below, to the burial palaces of the Roman Emperors. One day I discovered in a dark corner of the museum room a number of tuned steel pipes, among them even those four tuned in G A E. Signor Boni never having heard of "Parsifal," I played for him on a little right piano the Liszt transcription, which he accompanied it by striking those four pipes. As he never came in at the right time and place, the result was disastrous. But he did not mind it a bit, being absolutely musical; and I did not either, being compensated by the enchanting surroundings and genial hospitality of my host.

In his transcription, Liszt combined

of the many themes from "Parsifal":  
1. The theme of the bells, which first appears in the introduction (measures 22), in different keys, and then becomes the bass notes to the *March of the Grail Knights* as they enter the immense refectory of the Gralsburg and themselves at the long tables for the supper. The melody of the march begins like this (measures 22-26):

Ex. 2

(Continued on Page 275)

# FASCINATING PIECES FOR THE MUSICAL HOME

## MOON MIST

This piece is just what the name implies, "an improvisation." Its lyrical structure has an impressive but simple harmonic background. The tonal climax (*poco maestoso*) in the second section should be carefully developed. After this it immediately reverts to its dream-like, nebulous character depicting a misty night in early June. Grade 4.

Slowly with tenderness M.M. ♩ = 72

JAMES FRANCIS COOKE

The musical score for "Moon Mist" is presented in a single system with multiple staves. The notation includes various musical symbols such as notes, rests, slurs, and dynamic markings. The piece begins with a tempo of "Slowly with tenderness" and a metronome marking of 72. The score is divided into sections with measures numbered 10, 15, 20, 25, 30, 35, 40, 45, and 50. The key signature is B-flat major, and the time signature is 3/4. The score includes fingerings, slurs, and a repeat sign.

# WHIRLING LEAVES

This sinuous melody has a cohesive character that makes it "stick together." The phrase mark indications clearly show the natural melodic visions and a great deal of the success in the performance of this piece depends upon the lightness and animation with which it is played.

Grade 4.

FRANCES TERP

Allegro vivace M.M. ♩ = 69

The musical score for "Whirling Leaves" is written for piano in 3/8 time, key of D major. It consists of 55 measures. The tempo is marked "Allegro vivace" with a metronome marking of 69. The score is divided into systems of two staves each. The melody is characterized by its sinuous, flowing nature, with many slurs and phrasing marks. Dynamics include *p* (piano), *mf* (mezzo-forte), *f* (forte), *mp* (mezzo-piano), and *p* (piano). Articulations include *leggiere*, *poco rall.*, *in tempo*, *animato*, *calmato*, *poco rit.*, and *schierzando*. The score includes various fingerings and slurs throughout.

# DEEP RIVER

FOR LEFT HAND ALONE

Traditional Negro Spiritual

This deeply emotional negro spiritual lends itself splendidly to left hand treatment. A judicious handling of the chords marked to be rolled will produce many delightful effects. Grade 4.

Larghetto M.M. ♩ = 84

The musical score for 'Deep River' is written for the left hand in 4/4 time, with a tempo of Larghetto (M.M. ♩ = 84). The key signature has two flats (B-flat and E-flat). The score is divided into several systems, each with a measure number (10, 15, 20, 25, 30) and various performance instructions. The first system begins with 'pp poco cresc.' and 'poco rit.' followed by 'a tempo' and 'dolce cantando'. The second system includes 'poco rit.' and 'a tempo'. The third system features 'poco rit.', 'p', 'tempo giusto', and 'mf'. The fourth system has 'calore', 'cresc.', 'molto rit.', 'Tempo I', 'ff allarg.', and 'dim.'. The fifth system includes 'a tempo', 'pp rall.', and 'rit.'. The score concludes with a final measure marked 'p'.

The musical score is written for Violin and Piano. The key signature is two sharps (F# and C#), and the time signature is common time (C). The tempo is marked 'Con moto' with a metronome marking of 152 beats per minute. The score is divided into six systems, each with a Violin staff and a Piano staff. The Violin part features various musical notations including slurs, accents, and fingerings. The Piano part provides harmonic support with chords and arpeggios. Dynamics such as *mf* (mezzo-forte), *p* (piano), and *f* (forte) are indicated throughout the piece. The score concludes with a double bar line and repeat signs.

# THE FORWARD MARCH of MUSIC

## THE KEYS TO MUSICAL JOY

Week we saw an impressive looking girl peering eagerly into the large show window of a great piano in New York City. As she gazed at the glistening and inviting keyboards, she saw in them the keys to a world of joy. In and around the window were highly imaginative paintings, depicting the works of great masters. Thousands of young people are waiting for the keys to a musical future.

Over five centuries music-loving people of the world have had the thrill of the beautiful land of Music via the keyboard string instruments. Come the Clavichord, really nothing but a form of a horizontal harp or in which the keys operated devices which struck the strings. The Clavichord the sound could be sustained. Other cousins of this instrument were the Harpsichord, the Virginal, the Clavicembalo (or Gravicembalo) and the Spinnet. The sound in these instruments was produced, not by striking the strings, but by plucking the strings. The difference between the Virginal or Spinnet and the Harpsichord type is that in the first each tone came from vibrating strings, whereas the Harpsichord often had more variety of tone through two strings, two to four strings for each note, pedals, couplers and plucking devices of different sizes and materials.

The effect of all these early keyboard instruments was that there was no way of controlling the quantity of sound by the blow. Every tone had the same volume. The Spinnet was thought to be after an Italian called Spinetti, credited with inventing the first instrument of this oblong form. In England the instrument was called the Virginal, in France the Virgin Queen, Elizabeth. It is recently been a kind of dilettante's interest in the Harpsichord.

Elements of the Harpsichord type re-popular until the time of Beethoven. (1770-1827). Bach wrote his famous Forty-Nine Preludes and Fugues for an instrument called the "Well Tempered Clavier."

About the beginning of the 18th Century an Italian, Bartolomeo Cristofori (1655-1731), made what he called a "gravicembalo col piano e forte" the word "gravicembalo" which is used is supposed to be a corruption of "clavicembalo." This was a keyboard instrument playing both soft and loud from this has come our present instrument with its peculiar intricacy, with its pedals, movable and stationary. The instrument has developed mechanically until it is now upon the wires of a full size piano is now over twenty-five tons.

In over two centuries the manufacture of pianos has advanced very greatly, but the instrument for the most part remains the same in general principle. It is a keyboard instrument played with mechanical hammers. Under that it is difficult for the purchaser to know how to make a selection of a piano, in many parts and allowing such for quality.

The buyer probably has noticed that when the radio was being introduced, pianos were sold, the radio made music so popular that the piano for a higher understanding of music was increasing by the hour. The sale of pianos has thereby increased amazingly in a few years. The buyer knows that a piano is one of the safeguards of the home, particularly the home with children. Therefore, the investment in the piano is the heart of the musical home, an important matter.

## EXPANDING YOUR CULTURAL AND MUSICAL LIFE

By Joel Anderson

THE joy of collecting is like a contagion. Once started it is usually pursued with a kind of stimulating and exalting interest that is reflected in the development of the individual soul. This is largely in proportion to the intrinsic, artistic and spiritual value of the thing collected. We knew a man in London whose chief happiness was the collection of champagne corks, no doubt the relics of many hilarious evenings. Intrinsically, artistically and spiritually they had no value and were merely a monument to a wasted life.

There is, however, a great thrill to collecting a library of editions of music, a library of fine records and a library of worth while books. The sense of ownership is the dominating emotion in such a collection. The books you get from a public library serve an important purpose, but they are like chance acquaintances. The books you own are friends for life.

We realize that not all of the books we discuss in this department are within the means of the reader. In such cases the public library is the only refuge. However, we advise Etude readers to form the habit of replenishing their minds with fine books which they own and to which they have access at all times.

Edna Ferber, one of the greatest geniuses in the literary annals of the New World, has at last written her autobiography. She calls it "A Peculiar Treasure" (Doubleday, Doran and Co. \$3.00). It is a very frank and deft narration of the development of an extremely sensitive observer gifted with an imagination which gave the world "Show Boat," "The Royal Family," "So Big" and "Cimarron."

Born in a charming Michigan town of Jewish parents, brought up in Wisconsin observing the American scene as have few other writers, she ranks with Bret Harte, Mark Twain and Sinclair Lewis. As a girl she sang in a local church choir and had the happy, free life of the small town. She still feels that Mr. and Mrs. William Allen White of Emporia are the finest prototypes of our best American citizenry.

There is something about Miss Ferber's story of herself and of her times which we feel reflects a spirit of Americanism that Etude readers will find as delightful as her fascinating novels. Her remarkable dramatic sense is shown, in that all of the major plays and moving pictures made from her works have been famous successes.

History-minded readers will find real enjoyment in Blair Niles' "The James River and Virginia" (Farrar and Rinehart, \$2.50). That rivers influence the lives of those who live near them has long been realized. Changes in a river bed often change the entire social and economic background of a district. The Nile, the Tiber, the Thames, the Ganges, the Hudson and the Mississippi are like wonderful living things. We have often thought, in viewing the James River, of its influence

(Continued on Page 254)

## THE MUSETTE has a TONE as enchanting as a love song

Despite its small size, the MUSETTE offers you piano music at its loveliest. For Resonant Construction (patents pending) gives this instrument a truly golden voice—bringing out the full tonal beauty of every note. ♪ And though the MUSETTE stands only 34" high and occupies less floor space than a 2 x 5 ft. rug, it has a standard-height, full 88-note keyboard—a particularly pleasing and responsive action—and ample power for even the largest room. ♪ For your FREE copy of our handsome new, 36-page Catalog and Style Guide explaining how Resonant Construction steps up performance and showing MUSETTE's 10 charming PERIOD MODELS photographed in appropriate room settings, mail coupon below.

Besides the graceful Federal Model illustrated, there are 9 other authentic Period MUSETTES: Colonial, Early American, Sheraton, Duncan Phyfe, Chippendale, Louis XV, Louis XVI, Marquetry, Renaissance, and Moderne. MUSETTES are priced FOB New York from \$295 and may be purchased on Deferred Payment Plan.

## CIRCUS DAYS ARE HERE AGAIN!

"Dear Elizabeth Fairchild: Will you please send me instructions and decorations for my birthday party. I am twelve years old. If not too much trouble, please suggest something for my little brother who will be four. I will appreciate it very much. Sincerely yours, Amerylis B., Durham, N. C."

Spring is in the air, and the circus posters are blossoming all over town, and she is twelve and brother four. What could be more fun than a circus party of their own. Of course you, even in your grown up state, might enjoy just such a party too!

Decorate your party rooms, with gaily colored balloons. If you inflate them with a hand-pump, or at the air pump at the garage, they will float next to the ceiling. Or, lacking this, tie them to the chandeliers, or to gaily colored crepe paper streamers that have been looped and interwoven from one wall diagonally across to the other, to form the "Big Top." Have posters on the side walls showing various circus acts, such as clowns, animals, freaks, and so on. You can draw these crudely by hand, or cut out figures from crepe paper and paste them on cardboard. Have the *Donkey Party* on the wall, as one of the decorations; and a small booth for the prizes, or such refreshments as pop corn, candy, peanuts, lolly-pops, and other circus favorites. The small host and hostess can be dressed in clown suits. These are easily made from patterns, out of cloth or crepe paper.

Start your party with a "Going to the Circus" game. Arrange the players in a circle. An older person, or the hostess, sits in the center and says, "I went to the circus and saw—"; and the player must answer "clown." Then the questioner asks two more very silly questions like, "What did you have for breakfast"; and the player must answer, without even smiling, "Clown." If the responding player laughs, he or she is out. This continues with each player, until the one who remains without laughing wins a prize.

This may be followed with a version of "Spin the Bottle." Take a milk bottle and place it in the center of the circle of players. Spin the bottle, and the one to whom it points must name immediately some part of a circus. The same answer cannot be repeated twice. If the answer does not come immediately, or is wrong, that player is out. Continue this until only one remains. A prize can be awarded to the last remaining player.

Of course, "The Donkey Party," and the hilarity resulting from misplaced tails, must have a place in this party.

For prizes, give packages of pop corn, candy, or small stuffed animals, such as are seen at the circus.

When the guests are led to the gaily decorated table pictured above, there will be squeals of delight. The prettily tied boxes are animal crackers and candy for each one to take home. Serve clown salad, animal sandwiches, pink lemonade, and circus cake.

**Clown Salad:** On finely shredded lettuce, place half of a canned peach, with the rounded side up. Above this place a round of banana into which have been stuck cloves for eyes and mouth. Raisins can be caught around the neck by placing them in a collar of whipped cream. Use pineapple fingers for legs and arms. Use a round slice of orange for his hoop, and a strawberry topped with a dab of whipped cream, for his hat. Make clover buttons down his body. Make bread and butter sandwiches in the shapes of animals, and edge the bottom of the plate with them.

**Pink Lemonade:** Add grenadine to regular lemonade, and garnish with maraschino cherries.

**Circus Cake:** Make your regular two layer cake, and fill with currant or red raspberry jelly. Ice with a good stiff, white frosting, and stand animal crackers all around the edge. You can make a cardboard clown, like the one in the center piece, and stand him in the middle of the circle of animals. If for a birthday, put in candles instead of the clown.

In order to help you make this party a success, I will gladly send you the directions for making the decorations pictured. Address Elizabeth Fairchild, Room 613, 350 Madison Avenue, New York City.

## A PAGEANT OF THE PACIFIC

IN THE GOLDEN GATE to the Pacific, the San Francisco World's Fair dramatizes the romance of Far Eastern travel, and includes a varied musical program.

### *Treasure Island*

ON A FOUR HUNDRED-ACRE man made island in the center of San Francisco Bay, San Francisco World's Fair made its appearance in mid-February. In its first five days, the Golden Gate exposition had a higher average attendance than the Chicago Fair of 1933, thus establishing itself as a major tourist attraction in a banner year for travel.

Travel, in fact, is a principal exhibit theme of the Fair. Romantic South Sea glamor is featured in the elaborate buildings of New Zealand, Australia, the Philippines, Java, Bali and Indio-China. A Pan-American Airlines hangar on the Fair grounds houses the China Clippers which come and go on their regular schedules to Hawaii and the Orient. The two largest halls on Treasure Island are the Palace of Vacationland and the Travel and Transportation building, emphasizing travel in our own land.

Californians had a foretaste of the exposition's musical attractions in the series of pre-opening concerts that brought thousands to the island during the winter. First among the big musical events of the Fair itself was a two week engagement of General Platoff's world famous Don Cossack Choir. Edwin Franko Goldman began his band concert series on March 19, that will continue into June. A permanent feature of musical interest is the forty-four bell carillon atop the Tower of the Sun, four hundred foot theme spire of the exposition. This will be operated by outstanding carilloneurs, such as Kamiel Lefevre of Riverside Church in New York City. It comprises three and one half chromatic octaves and was manufactured by the one hundred year old firm of Gillett & Johnston, Croyden, England.

### *Musical Olympics*

ADDING TO LAST MONTH'S STORY of European musical attractions for this summer word has come from Switzerland of an international competition for music students to be held at Geneva, June 26 to July 8. Students of voice, piano, violin, flute, oboe, clarinet or bassoon, who are under thirty, are eligible. Ten prizes of one thousand Swiss francs each, and several other prizes of five hundred francs are offered. Paderewski heads the committee in charge, and the judges include Leschetizky, Gieseking, Baumgartner, Poltroniera, Penzera, Kulenkampf, Adolph Busch, Weingartner and Cortot. The purpose of the competition is to encourage promising students, especially those who have lost their nationality or whose careers are suffering from political persecution. The event is the fourth of an annual series. Past contests were in Vienna, Warsaw and Brussels. NBC will broadcast a concert from Geneva at the final day.

### *Fair of Tomorrow*

OFFICIALS OF THE NEW YORK World's Fair are preparing for its opening at the end of this month, encouraged by the initial success of the San Francisco Fair. It is believed that the two Fairs will provide mutual stimulation, rather than competition for each other. Many will avail themselves of the extraordinary railroad rate of nine dollars for a visit to both of the Fairs.

Among the events taking definite shape in the New York World's Fair plans is the monster male chorus of four thousand to five thousand voices, which will be heard in the Court of Peace on July 1 and 2. This largest chorus ever assembled in the United States will be composed of members of the Associated Glee Clubs of America, Inc. There will be eight conductors, four at each of the two performances. Program will consist of numbers especially adapted for such a large chorus, including Grieg's *Land Sighting*, Maunder's *Border Ballad*, and Sullivan's *The Lost Chord*.

### *Musical Map*

THE LATEST NEW YORK FAIR leaflet to be offered free of charge to inquiring readers of THE ETUDE is a handy Pocket Map of Musical Manhattan and the Fair, prepared by a well known piano manufacturer. This folder locates and describes all of the musical attractions of New York. Cultural centers, museums, churches, leading hotels, routes to the Fair Grounds, and transportation lines in the city, all appear on the map.

If you would like this map and other free literature on the New York Fair, or any sort of travel information, write at once to THE ETUDE Travel Department, Suite 613, 350 Madison Avenue, New York City.

## EASTER GIFT DE LUXE

Suppose when you were a young hope—the traditional hunt for colored Easter eggs—which lead in a round about way to gift supreme—a gaily tied, gaily decorated, crammed to the brim, Easter basket. Easter the eagerly looked for event of our life, that was second only to the of days—Christmas. Now of course, it means new clothes, new accessories, gifts that spell luxury. *Daggett & Sedell* presents the illustrated metal box and lipstick set, which is done in gold and decorated in engraved designs. The set's swank is enhanced in ivory colored jeweler's box artistically lined in deep blue velvet. The double box has a loose powder container. The box and lipstick come in light, medium and dark. The price? A mere trifle for a charming duo—\$3.50. If your dealer is not stock these sets, write me and I will pass your inquiry along to the manufacturer.

## FLOWERS THAT GROOM IN SPRING, TRA LA!

Just around the corner, and you plan your new bonnet, frock and accessories, you will find that every item of them will either be trimmed with ribbons, printed with flowers, or flowered, so that when you walk out with the best beau, you will resemble a spring flower. You will have a most delicately made-up, and so you must use perfume that will carry on the illusion of blue gentle breezes, and freshly blooming flowers. *Lentheric* has assembled two floral of typical spring floral perfumes, and I found them "Triangle de Fleurs." Each is boxed in a charming pastel band decorated with a pair of formal bouquets in green, yellow, dusty pink and white. A silver ribbon bands the cover is topped with a swirl of curly ribbons in fuchsia and turquoise (use these as decoration). Trio No. 1 includes *Lilac*, *Lilac* and *Jasmin*, all of which are creamy and warm. Trio No. 2 has different personalities, *Muguet* (lily of the valley), sweet and tender, *Violette*, shy and shy, and *Gardenia*, flower of sophistication. They are inexpensively priced at \$5.00 for the three two dram bottles. If your dealer does not carry them, write me and I will tell you where they can be purchased.

## "SAMPLE" YOUR MAKE-UP ACCESSORIES

Being a gadget collector of the first order, that is a person who likes to wander through neighborhood drug stores, chain drug stores, and Five and Tens in spare moments, I was impressed by the many prominent manufacturers who have boxed and bottled their cosmetics in 10¢ to 25¢ sizes.

And so, I decided to assemble for you street make-up, using only the items I found on the counters of these stores. First let us take cleansers for instance. Among others, I saw *Pond's*, *Gladys Glad*, *Daggett & Ramsdell*, *Lady Esther*, *Miner's Theatrical*, *Ambrosia*, both the pads and the liquid, *Phillips Milk of Magnesia*, and *Woodbury's*.

Since we must remove the cleansing cream, I looked for cleansing tissue and found such well-known ones as *Pond's*, *Kleenex* and *Venida*.

For skin tonics, *Woodbury*, and *Ambrosia* were among those present, while *Miner's* contributed their theatrical base, and liquid powder to match. *Miner's* is one of the best-known stage preparations manufactured. Then of course, there was *Hampden's Powder Base*, to which many of you are now undoubtedly devoted since getting your trial packages, and good dependable *Pond's Vanishing Cream*. *Lady Esther* makes a splendid base cream. In fact, I found *Lady Esther*, *Gladys Glad*, *Colgate's Cashmere Bouquet* and others had full lines of practically every essential represented on these counters.

It was a veritable feast of favorites when I turned to the rouges, both dry and paste. There was a shade of rouge for virtually every nuance of complexion, made by such well known cosmeticians, as *Outdoor Girl*, *Princess Pat*, *Cashmere Bouquet*, *Coty*, *Woodbury*, *Tangee*, *Park & Tilford*, *Lady Esther*. These manufacturers had lipsticks to match, and most of them had a full line of eyeshadow, to which were added such well known names as *Winx*, *Maybelline* and *Pinaud*, for mascara. I even found *Winx* had an eyelash curler, and that some enterprising manufacturer had a lipstick brush just like the one I spoke of several issues ago.

My real thrill came when I stood before the face powder section and noted such leaders as *Bourjois*, *Coty*, *Outdoor Girl*, *Cashmere Bouquet*, *Park & Tilford*, *Primrose House*, *Pond's*, *Lady Esther*, *Tangee* and *Max Factor*. *Cheramy* was presenting their powder with a tiny free sample phial of the lilting "April Showers." There was even a small powder brush available with which to brush away all surplus powder, so as to give a professionally smooth powdered finish to the face.

If your local stores do not have all these varied brands, write me and I will try to find out where you can get these convenient size packages nearest your home.

## GOOD GROOMING

While collecting your street make-up accessories from the counters of stores specializing in sample sizes, I headed for other departments to see what I could find to complete the perfect grooming picture.

As a musician your hands will be noticed first, and so I assembled all the necessities for a perfect home manicure. *Cutex* and *Platinum* have the most exciting new shades of nail polish, cream and transparent. There are polish removers for both dry and oily nails, whiteners for nails and hands, nail wax to strengthen those Chinese type nails affected by ladies of fashion, files, emery boards, cuticle scissors (these at 25¢) and buffers. Even the old-fashioned cake polish, which was the only thing we had in the past for gleaming nails, was there. A darling little nail brush in pastel colors, orange wood sticks, cotton, and—ssh!—False Nails for the breakers and biters. No excuse is left for ugly hands, for the hand creams and lotions are made by such well known firms as *Ponds*, *Jergens*, *Italian Balm*, *Frostilla*, *Hind's*, *Dame Nature* and *Pacquin*. Of course I am only naming a few of the numerous brands they have for your trial.

The next part of you, in order of notice, is your hair, and here I found every conceivable kind of comb, curler, pin, decoration and brush. Even a darling rubber or cellophane make-up cape to cover your dress when powdering or brushing your hair—and you must brush for gleaming hair. I spotted *Conti's Shampoo* and *Mulsified Coconut Oil*. There was also *Nestle's Brilliantine* and *Lacquer*, *Vaseline Hair Tonic*, *Woodbury's Brilliantine*, and *Venida Hair Set*. No excuse at all for badly groomed tresses when you can experiment first.

One whole counter was devoted to tooth preparations and your new friend, *Bost*, was there, as was *Forhan's*, *Pepsodent*, *Ipana*, *Listerine*, *Dr. Lyon's* (I'll bet your Grandmother used that one as well as *Colgate's*), *Kolynos* and *Pebeco*. I know there were many others, but at this juncture a young man noticed what I was writing, and so I took time out and asked him what in his opinion stood most in the way of a young lady's perfect grooming, and he answered laconically "spots."

I took this hint for you, and found that among the spot removers were *Carbena* and *Energine*. On the same counter, I found *Tintex* which will put the delicate pastel shades back into your washed-out underthings or overthings.

Being such a fussy person on the subject of odors, I hunted out and found *Zip*, both depilatory and deodorant, *Non-Spi*, *Park & Tilford Perfumed Deodorant*, *Arrid*, *Hush*, *Immac*, *Dew* and *Odorono*. A formidable array, I assure you, among which you must find just the ones to meet your every need. For the unsightly leg hair, there were *X-Bazin*, *Neet* and many others.

As I ticked off on my fingers the various points of good grooming which could be covered by a five and ten tour, one last remained and that was perfume, and so I trudged off to find what I could along these lines. Here indeed was a thrill. "Nips" held such favorites as your favorite *Park & Tilford #12*, #3, *Gardenia*, *Adventure*, *Cherish* and *Lilac*. *Cheramy's* "April Showers," *Bourjois' Evening in Paris*, a blend of *Lentheric's* favorites, such as "Shanghai," and *Colgate's Cashmere Bouquet* made a veritable perfume parade for your every mood.

If you have any grooming problems, address Theodora Van Doorn, 350 Madison Avenue, New York City.

## ORCHIDS FOR YOU

A well-known columnist usually awards "Orchids" to anyone whom he feels deserves special commendation for some service or accomplishment. *Park & Tilford* seem to think that all women not only rate "orchids"; but should be orchidaceous as well. Encased in a violet-blue metal container, (you'll rush to match it for that new afternoon dress you're thinking of) is their new orchid lipstick—a rich, velvety, blue-toned red to help you wear those trying new shades, and to give you a fragile, "hot-house" visage. A similarly colored bakelite box carries cake rouge and a small puff, to complete the ensemble. The rouge box has a screw top to eliminate the usual "rouge over everything in the handbag" problem. The lipstick and the rouge in generous sizes are 10¢ each. If you would care to try these flattering new accessories, send 10¢ in stamps for each—20¢ for the set, (no Canadian stamps or coins, please), and I will ask the manufacturer to forward same to you promptly.

Additional information on your make-up problems may be had by writing to me at 350 Madison Ave., New York City.

## Expanding Your Cultural and Musical Life

(Continued from Page 251)

upon the great state of Virginia in our earliest days. The settlement in 1607 had no Plymouth Rock of 1620 but it is none the less important. Mr. Niles has secured an unusual amount of interesting information and she tells it in engaging fashion.

The charm of the book lies in the sentimental anecdotes and atmosphere which the author has created. In other words, it is not the conventional history.

There is a kind of disreputable fascination to the charm of the gypsies. We have seen them in parts of Europe living in incredible poverty and squalor and again we have been in gypsy wagons apparently as clean as any one could wish. Martin Block's "Gypsies: Their Life and Customs" (D. Appleton-Century Co. \$3.50) is a much more serious discussion of this strange roving people who left India about the year 1100 and spread over a great part of the world, creating more romance and music than public respect.

Born and living their lives in the open, eating almost anything (save horseflesh, which is taboo), rarely bathing, drinking little water but much alcohol, beggars, thieves, sharp dealers, they make a social picture impossible to respect. On the other hand their remarkable dancing and their infectious music and their many hued costumes have contributed fascination and color to all who encounter them.

Their loyalty to their own is remarkable. A marriage is usually nothing more than a hand shake before the chief, followed by a fortnight of sprees—but there are literally no gypsy divorces. They settle crimes in their own courts and punishment is severe and unrelenting. All in all they are an enigma as a race and probably will remain so until the end of time.

### Additional Suggestions For Good Reading

Here are some books you should not miss looking up in your book shop or your library. Possibly you will not be able to resist adding them to your personal collection.

"Chateaubriand" by André Maurois (Harper and Bros. \$3.50).

"Samuel Pepys, The Saviour of the Navy" by Arthur Bryant (The Macmillan Co. \$3.50).

"A Guide to Understanding the Bible" by Harry Emerson Fosdick (Harper and Bros. \$3.00).

"Disputed Passage" by Lloyd C. Douglas (Houghton, Mifflin Co. \$2.50).

"Good American Speech" by Margaret P. McLean (E. P. Dutton & Co., \$2.00).

"Let's Set the Table" by Elizabeth Lounsbury (Funk & Wagnalls, \$2.75).

"Beautiful Canada" by Vernon Quinn (Frederick A. Stokes Co., \$4.00).

"Decoration for the Small Home" by Derek Patmore (G. P. Putnam's Sons, \$3.50).

"Co-Ediquette" by Elizabeth Eldridge (E. P. Dutton & Co., \$2.00).

"Rhythms for Children" by Shafer & Mosher (A. S. Barnes, \$1.25)

### For All Music Lovers

#### MUSIC AND THE LISTENER

by Harry Allen Feldman

Gives a clear and stimulating account of the development of music and shows how to recognize and what to listen for in the music of different composers and periods. Recommended to: TEACHERS as a guide for courses in music appreciation, STUDENTS to clarify their own knowledge of musical development, THE GENERAL LISTENER to gain a fuller understanding of music for his own enjoyment. The price is only \$2.00.

#### THE NEW MASTER MUSICIANS

Revised and re-edited by Eric Blom, this series now includes 19 volumes, each one a fine biography of a famous composer and written by an author well fitted for his subject. Attractively bound; illustrated with photographs, facsimiles and musical examples. Any 6 volumes boxed, \$10.00. Separately, \$2.00 each.

#### BEETHOVEN'S PIANOFORTE SONATAS DISCUSSED

by Eric Blom

This book, by the world-famous critic and editor of the Master Musician Series, contains detailed analyses in chronological order of Beethoven's thirty-two pianoforte sonatas, illustrated by some 300 musical quotations. There is also a valuable bibliography and index. \$3.00.

The musical score is written for a guitar and a string ensemble. The guitar part is in the treble clef, and the string part is in the bass clef. The key signature is one sharp (F#), and the time signature is 2/2. The score is divided into four systems of four measures each. The first system includes the title '(Tune: EASTER HYMN)' and the initial instrumentation 'Gt. Sw. C#'. The second system includes the instruction 'Sw. add Oboe'. The third system includes 'Sw. Flute 4' off; add Bourdon' and 'Sw. A# arpeggiate these chords'. The fourth system includes 'Gt. Bourdon off, Oboe on' and 'Sw. B Chime'. The fifth system includes 'Sw. Voix Celeste Sw. A#' and 'Ped. 3-1'. The score concludes with a final measure in the sixth system.

ARINET in Bb

# MAYFLOWER GAVOTTE

EDWARD BEYER

Four staves of music for Arinet in Bb. The first staff begins with a treble clef, a key signature of two sharps (F# and C#), and a common time signature (C). The music features dynamic markings of *f* (forte) and *p* (piano). The second staff continues the melody with similar dynamics. The third staff shows a change in dynamics, with *f* and *p* markings. The fourth staff concludes the piece with a final *f* marking.

TO SAXOPHONE

# MAYFLOWER GAVOTTE

EDWARD BEYER

Four staves of music for Saxophone. The first staff begins with a treble clef, a key signature of two sharps (F# and C#), and a common time signature (C). The music features dynamic markings of *f* (forte) and *p* (piano). The second staff continues the melody with similar dynamics. The third staff includes a clarinet part, indicated by the label "Clar." above the staff. The fourth staff concludes the piece with a final *f* marking.

RNET in Bb

# MAYFLOWER GAVOTTE

EDWARD BEYER

Four staves of music for RNET in Bb. The first staff begins with a treble clef, a key signature of two sharps (F# and C#), and a common time signature (C). The music features dynamic markings of *f* (forte) and *p* (piano). The second staff continues the melody with similar dynamics. The third staff includes a solo section, indicated by the label "SOLO" above the staff. The fourth staff concludes the piece with a final *f* marking.

ELLO or TROMBONE

# MAYFLOWER GAVOTTE

EDWARD BEYER

Four staves of music for Cello or Trombone. The first staff begins with a bass clef, a key signature of two sharps (F# and C#), and a common time signature (C). The music features dynamic markings of *f* (forte) and *p* (piano). The second staff continues the melody with similar dynamics. The third staff includes a cello part, indicated by the label "Cello" above the staff. The fourth staff concludes the piece with a final *f* marking.

## What Do Bands Mean to America?

(Continued from Page 225)

chants in our very progressive community. "Occasionally we learn of some educator who wonders if music in the schools is not overemphasized. Sometimes we suspect that there might be a bit of envy involved, because of the popularity of the successful band director (Mr. David Hughes, director of the Elkhart High School Band, was awarded a gold medal for the outstanding achievement of the year, a couple of years back); but I believe that if there is any overemphasis it arises out of misconception on the part of sincere and conscientious school music supervisors, and band and orchestra directors, who try to make thoroughly good musicians of all their pupils. All of us, music educators in particular, must remember that school music is not a vocational proposition, and that youngsters who are to-day members of school bands are to be the commercial and professional men and women of the future. Some of them, of course, will develop aptitude and ambition for musical careers; and these find their way, after high school, into the various institutions of higher musical knowledge and, later on, into the ranks of school music educators.

### And So a Good Investment

"AN ANSWER TO THE QUESTION—'What does a band cost?'—is very difficult, because of the variation in conditions and circumstances involved. It is becoming a generally accepted practice for parents of youngsters to provide the cornets (or trumpets), clarinets, trombones, saxophones and other small instruments, while the schools purchase and provide the tubas, baritones, bass drums, tympani, bassoons and oboes. Likewise, in the instrumentation of orchestras, schools provide the string basses and other large instruments, with the pupils providing their own violins, clarinets, flutes, trumpets, and so on. If a new band were being organized and all the instruments were to be supplied by the Board of Education, the average purchase price of good instruments would be about one hundred dollars per pupil—small instruments less and larger instruments more. It is well to remember that the lowest priced instrument is not always the best buy. In musical instruments as in nearly everything else, we get pretty much what we pay for, and it is not just the first cost that must be considered.

"Too many times School Boards advertise for bids and consider only price. If the highly proficient professional player requires a fine instrument in order to do justice to his ability and talent, is it not reasonable to assume that the young player, however talented and ambitious he might be, should be given a really good instrument and not be put up against the handicap of an inferior one, selected only because of its low price? Proper comprehension of all benefits and advantages which the young players will derive, both now and throughout the rest of their lives, as well as due appraisal of the credit and enjoyment which they will bring to their teachers, classmates, parents and others, demonstrate that the cost is not too great even though the finest instruments are purchased and placed in the hands of the youngsters.

### A Builder of Character

"NOT A SCHOOL BAND INSTRUCTOR who does not know of at least several boys who were

never amenable to school rules, never quite in step with the rest, until they joined the band. A national authority on juvenile delinquency once said, 'Teach a boy to blow a horn and he'll never blow a safe'; and, next to and just about on a par with athletics, there is nothing that will attract and hold the interest of the restless, 'full of pep' boy in school as will a band instrument and a chance to play in the school band. Therefore, and purely from a hard boiled business standpoint, it is perfectly safe to say that every dollar of public money ever invested in putting or maintaining a band in a school has been well spent.

"A rapidly growing realization of this is evident from the fact that so many school band instructors are now employed on a twelve months basis, devoting their time during the vacation months to the class instruction of beginning players as well as in weekly (at least) rehearsals of the concert and junior bands. This undoubtedly provides an outlet for that restless energy so apt to lead idle youngsters into mischief and keeps them in step with school discipline the year around, with no need of readjustment when schools reopen in September.

"Parents often ask 'Which instrument shall I select for my boy or girl?' The answer to that is—'Don't.' I mean that the youngster should make his own selection, this selection to be checked with the school band instructor, who will point out any physical handicap to proficiency on the particular instrument fancied by the youngster. When my oldest son was in his ninth year, I 'selected' the cornet for his instrument. He practiced and made very excellent progress, playing solo cornet in the Elkhart High School Band two years before he entered high school and during the four years that he was in high school. But, immediately after graduating and even before, he played saxophone in dance orchestras, studied clarinet and flute, and spent several years playing these instruments in some very fine, nationally known organizations. I also 'selected' saxophone for our second son and later on trumpet, but he took up bass when he went into high school and became one of the very finest tuba soloists I ever have heard. Incidentally, neither of these boys is now a professional musician, the elder being Assistant Sales Manager here at the Martin Band Instrument Company, and the other, since his graduation from Notre Dame last June, having been engaged in accounting work with a large utility company. Another son is now playing baritone in the band at St. Joseph's College, Rensselaer, Ind., and he also has no idea of following music professionally.

"I hope all readers will pardon this personal reference. It is also hoped that what has been written here will help, in some degree, to bring about the greater and more nearly correct appraisal of the importance of instrumental music in our schools. The millions of boys and girls who have already enjoyed the advantages of membership in school bands and orchestras owe a deep debt of gratitude to the superintendents and members of Boards of Education who have made it possible for them to have bands and orchestras with which to play, as well as to their instructors in music. And I am sure they are, without exception, properly appreciative of the opportunities lavished upon them, far in excess of those given

boys and girls in any other country on earth.

"Music has been aptly termed 'the fourth essential,' only food, clothing and shelter preceding music in importance in a well rounded and happy life. And to participate in a musical performance, even one of mediocre degree of excellence, is ever so much more enjoyable than merely to sit and listen. The progress or retrogression of a nation depends on its home life; and a musical home is a happy home.

"So, in addition to continuing and expanding the program of music in the schools, we should all promote more instrumental music in the home, more informal gatherings of small groups in duets, trios, quartets, and small orchestras."

This new issue is crammed full of interesting information about bands and musicians. In addition it has many outstanding articles such as one by Dr. Frank Simon, Director of the ARMC Band on "Ten years before the Microphone"—and another by Ralph Rush, Director of the Cleveland Heights (Ohio) High School Band, entitled "What it takes to win" . . . "Football Showmanship" by Robert J. Barrett, Columbia University M. A. and "The Story of Fred Waring and his Pennsylvanians" also by Robert J. Barrett—and news of the latest developments in KING, CLEVELAND and AMERICAN STANDARD BAND and ORCHESTRA Instruments . . . New instruments . . . New Models . . . It is yours for the asking . . . # THE ACCORDION DEPARTMENT

## Sight Reading, Part II

By PIETRO DEIRO

As told to Elvera Collins

**C**ONTRARY TO POPULAR BELIEF, sight reading does not require any particular talent. Suggestions and outlines for practice were given in the preceding article on this subject so we shall continue with further ideas.

### Have You Studied Harmony?

OR IS THAT one of the subjects that you thought would not have to be bothered with? A knowledge of harmony, and particularly the formation of chords, is most helpful for accordionists who wish to sight read. Instead of having to stop and read individual notes it will be possible, at a glance, to recognize a group of notes as a chord, regardless of the inversion. When reading a book we do not stop to spell out letters in every word. Instead, we recognize the group of individual letters as a unit and think of it as a complete word. Constant practice in sight reading enables the player to group notes similarly.

If one has not formed the habit of observing tempo marks, dynamics, repetition signs and changes of key in one's regular playing he cannot expect to do so when beginning to play at sight. This habit should be cultivated immediately, for these signs are important and represent the difference between merely playing a lot of notes or telling a musical story.

One of the aids mentioned for sight reading was memory. Perhaps one may wonder where memory enters in reading music. Visual memory is very important because as the eye glances at one or more measures it photographs these mentally and they must be remembered while the eye goes ahead to the next measures. To be a rapid sight reader the range of vision must be continually in advance of the music being played.

Granting that many readers have already prepared themselves according to the requisitions mentioned, let us go into the next step in sight reading. When beginning to learn to sight read it is a good idea to establish a definite system and then adhere to it. As an example, when playing a selection for the first time, let the first glance be comprehensive enough so that it determines the key of the selection as well as the time. In fact, the player should glance also at the clefs, as the accompaniment for accordion music may be written in either treble or bass clef. A little practice soon makes it possible to include the tempo sign as well as the dynamic symbol. That makes five individual signs or symbols to be observed in the split second while the hands are being placed in position on the accordion.

Some accordionists experience difficulty in sight reading passages where the melodic line contains many accidentals. Such passages frequently occur in novelettes. The following examples were taken from my text book "Sight Reading" and show a system which helps in working out such passages.

### How to Read the Melodic Line in Group Formation

THE SYSTEM of reading the melodic line in groups of notes rather than as individual notes is one of the greatest aids in sight reading. It is the same principle as reading the chords of a piano part where the notes are analyzed as a group, not as individual notes. This method of sight reading the melody in groups is particularly adaptable

to a melody in sequential form; that is, a melody of one or two measures repeated in various keys through the use of accidentals. The following melody is in sequential form, the first measure establishes the melody, the succeeding measures repeat the same melody in different keys.

#### Ex. 1

To read this melody as a succession of groups, the individual notes must be grouped from one natural accent to the next. Considering the rhythm as in 4, the first accent will be on one, the second accent on three, therefore the notes will be grouped from one to the third beat, and from the third beat to the end of the measure. The first measure will have two groups, the first containing F-A-C, the second group will contain E-flat-C-A-F-sharp. Therefore, instead of reading individual notes, the eye must see the melody as two groups in each measure, as follows:

#### Ex. 2

Another type of sequence is where the melodic line is written in the diatonic formation. In the following melody it must be immediately observed that each ascending and descending group begins a tone higher than the preceding group. It must be also observed that the sequences do not establish a new key, but retain the formation of the diatonic C major scale.

#### Ex. 3

As these diatonic progressions do not create any sense of chords, they must be read as groups of notes ascending and descending. As the first measure establishes the feeling of three notes up, and four notes down, it is necessary to read only each accented note, and then continue the swing of up and down. The melody then creates the impression of ascending and descending lines as follows:

#### Ex. 4

### Accordion Questions Answered

1. What makes a person lose his interest in the accordion, although he originally liked it very much? 2. What causes a person to make mistakes with his right hand, when playing a piece of music?—E. W. Ohio.
1. There are many answers which might cover your first question. Perhaps you have been playing music that is too difficult and have become discouraged. Are you studying alone or under a teacher? Regular weekly lessons usually keep a student enthusiastic. Let me know what your daily practice program consists of as perhaps it contains too many technical studies without enough interesting pieces for divertimento. 2. Right-hand errors may be caused by the student not being able to read the notes correctly or by his lacking technique to execute the passages causing difficulty. Numerous other causes might be given but those mentioned are the most common.

Write, "I saw it in THE ETUDE."

# FAMOUS FOLIO for SCHOOL BAND and ORCHESTRA

Each collection has books for Clarinet and Cornets in Bb, and for Saxophone

**BAND and/or ORCHESTRA**  
**JACOBS' ALBUM OF MASTER CLASSICS**—14 numbers for either ensemble, playable in combination. 14 numbers by such composers as Beethoven, Wagner, Goldmark, Tchaikovsky, Schubert, etc.  
**JACOBS' CONCERT ALBUM**—14 selected numbers complete for either band or orchestra, playable in combination. Lead parts for eight different instruments. Numbers include Rakoczy March (Berg), Pasquinade (Gottschalk), Amaryllis (Gottschalk), etc.  
**JACOBS' ENSEMBLE**—A diversified collection of original compositions by various American writers. Playable in combination. 41 separate books.  
**PRICES ON THE ABOVE (each collection):** Band Books, each 30c; String Books, each 40c; Piano Books, each 50c.  
**JACOBS' EVERGREEN COLLECTION of Fifty Famous Old Songs**—Songs that will never die. Includes Southern songs, war songs, religious songs. Arranged for all band and orchestra instruments.  
**Chorus (S. A. B.) 15c; Piano Acc. (Conductor) 60c; all other books, each 30c.**

**BAND**  
**JACOBS' BAND BOOK OF CLASSICS**—Contains numbers by such world-renowned composers as Verdi, Grieg, Schumann, Schubert, Massenet, Offenbach, Chaminade, Brahms. Excellent practice in interpretive playing. **Each Book, 30c.**  
**JACOBS' BAND BOOK OF MILITARY MARCHES**—Published in two volumes, each containing excellent standard marches. Contains NATIONAL EMBLEM, by E. E. Bagley (Vol. 1), and OUR DIRECTOR, by F. E. Bigelow (Vol. 2). **Each Book, 30c.**  
**JACOBS' SCHOOL AND COMMUNITY BAND BOOK**—16 original compositions, including 8 marches. An ideal collection for field, street, or concert. Easy but professionally effective. "The snappiest Band Book in print." **Each Book, 30c.**  
**R. B. HALL'S BAND BOOK OF HIS MOST FAMOUS MARCHES**—R. B. Hall was one of the great march writers of all time, and here is the cream of his work. Includes the ever popular De Moley Commemorative. **Each Book, 30c.**

**ORCHESTRA**  
**JACOBS' FOLIO OF CLASSICS**—Published in volumes, each containing selections such as Kamei-noi-Ostrow (Rubinstein), Polonaise Militaire (Gounod), Triumphant March (Verdi), Angelus (Massenet). Effective in both large and small combinations. **Piano-Conductor, 75c; all other books, each 40c.**  
**JACOBS' FOLIO FOR SCHOOL ORCHESTRAS**—Published in 3 volumes. Easy to play. The melodies are superbly tuneful and the arrangements for instruments are effective, practical, and correct. Part for 47 instruments.  
**Piano-Conductor, 65c; all other books, each 35c.**  
**JACOBS' LOOSE-LEAF COLLECTION OF STANDARD MARCHES**—Published in 3 volumes, each containing such standards as Our Director, National Emblem, and NC-4. **Piano-Conductor, \$1.00; all other books, each 50c.**  
**COLUMBIA COLLECTION OF PATRIOTIC AND FAVORITE HOME SONGS**—120 songs arranged in quartet form for over 50 Band, Orchestra, or 17 reed instruments. All parts interchangeable in combination, thus many duet, trio, and quartet combinations are possible. Piano book includes words and music for mixed quartet. **Each Book, 50c.**  
*Has books for Mandolin Orchestra*

## MELODY - FIRST BAND BOOK

A UNISONAL Instructor  
FOR ALL BAND INSTRUMENTS  
By FORTUNATO SORDILLO  
Asst. Director of Music, Boston Public Schools.  
No uninterested players. Every book a melody book. Students enjoy practicing. Cleverly-harmonized. Piano Accompaniment. **Piano Acc. & Teachers' Guide, 60c; all other books, each 30c.**

## CHOICE MELODIES

from the MASTER COMPOSERS  
A careful selection of lovely music from the classical skillfully arranged for elementary school orchestra. **Conductor-Piano, 65c; all other books, each 30c.**

**DIRECTORS:** Send for free lead books to any of the above-advertised collections and Cornet Book of Melody-First Band Book. Musical status must be established. Refer to this ad.

**Walter Jacobs, Inc.**  
120 Boylston St., Boston, Mass.

## SCHOOLS—COLLEGES

**CONVERSE COLLEGE**  
Ernest Bacon, Dean, Spartanburg, S. C.

**KNOX COLLEGE, DEPARTMENT OF MUSIC**  
Galesburg, Ill.  
James MacC. Waddell, Chairman.  
Catalogue sent free upon request.

**SHENANDOAH CONSERVATORY OF MUSIC**  
Courses leading to B. Mus., and B. Mus. Ed. degrees. Rates reasonable. In the heart of the Shenandoah Valley, D. C., Virginia.

## Instrument Offers Richer Opportunity than The VIBRAHARP!

Photo shows Adrian Rollini, internationally famous Vibraharp star.

Whether you play for pleasure or profit, no instrument offers greater opportunities for achievement than the sweet and mellow-toned Vibraharp. For proof, spend an evening with the vib. Note the prominence of the vibraharp in the arrangements of top-notch orchestras . . . its success in swing bands . . . its mounting popularity as a background for vocal groups.

**Easy to Own—Easy to Play**  
History-making new Deagan Vibraharp establishes a new high in value, a new low in price. *Easy to play* (lessons furnished). Irresistible as solo instrument, indispensable to the modern orchestra. Particulars on request.

AN EXCITING BAND ARRANGEMENT  
Specially written for and dedicated to the thousands of Safety Patrol groups in our schools. This band arrangement is a MUST number for school, radio and record bands, rapidly winning adoption as the SAFETY anthem. Send for it now. Price 75¢.

Caesar, 1619 Broadway, N. Y. C.

Send me . . . . . copies of SAFETY PATROL MARCH.

## Bands and Orchestras

(Continued from Page 235)

### The Band's Place in the Community

By KARL L. KING  
President, American Bandmasters' Association

THE HISTORY OF THE BAND in our country is a very interesting one. Band music was first rendered by the small ten or twelve piece bands which were formed shortly after the Civil War. From these small and oftentimes crude band groups have grown our excellent band organization of to-day. For years band music was kept alive by the "old town band," and it was perhaps nourished by a popular appeal that is stronger to-day than ever before.

With the growth of certain itinerant bands of excellent quality, and with the rapid strides of recent years in the school groups, bands and band music have become enormous and important factors in the musical life. The immeasurable share which the band has in making our people musically minded can be a real source of pleasure to all who are associated in the American band movement.

Many communities to-day have fine municipal bands playing concerts in newly erected band shells to large and appreciative audiences, and this type of organization (a reincarnation of the old town band, tax supported) has become an inseparable part of community life. A broader and more intensified development along this line will be the next notable phase of band history.

### The Choice of Band Programs

By HAROLD BACHMAN  
Director, University of Chicago Band

IN SELECTING MATERIALS for his public programs, the school band director is faced with many problems. He must choose material which will have audience appeal and will be suitable for various occasions. At the same time this music must fit into a progressively arranged course of study and must be of cultural and educational value to his students.

These characteristics are not necessarily incompatible. All fine music is not dry and uninteresting, from an audience point of view. Neither is all of the novelty, martial, or light popular music, which we find so liberally sprinkled in our band repertoires, harmful to the musical development of the student. Good taste and discrimination are needed in the selection of both the so-called classical music and that of the more popular variety.

Of great importance is the way the music is played. While the students will rise in a remarkable way to the technical demands of a good and interesting piece of music, the numbers finally selected for the public program should not be so technically difficult that the players cannot play them with ease and finesse. There is a great deal of fine music that is not technically difficult. For every difficult number the band plays, it should play a dozen of the non-technical variety, in which tone, phrasing, gracefulness of style and all the niceties of musical expression can be emphasized. The students and audience alike will form a more pleasant acquaintance with a great composer through a polished performance of one of his lighter, easier works than through a stilted, laborious performance of a work which greatly exceeds the technical limitations of the performers.

Even the playing of marches and "pep" songs at athletic events and on parades need not be harmful if such music is thoroughly rehearsed and carefully played with good tone, clean cut articulation, well marked accents, and proper attention to

expression. The harm comes when there are so many demands made on the band members for such occasions that there is insufficient time in the schedule either for careful rehearsal of the march music, or for the serious study of music of a more refined type.

The principal function of the band is to serve as a medium for promoting education through music. Public programs should, and usually do, enhance the educational value of the band course and give it added significance. They should be considered, however, in the nature of by-products of the course in musical training, and not the principal objective. To prevent the orderly processes of a systematically arranged course of study from being retarded, it sometimes becomes necessary for the school administrators to coöperate with the band director in zealously guarding the students from the excessive demands of overly enthusiastic, if well intentioned, community organizations.

### The Value of Band Clinics

By H. A. VANDERCOOK  
Director, Vandercook School of Music, Chicago

PROFESSIONAL MEN IN ALL LINES have readily recognized the value of the "get-together" spirit wherein they are enabled to compare notes and ideas to the betterment of their respective lines.

Undoubtedly no one idea has promoted and advanced the profession of the school bandmaster and orchestral conductor so much as the clinic. The remarkable success of the clinics held throughout our country is truly due to the fact that they are held under the supervision of capable as well as nationally famed directors and teachers.

At such clinics an exchange of ideas between directors and teachers is possible, and it is in this conjunction of knowledge and experience that clinics derive their great value.

As all bands, orchestras and glee clubs connected with public school endeavors in the line of music are usually lacking somewhat in fundamentals, we have at these clinics an opportunity to impress upon the teachers and directors this particularly important point.

Every teacher and leader while attending these functions, should be prepared to take notes for future reference in the work that he does at home. One of the recognizably valuable spirits in band work is that of coöperation, and there is no place better than the clinic for nurture of this spirit.

### Hands Across the Border

By CAPTAIN R. B. HAYWARD  
Director, the Toronto Concert Band

WHEN THE AMERICAN BANDMASTERS' ASSOCIATION was founded, a third of the charter members were Canadians. To Edwin Franko Goldman, the founder, no border existed.

Canadian bandmasters travel south to adjudicate band contests; bandmasters from the United States journey north for a similar purpose. Dr. Goldman and the late Walter M. Smith have come north to conduct massed band concerts in aid of Canadian unemployed musicians, and in return bandmasters from Quebec City, Montreal and Toronto have gone to New York as guest conductors of the Goldman Band. Frank Simon comes from Cincinnati to conduct the Toronto Summer Symphony Orchestra (which plays on the share plan), and many similar incidents take place, where neither fee nor reward is asked or expected.

(Continued on Page 278)

# Easy to play

## THE NEW CONNS

The world's largest manufacturers announce sensational improvements in band instruments. Outstanding stars of radio, stage and screen are equipping themselves with new model Conns as fast as our factories can supply them. They all want the easier playing, faster action and exclusive features that Conn has perfected to meet the demands of modern music. You, too, will advance faster with one of these wonderful new instruments.

**NEW PATENTED VOCABELL Revolutionizes Tone Effects**  
New principle VOCABELL on new Connoquor trumpets, cornets and trombones hailed as the greatest improvement in century. New tone brilliance. Faster, sweeter, easier to play.

Many exclusive improvements, yet they cost no more. See the new models at your music dealer's store. Or write us for home-trial, easy payment offer and free book on your favorite instrument. Mention instrument.

## Searching for a Teacher and How to Do It

By GEORGE CHADWICK STOCK

CE STUDY, AND TEACHING, are active throughout the year. Teachers are ready pupils. Pupils—embryo artists—are ready for some one to take charge of their voices and talents for singing.

If you are a beginning singer, that is, who never before has taken lessons, it is extremely important to get a good start. Be sure you are on the right road; then proceed ahead.

A wide awake prospective student of singing will ask, "What is the right road, who will show me the way to it?" The best answer is, "Look around." In the case of singers who are successful. They direct you to teachers who have helped them. It is better to get the opinion of an experienced person than to trust the judgment of one who knows very little of voice culture; whose advice is based wholly upon hearsay.

Naturally, you are anxious to place your voice where it will have dependable care. This means do some teacher searching on your own account. The student with initiative, and of independent mind, will do this, and probably will be grateful ever afterward.

Visit several teachers. But first arrange

for an audition, when sufficient time will be allowed for a thorough voice trial and a satisfactory conference.

Do not hesitate to ask questions. The time and money you purpose spending on your voice entitle you to the fullest explanation of how your voice is to be trained.

Usually the first question asked by an applicant for vocal lessons is, "What method do you teach?" That question usually starts something. Space is too limited to dwell on what might be said on the feverish topic of method.

Accept, please, a further hint from one of experience: listen closely to what you must do to develop your voice for singing. Pay close attention to every statement made. But do not accept as infallible everything you hear.

Take prophecies of a great career ahead (if they should be made) with a whole handful of salt. Many people possess voices which are well worth cultivating, but great careers are rare.

Do a lot of thinking on your own account, and mix it with plenty of common sense. This will help both you and a teacher to get at rockbottom truth.

## The Singing Tempo

By HERBERT WENDELL AUSTIN

"HOW FAST SHALL I SING?" asks a disoriented student. "Some say that I sing rapidly; others that I sing too slowly. What is a good singing tempo?"

The tempo of a song is very important to its musical effectiveness; but so many persons have a part in the matter that it is impossible to give a specific tempo for songs. Much must be left to the discretion of the singer; but a few points must not be overemphasized. These we shall discuss briefly.

**The Character of the Song.** The singer should study closely the nature of the song he is to sing. What singing speed seems to express its theme and idea? What mood would it portray—bright cheerfulness, or sombre seriousness? Both words and music should be considered in determining the movement of the song. Manifestly, some songs are more effective when sung to a rapid tempo; whilst others would be utterly ruined by such fast speed.

**The Number of Singers Performing.** A soloist can naturally sing most songs at a rapid tempo; whilst others would be ruined by such fast speed. In group singing, singing in slow tempo (except in typical numbers) have the effect of being laborious and cumbersome; while solo voice, singing in the same tempo, would seem to be free and amply fast. By singing his song until its theme permeates being, a soloist, appreciating the number can be depended upon to strike a suitable rate of movement. In group sing-

ing the director may try various tempi, to find the one which best expresses the emotions of the song. Do not drag a musical number; and do not run away with it! A song, sung in an ideal tempo, whether by a soloist or a group of singers, will not give the impression of either fast or slow movement. The tempo so splendidly fits the song, and the singer, or singers, that the sense of speed does not obtrude itself upon the whole by attracting undue attention.

**Get Acquainted with the Song.** As hinted above, the singer should study his song until he thoroughly appreciates it—so much that his emotions respond in harmony with the song theme. He should feel its message vibrant within himself, and should have a strong desire to interpret this message through song, in such a way that all hearers will emotionally respond to the number as a whole. When a song is fully appreciated by the performer, or performers, a favorable tempo is naturally struck as an integral part of the performance. To sing any song fast or slow, without consideration of its inherent qualities or of the form of rendition, is to take art out of singing and to place it on a purely mechanical basis.

A safe rule is to let the song itself, by its nature, message, and theme, suggest its natural movement; then to adapt this to solo or group rendition by proper modification, keeping in mind the fact that, as a rule, a group sings somewhat faster than a soloist.

## What Sound Shall We Use?

By WILBUR A. SKILES

THE VOWEL to be used should be given its primary sound, colloquialisms being easily avoided. One vowel sound is not transferable to another, and singers who say some of the English vowels are not singing and should be changed, so as to make them suitable for intelligible singing, should be informed that the fault lies with the language and not with the singer.

themselves, their ability, and their personal training and study. Singers should not be partial in their selection of vowels, because we really have no option in the matter. One vowel is as beautiful as another, if properly made. It is not right that clarity of enunciation should be impaired by tonal or vowel qualities; although, when attempted inexpertly, there is obvious danger of such a result.

BAYREUTH! MUNICH! SALZBURG!

# GERMANY

Let the genius of Wagner at Bayreuth, of immortal Mozart at Salzburg lift you to new heights of musical inspiration in Germany this year!

Also, take your choice of Munich's Festival Summer—concerts in the Bavarian Alps at the magnificent castles of Schleissheim and Neuschwanstein—Berlin's Art Weeks—Dresden's Music Summer—Heidelberg's Theatre and Music Festivals—Singers Week at quaint Nuremberg—and many, many others.

Explore the Blue Danube, the Vienna of Strauss, the castled Rhine, the medieval towns of the Meistersingers, the legend-laden Black Forest! Invest other vacation hours in treasure houses of art, modern drama, health and sport at famous spas. Save time using swift streamliners and broad express highways! Save money on the moderate prices of fine living. Plan your trip now!

# THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

## How to Understand the Pipe Organ

Non-Technical, General Information for the Layman

By ALBERT TUFTS

**T**O UNDERSTAND AN ORGAN, one usually commences with the swell pedals under the console, or playing desk, and looks at everything "from the ground up." As one will find that everything is labeled, he therefore can understand, through his eyes and ears, any organ. The descriptions marked upon various organs are slightly different, since most organs borrow their names from various languages. American and English organs, particularly, use names from different countries, such as, French, German, English and Latinized-Italian words. If one will carefully scrutinize a stop, he will understand what that stop calls for. Organs are generally the same, the world over, basically speaking; but owing to the size of buildings and the various sizes of instruments, voicing, and so on, each in itself is slightly different. We have playing pedals (making sounds when played by the feet), and we have loud and soft "Swell" pedals, also played by either foot.

A large organ usually has several different swell-pedals. If a pedal is labeled Great Swell-Pedal, it means that with it one can increase or decrease the tones upon the Great manual. If one has any (given) two manuals in one swell box, then one pedal will swell the volume for both, and this is so labeled. "Swell swell-pedal" means that by its use the tones in this top "swell" manual (of a three manual organ) may be increased or decreased in volume. If the organ has four manuals, the top manual pedal will be labeled Solo Swell-pedal. Modern organs often have a different Swell-pedal for the Echo-organ. Besides this, there are various dampers and push buttons which affect certain stops and, being invariably labeled, they tell one exactly what to do. The "Balanced-Crescendo Pedal" is a stop-puller; that is, when the toe presses upon this pedal the tones of the organ from soft to loud are brought on systematically, and when the heel is pressed this pedal will reduce sounds from the fullest organ back to the softest stops and so on finally to zero. The "Crescendo Pedal" does not swell individual tones, its function being to draw stops only.

Under each manual we find push buttons which will bring on combinations, soft or loud, from left to right. The various couplers, which affect octave pitches, are labeled and thus explain themselves. When the figure 8 is upon any tab or stop, it denotes unison or piano pitch. When the figure 4 is upon the stop, regardless of its quality or color, it denotes that the pitch sounds one octave higher than if played upon the piano or organ key; and correspondingly a stop with 2 upon it means that the tone will sound an octave higher than even the four-foot pitch. If one sees 16 upon a stop or tab, it means that the pitch will sound one octave lower than piano pitch, that is, one octave lower than the finger plays the key. When 8 is seen it means that the lowest C-pipe upon the organ is approximately eight feet long, excepting when it is a "stopped"-pipe; in which case the pipe is only four feet long,

but its pitch sounds as an eight foot pipe, because the sound waves must travel to the stop at the top of the pipe and then back to the lip, thus making really an eight-foot journey. This tone is somewhat muffled in quality.

### Blues, Reds and Yellows

WE NOW COME to the modern color scheme (as seen through the mental eye) for understanding basic registration. This may be imagined upon an old-fashioned organ just as easily, where all the stops are white looking with black lettering, as upon the most recent organs which are using the actual colored stops.

Simply imagine that each of the four basic (family) tones has a corresponding (arbitrarily designated) color. They are: Flutes (blue), Strings (yellow), Diapasons (grey), and Reeds (red). I often like to think of the delicate soft Reeds (pastoral sounds) as pink, with the loud, more strident and blatant Reeds as the red ones. We also have a fifth family in many theater organs and in some large residential and concert organs. This unusual (not average) family is the "traps" series of stops and their effects. In some organs the writer designed for theaters he designated these "traps" stops to be made brown.

We have all kinds of blues in the color world, and thus we have many different kinds (slightly differently shaded in volume, quality, even pitch and color) of flutes; but this family is always recognized when heard as some kind of a flute. Low pitched, (16 feet) heavy, dark sounding flutes (for the Pedals), and even for manuals, are actually one or two octaves lower than normal (8 foot pianoforte) pitch.

Each of these definite four families (of distinctly different tone colors) has (or may have) 16, 8, 4, 2, 2 & 2/3rds pitches upon any one, a few, or many stops. That is to say, we find low, medium, high and very high pitches (different stops in a numerical system) for each family of the four tone families (color). Hence the strings are found low, medium, high and very high pitch, just the same as we found the flutes having these different pitches; and the same holds good for the Diapason and Reed families. Besides this, do not forget that any stop may have companion stops at lower and higher pitches which will couple this stop (or stops) to another manual.

### We Colors Build and Blend

THUS WE MAY COUPLE (tie together so one finger may play) any stop tone or tones upon any or all manuals and at one or many pitches. By the use of the couplers we may play all of the manuals and pedals together. With the foot swells we can cause one stop, or many or all of them to get louder or softer, from any or all manuals. When the organist is not busily engaged in playing the pedal (lowest) tones, and in swelling and dimming the general organ tones (with his feet), he is pressing many levers which bring on various pre-arranged color or volume combinations.

No matter how large or how small a good organ is, it is supposed to have at least these four basic family tone colors upon each manual. Usually these families are not actually duplicated upon the different manuals (the color theory is), but the four families, although always represented on each manual, have a slightly changed (each same color) quality and volume, when a same family tone is repeated elsewhere (upon different manuals) in the organ.

The art of registration takes years to be really learned. After a rather long lifetime of serious study of the organ, I devised (twelve years ago) a method of imparting registrational knowledge to my pupils, which I now am stating for the first time in print. Over half of this way (scheme) may not be new to the good organist, while some of it probably is. Anyway, besides the four mentioned basic colors used (either alone, in alternation in the melody, by one hand or contrasted by another hand's playing), there are a mental discrimination and a logical treatment for getting variety, which I give as follows:

Play a melody upon one manual and accompany it (but with another stop color) upon another manual. Merely by alternating each hand (a new manual with the other hand's former manual) we have a delightful variety. Ignoring the printed page and moving either hand, higher or lower by an octave of pitch change, we may have new most interesting effects, with these same two former stops.

If one uses a bright blue flute, we will say, as a melody stop, we may contrast the accompaniment, upon the other manual, by a duller string than usual. If one uses a bright yellow string for the melody hand, he may contrast this by having a darker flute stop for the accompaniment.

We possibly could play any loud toned stop, anywhere, from any manual, and accompany it with another stop (any family tone) from another manual (or lower pitch upon the same manual); but we find we prefer only about half of the stops for solo playing. We will use all of the stops and couplers, all coupled together from every manual, in addition using all of their higher and lower pitch couplers, in very loud passages and climaxes; but when this is done it is difficult to distinguish individual stops, save as each organ is so constructed

THE GREAT ORGAN IN THE BASILICA OF THE SACRED HEART, PARIS

that one of the four families is caused to predominate by more numbers of this particular color. We also prefer to choose colors, pitches and volumes, and then to seek to alternate these with other contrasting colors, pitches and lesser or more volumes.

### The Individual Must Feel

THIS SCHEME OF THOUGHT is only the mildest suggestion of this vast art. Our readers' imagination may be awakened to the infinite variety organists have upon fine instruments, when they themselves have a fine mental organ from which to draw logically. namely:—Flutes are pastoral and good in accompaniment; strings and soft reeds are good pastoral melody stops and to accompany darker colors and heavier volumes. Flutes, strings, diapasons, and sometimes reeds, may be played in chords as well as in melodies. When we have a general background of normal volume and average color, of Strings and Flutes, we may add another Flute and a softer Diapason when more volume is desired. (N. B.—The Diapason tone is mellow, loud or soft; high or low pitched and is a good blender with more brilliant stops; however, there is a very brilliant, high pitched Diapason-chorus, often designated as a single stop, that sounds very much like an extremely high and shrilly brilliant number of strings.) When we wish still more volume, without any particular effect of color, we may add more heavy Flutes, one or more heavier

**TOP OF THE POCONOS**  
Private lake...18-hole tour-  
nament golf course...22 miles  
of bridle paths...tennis  
courts...woodland trails...  
music, dancing, full entertain-  
ment program...modern  
rooms, delicious meals...se-  
lected clientele.

Diapasons, and a few mellow Reeds, or  
possibly a bright Reed.

When an organist wishes considerably  
more volume with no particular color  
scheme devised, and also desires more  
brilliance, he usually chooses to put on  
octave higher couplers of what he already

has, and this may add not only much bril-  
liancy but, with about fifteen former stops  
on before the couplers were added, he now  
has at least thirty or more stops playing.  
Which is quite enough along the line of  
volume discussion.

(Concluded in *The Etude* of May)

### The Preliminary Note

By LEROY V. BRANT

**T**HE USE OF A PROPER prelim-  
inary note is one of the most use-  
ful devices available to the man who  
is both organist and choirmaster. This  
note is one which is not necessarily written  
into the musical score, and usually it is  
the dominant of the key in which the pas-  
sage is written. Especially at the time of  
the processional, if there be one, or when  
both hands are too busy on the keyboard  
to give a signal, is it a boon to the care-  
ful director. Very often a preliminary note  
may also be used to intensify the drama  
of the music, such a tone being followed  
immediately by the voices definitely having  
the effect of a *stretto*.

If any purist should read these lines, and  
should question any person's right to in-  
troduce such a note into a vocal score,  
where it does not appear, we would point  
to the fact that almost without exception  
hymns are scored for voices alone; that a  
part written in the idiom of the organ  
usually is not to be found; that where such  
is found the parts are different from the  
voice parts; that in the scores of Bach,  
Beethoven, and Brahms (to mention only  
the "three B's") there are thousands of  
instances where the organ, the orchestra,  
or the instrument accompanying the voices  
for recitatives does in fact give just such  
a preliminary note as is here treated.

#### The Procedure

LET US SUPPOSE we have as a processional  
hymn the old favorite, *Onward, Christian  
Soldiers*, sung in the key of F. If the  
choir is not in procession the principle is  
the same, and the organist will play a pre-  
determined portion of the hymn, probably  
the last part, for a lead. He will play in  
very strict time the last two measures, to  
which the words "going on before" are  
sung. He holds the syllable "fore" for its  
exact four beats, and then he sustains that  
chord for another three beats, and for a  
fourth beat strikes a solitary middle C,  
after which the choir and organ swing  
into the singing, nine chances out of ten  
in perfect attack.

An identical procedure is had between  
stanzas, giving the singers the needed  
breathing interval, and then certainty as  
to just when they are to sing again.

If singers have become accustomed to  
this procedure, one may vary the matter

used in the extra measure, but one may  
never vary the rhythm itself. In three-  
four time one makes the extra measure  
three beats long, of course.

The preliminary note could be, of course,  
one of three: that is, it could be tonic,  
mediant, or dominant. Of these three the  
dominant is definitely to be preferred. If  
the opening harmony is dominant no other  
note could be used. If it be tonic, the dom-  
inant works out better, apparently for  
some psychological reason, involving a feel-  
ing built up since the days of Monteverdi,  
a feeling of the dominant being the central  
note of any tonality, resting on a tonic  
foundation. One may play the dominant  
above the opening soprano note, or below  
it, as taste dictates. The choirmaster con-  
siders whether he desires a bright and  
martial effect, such as might be wished for  
Easter, or a more subdued one, perhaps  
during Lent, in deciding the pitch of his  
preliminary note.

#### Bringing Up the Rear Guard

IF EITHER CHOIR OR CONGREGATION, or both,  
are a bit hesitant in attacks (even the best  
singers sometimes get that way) the use  
of this device will prove to be almost a  
"cure all." The procedure should be worked  
out by the organist before choir rehearsal,  
and then thoroughly with the choir. Per-  
haps two rehearsals should be had on it  
before employing it on a Sunday. It is to  
be expected that the congregation might  
make one or two bad starts during the first  
service in which it is used; but let that not  
be discouraging; in three weeks the attacks  
will be sure.

The thoughtful organist and choirmaster  
will find a thousand uses for the idea here  
presented. The preliminary note need not  
sound like a bit of musical scaffolding upon  
which the choir mounts to whatever heights  
it may attain. On the contrary, it can be-  
come a dramatic and reverent part of the  
musical score itself. Especially can such a  
device be helpful where the organist is  
placed in a disadvantageous location, per-  
haps behind the choir seats. Signals which  
are not visible to the eye must be given  
to the ear, and during a service they must  
be given by musical sounds. This way of  
giving them works under all conditions  
that have been encountered.

### The Eternal Soloist Problem

By WILLIAM H. BUCKLEY

IF POSSIBLE, leave the responsibility of en-  
gaging soloists in the hands of your music  
committee. Naturally, it will rely upon your  
assistance in this matter. No soloist will  
please everybody; and the committee is less  
vulnerable to the attacks of disgruntled  
church members.

Each soloist should supply the director  
with a complete list of his or her sacred  
repertoire, in order to avoid the annoyance  
of having them sing one another's songs.  
No new song should be purchased until the  
singer is assured by the director that it is  
not already on one of the lists. To avoid  
possible padding, the director has the right  
to call for any song appearing on any list  
submitted to him.

There comes to mind one church which  
made a practice of providing a second copy

of all solos, for the organist's use. These  
copies were kept in its choir library.

Do not depend upon your soloists entirely  
for solo passages in your anthems. Re-  
hearse all solo parts with the chorus, and  
have substitute soloists among your vol-  
unteer members so that they may step into  
the breach if your regular soloist is ill  
and no competent substitute is provided.

## JUILLIARD SUMMER SCHOOL

GEORGE A. WEDGE, Director

July 5 to August 11, 1939

Accredited music courses leading to diplomas, teacher's certificate, and Bachelor of Science and Master of Science degrees. Instrumental and vocal instruction for beginning and advanced students, repertoire classes, methods and materials, public school music, theory, composition, and musicology.

Special program of study for high school students including private instrumental or vocal instruction, rudiments of music, and daily rehearsals in orchestra, band, and chorus.

Two one-week FORUM courses conducted by leading music educators July 17 to 21 and July 24-28

For catalogue please address

120 Claremont Avenue Room 125 New York, N. Y.

### THE DUNNING COURSE OF MUSIC STUDY

Creative—Pre-School—Intermediate—Junior—Senior Courses  
Mrs. Jean Warren Carrick, International Dean

#### NORMAL CLASSES AS FOLLOWS

Miss Allie E. Barcus  
2001 Hill Crest  
Ft. Worth, Texas;  
Chicago and Kansas City

Mrs. Jean Warren Carrick  
940 S. E. 68 Ave., Portland, Ore.;  
San Francisco—July 5th  
and New York City—Aug. 9th

Miss Minnie Cogbill  
2727 W. Grace St.  
Richmond, Va.

Miss Adda Eddy  
136 West Sandusky  
Bellefontaine, Ohio;  
Columbus and Dayton

Mrs. Laud German Phippen  
3508 Potomac Ave.  
Dallas, Texas;  
Denver and Los Angeles

Mrs. Virginia Ryan  
76 E. 79th St., New York City  
Normal and Interpretation  
Classes

Mrs. Stella H. Seymour  
1419 S. St. Mary's St.  
San Antonio, Texas—June 4th  
Houston, Texas—July 9th

Dates and booklet of information sent upon request.

UNIVERSITY OF TORONTO, CANADA

## TORONTO CONSERVATORY OF MUSIC

Principal—Sir Ernest MacMillan, B.A., Mus.D., LL.D., Hon. R.A.M., F.R.C.M., F.R.C.O.

### SUMMER SCHOOL

July 3rd to July 29th

Announcing the engagement of the world famous pianist

## MORIZ ROSENTHAL

Master Classes — Auditors' Classes — Private Lessons

MME. HEDWIG ROSENTHAL  
Piano

DR. HEINRICH JALOWETZ  
Opera

Special Teachers' Courses In All Musical Subjects

Attractive Residence for Women Students.

Circular, giving complete information, mailed to any address on request.

Address—135 College Street, Toronto, Canada

## ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. What power is used to operate a two manual reed organ? What organ stop do you think is the least used? Is there a six manual organ in the world? How many stops are there on the organ in Atlantic City? At Wanamaker's in Philadelphia? What number of manuals are included in most organs in use at this time.

—C. T.

A. Two manual reed organs may be blown either by hand, if equipped for such use, or a motor may be used. We cannot give accurate information as to the organ stop least used, as that would depend on the specification of the instrument and the wish of the player. It, perhaps, would be some stop included in theater organs, not now in use, such as Kiuura, for instance. The organ in Wanamaker's store Philadelphia, is a six manual instrument of 451 stops and over thirty thousand pipes. The organ in Convention Hall, Atlantic City includes 933 stops and 32,913 pipes. We have no statistics as to the number of manuals common to most organs used to-day, but presume two manual instruments are most numerous.

Q. Will you please give a list of good piano music for preludes, offertories and postludes, for a church having only a piano? Would Beethoven sonatas and excerpts from the oratorios be suitable? Can you give me the names of some pipe organ numbers that can be used for piano?—P. H. C.

A. We suggest your examination of the following books for your purpose: "Church and Chapel Voluntaries," by Dreisbach; "Piano Voluntaries" (by Publishers of THE ETUDE); "Ashford Piano Voluntaries" (two volumes); "Lorenz Church Pianist"; "Sabbath Day Music." Regular pipe organ music, with a separate pedal part, would not be very practical for use on a piano. However some books of reed organ music might be found useful. You might investigate the following: "Organ Selections" (Ditson Edition); "59 Original Pieces for Harmonium," by Franck. The sonatas and excerpts you suggest would be suitable, if appropriate selection is made. The books mentioned may be secured from the publishers of THE ETUDE.

Q. I have been appointed to purchase a small organ for a country church. Is the "Ward" a reliable one? Would you advise a harp stop or chimes as an addition if we can afford it? What size set of chimes would meet our needs? In examining an organ of the type we have in view, I noticed there were no couplers or pistons. Would this not be a drawback? Based on enclosed specifications can you give further suggestions of what we might obtain that would give more variety of tone?—N. B. H.

A. As you will see by the note appearing at the top of this department, we cannot give an opinion on any particular make of instrument in these columns. Harp or chimes may be added to your specification, though other additions would be preferable in so small an organ. For instance, we should prefer a Pedal Bourdon rather than any substitute. With the inclusion of the Pedal Bourdon the specification you name would probably prove satisfactory. Personally, we prefer a 25 note set of chimes, but you would probably find a smaller set useful. Swell to Great, Swell to Pedal, and Great to Pedal couplers, and pistons, would, of course, be advantageous.

Q. I have a small old fashioned reed organ—eleven stops and a single keyboard. Is this instrument a suitable one on which to begin organ study? I am thirty-three years of age and would like to learn to play the organ. Am I too old to take up a new instrument? What method or book would you advise? I do not intend to be a professional organist, but want to use the instrument as a medium for composing music for orchestra and concert band.

—H. E. G.

A. If you anticipate using the ordinary reed organ, we see no reason why the instrument you mention should not be satisfactory. If, however, you wish to prepare for pipe organ work, the piano is a much more satisfactory instrument for preliminary technical work. The tone quality of the reed organ is quite limited as to variety of color. We do not consider you to be too old to study an additional instrument. If you wish to learn to play the reed organ, you might secure a copy of "Landon's Reed Organ Method," which may be secured from the publishers of THE ETUDE.

Q. I am organist, choirmaster and everything else combined in a small church. To make the service more reverent I introduced a small one manual reed organ. I need books containing pieces for reed organ. Is there any firm that publishes music of that type? Also, will you please tell me the name of the nearest organ builder, so that when we have the money we can install a blower?—B. E.

A. You can secure books of reed organ music from the publishers of THE ETUDE at a cost of about 68 cents to \$1.50 each. You will find some makers of blowers listed in the December 1937 issue of THE ETUDE—page 822.

Q. What is the best procedure in forming a boy choir? What ages should the boys be? Should all have treble voices, or may voices which are changing be used? How many boys

should there be? Where can I get simple music for such a choir? How much power does it take, and what is the cost per hour at six cents per k.w.h. for one-half horse power motor? Do large amount of use injure a pipe organ? Do great degree? What acts of a player will age an organ?—R. S.

A. Let it be known that you wish to organize a boys' choir and set a time for your trials. You might set an age limit of ten to twelve years, though in starting it might be an advantage to have a few older boys to act as leaders. It might be better to avoid boys whose voices are actually changing. The number depends on the requirements—size of auditorium—number of men's voices (if men are included), and so forth. If the music is to be sung by boys alone, we suggest that you start with unison numbers. You will find that nearly all boys will be of the treble variety, though you might find a very occasional low voice among them. Write to music dealers, stating your needs for proper music and asking for suggestions or catalogs. The amount of power used in furnishing wind supply is probably dependent on the amount of organ used—full organ requiring more power than soft combinations. You might secure approximate cost from the Electric Company which furnishes the power. Large amount of use of an organ should cause natural wear. Ordinary use of an organ should not cause damage. Interference with the mechanism, and so forth, might cause harm.

Q. Will you please tell me the meaning of the double vertical lines on both sides of a whole note?—M. J. M.

A. Double vertical lines on both sides of a whole note indicate a double whole note; that is, twice as long as the whole note.

Q. I have recently started directing a volunteer church choir. For the anthem on Sunday morning I have been directing from the front so that organist and members of the choir can follow my leading. There has been some complaint on my directing from in front. Please tell me how I am to get the results I want if I do not lead from the front?—M. L.

A. We are not familiar with the position available for the director of music in your church; nor with the seating arrangements of the choir. Some churches object to the directing from the front, and our suggestion would be that, if possible, you find some other location from which to lead. Perhaps mirrors can be arranged, through which a portion of the choir and the organist may follow your direction from some point other than in front.

Q. In Holloway's edition of "Organ Work of Bach" appears the direction, "Ped. All the work." The word "flue" has puzzled both my teacher and myself. Can you help us?—E. W. B.

A. The direction you name indicates Pedal stops exclusive of reeds—"flue work" being used to indicate stops other than reed stops.

Q. I would appreciate a list of books that you would recommend for a beginner learning to play the organ.—M. N.

A. We suggest the following: "Studies in Pedal-Playing," by Nillson. "The Organ," by Stainer-Kraft. "Master Studies for the Organ," by Carl.

Q. I am a young organist wishing to know something technical about the construction of the instrument. Can you tell me of any reference work which explains organ principles something not too technical?—J. K. M.

A. We suggest "The Contemporary American Organ," by Barnes.

Q. I am thirteen years of age and have studied piano for four or five years. Since I have a slight knowledge of the organ, I would like to take organ lessons. Would you advise me to do so? What do you think I should do as reference to securing an instrument on which to practice?—D. S.

A. If you have a fluent piano technique, you might begin organ studies, but continue piano practice (and lessons, if possible), to keep up skill in your technique. We are not familiar with your opportunities for practice. There are several ways, if they are available to you—namely, securing the use of a church organ (paying whatever charge is arranged for)—having an instrument with pedals in your home, or adding a pedal board to your piano. Both two manual and pedal reed organs and pedal pianos are sometimes available, second hand. The use of a piano would not give you the advantage of two or more manuals.

Q. We have a small pipe organ in our church. Among the stops there is one marked "alarm." It is impossible to pull it out. What is its purpose? Also, I once played an organ which had a stop marked "signal." When pulled out it would immediately snap back. What was its use?

A. Both stops you name are probably signals for wind produced for an instrument which is hand pumped. If your organ is equipped with a motor, the stop is of no use. If no motor is used, and you need the stop for "blower's signal," we suggest your having it made effective.

# March of the Grail Knights

(Continued from Page 238)

The theme of the Holy Grail (measures 62-64):

no other composer has enriched, so much Liszt, piano compositions, by orchestral variations. Richard Strauss, when asked he did not write piano pieces, owned only: "Liszt has exhausted all possibilities of that instrument." Already the six-pieces of the "Années de Pèlerinage," with the youthful Liszt, inspired by the beauties of nature and works of art, composed during his travelings in Switzerland and Italy, with the Countess d'Agoult, the mother of Cosima, are full of orchestral beauties. For a musical pianist, it is not hard to imitate, for instance, the wood instruments in the *Pastorale* and the *Eglogue*, or in the "Symphonie to Dante's *Divine Comedy*, for orchestra and female chorus," or trombones with their awe-stricken call to the condemned entering gehenna. *lasciate ogni speranza, voi ch'entrate* ("Give up all hope, you who enter here.") of the "Paganini Etudes," the one in E major imitates a delightful dialogue between flute and French horns, while the high bells of *La Campanella* speak for themselves. The harplike arpeggios in the *Andante Etude in D-flat major* give a ring-swinging to a dropwise falling melody; in the demoniacal *Mephisto Waltz* the reduction formed by the intervals of fifths of the open string-instruments leads to one of Liszt's most genial compositions.

One of the lessons I played with the teacher his setting for four hands of the *March* by Schubert. He played the treble part and I the bass, and when we came to the second theme, in A-flat major, I struck the keys with stiff fingers *fortissimo* and *staccatissimo*, together with the right pedal, and so imitated the ringing tones of a trumpet in a most deceptive way. Bells, of different intonation, having no dampers and being struck together, produce unresolved discords. Therefore by holding down the right pedal throughout in measures 1 to 7 and 19 to 22, the bass notes will also produce discords; by playing them *pianissimo* and holding down the left pedal—*una corda*—at the same time, the effect of it in this introduction (measures 1 to 22) to the march will be quite a mystical one. From the twenty-third measure on, the right pedal, however, is to be changed on each bass note, for sake of harmonic clarity. Further, from measures 1 to 22, the left hand must strike the keys with a light *staccato* touch, just as one would strike softly a bell; while in the following measures, beginning with the note of the march, the bass notes must be played *portamento* throughout, *pianissimo* at first and later on, in the repetition, *fortissimo* and *molto pesante*. In measures 23 to 30, observe strictly the difference between triplets, eighths and sixteenth notes.

## The Master Tone Colorist

ILLUSTRATE THE PURITY of "Parsifal," Wagner composed his theme (measures 52 to 54), quite ingeniously, of intervals of fifths. A velvety, immaterial touch effectuate the rare combination of deep colors and simplicity. This short interlude was loved immediately by the theme of the Holy Grail, which is played *fortissimo*,

DEPT. E CINCINNATI, OHIO

three times in different keys (measures 62-86) intermingled by the ringing theme of the bells in the bass. It closes with a *marziale* (measures 87-100) in which all bass octaves must be hammered down to sound like brazen steps. The last measure of it is connected with a *pianissimo* repetition of the theme of the *Holy Grail*, by means of a pedal effect. Lift the foot from the right pedal exactly on the third beat of measure 99, and put it down again on the third beat of the next one. The following is played *pianissimo* and with *una corda* up to the last measure. If possible, the intervals of the tenth in the left hand should not be broken.

From measure 111 on, hold both pedals down without lifting them and end the composition as mystically as it began. From the transcriptions which Liszt made of Wagner's music dramas, the most difficult one, technically, is the one of the popular *Overture to "Tannhäuser."* Joseph Hofmann played it admirably; he was the last pianist who dared to put it on a concert program. Musically, the most intricate transcription for the piano is the one of Isolde's *Liebestod*, from "Tristan and Isolde." About fifty years ago I played it for the first time, in Baltimore; and it was hard for

Mr. Asger Hamerik, the director then of the Peabody Institute there, to believe that in the transcription no note of the full orchestra score was omitted.

### 'Indefatigable, and Faithful Friend

LISZT WAS A HARD WORKER all his life. He wrote transcriptions not only of operas but also of whole symphonies by Beethoven and Berlioz, of marches, dances, organ preludes and fugues by Bach, and of several hundred songs by Schubert, Schumann, Chopin and others. Many of them he made known by playing them in his concerts before the singers had sung the original compositions, devoting also in this way his time and art to the benefit of others. Liszt's lifelong friendship with Wagner is known all over the world. Not so much known is the fact that of these two stars in the realm of music, Wagner was always the begging friend and Liszt the giving one. For many years Liszt served as something like a banking institute for his friend, who complained constantly of being in monetary

difficulties and asked for loan after loan he never repaid. But he also borrowed from Liszt some themes and harmonic novelties of his works. When once, in a concert they both attended, a composition by Wagner was played, the latter whispered to his father-in-law, "Do you hear, this theme is from you," and received the answer, "Well, then at least it will be heard once."

Liszt's faithfulness did not end with Wagner's death. In the summer of 1886, upon the urgent request of Cosima, her father, now aged seventy-five, came again to Bayreuth to assist the Wagner Festival; but his health was utterly broken, his last travels and triumphs in London and Paris having shattered his vitality. Dutifully he attended once more a performance of "Tristan and Isolde," but immediately afterwards was confined to bed for six days of much suffering and died on July 31, 1886, under tragical circumstances.

On his tomb in the churchyard of Bayreuth are inscribed invisibly the two words which guided him all his life: *Gemüthe oblige.*

\* \* \* \* \*

"The finest musicians in the world collected suddenly, without the previous experience of playing together would make a sorry showing as an orchestra."—Winthrop Sargant.

# THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

## Rattles, Buzzes and Knocks

By RALEIGH CALDWELL

EVERY STRING INSTRUMENT, at one time or another, through wear or because of mechanical reasons, gives trouble to the player, with nonmusical noises that originate in the instrument itself. This fact, besides the strange whims and stubbornness of the instrument under adverse climatic conditions, often causes a lack of response and sometimes thinness of tone. Seventy pieces, more or less, of wood, glued together, can cause just about that many kinds of trouble when something goes wrong. Let us see just how many things commonly cause trouble, and try to point out a remedy.

Does the violin rattle violently when some notes are played? If so, you must see that no hard substances are touching the body of the instrument. Lapel buttons, bar pins, buttons on a dress, and stick pins, are chief offenders. If all is clear in that respect, then look to see that the chin rest is tight, and in the case of an "over-the-tailpiece" type of chin rest, be sure that it does not touch the tailpiece while you are playing. If all this looks right, you must carefully examine the back of the instrument to see that top and back and sides are glued firmly. There might be a strong buzzing if the top or back were even slightly loose where the chin rest clamps.

An E-string adjuster might be screwed down just enough to touch the top of the

instrument. Unscrew the adjuster so it is absolutely clear of the top and try again. If the buzz still is heard, then look back to where the tailpiece gut is fitted. Sometimes we find knots in the gut that touch the top of the violin; the cure for this is a proper fitting of the gut to the piece. Remember it might look all right when you are not playing, but when the chin adds pressure it at times lowers the tailpiece considerably. Then, too, in some types of instruments the top rises to almost a full arch near the edges of the tailpiece. In this kind of violin, tailpiece buzzes are common. The cure for this trouble will be found by replacing the saddle over which the gut rides, so that the tailpiece will be a little higher. Do not forget to look at the E-adjuster before you finally condemn the tailpiece. The small piece which holds the adjuster in place may be loose enough to cause a rattle.

### Use Good Strings

NEXT TO BUTTONS, the chief offenders are the strings and the finger board. If you are using steel strings wound with metal for G and D, the fault is most likely in the strings themselves. Strings made for use on instruments played with a pick (plectrum) should not be used on a bowed instrument. No player can do better than to use the best strings he can possibly afford.

Silver wound G strings, aluminum wound or gut D strings, aluminum wound or gut A strings, and gut or steel E strings (made specially for the instrument) can be obtained at reasonable prices. Do not be satisfied with substitutes. If the strings are right, then look at the finger board right under the strings and close to the peg end. Pull the string aside. Is there a deep dent just where the fingers strike? Or does the finger board show hollows? Either dents or hollows might be the cause of a buzz or rattle. Hold the violin up and sight along the edge of the finger board. Is the edge perfectly straight, or is the board visibly warped? If it is warped, or you have other troubles of the finger board, the remedy is in the hands of the violin maker who can resurface the finger board. But if these things seem to be ship-shape, look at the nut at the end of the finger board, over which the strings ride. In time the slots or notches into which the strings fit will wear down, permitting the string to touch the finger board. If a thin visiting card can be slipped beneath each string at this point, and moved freely, the trouble is elsewhere. Again you must remember that strings will rattle if the bridge is too low. In this case, a strong bow stroke causes the string to strike the wood. In particular is this true of the G string. Before leaving the inspection of the finger

board, grasp it gently near the bridge end and lift up lightly. If loose, this will be seen immediately.

### Tapping for Noises

NOW LET US TURN to an inspection of the body of the violin. With the knuckle of the forefinger, tap firmly all around the edge of the instrument. If no joints are open, the instrument will sound solid all around. If there is a loose corner or edge, the changing sound will be noticed instantly. There will be no doubt about it. In this manner it is possible to find a loosened place, which it might be impossible to see it. The cure for this condition is a little good glue applied with a thin bladed knife. When the parts are clamped together, be sure there is firm, but not severe pressure. The corners and upper right side of the instrument open most often, and they are easily mended in the studio. Be sure to wipe off all surplus glue, with a damp cloth, after fixing the clamps. It is easy then; but, if scraped off later, it will most likely take some of the varnish with it, leaving an ugly blemish.

Open joints in the top or back, where the halves are joined, often are hard to find and cause no little trouble. If the back sounds, look at the top beneath the finger board and beneath the tailpiece. A small crack of this sort will cause periodic

(Continued on Next Page)

## Evolution of the Violin in Brief

By M. READ DANA

THE EARLY HISTORY of the violin is veiled in obscurity. It is not known for a certainty when or where the first one came into existence, but there are many different opinions on the subject. A certain distinguished old French violist, bent upon going to the root of the subject, in a treatise on the viol begins with creation and speaks of Adam as a violist. It is also said that about three thousand years before our era, there lived a certain king of Ceylon, named Ravanon, who invented a four stringed instrument played with a bow and named the Ravanastron. There is still an instrument of that name existing among the Hindoos, but as so many traditions are merely invented to explain the name, not much confidence can be placed in this story.

The early types of violins were crude and somewhat barbarous even up to the fifteenth century. They were not made according to any set plan, but rather as the fancy of the maker prompted. The vielle seems to have been one of the earliest, and from this type a continuous development can be traced down to the present violin. In the early days the bow seems to have been rarely used, if ever. It is said that Sanscrit scholars have met with names of the bow in Sanscrit writings dating back as far as two thousand years. If this information could be relied upon, it would prove that the bow of some rude kind existed among the nations of the East about the commencement of the Christian era. But

the ancient violin seems to have been struck and not bowed.

Stringed instruments figured in history, sacred and profane, and in lore, classic and barbaric. They were not used as we use them now, but merely as accompaniments

for the voice. We read of the troubadours of olden times, and we see them depicted on the screen, going from village to village with their instruments, playing and singing for the villagers, or making merry at the court of a king.

Violins were also used to accompany dancing, which in ancient times look prominent in all festivities, sacred or otherwise. At length domestic music began to be cultivated in Germany and the Low Countries; and it is to this circumstance that the rapid development of stringed instruments is traceable.

The viol was probably introduced into Europe by the Arabians, and the Germans seem to have been the first to make it in Europe. The most ancient viols in existence are those made by Hieronymus Brosius of Bologna, two of which are in the Museum of the Academy of Music, Bologna. These seem to have been made about the fifteenth century. But it was in "Sun Italy," that land which has the reputation of being the cradle of music, art and poetry, that the viol developed imperceptibly into the violin. The earliest form of the violin known as the rebec, had but three strings, and it is a question when the four stringed instrument first appeared in Italy. To Gasparo da Salo is given the credit of its authorship. Da Salo's and Maggini's names are associated with the rapid development of the art of violin making, but Stradivarius and Giuseppe Guarnerius brought it to its perfection in the eighteenth century.

The violin imitates the voice more perfectly than any other instrument. It is an instrument which age cannot harm; instead, its tone will mellow and sweeten with the years, especially if it is a violin made by one of the masters.

THREE VIEWS OF A FRANCESCO RUGERI VIOLIN  
MADE IN CREMONA IN 1678

## The Mute

How It Operates to Produce the Muffled Tone Color

By OTTO J. MULLER

THE EFFECT produced by the mute cannot be attributed to the strings—which, with or without the mute, give equal vibrations when brought into motion by the bow—but to the activity of the bridge as the transmitter of the vibrations of the strings to the top of the instrument. Its changing of the tone can be attributed only as a result of the muffled pressing and disturbing the upper portion of the bridge, transforming the horizontal vibrations into perpendicular vibrations and by its weight restraining the resultant vibrations.

Mutes are usually made of wood. Some are made of ivory, horn, tortoise shell, hard rubber or metal are used. They are made in the form of a comb, with three prongs slit in a fashion that the cleft of the prongs can be placed over the bridge, leaving freedom between the prongs for the passage of the two middle strings.

### Choosing the Material

MATERIAL for a mute, in regard to its weight, compactness and elasticity, is of great importance. The more rigid and less elastic the material, the greater the effect. It is, however, advisable to use a material that is not too rigid and to fit it snugly to the top of the bridge, which will produce a muffled agreeable tone color. The best are

made of ebony. They should be sufficiently heavy in wood, and the prongs should be not too short.

There is, however, nothing better than the old conventional form of the mute, for compositions played entirely muted; but it has its little drawbacks, for the reason mentioned above, and when only certain passages which have not been sufficiently prepared with rests are to be played with its use.

### To Mute or Not to Mute

IT IS NOT UNUSUAL to see in orchestras—when such a passage is reached—the way the players scramble for the mute. Usually it is found in a pocket, the violin case, and frequently it has been left at home. Then again some of the players are always sure to drop it, not only causing considerable disturbance but also not producing the effect that the composer desired.

To overcome these difficulties and also to satisfy the demands of the ultra-modern composers, mechanical mutes are frequently employed. Of these there are a number on the market and all have their admirers. Some are rather ingeniously constructed and operate with such rapidity that to mute or unmute consumes no more time than to change from *arco* to *pizzicato*.

—Fiddle Strings

## Shadow Practicing the Vibrato

By HERMAN BASSOFSKY

PERFECT the *vibrato*, try shadow practice and note results.

Use an ordinary light, such as is used in music stands, five feet from the wall. Place the violin for practice, and have the light focused on the left hand. The light must be midway between the light and the white wall.

Since light travels in straight lines, an image of the black and white shadow-image of the hand will be cast upon the wall. The shadow thus created upon the wall will show as much penumbra, or depth of con-

trast, as it would have if the sun were used as the source of light. Practice the *vibrato* slowly at first; then gradually accelerate the *vibrato*, using the same tone. The vibratory action of the shadow will increase proportionately with the increased tempo of the *vibrato*.

Since the eye has a great advantage over the ear, close observation of the magnified shadow of the hand will help you to see and pursue each tremulous motion and to detect details that the ear can scarcely discern in sound.

## Rattles, Buzzes and Knocks

(Continued from previous Page)

ing, depending upon the weather and humidity. This type of crack requires the most skilled repairer, owing to the fact that the top of an instrument will season and warp rapidly than the back. Simply pulling the crack together is not enough, for the crack will re-appear. The good violin maker will do this job in such a way that the instrument will not be strained and full tone will be retained.

If the f holes should be examined carefully, if small cracks start there, you may be troubled with a buzzing when playing in the higher range of notes. A badly fitted top can cause buzzing. Recently a new crack has appeared. This has a vertical slot cut, for about half its height, in the center. In some patterns strong pressure of the E string will eventually break down that side of the bridge, until the

slot just above the foot of the bridge will close. When this happens there is a knocking rattle that can be corrected only by cutting open the horizontal slot to its former width.

A sharp knock, like the tap of the knuckle on the back of the violin, will occur in some cases. As a rule this is the result of a loose neck or end pin block. Generally, raising or lowering the instrument from playing position will cause this sound. This same knock can be caused by a loose nut or saddle, loose tailpiece, or a weakening of the tailpiece gut. When there are noises in the instrument and the trouble cannot be located, the violin maker might find the inside linings or blocks or bass bar are causing the trouble. But try it yourself first—most of the noises mentioned are easily found and just as easily remedied.

## Bands and Orchestras

(Continued from Page 269)

Opportunities for complete bands to meet and to fraternize are naturally fewer than for individuals, but when this does occur it is evident that the brotherhood of bandmen knows no national bounds.

With a fairly intimate knowledge of numerous bands and bandmasters of both countries, this writer long ago discovered that the hearts and homes of each are ever open to the other, for though living under different flags, we are all Americans!

### The Brass Family in the Band

By ERNEST WILLIAMS

Director Ernest Williams School of Music, Brooklyn, N. Y.

OUR FOREMOST SYMPHONIC BAND conductors are securing effects from the brasses not dreamed of two decades ago. They are choosing their instrumentalists with as much care, as regards quality, balance and blending properties, as a chorus master exercises in the selection of voices.

In the past, notable limitations have been placed on the brass group. Theorists and composers held the opinion that the brasses were not well adapted to expressive playing, believing that simplicity, eloquence, energetic power and the excellent capacity for swelling from *pianissimo* to *fortissimo*, and *vice versa*, were the valuable qualities of the group. This viewpoint is changing owing to the excellence of our present day performers, who are capable of expressing on the brasses some of the extremes of emotion such as joy, sorrow, mirth, melancholy, brilliancy, dullness, triumph and nobility.

The solo brasses are a near approach to the human voice and in the *cantabile* are extremely beautiful. The great virtuoso orchestral conductors obtain the aesthetic qualities from the brass choirs which are also indispensable to him in the martial passages and powerful climaxes.

The brass family plays a more important part in the symphony band than otherwise as a result of the fact that our band literature is mostly transcribed from the orchestra. Clarinet, bassoon, viola, violoncello and bass parts are frequently given to the brasses in the band arrangements. The American Bandmasters' Association and the National School Band Association are encouraging composers to write for the symphonic band, so that it will eventually have a literature of its own.

### The United States Marine Band

By CAPTAIN TAYLOR BRANSON

Conductor, United States Marine Band  
UNIQUE IN THE BAND ANNALS of our nation is the United States Marine Band; its long history bears witness to its position. Organized in 1798, by Act of Congress, it has functioned in the nation's Capital since 1800 when the seat of our government was moved from Philadelphia to Washington. Since that time it has given an unbroken series of concerts in Washington; and beginning with the administration of President Van Buren, it has appeared on the east front of the Capitol building. President Tyler instituted the old promenade concerts on the White House grounds on Saturday afternoons, and in 1856 President Pierce showed special interest in the work of the band at the White House grounds and Capitol.

Great impetus to the cause of band music in the United States was given by John Philip Sousa, who composed his most famous marches while Leader of the Marine Band from 1880 to 1892, and he did much to improve the quality of music played by the band. After the Spanish-American War

further advancement was made in the programs of the Marine Band under Captain William H. Santelmann, and since the World War even greater strides have been made. With the advent of radio and the phonograph, music in America has reached a high order, and the Marine Band, in its programs, has kept pace with such progress.

All applicants for enlistment in the United States Marine Band must be American citizens and high school graduates and lately there has been an insistence that all take courses in arranging for band and orchestra, with a resultant fine corps of arrangers who transcribe the great classical for military band. Through its long existence, the Marine Band has had a record to be proud of, and this heritage is recognized and lived up to by its present members. A military well drilled marching organization, and as a concert organization, the Marine Band of to-day is a prime mover of the band forces existent in America.

### Tempo in Band Performance

By CHARLES O'NEILL

Formerly Director of Music, Royal 22nd Regiment

ONE OF THE MAIN FEATURES in a satisfactory music performance is a good choice of tempo.

In band music, many performances which would have been good have been adversely affected by what may be described as unwise choice of tempo. It is the slow tempo that seem to give the most trouble, the tendency being to take them too slow.

The music terms in common use are to great extent indefinite and, unless some name rate of speed is indicated, there is often difficulty in determining what is appropriate to the occasion.

Several factors should be considered before deciding upon a tempo for a given work, among them being:

1. The length of the phrase
2. The number of harmonic changes
3. The complexity of the music
4. The character of the music.

Each of these should receive close attention in making a decision, and the importance of the character of the music cannot be overemphasized.

How often do we hear a simple melody which should move along easily, played in a slow, sensuous manner? When matters such as these have been determined to nicety, there is every reason to believe that tempo will be handled with as much artistic as any other aspect of musical performance.

### Past and Future of Concert Bands

By LT. CHARLES BENTER, U.S.N.

Leader, United States Navy Band

SO MANY ARTICLES AND STORIES have been written about the great bands of the past that one is perhaps impressed with the decadence in this particular branch of musical art. There is an erroneous idea that the band reached its pinnacle long ago, back in the "good old days," as it were, and that it is now on the decline.

This is no doubt largely due to a propensity among writers toward glamour in their phrases, a deft touch that veils the distant past in an aura of romance. Had some form of recording preserved the work of some of these traditional bands, we might be in a position to make more accurate comparisons between those units and the bands of our own time.

The new band movement, as we know it, is possessed of advantages never dreamed of by our worthy predecessors, and the

(Continued on Page 285)

# QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College  
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

**Against Four.**  
How do you play the following rhythms?  
—B. H. B.

(a) The common multiple of three and six. Count two for each right-hand note they will come on one, three, and five. (three for each note in the left hand and come on one and four. However, this is not to be necessary more than once or, as the second note in the left hand is exactly half way between the second and third notes of the triplet in the right hand. These rhythms can be mathematically created by counting up to twelve (common multiple of three and four), but notwithstanding the fact that many teachers do this, it is impractical. The two groups should be a unit. This is not so difficult since such groups are generally used only in fast tempi. Lower tempi a fairly satisfactory way is to play the second note of the triplet between second and third notes in the right hand and the third note of the triplet between the third and fourth notes in the right hand. By playing the right hand notes in twos, are the same rhythm as in (b). I never saw this rhythm. If you have I be pleased to have you tell me where you find it. The second note of the left hand comes half way between the third and fourth of the right hand.

**ult Rhythm in Grieg and Godard.**  
1. In Grieg's To Spring, first line, third measure of the left hand, I cannot understand only five beats are given when the time signature is six-four. In my copy there is a 2 over the two quarter notes and I assume they are played against the fifth beat. I would appreciate an explanation of how only five beats can be correct. Something similar occurs in Godard's Mazurka when two half notes occur by a dotted eighth and a sixteenth. Is this done? Please explain the notation of the second measure of the second measure of the left hand in a Spinning Wheel by von Wilh.—E. S.

1. The printing in your edition is correct; however, the two quarter notes are not against the fifth beat but against the fourth, fifth, and sixth beats. They are a group of three notes occupying the time normally taken by two beats; such a figure is known as a triplet, or triplet. It constitutes the only encountered problem of two against one and would be played as follows:

Here the problem is quite different, for the rhythm is perfectly regular. It looks complicated because the right hand must play the triplet on the second beat on the bass. It would be done this way:

This is merely an abbreviation for six eighth notes.

3. Written

**A Difficult Rhythm.**  
Q. Kindly inform me how to play the following rhythm as found in the second variation of the Schumann "Symphonic Variations," measure 16.—J. L. S.

A. I believe the rhythmic problem to which you refer is found in Measure 12 of the second variation, not Measure 16. It would be played thus:

To facilitate learning this difficult pattern I would suggest that you practice the right hand part alone, first with two hands, and then with only the right hand:

Next practice the left hand melody with only the accompaniment figure in the right hand:

Finally put all parts together. You will find that by dividing complex rhythmic combinations into several simpler figures the total problem becomes much easier.

**How Much Pedal in Bach.**  
Q. 1. How do you pedal measures 1, 4, and 14 of Bach's Fourteenth Invention? (Two Part).  
2. What would be a good contrasting number for Venetienne, by Godard?—W. D.

A. 1. It is always better to use too little pedal in Bach, rather than too much. As you see, the pedaling I have marked is in accord with that idea. All measures between 6 and 14 would have to be pedaled on the off beat (counts two and four). This Invention should trip along so lightly that I fear it would take very little pedal to spoil it; ordinarily, no pedal is used.

2. This Invention; or Bach's Garotte in G minor; or the one in B minor; or Emmanuel Bach's Solfeggietto.

## FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

## Luigi Mozzani

**W**HILE AMERICAN GUITARISTS are accustomed to associate with the classic guitar only such names as Segovia, Llobet, Gomez, Sainz de la Maza, Alfonso and others coming to us from Spain, little is known of Luigi Mozzani, the most celebrated living guitarist, of Bologna, Italy, who, according to competent critics, ranks with the best. One of the most unique personalities in guitar history, Mozzani is not only a virtuoso, composer, and teacher, but also a guitar maker, whose instruments are said to compare favorably with those of the old masters and even to surpass them in tone quality and carrying power.

Born some sixty-five years ago in Cento, Italy, young Luigi lived and attended school in his native town until he was ready to enter the Bologna Conservatory, where he studied music for a number of years, electing the oboe as his principal instrument, and also devoting some of his spare time to the guitar. Upon graduation he accepted a position as first oboist with a prominent orchestra, and for ten years he was thus professionally engaged, playing at different times under Hans Richter and Arturo Toscanini. A concert tour to America was arranged for an orchestra with which he was connected at that time, but this venture proved a failure and a few months after its arrival the orchestra was disbanded. Finding himself stranded far away from home, Mozzani, as a guitarist, joined a group of mandolin and banjo players and managed to eke out a meager existence until he found a number of guitar pupils eager to study with him, which helped to put him back on his feet financially.

During this time he composed a set of "Studies for Guitar" which were published in three books. The writer still recalls a visit paid by Mozzani to William Foden, the American guitarist, in his St. Louis studio. After Foden entertained him with a number of guitar solos, Mozzani expressed his surprise and astonishment at the wonderful technic displayed by this artist; especially was he entranced by the right hand tremolo. Fritz Buek in his book, "Die Gitarre und ihre Meister," discussing the technic of Mozzani makes the statement that "the tremolo of Mozzani is unrivalled"; and it is our firm conviction that Mozzani, being a keen observer, took with him the impression made upon him by Foden; for from that time on he devoted all his time to the improvement and development of his technic.

A few years later we find him in Paris, where he spent two years in the congenial companionship of the well known guitarists Cottin, Zurfuh, Castilio, Gelas and Llobet; and from there he departed as a full fledged virtuoso of the guitar.

A recital in Nuremberg, in the fall of 1906, sponsored by the "International Guitar Society," established his reputation in Central Europe; and in the following season we find him giving guitar recitals in the principal cities of Germany and Austria and later in Italy.

### The Artist Turns Craftsman

WHILE PURSUING his concert activities Mozzani was continually thinking of the shortcomings and limitations of the instrument and decided to devote himself to the improvement of the guitar. Having returned

to his native city he now carried out plans by experimenting with the making of different types of guitars.

Impressed with the wonderful tone of old guitar in the form of a lyra made 1839, by Schenk of Vienna, he worked many years until to-day he has produced one that is considered a masterpiece of art. In addition to guitars, he is making violins, mandolins, mandolas and violoncellos; and he has taken on young men as apprentices in the making of these instruments. So successful has he been as a teacher in this department, that about ten years ago he was induced to transfer his "school" to Bologna where later on it was incorporated as the "State School for the Making of Stringed Instruments," with Mozzani as its head. While all these activities absorb a great deal of his time Mozzani, the virtuoso guitarist, has not neglected his technic. Most of the guitarists from Central Europe come from time to time to him for a post graduate course, in order to polish up their technic; for he is recognized as a master teacher. A born musician with many years of orchestral training Mozzani extracts from his instrument the most beautiful tone imaginable, and in phrasing and rapid scale passages are a delight to the ear. His sense of humor may be gauged by the following incident related to the writer by a young guitarist of Munich, who lived and studied with Mozzani for several months. "One evening we were sitting on the balcony of his home, when along came an organ grinder who stopped just below us and began playing an Italian tune. Quickly Mozzani grasped his guitar and improvised the most delightful variations. With a grin the street musician looked up and then began another tune. For full a half hour this 'duet' continued until, with a handful of small coins, the 'brother musician' made his exit."

As a composer Mozzani has given us a limited number of works in the small forms. Several are published in Paris, a set of six "Capriccios" is published in Leipzig and a set of five solo pieces, in Berlin. "Twenty-five Preludes" and some other works are still in manuscript; as is also the "Modern Method," which we sincerely hope will before long be available to guitar students.

Mozzani once stated to a mutual friend: "During my early years I had all the shortcomings and limitations of most guitar students, and I had to depend on my ingenuity and inventiveness to overcome them gradually. My own experience along those lines has taught me what to do and what not to do. To progress in any artistic endeavor we not only must study what others have created, but also must build and expand upon this, and contribute our own ideas, in order to have our instrument and its music conform to modern standards. That should be the underlying principle of a new method."

Many times in recent years this master has been urged to return to the concert platform; but, in spite of the promises of financial rewards and additional fame, he has refused all such temptations. He is happiest when playing for small gatherings of friends and admirers and when he is engaged in carrying out his long cherished plans to use his knowledge and skill for the improvement of his favorite instrument, the guitar.

\* \* \* \* \*

"A famous teacher of piano, illustrating the correct position at the instrument, said, 'Sit at the instrument as you would sit on a horse. You are the master, and the horse is your servant.'"
